Another useful, sensible collection of essays is the volume *Women and Goddess Traditions in Antiquity and Today,* edited by Karen King (1997). Several writers examine Egyptian and ancient Near Eastern traditions, as well as Buddhist, Hindu, and other non-Jewish and non-Christian religious traditions, and the experiences of women within them (Susan Ackerman on ancient Israel). All these writers are feminists, but none are doctrinaire "Goddess devotees" (except Emily Erwin Culpepper, a self-styled "Amazon"). They acknowledge that most previous studies have been androcentric and patriarchal. But they do not think that men are always the enemy; that women's spirituality is necessarily superior; that the Goddess reigns supreme. They document in detail both the historical and the psychological fallacies of the "Goddess movement" — especially when the Goddess *redivivus* looks stereotypically Jewish or Christian.

The essay by Judith Ochshorn (author of *The Female Experience and the Nature of the Divine,* 1981) is one of the best. She points out that patriarchal religion is hardly to be blamed exclusively on the ancient Israelite men who wrote the Bible; that their single "male deity" does not necessarily justify male domination on earth. With other more moderate feminists (and me), she believes that Judaism's and Christianity's vision of God can be expanded considerably and reformed to embrace women's experiences. That includes the belief in monotheism in particular, which must be broadened. Finally, Ochshorn objects to focusing too narrowly on the "fertility" aspects of the Goddess, since women have many concerns and needs beyond biological urges to motherhood. In short, the "Goddess movement," while it may have comforted some women superficially, has left them still in need of the *truth,* not a naïve Utopia where all is women's sup-

posedly unique "strength, beauty, fertility, love, harmony, and peace" (1997:390).

Appreciation of the Goddess in the history of religions should bring warmth, caring, and healing to religion, as well as joy in the sexual union ordained and celebrated by the gods. That would be a sufficient contribution in itself. It is not enough to treat feminism generally, however, in asking what the Goddess can do to help. There are many "schools" within the feminist movement (Foreword). (1) For instance, many current feminist scholars sprang directly out of the religious community, mostly in Christian biblical studies, but occasionally in Jewish biblical scholarship. The former would include leading figures like Phyllis Chester, Adela Yarbro Collins, Mary Daly (in her early works), Rosemary Radford Ruether, Elisabeth Schussler Fiorenza, and Phyllis Trible; the latter, Athalya Brenner, Naomi Goldberg, and Judith Plaskow, among others. Representative works would include Collins' edited volume *Feminist Perspectives on Biblical Scholarship* (1985); and Trible's *God and the Rhetoric of Sexuality* (1978) and *Texts of Terror* (1984). Jewish works are fewer in number, but one could cite Plaskow's *Standing Again at Sinai: Judaism from a Feminist Perspective* (1990); *Changing of the Gods: Feminism and the End of Traditional Religion* (1979); and Brenner and Carole Fontaine's edited volume *A Feminist Companion to Reading the Bible: Approaches, Methods and Strategies* (1997). (One might add Susan Ackerman, Phyllis Bird, and Carol Meyers — treated above — although it is not clear, as noted in the Foreword, that they would care to be characterized principally as "feminists.") While "radical" in some senses, most feminists do not necessarily seek to dethrone the male deity, only to dismantle patriarchal religion. Such feminists do not ordinarily buy into the "Goddess movement," since in their work they are critical scholars first, women second.

There is another, secular "school" of feminists, much more radical. Many of these are simply "post-Christian" (or post-Jewish) scholars. They are quite willing to abandon religion altogether in their quest for equality for women; there are no "goddesses," male or female. Alternatively, they espouse a sort of "generic religion" which sometimes appeals to a sort of Goddess mystique to inspire female spirituality. A representative work might be that co-edited by Carol Christ and Judith Plaskow, *Womanspirit Rising: A Feminist Reader in Religion* (1979). Sometimes in this discourse, "theology" becomes "thealogy"; "history" becomes "herstory."

Finally, still more radical secular feminists may style themselves

"Neopagans," or "Wiccans" (witches). Many were inspired by Gimbutas' early works (above), celebrating a supposedly universal Earth Mother whom traditional and official religions have sought to suppress. These occult works, which romanticize "primitive women's religion," are represented by Mary Daly's later work *Beyond God the Father* (1973); Christine Downing's *The Goddess* (1984); Merlin Stone's *When God Was a Woman* (1978); and Starhawk's *(sic) The Spiral Dance: A Rebirth of the Ancient Religion of the Great Goddess* (1979). (Some of the Wiccan magazines and journals are fascinating, too, but beyond our purview here.)

Whatever ideological agendas various feminist groups may have, and quite apart from their identification with any goddesses, there is one development that has received little notice: the growth of anti-Semitism among some feminists. The German Protestant scholar Katharina von Kellenbach has called attention to this phenomenon in her *Anti-Judaism in Feminist Religious Writings* (1994). The "rationale" escaped me at first, but then I realized that these feminists blame all patriarchal religions and their obvious oppression of women on the ancient Israelite ("Jewish") writers of the Hebrew Bible. They argue that monotheism *itself,* as enshrined in the Hebrew Bible — an almost exclusively male deity — is inevitably oppressive, cannot be mitigated by any sort of theological dualism. These accusations are so mindless that they do not deserve a response. But the rhetoric is alarming — especially since most of it is European, where the phenomenon of the revival of anti-Semitism is becoming all too apparent. The Goddess would surely not approve, whoever she may be.

In trying to seek a balance, I would observe that while some in the feminist movement have found support in the rediscovery of the Goddess, many men who are sympathetic to women's special concerns resonate with her as well. We all know instinctively that gender-specific terminology describing the deity may be built into human language, but it is nonetheless inadequate. The biblical language about God speaks about the deity in terms of predominantly male attributes simply because it was men who wrote the Bible. I have argued above that if women had written their own Bible, God would have appeared very differently — and perhaps more humanely. That is not reverse sexism, but simply the recognition of biological facts. Men and women are not of differing worth or achievements, just different. My stepdaughter Hannah explained this to me one day when she was five and we were talking about theology. She asked me: "Do you know that God is both a man and a *woman*"? I replied that I did, and that her

mother and I often spoke and wrote about the Goddess. Then I asked her why it should be that God was also a woman. She gave me a withering look such as only a child can to a thick adult, and she said: "Silly! Half the people in the world are women, and God has to be for everybody." That says it all.

The rediscovery of the Goddess and of women's popular cults in ancient Israel redresses the balance. It helps to correct the androcentric bias of the biblical writers. It "fleshes out" that concept of God, brings the divine mystery closer to the heart of human experience, and yes, to the mystery of human sexual love. We humans are engendered; if we are to think and speak about God at all, it must be in a way that combines all that is best in males and all that is best in females. Even the androcentric biblical writers sometimes employ female imagery. Yahweh "gave birth" to Israel (Deut. 32:18); he has a "womb" (Job 38:29).

Such a single "composite deity" may be the logical outgrowth of polytheism, may even retain some of its advantages in a plurality of divine rules. But it can also be confusing. How can one God embrace such apparently contradictory qualities? A god of vengeance and also a god of mercy? Yet the Canaanite goddesses sometimes combine these polar opposites, as we have seen. Raphael Patai speaks of the "conflated image of the virgin-wanton-mother." And here the paradox of God confronts the paradox of human nature. We, too, are a bundle of contradictions — in God's own image?

(4) Do the Hebrew Goddess and her veiled presence in later Judaism and Christianity offer anything of value to the non-Western world, or is this just another example of the "cultural imperialism" of the West? Certainly one of the impediments in our reaching out to the rest of the world has been the Judeo-Christian notion that the religion of ancient Israel (ironically an "eastern" religion) is "unique" and therefore superior. In particular, the resultant monotheism, which became the foundation of the Western cultural tradition, has been held to be superior to all "primitive" animism, polytheism, and even to other unenlightened forms of monotheism.

While I have little respect for "postmodernism" and have written elsewhere to expose it as simply another form of nihilism (Dever 2001), its critics of the Western cultural tradition are right about the dominant influence of "dead, white, Europeanized males." Perhaps we need to listen now to the voices of living females, many of color, and no longer so out-

spokenly Euro-centric. We now know that the religions of ancient Israel were *not* unique; that they were not what the male Establishment wanted us to believe they were; that they gladly embraced many universal human beliefs and values; and that they evolved dramatically over time. Such knowledge ought to result in a certain humility about "our" religious traditions.

Already biblical studies are being challenged by Third World theologies. In the last words of Keel and Uehlinger's ground-breaking work *Gods, Goddesses, and Images of God* (1998) the authors address the challenge of creating a better world for all people, of all races and both sexes, which they believe can be created only by a "revolutionary restructuring of our symbol world." Such work

> will not only expose the buried feminine aspects of the Judeo-Christian image of god with their salvific power, it can also open our eyes to the theological dignity of many images and concepts that can nourish us from the thriving Christian groups and from the encultured theologies of Asia, Africa, and Latin America (Keel and Uehlinger 1998:409).

(5) Finally, what does our new understanding of the reality of ancient Israelite folk religion say, if anything, to the "ordinary" people whom I addressed in beginning this book? For Jewish or Christian believers, for whom the Bible is still authoritative in some sense, the answer may vary.

Some of orthodox or even conservative persuasion will tend to reject out of hand everything that I have said here. It cannot be true, because "biblical religion" *has* to be monotheistic: the Bible says so. (This is simply the typical fundamentalist protest: "My mind is made up, don't confuse me with facts.") Other believers, however, may be secretly relieved. The biblical writers maintain that polytheism was evil and had to be overcome. This did in fact happen over time, so the Bible was right after all. Asherah may have existed; but she is gone now — and good riddance.

Those who are more liberal by temperament, training, and experience (and the latter is really what counts), even if believers, may not be too surprised. After all, they always knew instinctively that all our conceptions of God are too small. If rediscovering the "feminine qualities" of God is new for some of us, it is not really revolutionary — just a sign of progress on our universal human odyssey. Those on the radical left, virulent secularists, will dismiss all this as piffle: the Bible is nonsense, and so is religion.

I can only speak for men, and for myself in particular. Knowledge of the Goddess has introduced me to the other half of myself. As Patai puts it:

> The goddess thus speaks to man with four tongues: keep away from me because I am a Virgin; enjoy me because I am available to all; come shelter in my motherly bosom; and die in me because I thirst for your blood. Whichever of her aspects momentarily gains the upper hand, there is a deep chord in the male psyche which powerfully responds to it. Her voices enter man and stir him; they bend man to pay homage to her and they lure man to lose himself in her, whether in love or in death. (Patai 1990:154)

Afterword (and Foreword Again)

I began this book with a concern for ordinary people and their religious beliefs and practices, ancient and modern. Now we come full circle, having surveyed the archaeological evidence for religion in ancient Israel. I have argued that it is this material evidence that constitutes our primary data, at least for illuminating folk religion, obviously the religion of the masses. The assumption throughout this work is that a contrast can be drawn between "Book religion" and "folk religion," neither of which alone can be regarded as "normative," but that the latter has been neglected.

In "book religion" (1) belief is primarily intellectual (theology); (2) piety consists mostly of liturgy (institutional religion); and (3) morality focuses largely on overarching theoretical principles. We can call this the "Great tradition" — that is, the *literary* tradition, deriving its authority from writings that are considered canonical Scripture. This is the characteristic religion of elites, the few who can appreciate great literature and its lofty ideals. This dimension of religion we may characterize as predominantly *verbal.*

On the other hand, we have folk religion, in which (1) belief is mostly intuitive; (2) piety consists of private and family rituals to insure well-being ("magic"); and (3) morality is defined by right relations and charitable acts within the immediate circle. This we can call the "little tradition," characterizing the masses as more *visceral* than verbal. It is the religion, for example, of the poor, illiterate Jewish women in Jerusalem that Susan Sered studied.

I have argued that it was also the religion of both the majority of

women *and* men in ancient Israel. I have tried not to regard either expression of religion as "better" than the other, only different — piety in different dimensions. But as an archaeologist, I have privileged folk religion because it more readily illuminates *practice* than theory, and that is what I am interested in here. I am convinced that in the final analysis religion is not what institutions and clerics legislate, but what the majority of people *do.*

Because they represented the Great tradition, most previous scholars, men and women, have concentrated almost exclusively on the biblical texts, as though these alone reflected the "true" religion of ancient Israel. I regard most traditional works, however, not only as obsolete, but also as dangerously misleading. Think of what the Great tradition in many religions has wrought historically: the Roman Catholic hierarchy and its Canon Law; Protestantism and its scholastic *sola Scriptura;* Orthodox Judaism and its exclusionist Torah; and militant Islam and its Qurân. Of course, one may object that this is judging those religions by their worst excesses, overlooking their great contributions to both the Western and Eastern civilizations in their heyday. I simply say that the price may have been very high.

Monotheistic, patriarchal *literary* religions have had a long and often bloody history, largely because their concept of God seemed to require them to force their Book on others, even marginalized groups (especially women) within their own communities. As a historian, I cannot avoid the conclusion that triumphant monotheism tends to foster cultural imperialism. Monotheism defined exclusively by a male clergy in terms of *their* male deity almost inevitably results in a hierarchical and patriarchal system. But all such systems are now facing momentous challenges as the modern world struggles with the defining issue of our time: the sacred versus the secular. Where do we go from here? Is there a better way? And are there more pluralistic, kinder and gentler expressions of religion?

I have argued as forcefully as I can for broadening our concept of deity by envisioning divine qualities that are more "feminine" alongside the traditional masculine qualities — and enshrining these attributes in appropriate language. (After all, why should all our imagery and language be male?) Rediscovering the Great Mother in ancient Israelite folk religion, as illuminated recently by archaeology, may help us to redress the balance.

Is mine, then, a "feminist manifesto"? And by a *man?* I am not so presumptuous. I do not pretend to speak for women, ancient or modern,

only with them; not to give them a voice, but only through archaeology to help them to find their own long-lost voice, and thus to speak for themselves, out of their own experience. I do presume, however, that women's demand for an equal voice in defining religious belief and practice is entirely legitimate and has been denied for far too long. It is their turn.

Mine is finally a *humanist* manifesto, a plea to restore religion to its original and proper place. It is a vision of religion seen not from the institutional perspective, "from the top down," but from the perspective of the individual, "from the bottom up." What this vision hopes to do, while not ignoring its transcendent dimensions, is to "humanize" religion — to put a face on it, often a woman's face. This is the first face that we all see upon coming into this world, and in that face, the face of a mother, we glimpse the unconditional love that is the essence of all true religion. The hand that rocks the cradle *will* rule the world, and it will ultimately make the world more humane.

Meanwhile, we are burdened with "Book religion," the creation of men in order to enshrine their concerns. And until very recently, women have been systematically *excluded* from the study, interpretation, and proclamation of the Book, that is, from the clergy and institutional religion. That has been true historically of such great monotheistic religions as Judaism and Christianity; and it is still true of Islam. But that is changing finally, if only slowly. Women's new access to the Book and to its claims to authority — to the scholarly and clerical worlds of academy and cloister — is revolutionizing religion. And this change is coming just in time to keep the religious Establishment from becoming irrelevant to the modern world.

Women are writing their own "bibles," and thus for the first time in history moving beyond the "religion of hearth and home" into the *public* arena. And much of the impetus has come as mothers and women everywhere are rediscovering the Great Mother. Now we are beginning to speak less of the "Fatherhood of God" and "the brotherhood of Man"; and more of "God the Father and Mother" and "the *whole* family of humankind."

This is not as radical as it may sound. It is simply a recognition that Nature has engendered all species and made us humans uniquely aware of the fact that all our experiences *and* language are engendered. Thus it is difficult to speak of the deity except in reference exclusively to one gender, traditionally as "Father." Yet we instinctively know that this conception of God is too small. If God has indeed created us — male and female — "in

his own image" (Genesis 1:27), then it must be in his and *her* images (Genesis 1:27; remember, the Hebrew text has "God" in the plural).

To focus as I have here on the human rather than the divine aspects of deity is not to trivialize religion, to reduce it to New Age theobabble and superficial "pop spirituality." It is to give back to religion its depth and immediacy in human nature and in universal human experience, that of women as well as men. It is not to marginalize religion, but to move it toward the real center.

With the full recognition of women — the other half of humanity — in religion and society, the spirit of the Great Mother will at last be freed. Here I have tried simply to anticipate her emancipation by showing that in the world of ancient Israel, among other places and times, she was once alive and well, at least until she was driven underground by the men who wrote the Bible. Archaeology brings her back to life.

Some Basic Sources

The following does not pretend to be a comprehensive bibliography, only a listing of works quoted in the text, together with a few suggestions for further reading. It gives preference to recent publications and to works with extensive bibliography. Works in languages other than English, while consulted, are omitted, since this is a book for general readers and this bibliography is meant to be an aid to them.

PREFACE

This book is the fruit of several years of research into the phenomenon of family religion in the ancient Near East. Some preliminary results were read as papers at the annual meetings of the Society of Biblical Literature or published as articles in such journals as the *Catholic Biblical Quarterly*, the *Journal of Biblical Literature*, *Vetus Testamentum*, the *Zeitschrift für Assyriologie* and the *Zeitschrift für die alttestamentliche Wissenschaft*. This monograph does not reproduce these publications, but integrates their central elements in what is meant to be a comprehensive treatment of family religion in ancient Babylonia, Syria, and early Israel.

The opportunity to turn my earlier studies and observations into a monograph was given me by the Faculty of Theology of Leiden University. Owing to a grant by the Netherlands Foundation for Scientific Research (NWO), and thanks to the willingness of my colleagues to temporarily release me from my normal duties, I was able to spend the major part of the academic year 1994-1995 at the Netherlands Institute for Advanced Study (NIAS) writing this book. As a member of the theme group on 'Magic and Religion in the Ancient Near East', I worked together with Tzvi Abusch, Wim van Binsbergen, Mark Geller, Shaul Shaked and Frans Wiggermann. It would be difficult to determine with any precision how much I owe to our weekly sessions and daily discussions, but I can hardly imagine a better and more stimulating atmosphere of scholarship. It is a pleasant duty to acknowledge the active part of the staff and fellows of NIAS in creating the nearly perfect environment in which we could pursue our research.

Other friends and colleagues should not go unmentioned. I could not have written this book without the help and advice of Bob Becking, Gary Beckman, Liz Bloch-Smith, John Collins, Diana Edelman, Joan Goodnick Westenholz, Baruch Halpern, Cees Houtman, Arie van der Kooij, Theo Krispijn, Dennis Pardee, Jan Platvoet, David Schloen, Mark Smith, Wilfred van Soldt, Marten Stol, Klaas Veenhof, and Hetty Zock. My gratitude goes to them all.

Wassenaar, 31 July 1995

CHAPTER ONE

INTRODUCTION

Breaking with the habits of earlier generations, historians of religion have been increasingly concerned in recent years with the description and analysis of the religious life of ordinary people. They no longer feel that they must be guided by 'considerations of religious merits' and that therefore it is their task 'to present evidence of the highest religious achievement' in the data which they study.[1] The challenge as many of them perceive it today is to bring to life the religion of the common man and the common woman. Ancient religions especially have too often been reduced to a hotchpotch of myth and ritual bearing little relationship to the forms of religious life as they actually existed. If the history of religions is to fulfil its role as a preserver and interpreter of past religious experience it should focus on the religions as practised in daily life.

My decision to write about family religion was made in the spirit of the above remarks. In the field of ancient Near Eastern studies little research has been done so far into the popular forms of religious life. With a few notable exceptions such as Rainer Albertz, most writers have cultivated other interests. When not absorbed by pure philology, cuneiform scholars have generally limited themselves to studies of the state cult and its theology. Biblical scholars, for their part, have hardly begun to rid themselves of the cloak of the theologian for whom historiography is essentially subservient to theology. One regrettable consequence of this state of affairs is a disregard for the interaction of state religion and family religion and for the formative impact of the latter upon the former. Owing to the historical conjunction of family religion and state religion, the study of the one is bound to lead to a keener appreciation of the other as well.

Religious Pluralism in the Ancient Near East

I have just made a contrast between family religion and state religion. Both the distinction and the definition of the two will not meet with undivided approval. It is necessary, therefore, to explain my reasons for choosing these terms.

---

[1] Quotations from Jacobsen 1976:4.

During the last twenty years there has been a growing awareness of the fact that many of the existing textbooks on ancient religions fail to do justice to their subject because they tend to see religion as the combination of the cosmology of the élite and the liturgy of the state cult. Though these are indeed religion, they are not more than a part of the entire complex of religion in a given civilization. No religion is a monolith; it is an assemblage of different clusters of beliefs, values, and practices, each cluster having its own niche in society. There is, in nearly every historical religion, an internal pluralism—pluralism because the diversity is tacitly accepted by most of the participants in the religious system.[2] Since the discrete clusters of beliefs, values and practices are at home in distinct social groups, it is possible to speak of 'domestic religion', 'city religion', 'royal religion', and the like. Despite this plurality of religions, the differences between them are not insurmountable. All these 'religions' are aspects of a single religious system; they are not separate entities, but hold together.[3]

In studies on the multi-layered nature of religions, the internal diversity is frequently framed as an opposition between 'official' and 'popular' religion.[4] While such a distinction may be appropriate when applied to religions with an established body of doctrine, adherence to which is the hallmark of orthodoxy, it is of little use when we are dealing with religions that have no dogmatics. Both the Old Babylonian and the Early Israelite religion belong to this class—as do most ancient religions.[5] It would be difficult to draw the line between official and popular in Israelite religion, especially since such a distinction—assuming it could be made—does not coincide with the distinction between normative and deviant as made by the biblical authors. The diversity within the ancient Near Eastern religions is better classified by its social setting. One could thus distinguish the religious practices performed by the family from those performed by the state; the religion of the one profession, such as the scribes, might be set off against that of the other; urban religion might be contrasted with rural religion; and in this way a series of oppositions could be delineated.

---

[2] Lanczkowski 1980:30-35.

[3] Note, e.g., the observations by Conrad 1980:486-488, who argues that 'personal religion' in Israel is to be seen as an aspect of the more encompassing whole of Israelite religion.

[4] Note, e.g., the title of a collection of essays edited by Vrijhof & Waardenburg, *Official and Popular Religion: Analysis of a Theme for Religious Studies* (Vrijhof & Waardenburg 1979). For Israelite religion see Segal 1976, who contrasts 'popular religion' with 'the established cult'. A similar opposition is implied by the title of Albertz' ground-breaking study *Persönliche Frömmigkeit und offizielle Religion* (Albertz 1978).

[5] Though the term 'canonical' is sometimes used by Assyriologists of certain cuneiform texts, it does not qualify the latter as having absolute authority in moral and doctrinal matters.

In most studies that deal with the issue of pluralism in ancient religions, only two layers are distinguished. Albertz, to mention a pioneer in the field, speaks in the title of his book about 'personal devotion' as distinct from 'official religion' (*Persönliche Frömmigkeit und offizielle Religion*).[6] In connection with the Mesopotamian evidence, Lambert makes a comparable distinction by using the terms 'state' and 'private' religion.[7] Though more refined subdivisions have been defended,[8] I believe that the division in two components is indeed the most useful one. In recent research a case has been made for a tripartition: alongside 'personal' and 'official' religion, there would have been the category of 'local' religion.[9] Once it is acknowledged that the category of personal religion should be abandoned in favour of the notion of family religion, however, the phenomenon of local religion merges with the latter. As will become evident in the course of this study, there was such resemblance between ties of kinship and ties of co-residence that a distinction between them is often difficult to make. Those dwelling in the same village or the same city quarter tended to conceive of their interrelation as one of kinship. Though the distinction between family religion and local religion is in principle justified, it is of limited practical use in the cases of Babylonia and Israel.

My preference for the term 'family religion' over the more widely used notions of 'personal', 'individual' or 'private' religion follows from the fact that the religious involvement of individuals in the ancient Near East takes place nearly always in the context of the group of which he is a member. Ahlström's reminder that 'religion was the expression of the life of a community' is justified. 'The religions of the ancient Near East have too often been looked upon from the viewpoints of modern man who is unable to comprehend that private religions held little place in these oriental societies,' as the same author remarks.[10] Though the adjectives 'personal' and 'individual' should not be simply dismissed,[11] it must be borne in mind that in the ancient world 'a person was not an individual in our sense of the word.'[12] Individuals were first and foremost members of a group, the principal one being the family. The term 'private', finally, is infelicitous

---

6 Albertz 1978.

7 Lambert 1975:191.

8 Westenholz 1976 distinguishes four 'layers': popular religion, the religion of practitioners not attached to the temple, the religion of temple practitioners, and the official religion of the ruling family.

9 Thus Weippert, M. 1990:153; Albertz 1992.1:40-43.

10 Both quotations from Ahlström 1982a, foreword.

11 Cf. Chapter Five: 'Family Religion and the Individual'.

12 de Geus 1989:54.

because there was hardly any privacy to family religion. The Near Eastern civilizations were unfamiliar with contemplation or silent prayer; acts of devotion always had a public aspect.[13]

In view of the contents of the religious life of the common man and woman in Babylonia, Syria and Israel, 'family religion' seems to be its most appropriate designation.[14] Its two characteristic elements, viz. the cult of the ancestors and the devotion to a local god, were both at home in the family. The responsibility for the continued cult of the forefathers was normally incumbent upon the paterfamilias. At regular intervals all family members were involved in the rites. The special worship of a patron god was a family matter as well. This 'god of the father' was venerated by successive generations of the family; his cult belonged to its heritage, so to speak. Such data show that the social setting of what goes by the name of personal religion was the family. This fact is best reflected by the term family religion, the use of which is less fraught with misleading associations than that of alternative expressions.

Continuity and Change

The subtitle of this monograph ('Continuity and Change in the Forms of Religious Life') shows that it is intended to be a study of the historical development of a religious phenomenon. Owing to the juxtaposition of three cultures (Babylonia, ancient Syria, and early Israel) it is at the same time comparative. This twofold approach requires a word of explanation.

A central thesis of this study is that family religion, despite local variations, displays very similar forms in Babylonia, Syria, and Israel, the main similarity being the conjunction of the cult of the ancestors and the worship of a family god. These three Near Eastern civilizations belong to a cultural continuum; they constitute, to borrow a term employed by some anthropologists, a field of ethnological study.[15] Ancient Syria, the civilization of Ugarit, and early Israel have a common Semitic background. To what degree their inhabitants are racially related is a moot question, but the fact that they have a common cultural heritage is not in doubt. Religion was part

---

[13] It may be of interest to note in this connection that the frequent expression *maḫar iliya akarrabakkum* does not mean 'I will pray for you to my god' (so the usual translations), but 'I will speak highly of you to my god'. The act of *karābu* ('to bless') is never performed in silence. Its intended effect was to increase the prestige of the beneficiary with god and man.

[14] Cf. Gerstenberger 1980:169 ('Familienglaube').

[15] See de Josselin de Jong 1977:167-168. Compare the notion of 'province ethnographique' used by Mauss & Hubert 1909:133.

of this heritage, as is clear from what has been called on occasion 'the common theology of the ancient Near East'.[16] Family religion in ancient Babylonia and family religion in early Israel are not incomparable. Modern Spain and mediaeval France, though centuries apart, share a European heritage which provides a basis for comparison; so do the Old Babylonian (2000-1500 BC) and the early Israelite (1200-700 BC) civilizations, the Ugaritic evidence (1450-1200 BC) serving as a middle term.

Against the background of a fundamental similarity the differences that emerge must be seen in correlation with the cultural specifics of the three civilizations, on the one hand, and the historical development of family religion in each of them, on the other. The times in which all religions were believed to follow the same evolution have long passed. We are well aware at present that historical developments are contingent upon historical circumstances and must accordingly be explained in regard to those circumstances. There are no general laws of development. To allow an understanding of the distinctive characteristics of Babylonian and Israelite family religion respectively, then, the study of the evidence is preceded in both cases by a description of the social and political setting. In this way, the dangers of a divorce of the religious phenomenon from its historical context can be avoided.

A truly diachronic approach to family religion is only possible to a limited degree for the religions of antiquity, simply because too much data are lacking to allow us to make a historical reconstruction. The approach followed here will therefore be diachronic only in part. The first part of this study consists of a description and analysis of Old Babylonian family religion from a synchronic perspective. A second part on Syrian family religion will serve as a transition to part three of the study, devoted to a description and analysis of Israelite family religion from a diachronic perspective. The terms 'Israelite' and 'Israel' are used here in their strict sense, as designations of what is also known as the Northern Kingdom or Ephraim. Though we must also work with imperfect data in the case of Israelite family religion, there is sufficient evidence to justify the attempt at a historical approach.

The at least implicitly comparative nature of this monograph is, in my view, essential for a proper appreciation of family religion in Israel. Without the knowledge of Old Babylonian family religion, it would be very difficult to interpret the few and mostly oblique references to family religion in the Bible. In the biblical texts as we have them, family religion has survived mainly as a substratum. Though its historical impact has been tremendous, as a study of the evidence will show, it might easily go undetected. Information

---

[16] Smith, M. 1952.

about the role of family religion in neighbouring civilizations, however, focuses the eyes on the traces which Israelite family religion did leave in the Hebrew scriptures. Israelite family religion must of course be reconstructed on the basis of Israelite data, just as our knowledge of Babylonian family religion must come from Babylonian sources. Yet a conjoint study of Babylonian, Syrian and Israelite family religion throws the evidence for each of them separately into an unexpected and revealing relief, whether by contrast or by similarity, thus making us see more than we would otherwise.

Within the overall design of the book, each of its three parts fulfils its own role. In addition to being a description and analysis of Old Babylonian family religion, the first part serves as a phenomenology of family religion. Under the title 'The Forms and Functions of Family Religion' it is meant to lay the foundation for the study of both Syrian and Israelite family religion. The part devoted to Syrian family religion has its place in the larger whole in that it demonstrates 'The Continuity of Family Religion', as the intermediate section is called. The continuity in question is both historical (the centuries described falling between the Old Babylonian and the Early Israelite Periods) and topographical (Ugarit being the topographical link between Mesopotamia and Palestine). The third and most extensive part of the book has been called 'From Family Religion to Personal Devotion', since it describes the waning of the traditional forms of family religion and the emergence of a religion of personal commitment to beliefs and values that transcend the immediate interests of the family and the local community.

Religion as a Focus of Identity

An archivist can be content to collect and order his records; the work of a historian, I submit, is not exhausted by the mere collecting and ordering of data. It belongs to his task to make sense of the past. Though the attempt at interpretation might disqualify him as a scientist, it is a duty that may not be renounced.

The basis for any interpretation of the past—the basis, in fact, for history as a scholarly discipline—is the assumption that there is some common ground between previous generations and ourselves. Of course, they were different from us, and their lives and times unlike our own. Yet beneath the evident dissimilarities, we must assume the presence of some continuity by virtue of which their experience is somehow relevant to us. The axiomatic assumption of a common ground justifies our use of modern notions and concepts in the effort to read and organize the past. To bridge the distance between them and us we are forced to continually shift from their terms to

our terms and back. To remain wholly within their terms (which is more than a matter of words, because these terms reflect and perpetuate a certain vision of reality) would defeat all efforts at interpretation. We cannot understand cultures different from our own unless we appropriate them by an effort of translation. Scrupulous adherence to the rule of *Eigenbegrifflichkeit* would condemn us to incomprehension.

The notions of 'religion' and 'identity' were unknown to the inhabitants of the ancient Near East. Because they nevertheless figure quite prominently in this book, a brief comment is in order. The word religion is so commonly used in studies of ancient Near Eastern civilizations, that it is seldom realized that it is not a native concept. Religion in the modern sense of the term is an abstraction of a fairly recent date, since it did not gain currency until the Enlightenment. A certain measure of detachment was needed before religion could be perceived as a separate province of human culture, and the term developed its modern meaning.[17] When the Babylonians or the Israelites spoke about the 'fear of God'—the expression that approximates our notion of religion most closely[18]—they were referring to religious worship and the respect of moral values. In my use of the term, religion refers to the various notions, values and practices involving non-empirical powers. By this definition, the mumbling of a charm to regain potency is as much religion as the pious worship of an aniconic and sternly moral god; it will not do to reserve the term 'religion' for the latter, and to place the former in the dim domain of magic or superstition.

Unlike the concept of religion, which is meant to be descriptive, the notion of identity is primarily interpretative. I use the concept in much the same way as the anthropologist William A. Christian does in a study of saints and shrines in a Spanish valley in the 1960's.[19] Studying the popular devotion to various local saints, Christian discovered that it serves to reinforce a sense of local identity.

> The shrine image seems to engage the social self of its devotees. They approach the shrine not as individuals, but also as members of collectivities. The shrine ceremonies are social as well as religious statements, reaffirmations of identity and solidarity. For this reason they are supported by those institutions which are based in the territory of grace, institutions that depend for their survival or smooth functioning upon the sense of identity that the shrine devotion consolidates.[20]

---

17 See, e.g., Byrne 1989; Harrison 1990.
18 Pfeiffer 1955.
19 Christian, W. A. 1972.
20 Christian, W. A. 1972:46.

Such phrases could, with some slight adaptations, be applied to the Old Babylonian and early Israelite forms of family religion as well. They, too, were social as well as religious statements. It would be misguided to limit the treatment of ancient Near Eastern religion to its doctrinal and liturgical aspects while ignoring its social effects. The assertion and reinforcement of identity, personal as well as collective, was a dominant function of family religion in Babylonia and Israel.

Though the construction and consolidation of identity is an important aspect of religion, one should beware not to overrate the explanatory potential of the notion of identity. Some currents in the sociology of religion tend to do so. In a book published in 1976, Hans Mol presents what he called 'a sketch for a new social-scientific theory of religion' under the title *Identity and the Sacred*.[21] It is an important and at times provocative book which views religion as an instrument of sacralizing identity. Mol is quite right to stress that the search for identity is universal to all human societies (from 'the most primitive of tribes' to 'the most advanced societies'[22]), but he errs in positing it as the quintessence of religion. Religion fulfils a variety of functions. The sacralizing of identity is not the least of them, but certainly not the only one. Aside from the fact that religion cannot be reduced to its social functions, these functions themselves are more diverse than Mol suggests—unless one is prepared to accept an extension of the notion of identity to the point where it becomes a label with little meaning.

By highlighting the role of religion in the identity construction of its followers, then, I simply choose one possible angle from which to approach family religion in the ancient Near East. I do not wish to suggest that identity is the only category in which the function of family religion can be understood. Such things as the search for meaning, the sacralization of a moral code, and the need of moral comfort in times of distress are no less important in the practice of family religion. They will, in fact, receive due attention in this study. The reason why I have nevertheless chosen to focus on the notion of identity is related the modern concern with identity. Since the work of Erikson on psychological identity[23] and Tajfel on social identity,[24] the notion has entered the vocabulary of a great many people with no professional interest in psychology or sociology. By using it as a key to the understanding of ancient religion, I hope to demonstrate the value of the concept for our appreciation today of a religious phenomenon of the distant past.

PART ONE

BABYLONIA
THE FORMS & FUNCTIONS OF FAMILY RELIGION

INTRODUCTION TO PART ONE

No place or period provides a more suitable entry to the study of family religion in the ancient Near East than Babylonia in the first half of the second millennium BC. In contrast with later periods and other civilizations, the Old Babylonian culture has left a huge amount of documents emanating from the private realm. Though these records do not have the qualities of the literary works from the stream of tradition, such as the Gilgameš Epic or the Story of the Flood, they are a precious source of information on the daily life of the Old Babylonian citizens. Family correspondence, letters to officials and to gods, cylinder seals with personal inscriptions, deeds of inheritance, balance sheets and records of litigation allow us a glimpse of family life in Babylonia.

Religion was one of the realities in the life of the family. Amid an abundance of references to economic matters, our records also contain information about religious rituals and beliefs. The perseverance which the collection and analysis of these data requires is rewarded by a compelling view of Old Babylonian family religion. The two elements of which it consisted were the cult of the ancestors and the veneration of a local patron deity. The one afforded the family a sense of continuity and tradition, the other provided a way of asserting and maintaining a local identity. Both aspects of family religion also had a legitimizing function. Through the cult of the ancestors, the paterfamilias was confirmed in his position as successor to his forefathers. The devotion to the family god, on the other hand, had the attendant effect of legitimizing the social station of the family, since health, wealth, and a good reputation were celebrated as his gifts. Because the ancestors and the family god were assumed to reprove or reward the conduct of the family members, the practice of family religion was conducive to compliance with the culturally accepted code of behaviour.

The family religion we get to know through the study of the Old Babylonian data is not the religion of a cross-section of the population. The channels of written communication were dominated by the upper classes, and it is their religion we learn about. It also has an urban bias, since most of these people lived in the cities. Despite the social imbalance of our information, however, it may be more representative of the general population than might be inferred from the above remarks. The middle and lower classes regarded the gentry, if we may use that term, as a model to emulate. Although the realities of their lives might suggest otherwise, their aspirations did not

greatly differ from those of the élite. Nor did their religion, presumably, even though it was practised with more modest means. The main form of religious involvement of the men and women in Babylonia was family religion. They held on to it, in good days and in bad days, at home or abroad, as to the one thing that would give them comfort and a sense of belonging.

CHAPTER TWO

FAMILY AND HOUSEHOLD IN THE OLD BABYLONIAN SOCIETY

Being a social phenomenon, religion cannot be properly understood when studied in isolation from the social setting in which it functions. This rule is applicable to family religion as much as to any other form of religion. Unless we have a clear idea of the Babylonian family and its place in the Old Babylonian civilization, Old Babylonian family religion is bound to remain an elusive reality. The present chapter is therefore devoted to a description of family life in the Old Babylonian society.

The Old Babylonian City

For most Mesopotamians of the Old Babylonian period, life as they knew it took place in the city.[1] The city had been there as far back as they cared to remember: before kings reigned there were cities, antediluvian and defying the passage of time.[2] Its inhabitants could scarcely conceive of a civilized life outside an urban environment. Though one or two later texts may extol military life over life in the city ('the finest city food cannot compare with what is cooked on the embers, best beer, however sweet, cannot compare with water from the goatskin, a palace on a platform cannot compare with the shelters of [a camp]'[3]), the general sentiment around 1750 BC was the opposite; to most Babylonians, civilization was by definition urban.[4]

To form an idea for ourselves of life in an Old Babylonian city (u r u, *ālum*) we can draw on written and archaeological sources; for a handful of cities the two are conjointly available. Some Old Babylonian cities have been the subject of a methodical investigation from the literary as well as the archaeological angle; as a result we have a fair idea of certain aspects of life

---

[2] For the notion of cities predating the institution of kingship (or the descent of kingship from heaven, as the Mesopotamians put it), see Jacobsen 1939; Hallo 1970.

[3] *Erra* I 57-59. For English translations see Dalley 1989:282-315; Foster 1993.2:771-805.

[4] On the earliest Mesopotamian cities see Adams 1966; Redman 1978; Nissen 1983:41-139. For discussions of the Mesopotamian city in general see Brentjes 1968; Oppenheim 1969; 1977[2]:109-144; Stone 1991; Postgate 1992:73-87.

at Ur,[5] Nippur,[6] and, on the middle Euphrates river, Mari.[7] The textual data that lay at the basis of a demographic study of Sippar, near Babylon, can now be supplemented by an increasing number of archaeological data.[8] The extant information on most Old Babylonian cities, however, is of either the one kind or the other, and always fragmentary. Therefore, a synthetic view of Old Babylonian city life can be obtained only by means of a combination of scattered data, infused with a semblance of life by an informed effort of imagination. In this, the data of previous and later periods are of some help, since the Old Babylonian city is the heir of the third millennium cities and leaves its legacy to later periods.[9]

One of the dominating features of the Old Babylonian city was its wall (*dūrum*). The city wall offered seclusion as much as protection: it constituted a frontier between the inside and outside, and stood as a symbol for the city itself. That is why, to celebrate the city of Uruk, the Gilgameš Epic chooses to sing the praises of its imposing walls (I i 16-19; XI 303-305). The surface area within the walls was not entirely built-on; according to the Gilgameš Epic 'one square mile is city, one square mile is orchards, and one square mile is claypits' (XI 306-307). Though this division of Uruk, schematic and reflecting a specific moment in time, is not simply applicable to other cities, there is evidence of a considerable amount of undeveloped land within the walls of other cities as well.[10] Sippar, for instance, had various fields, orchards, and pasture areas within its perimeter.[11] The extra space was used in times of war to accommodate those from outside the city who took shelter within its walls;[12] spare room was necessary as well for the extension of houses as families grew.[13]

Just outside the city walls were the suburbs which offered accommodation to the overflow from the city and to the semi-permanent encampments of sheep 'nomads'. According to the Instructions of Šuruppak, 'the houses

[11] Harris 1975:20.

[12] See von Soden 1989:306; Charpin, in AEM 1/2:364.

[13] See Jacobsen, commentary to proverb 2.144, in Gordon, E. I. 1959:486.

of the outer city prop up the inner city.'[14] The saying, implying that the imposing elements need the support of the humble ones, conveys the image of a conglomerate of houses built close to the outer side of the city wall. These outgrowths of the city could be enclosed by a secondary wall. Distinct from both the city and the suburbs is the *kārum*, originally designating the harbour where goods were unloaded (*kārum* means 'quai'), but by Old Babylonian times the term for the local trade centre and the merchants in charge of it; the often foreign traders enjoyed administrative independence and had a separate legal status.[15]

One or several gates afforded entrance to the inner city (called *libbi ālim*). Its plan consisted of a maze of narrow and often tortuous streets, about two metres wide, criss-crossing the city from wall to wall. Though laid out in what comes close to a rectangular grid, these roads and alleys often followed a sinuous course owing to natural variations in the terrain. Houses on each side marked the gradual transition from the public to the private domain—if street and domestic area may be so defined. The relatively small houses[16] were turned inward: a door, preferably unobtrusive, gave on to a reception room (perhaps known as the *papāḫum*[17]). Penetrating further into the house, the visitor would find a square yard with cooking facilities. Alongside the yard were storage rooms, and at the back of the house the living quarters and the bedroom.

The temple of the city god, situated on what was usually the most elevated part of town,[18] dominated the silhouette of the city.[19] As the principal monumental building, the temple could be regarded as the heart of the Babylonian city. Historically, the Mesopotamian city seems to owe its origin to the temple: the ideology according to which the god was owner of the land, and the citizens his servants, was the key to success of the earliest Mesopotamian cities.[20] Remnants of this theological vision are still present in the Old

[18] Stone 1991:237.

[19] On the architecture of Mesopotamian temples see Heinrich & Seidl 1982.

[20] The presumed Sumerian ideology of the temple-state has been reconstructed by Falkenstein in his influential essay *The Sumerian Temple City* (Falkenstein 1974), originally published in 1954 under the title 'La cité-temple sumérienne' in the *Cahiers d'Histoire Mondiale* 1:784-814. More recent presentations stress the fact that the temple was not the only land-owner; see, e.g., Foster 1981.

Babylonian period: the temple was a major land holder, and possessed a variety of great riches; many a citizen depended on the temple for his livelihood. Yet for all his impact on life in the city, the divine inhabitant of the temple remained mostly inaccessible to ordinary citizens; they communicated with him (or, less often, her) by written statements or through the agency of intermediaries. Only on holidays was a closer contact possible. New Year was the most prominent among the festivals; on that occasion the city god left his temple for a procession along the monumental road that led to a chapel just outside the city. On such days people thronged around the temple area and at the sides of the procession road; there were musicians, acrobats, and wrestling contests; the inhabitants of the city and the surrounding countryside had a few days off; they met and had the opportunity to strike up new acquaintances.[21]

In addition to the main temple, most cities could boast the presence of a variety of secondary temples and chapels scattered over the various quarters and neighbourhoods.[22] Such sanctuaries have been found in Ur,[23] Nērebtum (modern Išchāli),[24] Šaduppum (Tell Harmal, on the fringes of modern Baghdad),[25] Ešnunna (modern Tell Asmar),[26] Tell ed-Dhibāʿi (ca. 10 km east of Baghdad),[27] and Isin.[28] Most of these ceremonial buildings are quite simple, consisting of an open courtyard and a covered sanctuary, in the back wall of which is a recess for the cult statue. They usually possess an altar; some of them have a room for votive gifts and images of protective demons affixed to the entrance. Sir Leonard Woolley, the excavator of Ur, qualifies many of these buildings as 'public chapels' and compares them to the wayside shrines of a Roman Catholic town.[29] In the absence of written evidence, the gods to whom these chapels were dedicated can usually not be

---

21 The only monograph on the Babylonian New Year festival is Pallis 1926. It should be used with circumspection, since both the relevance of the collected data and their interpretation by Pallis are debatable. More recent surveys include Falkenstein 1959; Black 1981; van der Toorn 1990; Pongratz-Leisten 1994. It should be stressed that our knowledge concerning the new year festival is based almost exclusively on first millennium sources.

22 See, in addition to the literature mentioned in the following notes, Wiseman 1960; Barrelet 1978:274-275; Heinrich & Seidl 1982.1:167-202; Heinrich 1983. It is not impossible to interpret some of the alleged 'domestic shrines' (see, e.g., the references collected by Albertz 1978:252 n. 152 and Heinrich & Seidl 1982.1:193-196) as public chapels.

23 Heinrich & Seidl 1982.1:190-193 (with references to further literature).

24 Hill & Jacobsen 1990:79-82.

25 Heinrich & Seidl 1982.1:189-190 (with references to further literature).

27 Mustafa 1949.

28 An Old Babylonian building in Bauteil 5 (Hrouda 1981:37) is interpreted by Mayer-Opificius 1984:145 as a street chapel, perhaps dedicated to the god Sùd.

29 Woolley 1976:30-32.

identified.[30] A text from our period found at Sippar records the dedication of a sanctuary (é, *bītum*) by one Nūr-Ilišu 'for his god' Ḫaniš-and-Šullat.[31] The chapel was not for personal use only; Nūr-ilišu appointed a fellow-citizen as its priest, and promised never to dispute the latter's title to the priesthood.[32] The foundation and maintenance of such a shrine, open to the public, was an act of private charity. Other texts, from different places and later periods, show that the existence of privately financed shrines is not limited to the Old Babylonian period.[33] Their founders may have expected divine benevolence as their reward in addition to an increase in their social prestige.

The appointment of a specialized priest, referred to in the Sippar text just mentioned, reflects a division of labour that is characteristic of urban society. Though most families made their own bread, the professional baker catering to the needs of the temple only,[34] all kinds of other services were provided by specialists. The Codex Hammurabi mentions physicians, veterinary surgeons, barbers, house builders, ship builders, brick makers, smiths, carpenters, shoemakers (CḪ §§ 215-224, 253-274), and all of these professions (often part-time) are found in the records of daily life. There were also scribes, potters, butchers, innkeepers, brewers, tanners, goldsmiths and craftsmen of various other kinds.[35] Though the presence of a market is doubtful,[36] it is evident from the texts that silver was used as a means of payment.[37] In the city were shops and taverns, some of them owned by women, where such money could be spent.[38] Those active in the same occupation tended to exercise their profession in the same quarter.[39] A relatively large labour force was active in the city's work-house (*nupārum, nepārum*) or 'mill' (*bīt ararrim*), which also served as a place of detention. Here slaves, distrainees, and prisoners of war performed the menial tasks of

grinding barley and weaving cloth, usually in the service of the palace or the temple.[40]

Daily Life in the Babylonian City

If life in the city held more attractions than an existence in the country, it was by no means a life of ease. Unless the city's ruler achieved great success in his military campaigns, the city could not boast great riches. Its inhabitants led a sober life. Their diet consisted of cereals, onions, garlic, and porridge, milk and butter, fish, and modest amounts of meat.[41] We hear of large amounts of beer, but most of it was of second rate quality; people drank it in part out of necessity, because most of the water was unhealthy.[42] The furnishings of private houses were not luxurious. Judging by the items mentioned in wills and marriage contracts, there were reed-mats, cushions, and a limited number of wooden pieces such as a table and chairs, in addition to cutlery, a grindstone and an oven.[43] Clothes, for most citizens, were simple. In the better-situated families the women wore jewellery; those less well off had to borrow their ornaments if they wanted to make an impression at the city festivals.[44]

In the modern perception, the phenomenon of the city is often associated with the threat of anonymity and isolation. Such was hardly the danger in the Old Babylonian city where the average population did not exceed four thousand souls.[45] The major inconvenience of the city was the lack of privacy. Houses gave directly on to the street, and the walls between the one house and the other were insufficient to deaden the noise of family life. Literary counsels advising not to get involved in the quarrels of the neighbours convey a glimpse of life in a city neighbourhood; it was not easy to keep domestic disorder a secret for others. In characteristic anthropomorphic manner, the Babylonians ascribed a special desire for quiet to their gods. The

The *enûtum* (furnishings) records drawn up on the death of the owner of a house convey a general idea of the simplicity of the furniture of most Mesopotamian houses, even those of high officials, see Michel, C. 1994:289-290.

[44] Note the warning in the Instructions of Šuruppak, lines 213-216, against choosing a wife during the festival, because her apparel may well be borrowed. For the interpretation of the text see Wilcke 1978:227-228.

[45] See the calculation in Postgate 1992:80.

flood had been brought down upon mankind, according to the Old Babylonian Atraḫasis Myth, because the human creatures made too much noise; the din kept the gods awake. The mythological theme reflects a central concern to the people of the time. Refuse was another problem in the densely populated cities;[46] the importance attached to a pleasant scent and the metaphorical qualification of improper behaviour as 'malodorous'[47] reveal a sensitivity to smell almost as acute as that to noise.[48] A priest had to have a clean and fresh scent in order to be pleasing to the gods, a rule based on the assumption that gods reacted quite like humans.[49]

During the day the sounds of city life hardly ever subsided. As soon as dawn had broken the hum of daily life began. After the first meal of the day people went out to work; some to their shops in the city, others to the palace or the temple—the two 'great organizations', as Oppenheim called them—, others yet to the fields just outside the city walls. In the inner city vendors sang the praises of their goods, cart drivers ordered people to get out of their way, while children produced the noise that usually attends children's games.[50] All came to a temporary rest at noon, at the hour of the siesta. People returned home to find coolness and rest, and the gates of palace and temple were closed; sleep was prohibited only to the guardians of the gates.[51] In the late afternoon, as the worst of the heat had subsided, life began anew. The second meal of the day was eaten, and people returned to their chores. Later still they would gather in the city gate which served as the city's square, or in one of the bars, mostly run by women.[52] At nightfall the

gates were closed and silence settled in. Woe to the lonely traveller outside the city; neither god nor man would protect him.[53]

The Family and the Household

The basic nucleus to which the Babylonian belonged, whether he lived in the city or in the country,[54] was the family (*bīt abim*).[55] It was the social and emotional centre in the life of the Babylonians,[56] providing them with a corporate identity nothing else could replace: the family constituted a group of people participating in the same 'flesh and blood', to quote the words of a central metaphor. Those who shared in this 'flesh and blood' were 'brothers'. Everybody else was a 'stranger' (*nakrum*), being 'foreign' (*aḫûm*) to the family.[57]

The dimensions of the Old Babylonian family are not clearly defined; usually the term *bīt abim* refers to a nuclear family consisting of a man and his wife and their two or three children (polygamy was exceptional, and children in excess of the number of three above average). Grown up and married, having themselves become parents, children continued to refer to their own family as part of their ancestral *bīt abim*. Unlike the word *qinnum*, 'nest', which also serves as a designation of the family, the notion of *bīt abim* has both a synchronic and a diachronic dimension. At a synchronic level, its semantic range covers both the 'nuclear' or the 'extended' family.

The family is referred to as the 'house of the father' (*bīt abim*, Sumerian é a d - d a), the paterfamilias being its most prominent member. His role had two aspects: within the family he was the highest authority, and to

[53] At night 'the noisy population has become quiet, the doors that were open are barred. Gods of the land, goddesses of the land, Šamaš, Sîn, Adad and Ištar have receded into the lap of heaven; they give no judgment, they decide no cases. The night is veiled, the palace is hushed, and the open country is deadly still. The wayfarer calls to the god, but He who is beseeched keeps on sleeping; the true Judge, Father to the orphaned, Šamaš has gone off to his bedchamber.' From the Old Babylonian Prayer to the Gods of the Night, lines 2-15. For a full translation and references to the current editions see Foster 1993.1:146-147.

[54] For an illustration of the role of the family in the traditional society of the Amorites see ARM 23, 496.

[55] On the family see Sjöberg 1967; Kraus 1973:47-48; Gelb 1979; Stone 1981; Wilcke 1985:219-241; Diakonoff 1982:37-48; 1985; Donbaz & Yoffee 1986:66-67; Glassner 1986; Leemans 1986; Powell 1986; Stone 1987; Stone & Owen 1991:1-11.

[56] The attachment to the family transpires in the sentences which this father wrote in a letter home: 'Don't you know that someone abroad is eagerly awaiting messages from his home?' (TCL 17, 19 [10] *kīma alānû ana šipirtim* [11] *ša bītišu uznāšu ibaššiā* [12] *attā ul tidē*).

[57] Cf. Van Lerberghe & Voet 1991, 77 [27] *anāku ana aḫiya kâta* [28] *ul aḫiāku* [29] *šīrka u dāmūka anāku*, 'I am not foreign to you, my brother, I am your own flesh and blood'; Whiting 1987, 11 [3] *anāku aḫuka* [4] *šīrka u dāmūka* [5] *anāku nakrum* [6] *nakarma* [7] *anāku ana awātīka* [8] *azzaz u attā* [9] *awātī šime*, 'I am your brother; I am your own flesh and blood. A stranger would be hostile, whereas I support you; now you pay attention to my affair.'

society at large he represented the family; the position was taken by 'the oldest male member in full possession of his faculties'.[58] He held 'paternal authority' (*abbūtum*, n a m - a d - d a). Acting as the head of the family, he was their spokesman in court and took part in the sessions of the city elders —if the family enjoyed sufficient social standing to have a representative among the elders. 'Paternal authority' did not at all times devolve upon the actual father. On occasion, the eldest son would hold the position. Witness some of the literary sources, the 'big (i.e., eldest) brother' (p a $_4$ or š e š - g a l) had a position of great authority, even during the lifetime of his father.[59] This tallies with the fact that the Sumerian also has a special term for the eldest brother of the father, viz. p a b i l g a, literally the 'oldest big brother'.[60] Though the Sumerian terminology has been interpreted as reflecting an archaic fratriarchy,[61] there is no indication of the existence of fratriarchal structures in the Old Babylonian family. Testamentary texts from later periods show that women could also be given the juridical status of father; there is no convincing way in which these arrangements can be interpreted as relics of a matriarchal age, either.

The Old Babylonian family is patrilinear (inheritance is through the male line) and patrilocal (the wife goes to live with her husband and his family). Though the influence of women in the family could be great, judicial authority lay with the men. The women of the family had to remain in the background, having their domain in the private quarters of the house (to be distinguished from the reception area at its entrance). A man expected his wife not to behave as 'a woman who goes out' (*wāṣītum*). Officially, the city's public facilities (such as the gate and the bar) were open to her; yet it was understood that most of these were places a well-bred woman would not visit, except on special occasions. Modesty, submissiveness, and a sense of decency were impressed upon the Babylonian wife as cardinal virtues.[62] Daughters were to display similar qualities from a young age onward; only at celebrations and festivals was there a climate in which they might freely mingle with the men folk—a temporary permissiveness which sometimes led to undesired, if predictable, results.[63]

63 According to a paragraph of the Middle Assyrian Laws, 'violation' (here a juridical term for sexual intercourse without the legitimacy of marriage) might take place during the 'city festival', see Driver & Miles 1935:422-423, § 55. A bilingual incantation from the first millennium BC refers to the Ardat lilî demon as 'the girl who did not rejoice with the other girls, who was not seen at the festival of her city' (*SbTU* 2, 7:5-6).

The nuclear family was part of the larger network of the clan (*kimtum*, Sumerian i m - r u - a or i m - r i - a).[64] Such a clan could be dispersed over several cities.[65] Members of the clan were under the obligation to help one another. Even if the ties of kinship were thin, as long as one was family, one was entitled to its protection against outsiders.[66] An example of an appeal to kinship solidarity is found in the letter which announced the arrival of Sîn-abušu in Sippar. The man did not know a soul in the city, and had to rely on the hospitality of his wider kin-group to provide him with lodgings, which is why he needed a letter of introduction. Its writer informs the addressee that he has sent this Sîn-abušu to Sippar, 'to you', and insists that the man be treated as family: 'That man is no stranger to us; he is our brother, from among our own clan (*kimtum*). Provide him with a decent guest-house and treat him correctly; his heart must not be bitter.'[67]

The family inheritance followed the male line. A man's part in the inheritance qualified him as a full member of his family group. The males of the extended family had coparcenary rights to its land.[68] It followed that transactions in which a portion of the land changed ownership had to be witnessed by all share-holders. This exclusively male society was also present on other occasions of great moment, such as the division of the patrimony among the children. Middle Babylonian inheritance texts from Emar are explicit in their reference to the 'brothers' in whose presence a man announces his will; since his possessions are part of the clan it is only reasonable that the clan members should be present.[69] Old Babylonian texts are not as explicit. Yet prosopographical research shows that here, too, the witnesses often belonged to the family of the testator.[70] Women are rarely mentioned among those witnessing the act: their share in the clan property was merely indirect, either through their fathers or through their husbands.

---

[64] The word *kimtum* may refer to the nuclear family, as in TCL 18, 81 ([4] *aḫatka imtūt* [5] *ummaka marṣatti* [6] ▪ *Sîn-magir mārī imtūt* [7] *kušdannima* [8] *kimtī lā iḫalliq* [9] *[tam]karūtum lā itabbalu*, 'Your sister has died, your mother is ill, and my son Sîn-magir has died. Come here! My family should not perish; the creditors should not take along (its remaining members).' The letter is perhaps a school exercise, and thus not 'real', see Kraus 1964:28-29). (Other terms yet, such as *salātum* (*salūtum*), can be used for the still wider web of kinship established by matrimonial relations. On the various terms see Kraus 1973:47-49.

[65] Cf. TCL 18, 85 [18] *ina ālim šâti kimtī* [19] *u aḫī attāma*, 'In that town your are my family and brother.'

[66] Cf. TCL 17, 21 [31] *kīma aḫam u qerbam* [32] *[l]ā išû epšēku*, 'I have been treated like somebody who has neither brother nor relative.'

[67] AbB 12, 144 [15] *awīlum šû* [16] *ul nakaranniāšim* [17] *aḫuni libbu kimt[ini]* [18] *bīt napṭ[arim ṭ]ābam* [19] *š[u]kuššum* [20] *ittišu išāriš* [21] *dubub* [22] *li[bb]ašu [l]ā im[a]rraṣma.*

[70] Cf., especially for the older period, Bottéro 1971:104-110.

The contrast perceived between kin and non-kin made the need for solidarity within the kin group all the more important. When the world outside is seen as dangerous and inimical (to the point where the language does not distinguish between 'foreigner' and 'enemy', both being referred to as *nakrum*), division within the family cannot be tolerated; it would be harmful to all its members. Hence the unwritten code of conduct commends filial obedience, fraternal solidarity, and parental care as essential virtues.[71] Internal strife and dispersion of the family were dreaded as major evils: to oust people from their clan (*kimtum*), or to disperse a united family (*qinnu puḫḫurtu*) would inevitably elicit a curse from the gods.[72] The dwindling of family values (*aḫḫūtum*, literally 'brotherhood') to the point of extinction is an apocalyptic horror believed to occur only in times of great distress.[73] At such times 'the son will not concern himself about the father's well-being, nor will the father about the son's; a mother will happily plot harm for her daughter.'[74] In the worst of all scenarios, famine would disrupt family solidarity to the extent where a mother would not open the door to her daughter, but would be watching the scales at the latter's sale; children would be served up for dinner, as the one house consumed the other.[75]

In the early Babylonian civilization, which combined a devotion to family values with a strong sense of public propriety, open conflicts within the family were regarded as a disgrace. Children were to 'honour' (*kubbutum*) their parents and to provide for their needs; disobedience and disrespect were severely punished.[76] The woman who married into the family was to respect her husband and to comply with the wishes of his parents. No family is impervious to tensions and quarrels, however. To reconcile the reality of family discord with the ideal of undisturbed harmony, the Babylonians sought to blame forces outside, or on the fringes of, the family when conflicts came to light. Public scandal was avoided, or at least minimized, by mythological explanations. Demons might be invoked as the cause of the trouble or, more characteristically perhaps, witchcraft and the evil eye.[77] Such explanations exonerated the principal members of the family and helped to maintain the illusion that the family did not suffer from internal division but from attacks by outsiders.

Solidarity was in the first place a matter regarding the men of the family:

discord could be conceived of, perhaps tolerated to a degree, if it had been instigated by the women having been married into the family. All the men of the kin group were 'brothers' (*aḫḫū*); they were supposed to honour their 'brotherhood' (*aḫḫūtum*). The feminine equivalents of these expressions were seldom used: outside the nuclear family women rarely spoke of one another as 'sisters', nor did they pledge loyalty to their 'sisterhood'. Patrilinearity and patrilocality characterized the Old Babylonian family. In the Babylonian perspective women were either temporary or associate members. Daughters would eventually marry and leave the family, and wives who had joined the family originally belonged to a different family. Even if they were expected to live up to the same standards of loyalty as the men, their position was not the same. Women were regarded as the vulnerable elements in the familiar cell; in cases of alleged sorcery or debauchery and dissolution, they were almost invariably the first to be suspected.[78]

The domestic situation of the Old Babylonian family is not uniform; it differs from period to period, from city to city, and even from neighbourhood to neighbourhood. A clear distinction must be made between house and household; one house could provide room to more than one household, each of them centred around its own 'fireplace' (*kinūnum*).[79] In cities like Ur and Nippur, there was both nuclear family residence and multiple family residence.[80] If the situation at Ur can be taken as the rule, the Old Babylonian houses measured about 100 square metres. In earlier periods houses were more spacious (about 400 square metres at Fara and Abu Salabiḫ), which may reflect a development from extended family residence toward nuclear family dwelling. Also in cases of nuclear family residence, though, it is clear that families endeavoured to stay close together. It was popular wisdom to have a vacant lot adjacent to one's house; when the children married and needed houses of their own, they would at least remain neighbours.[81]

Even where houses were built for single family residence, the extended family or the 'clan' followed a pattern of residential propinquity. One of the excavated quarters of Old Babylonian Nippur shows evidence of occupation by kinsmen and retainers of one given family.[82] Familial households in Ur,[83] Kiš,[84] and Nippur[85] consisted, on an average, of twenty to forty persons. In

Ur, these corporate families lived in clusters of adjacent houses.[86] Such clusters of houses compare to the *darb* (plural *durūb*) of the traditional Islamic city, i.e., the alley or cul-de-sac around which the houses of related families were built.[87] In the Babylonian cities, too, related families often lived in proximity to one another.[88]

The neighbourhoods or sections of the city (the so-called *bābāti*, *bābū*, *bābānu* or *bābātu*, singular *bābtu* and *bābu*) were inhabited by groups formed around one or more families or an institution. It would be untrue to say that ties of consanguinity united all those living in the same neighbourhood, yet the family was the social model of the interhuman relations within the ward, as evidenced by the early second millennium counsel to treat 'the son of the ward' (d u m u - k á - g i$_4$ - a) as a brother (š e š - g i n$_7$).[89] On occasion, the ward served as a substitute for the family, as in the case where a man, having lost his own son, adopted a neighbour to be his heir.[90] The neighbourhoods were villages in an urban setting; their existence favoured the maintenance or emergence of residential communities with a number of related interests. In this respect the city may be called a conglomerate, not of individuals, but of separate groups.

An indication for the continuing importance of the larger kin group in the urban civilization of ancient Babylonia is the common ownership of land. The existence of collective land property, owned by extended family households, goes back to the third millennium.[91] The coparcenary rights of the clan to land property can be inferred from the large number of sellers mentioned in third millennium deeds of purchase.[92] Witnesses to the transaction were either related to the seller—so mostly—or the buyer.[93] In any event they were always from the neighbourhood.[94] The alienation of land was subject to certain restrictions, because it belonged to the inheritance of the clan.[95] Therefore, when a sale did occur, the transaction was accompanied by

ritual acts designed to create a symbolic bond integrating the buyer with the seller and his kinsmen. By means of gifts and a communal meal, offered by the buyer, the latter became in a sense a member of the clan.[96] There was an effort, then, to maintain the illusion that the land remained 'in the family'. By Old Babylonian times these ideas and customs had still not fallen into abeyance. According to sources from Ur, the average group of landholders consisted of eight men; which means, as matter of consequence, that the extended family consisted of 30 to 40 persons.[97] Only close agnatic kin were entitled to buy fields; adoption was the main legal device by which this principle was circumvented.

The data on the residential propinquity of related families, as well as the interpretation of the land of the family as an almost sacred clan inheritance, shows that the individual in Old Babylonian society derived identity not so much from his own household, but from the kin group of which his family was a part. His portion in the land of the fathers was proof of his rightful place within that community. That is why people at Sippar, when forced to sell their land, kept a small part called the *ezibtum*, 'left over', as a symbolic share in the family estate.[98] The clan (or the kin group, if a more general term is preferred) provided a link, too, between the individual and the wider community in which he lived—first the neighbourhood and then, usually, the city. The society he lived in may be visually represented as concentric circles; from circumference to centre there were the city (or, in the case of the country, the land or the tribe); the neighbourhood (or the village); the house or compound of houses; and, finally, the individual household.

The Social Stratification

Families and clans were part of the wider network of Old Babylonian society. The structure of that society was not egalitarian. In the Old Babylonian city—and in the Old Babylonian civilization in general—several hierarchies can be distinguished. The first stratification to be discussed is social, the second political, and the third religious. Though correlated, these stratifications are best separately dealt with.

Each man and woman in the Old Babylonian society had a proper station in one of the three strata of the social hierarchy which, provisionally, may be referred to as the upper, middle and lower classes.[99] The existence of an upper class is evident from the designation of certain people as *kabtum*

(literally 'weighty'); a *mār kabtim* is a man of importance. These notables are often mentioned alongside the 'palace' (*ekallum*) or the 'king' (*šarrum*) and the man of substance (*rabium* or *rabûm*).[100] Though they have influence with the king, they cannot be reduced to mere royal servants. They are best described as the aristocracy out of whose midst the king had arisen, and which formed his principal support group.[101] In texts from the Old Babylonian city of Mari, the group is referred to as the *qaqqadātu* ('chiefs'),[102] the *wēdûtu* ('notables'),[103] or the *mārē damqūtim* ('nobility' as opposed to 'the poor fellows', *eṭlūtum lapnūtum*).[104]

The usual term for a member of the social élite is *awīlum*. In addition to its current meaning 'man' or 'human being', the term is a social appellation best rendered as 'gentleman'.[105] The designation has moral overtones. In business, one is to behave as a *mār awīlim*, which means that one is to adhere to certain ethical and social standards.[106] The code of behaviour of the *awīlum* makes no clear distinction between ethics and etiquette: an *awīlum* should know how to behave decently; he should not look greedily on food and on beer when invited to dinner.[107] Likewise a 'lady (*awīltum*) should conduct herself 'in accordance with [her] *awīlūtum*-status'.[108] The prestige of the *awīlum* is not based on wealth alone; it is wealth in combination with a sense of rectitude, generosity, and munificence The *awīlū* were originally the landed gentry; though many of them had earned their riches through commerce, they looked upon their position as inherited. Theirs, they believed, was a prominence by tradition, protected by the gods and beneficial to society.[109]

108 AbB 12, 117:113.

109 Cf. the appeal in an Old Babylonian letter addressed to a group of nobles: 'Because the god has accepted your prayers, you are now gentlemen and men of property; all your affairs have prospered' (AbB 3, 52:19-21). Even if the author of this letter was merely

A member of the aristocracy regarded himself as quite superior to the *muškēnum*. By itself, the term *muškēnum* denotes the 'population' in the most general manner. The king, referring to his subjects, speaks of the *muškēnum* as a collective; they are 'his' *muškēnum*, i.e., his subjects.[110] It is in the king's interests to act in such a way that the 'opinion of the subjects' (*pî muškēnim*) should not turn against him.[111] There is no trace of condescension here; the term *muškēnum* is used neutrally, so to speak, to refer to 'inhabitants of the land'.[112] When *muškēnum* appears in contrast with other terms, however, it assumes the nuance of 'underprivileged'. Thus the population known as *muškēnum* is contrasted with the 'strong' (*dannum*), that is wealthy, citizens;[113] they are opposed to the 'notables' (*wēdûtu*);[114] and to the men of eminence (*kabtum*).[115] To speak of the *muškēnum* as 'weak' or 'powerless' ('I have not hastened to take anything by force from the powerless *muškēnum*'[116]) is almost a redundancy.

The most common pair of opposites is that of the *muškēnum* versus the *awīlum*. In contrast with the *awīlum*, the aristocrat in position and manners, the *muškēnum* is the commoner who is common in his behaviour.[117] Even though the *muškēnum* need not be wholly without means, he is considerably removed from the *awīlum*—in the eyes of the latter, that is. Some statements suggest that there was no common measure: 'I am a *mār awīlim* whereas he is a *mār muškēnim*: how could he possibly return my favour?'[118] The relationship between *muškēnum* and *awīlum* is similar to that obtaining between the Roman *cliens* and his *patronus*: the former 'serves in the gate'

---

flattering, the view here expressed was certainly held by the *awīlū* in question.

117 Cf. the derogatory overtones of Italian *meschino* (wretched creature, miserable fellow) and French *mesquin* (mean, shallow, paltry, petty), both going back, via Arabic *miskin* (poor), to Akkadian *muškēnum*.

118 AbB 3, 33 22 *anāku mār awīlim šû mār muškēnim* 23 *ina minîm gimillī uṭâr*.

of the latter in return for his protection.[119] Evidence from Nērebtum (Išchāli) suggests that one could also be a 'retainer' (*muškēnum*) of a temple.[120]

If the *muškēnum*, in respect to the *awīlum*, stands for the Babylonian middle class, the lower class is generally said to consist of slaves (*wardum*). The *locus classicus* for this social tripartition is the sequence *awīlum*, *muškēnum*, *wardum* found in several paragraphs of the Codex Ḫammurabi.[121] The social distance between slaves and members of the élite can be measured by the expression of indignation over the fact that the testimony of a slave is relied upon for the extradition of 'gentlemen'.[122] Slaves were not the only ones in the class of the economically and socially underprivileged. Many people not having the benefit of property or a professional training were hardly better off than slaves, even if they were free. They had to hire themselves out to whoever was looking for unskilled labourers: as shepherds, cultivators, and non-specialized craftsmen.[123] Prostitutes, waiting for clients at the crossroads and in the shade of the city wall, belonged to this category as well;[124] so did most prisoners of war. The texts do not reveal much about the lower stratum of society; in spite of its numerical importance, it remains largely unknown. No study on Babylonian religion can overcome the handicap of our one-sided information: knowledge of the religion of important segments of the population is denied to us.

The social stratification of Old Babylonian society coincides in large measure with the unequal distribution of material wealth. In later times, the term *awīlum* came to mean 'rich', and *muškēnum* 'poor'.[125] This economic nuance is not wholly absent in the Old Babylonian usage of the terms: writing to his god, an individual complains that his brothers have not come to his rescue even though he is a *muškēnum*;[126] the fact that one is a *muškēnum* should suffice to elicit pity.[127] The *muškēnum* was known, indeed, to be

'weak' (*enšum*).[128] It was incumbent upon the king, according to the prologue of the Codex Hammurabi, to protect 'the weak from the mighty (*dannum*)' (CḪ i 37-39). These terms have economic implications, just as their Sumerian equivalents s i g and k a l a g.[129] They indicate that the middle and lower classes tended to coincide with an economic underclass. Some people were so desperately debt-ridden that they even sold their children into—what they hoped to be a temporary—slavery.[130] Nor was the presence of beggars in the streets of the Babylonian city an unknown phenomenon.[131] In spite of the dishonour incurred by taking alms, sheer hunger reduced some people to beggary.[132] Other paupers waited for the evening when they could go out and scavenge the streets unobserved.[133]

The Political Hierarchy

The second hierarchy shaping Old Babylonian society was political; it coincides largely with the social hierarchy, since the king[134] might be viewed as the representative of the upper class. Predictions in the omen literature mention the possibility of a *muškēnum* seizing the throne.[135] The event was unusual (for which reason one finds it mentioned in the omen literature); the ruler was normally a *mār awīlim* from an established family. He refers to his underlings as the *muškēnum*, which suggests that he regarded the *awīlū*, at least to some extent, as his peers.[136] Also, the administration consists largely of members of the upper class. Qualified as *mārē damqūtim*, they are found in texts from Mari as court dignitaries[137] and leaders of the royal army.[138]

The power of the king was such that he could receive epithets normally

136 Kraus 1973:120-122 stresses the links between the *awīlū* and the palace to the point where they all become part of the royal administration.

137 According to ARMT 23, 620 the king hosted 21 d u m u - m e š *damqūtim* at his table.

138 Lafont 1985:162.

used for gods. In letters from Mari the king is called 'my star' or 'my sun', star and sun being usual qualifications of gods in theophoric personal names.[139] The sheer divinity ascribed to the king is made explicit in a number of ways. The turn of phrase 'May the king act as it pleases his divinity'[140] could still be interpreted as a form of flattery. But the oath by the king instead of, or along with, the god is indicative of the sphere of influence the human ruler is credited with. The matter deserves to be noted, especially since the king can also be mentioned in the place where one normally finds a reference to the personal god of the individual. Cylinder seals carry the name of their owner, his patronymic, and the name of his god. Instead of the expression 'servant of Šamaš' (or some other god), many seals read 'servant of Hammurabi' (or some other king). The significance of these occurrences will be probed in another chapter; suffice it to remark here that the devotion to the king may be connected to his divine status.[141]

Though the king is at the apex of the political hierarchy, he does not wield absolute power. The social élite (consisting of such men as the *kabtum* and the *rabium*) also had its share of influence; run-away slaves might seek refuge in the palace, or with the *kabtum* or the *rabium*.[142] These men of importance could grant judicial proceedings,[143] which suggests that they acted as chiefs and judges.[144] Indeed, in one or two Old Babylonian texts the *kabtum* is mentioned in parallelism with *dayyānum* ('judge').[145] Since the judiciary was not a profession but an honorific office, the judges are aptly characterized as a 'standing committee' of some of the more prominent members of the community.[146] The judges did not have the same authority as the king, yet their influence was far-reaching. If a good reputation was essential for a happy life in the Babylonian city, it was especially important to be well-considered by the *kabtum* and the *rabûm*.[147] According to texts of a later period people might even resort to magical means to win their favour.[148]

148 Abusch 1985.

The so-called 'elders' (*šībūtum*) formed another body with political power counterbalancing, to some degree, that of the king.[149] They were in part conterminous with the circle of the 'judges'. The title 'elders' does not mean that these men were all senior citizens; they did, however, all belong to the local élite.[150] Unlike the judges, they did not need to be formally recognized or appointed by the king. The elders of the early second millennium are the heirs of the third millennium institution of the city council (u n k e n) of which all the family heads of the city (a b - b a [a b b a$_x$] u r u) were members.[151] They represented the city to the king, advising him in all relevant matters. Without their approval, the king could not easily reign. It is probably wrong to call this a form of democracy, even if primitive; what it amounts to is an aristocratic control of the exercise of royal power.

Many matters of the civil administration were settled at a level beneath that of the city as a whole, viz. that of the ward or the neighbourhood. The neighbourhood, called *bābtum* (Sumerian d a g - g i$_4$ - a) or *bābum* (k á) in Babylonian, i.e., 'gate', had its own jurisdiction and responsibilities.[152] Headed by a *rabiān bābtim*, 'leader of the ward',[153] or a *ḫazannum*, 'alderman, burgomaster',[154] the ward regulated its own local affairs, from sanitation to security. Minor cases, such as a divorce procedure, might be settled by the neighbourhood court.[155] The 'man of influence' (*kabtum*) of the ward, who acted normally as its judge, was expected to represent and defend the interests of the neighbours vis-à-vis the city authorities.[156] These neighbourhoods, whose structure was indistinguishable from city quarters,[157] can be regarded as the institutional layer between the city and the individual families.

VAS 22, 85 18' *ipâdūninnima* 19' *3 ūmī kabtum ša ina* k á-*kunu* 20' *tazzissu* 21' *ul izzizunim* 22' *wākil tamkārim izzizamma* 23' *ušāṣianni*, 'They locked me up and for three days the 'man of influence' whose station (**tazziz-su*) is in your ward—they did not come to my rescue. The inspector of the merchants came to my rescue and released me.' Cf. Kraus & Klengel 1983:54-55.

[157] Adams 1969:188. Stone 1987:3-4 compares the Old Babylonian neighbourhoods to the residential quarters of pre-industrial Muslim cities; these Muslim neighbourhoods consist of between 500 and 1000 inhabitants, and have their own mosques and bath-houses.

The Religious Hierarchy

The third hierarchy in the Old Babylonian city is religious; once again, it must be noted that there is a substantial overlap with the two previously mentioned hierarchies. Leo Oppenheim has formulated the theory that the city developed as landed owners began to maintain 'town houses' at nearby sanctuaries, and eventually moved their main residences there. Thus there would have emerged 'a community of persons of equal status living in symbiosis with a cultic center.'[158] The hypothesis is attractive in view of the evident ties in Old Babylonian times (and later) between the main temple of the city and the city's social élite. Though the god is patron of the entire city, his temple is run in fact by the established upper-class families of the city.[159]

The links between the city temple and the city élite brings up the question of the relations between temple and palace. It is generally held that kingship is a later development in Mesopotamia, having been preceded by the rule of the high priest (the Sumerian e n).[160] In this construction of the historical development, the advent of kingship is often regarded as having led to a kind of dualism, the temple remaining an independent centre of political power. There is little evidence to support this idea, however. The physical distance between temple and palace in a number of cities is no valid argument, since the palace had usually to be built on new premises.[161] According to the liturgy of the Babylonian New Year festival, known from late first millennium copies, the chief priest (*šešgallu*) of Marduk slapped the king on the cheek and heard his confession at the beginning of the first month of the year.[162] Yet this fact should not be interpreted to mean that the king was inferior to, or even kept in check by, the priest. The supervisor (*šangûm*) of the temple was in fact appointed by the king.[163] Also, the palace had apparently complete records of, and unrestricted access to, temple property.[164] A king was likely to feel that this was as it should be, since it was his responsibility to keep the temple in good repair.[165] Though in theory the king was in the

165 Van de Mieroop 1992:96.

service of the city god, the reverse was true in practice: the temple provided religious legitimacy to the king.[166] In the hierarchy of status the temple may have ranked higher than the palace, but in the hierarchy of power the palace was superior to the temple.

To grasp the significance of the religious hierarchy and its social constitution, it is necessary to understand that the role of the temple in the Old Babylonian society went well beyond the realm of devotion. The temple is not the Mesopotamian equivalent of our synagogue or church; it was literally the 'house' or 'palace' of the city god. Being one of the two 'great organizations', the temple was an important economic, judicial, and administrative centre.[167] There was hardly a safer place to put one's money than the temple treasury: the god himself would keep watch; embezzlement would amount to hierosylia. The temple served as a bank of savings for wealthy citizens,[168] for merchants as a bank of commerce, and for people in financial need as a bank of loans.[169] Temple loans to the needy did not bear interest; their records often leave the date of reimbursement open, saying that the debtor will pay 'on the day the god has shown him favour'.[170] A religious terminology is also used for commercial loans to which Old Assyrian merchants refer in their letters: they are called 'votive gifts' (*ikribū*), since they are eventually to be returned to the temple.[171]

The importance of the temple as a centre of finance followed from its role in the city economy. By the Old Babylonian period the city god had long ceased to be the sole formal owner of the city and its land; yet the temple domains were still impressive. The temple of the moon god Nanna at Ur can be cited in example.[172] It owned land inside and outside the city; many of its fields were rented out for a fee or a share of the harvest; likewise, most of its date orchards were cultivated by tenant farmers. The enormous herds of sheep and goats owned by the Nanna temple were assigned to the care of professional shepherds. Another source of income for the temple derived from the marshes in the vicinity of Ur; they were a quarry for fishermen and reed-cutters. The temple had a special house (the Ganunmaḫ) and a granary for storing its wealth; the former harboured the temple taxes and votive gifts,

whereas the granary was the place for cereals and bread. In addition to its non-movable property, the temple had votaries who worked as millers and weavers in the temple's 'workshops'; they consisted of prisoners of war, widows, children from impoverished families, and the like.[173] Loans to traders, bearing an interest, resulted in a further increase of the temple's possessions.

The survey of the possessions of the temple lends a certain urgency to the question concerning the destination of these riches; who stood to gain by the temple's wealth? The theologically correct answer to the question would be: the god of the temple and his divine entourage. Since the gods fed on the sight and the scent of their offerings, most of the temple's income was left for humans to use. What remained after the expenditures for personnel and maintenance served as a reserve capital from which the entire community was potentially to profit. The temple aided indebted farmers by means of loans without interest; citizens who had ended up as prisoners of war were ransomed with temple money (CḪ § 32); those who had suffered severe losses on account of robbery were indemnified from the temple funds.[174] The temple adminstration, drawn from the *awīlū* of the city, had the right of decision in such matters; a royal appointee, the *šatammu*, served as liaison with the palace;[175] in practice, the king had the right of veto.

Judicial matters were dealt with in the temples, too, in the main one at the level of the city and in the neighbourhood shrines at the level of the neighbourhood or ward (*bābtum*).[176] The presence of the god, in the form of an image or some other symbol, endowed the proceedings with a lustre of legitimacy and solemnity. Since the Babylonians did not distinguish between civil law and criminal law, all kinds of cases were brought to the temples: allegations of larceny, inheritance disputes, and suspicions of marital infidelity could all be dealt with in the temple of the city god.[177] Along with the judiciary, the chiefs of the city (*qaqqadāt ālim*) could be present at the

176 On the role of the central temple as place of judicial litigation cf. Christian, J. B. 1969:58 no. 18 [20] *awīlū kīma ša dīnum u dayyānu* [21] *lā ibaššû* [22] *itepšū* [23] *šumma ina [kit]tim* [24] *abī attā* [25] *ana Larsam ṭurdaššunūtima* [26] *ina bīt* [d]*Šamaš* [27] *dīnam lišāḫizū*[r]= *šunūti*[ma] [28] *šumma ḫibiltašunu* [29] *ibašši* [30] *ina dīn* [d]*Šamaš lilqû*, 'The men have acted as though there were no lawsuit or judge. If you are truly my father, send them to Larsa that they might investigate their matter in the temple of Šamaš; and if they have suffered injustice they will receive compensation by the verdict of Šamaš.'

177 Klengel 1976a:72.

deliberations.[178] The distribution of justice was based on the consensus of the judges and the chiefs composing the leading élite of the city. Records of the proceedings were usually kept in the temple archives. When physical evidence prevented a matter from being brought to the temple, the case was nevertheless adjudicated in the presence of the god by means of the divine weapon; this weapon was simply carried to the place of litigation; the parties involved made their statements in front of it.[179]

In the religious hierarchy the temple stood at the top; society as a whole, including the authorities, had to bow to it. In reality, the religious hierarchy appears to have had a primarily symbolic function. From the intimate ties of the established upper class (the *awīlū* out of whose midst the 'elders' came) and the palace with the temple it is evident that the effective power lay with the king and the city élite. The institutionalized religion of the day, embodied in the temple, veiled the effective hierarchy of power: it offered the citizen the image of a stern yet merciful god who reigned supreme, bestowing his kindness on all alike, irrespective of their status or position. Before the god, every citizen, including the king, was a slave.[180] In the real world, however, equality was an illusion. All through the Old Babylonian period society remained divided in classes based on wealth and prestige.

Outside the City

Due to the provenience of most of our sources, the Old Babylonian society may appear to have been thoroughly urbanized and quite sophisticated. There was also a world outside the city, however; life in the villages and encampments was as much a part of the Old Babylonian civilization as life in the city. In the mind of the urban population, the division of the Old Babylonian society in an urban and a rural element tended to coincide with the distinction between Akkadians and Amorites; the former were the traditional inhabitants of the cities, the latter the 'nomads' who felt at home in the open country.[181]

The average Old Babylonian city had a hinterland with which it was in close contact. Spread out over the countryside were various villages and encampments; though politically dependent upon the city, they enjoyed a relative autonomy in their administration. The distinction between a city and

---

[178] AbB 10, 161:6'-10'.

[179] Harris 1965; Van Lerberghe 1982; Spaey 1993.

[180] It is entirely in line with the idea of 'equality before God' when later the qualification 'beggar' (*pisnuqu*) is used by Nabonidus to qualify himself in relation to the god (VAB 4:68, line 19).

[181] According to Finkelstein, J. J. 1969:53 n. 1 the term 'Amorites' could simply refer to the 'rural population'.

a village is not always clear in the language: the world *ālum* may refer to either a city or a village, which suggests that the differences between them were gradual. A specific designation of the rural settlement is *kaprum* (é - d u r u $_5$); another term is *dimtum* (a n - z a - g à r) which, in distinction from *kaprum*, refers to a place with fortifications (*dimtum* means 'tower').[182] The main characteristic which distinguishes both the *kaprum* and the *dimtum* from the *ālum*, it seems, is the homogeneity of the village population in contrast to the diverse origins of the city dwellers: the *kaprum* and the *dimtum* are clan settlements, inhabited by members of the same kin group and their retainers.[183]

In some cases there is evidence to the effect that the land of the village was communal property. A document from Mari records the solemn transaction by which a tract of arable land (*eqlum*) near Appān, belonging to the Rabbaean clan Bīt-Awīn, was given by that clan to Yarīm-Addu (the verb is *naḫālu*, 'to give in inheritance'). In confirmation of the allotment, thirteen leading members of the clan, 'brothers' of Yarīm-Addu, took an oath by the Assyrian king Samsī-Addu and their eponymous ancestor Awīn the Rabbaean.[184] Such customs cannot be dismissed as foreign elements in the Mesopotamian system. The celebrated Maništušu Obelisk (ca. 2260) records the royal purchase of eight fields, totalling 3430 hectares; each field was bought from a group of people (called the *bēlū eqlim*, 'owners of the field') belonging to the same kinship cluster. The transaction, conducted in the presence of the 'witnesses of the field' (*šībūt eqlim*), included the presentation of gifts to the 'brothers'—presumably the members of the kin group that owned the property.[185] Comparable customs are attested for other places in late third millennium documents;[186] they are still found until deep into the second millennium in the peripheral zones of Mesopotamia.[187]

Archives belonging to, or dealing with, inhabitants of the countryside convey an impression of the social organization of a village. An example is the archive of the soldier Ubarum who lived in the village (u r u^{ki}, i.e.,

---

182 See *CAD* D s.v. *dimtum*, esp. pp. 146-147.

183 See Diakonoff 1975; Heltzer 1979; Foster 1989; Groneberg 1989. The interpretation of the *dimtum* as a clan settlement rests on an extrapolation from the evidence for Nuzi, for which see Jankowska 1969 and Grosz 1988:23-24. Evidence for extended family villages in later times is not lacking: for the Neo-Assyrian period see, e.g., Postgate 1988:142-145 commentary to nos. 54-56; for the Neo-Babyloninan period see, e.g., Brinkman 1989.

ālum!) of Ṣupur-Šubula, not far from the city of Kutha.[188] Comparable in this to the ward of any big city, the village was administered by a council of elders, led by the *rabiānum*—a dignity rotated year by year among the elders; the local *mu'irrum* (gal-unken-na) exercised authority on behalf of the Babylonian king who reigned over Ṣupur-Šubula. The village had its own temple, dedicated to the god Šubula, theologically interpreted as the son of Nergal because of the proximity of Kutha (where Nergal was the chief god). The local temple was the place to settle legal disputes and to conclude contracts; the national gods Šamaš and Marduk were invoked as witnesses alongside Šubula. Evidently, there was a local administration and a local religion; these were subordinate, however, to the national (i.e., Babylonian) administration and the national religion. The organization of the village differed little from that of the city neighbourhood; in fact, the former may have served as a model for the latter.

Though the actual difference between village and city was gradual, the city population cultivated an image of the country-dwellers that was based on the assumption of a fundamental contrast. They perceived the Amorite living in the country as a typical 'nomad'.[189] He was depicted as

> a tent-dweller, [buffeted] by wind and rain, [unfamiliar with] the habit of praying (...). He digs up mushrooms in the hills, but does not know how to kneel; he eats raw meat; he has no house while he lives, nor is he buried when he dies.[190]

Amorites were said to belong to 'a ravaging people, with the instincts of a beast'.[191] The unflattering image was completed, according to a piece of evidence from the first millennium, by the characterization of the Amorite as a sexual pervert: '[The A]morite says to his wife: You be the man, [I] will be the woman'.[192] Summing up the ignorance and lack of manners of the rural population, the Amorite nomad was the antipode of the civilized Babylonian citizen.

The clichés about the Amorites catered to the need for an anti-type as a

means to define an urban identity; they cannot be taken as a faithful reflection of reality. The barbaric Amorite belongs to the same category as the fundamentalist Muslim and the bigoted Christian: they are distorted images designed to flatter the self-complacency of those who produce them. That the Amorites were by no means the scum of society, as the string of clichés might lead one to believe, is clear from the fact that many of the royal dynasties in the Old Babylonian period were of Amorite descent. Hammurabi of Babylon had Amorite ancestors; so did Samsī-Addu of Assur and Zimrī-Līm of Mari. Their fathers were 'kings that dwelt in tents', as the Assyrian king list puts it.[193] Nor did the Amorite monarchs try to disguise their origins. Sacrificial rituals for the dead, attested for Mari[194] and Babylon,[195] publicly commemorated the Amorite ancestry of the ruling monarch.[196] An Amorite king like Zimrī-Līm had to be reminded by one of his officials that he was king of both the Haneans (an Amorite people) and the 'Akkadian' (i.e., native) element of the population; therefore he should not ride solely on horses, as was the Amorite custom, but in a chariot with mules, in accordance with the native practice.[197]

Real Amorites could in fact be found in a variety of settings: some were pastoralists with a pattern of annual transhumance;[198] others had settled in villages and taken to an agricultural mode of existence;[199] yet others served as soldiers in the king's army;[200] while some lived in the city, usually in the same neighbourhood.[201] The main thing these different groups had in common was their ethnic background:[202] the Amorites are originally from the Syrian regions situated west of Mesopotamia.[203] Amorite was their native tongue; though hardly ever used in the written records of the time, the language surfaces in their names and the names they gave to their settlements.[204] Also in an urban setting they preserved a separate identity: they usually lived in what we would call 'ethnic' neighbourhoods;[205] marriage

205 A list from the city of Ešnunna mentions twenty-nine Amorite men, divided into five *bābtum*s and denoted as residing in the city. The editor of the text suggests that in this context the *bābtum* stands for a small encampment (Gelb 1968), but nothing proves that

partners were preferably sought within their own group.[206] It is the combination of success in an urban environment with the maintenance of an Amorite cultural identity that explains some of the resentment the Amorites elicited from native Mesopotamians.

The advice to Zimrī-Līm to act in such a way as to satisfy both his Amorite and his Akkadian subjects offers a glimpse into the cultural differences between the rural and the urban population. So do some of the Amorite terms relating to their social organization. Thus the *ḫibrum*, 'lineage group', refers to a number of conjoint households.[207] It was a subdivision of the clan or *gāyum*, a word etymologically related to Hebrew *gôy*, 'people'.[208] Each clan was under the leadership of a *sugāgum*, whose designation is particular to the Amorite milieu, but whose functions ran parallel to those of the *ḫazannum* known from the Babylonian city wards.[209] The *sugāgum* was appointed by the king on the recommendation of the clan;[210] he was chosen from, and assisted by, a council of elders, the *šībūtu*.[211] A collective of clans could be referred to as a 'land' (*mātum*), a 'house' (*bītum*) or as 'sons of So-and-so' (e.g., d u m u - m e š *Yamīna*).

To some extent the differences in social organization between Amorites and Akkadians may be more terminological than real; yet the fact that these Amorite terms did survive suggests that there were no fully satisfactory equivalents in the Babylonian idiom. Apparently, the Amorites consciously maintained their 'tribal' culture in their social organization. To call this culture nomadic is not entirely appropriate. Theirs was a nomadism that has been described as 'enclosed', because they were surrounded by, and depended upon, the urban civilization of the Babylonians; the transhumant movements they made were limited. The rural Amorites were not bands of lawless adventurers; most of them were simply pastoralists. Like any other segment of the population, they were expected to pay taxes.[212] The temple administration collected these contributions on behalf of the palace.[213] The

---

such is the case. Clan-wise habitation of city neighbourhoods is not typical of Amorites (Donbaz & Yoffee 1986:67). Two suburbs of Sippar, viz. Sippar-Amnānum and Sippar-Yaḫrūrum, grew out of Amorite encampments.

freedom of the Amorite nomads was limited, then; they had been integrated into the administrative system of the Old Babylonian states.

Because of the cohabitation of Amorites and Akkadians, the Old Babylonian society has been characterized as 'dimorphic'.[214] Though the use of the term is subject to the risk of over-emphasizing the distinctions,[215] it can hardly be denied that there was a dimorphism of sorts, manifesting itself in the coexistence of two different lifestyles and patterns of social organization. The dimorphism is also evident in the points of reference which the two population segments chose for defining themselves. Whereas the urban population of Akkadian extraction looked to the city and the neighbourhood as anchors of identity, the Amorites and the village dwellers (the two being nearly indistinguishable at times) identified with their land and their ancestors. The 'sons of the city' (*mārē ālim*) defined themselves in a different way than the 'sons' of ancestor So-and-so, such as the *mārē Awīn*. This distinction also plays a role in the characteristic forms of family religion of the Akkadian and Amorites segments of the population—and it is to the forms of family religion that the following chapters are devoted.

CHAPTER THREE

THE CULT OF THE ANCESTORS: A HISTORICAL FOCUS OF IDENTITY

'The religion of the family' is an ambiguous expression: it might refer either to the religion as practised by and within the family or to the devotion to one's family and family values. To avoid such confusion, preference has been given in this study to the term 'family religion'. It should not be overlooked, however, that the practice of family religion is rooted in, and thrives upon, attachment and loyalty to one's family. No better illustration of this principle than the cult of the ancestors: veneration of one's forebears is a form of devotion to one's family in its historical dimension. The two sides of the coin—devotion to the family and devotion of the family—cannot be entirely separated. The present chapter will seek to describe, first the rites of passage into and out of the family, and then the cult of the ancestors.

Rites of Incorporation

The predominant metaphor for the Babylonian family is that of 'flesh and blood' (*šīrum u dāmū*). The concept of kinship underlying this expression is that of common descent; through the line of generation, the members of the family are part of the same flesh and blood. Yet by itself such common ancestry is neither a prerequisite nor a guarantee of membership in the family.

Like any other human institution, the Old Babylonian family is a social construct. Even if presented as a natural fact, it becomes a social reality only because the participants ascribe to a set of common symbolizations.[1] Their assent to these symbols takes the form of participation in the family rituals. Such rituals may be quite informal, to the point of escaping notice. The rites of incorporation and exclusion performed at the passage from the out-group to the in-group or vice versa, however, are too emphatic to go unrecognized. These rites of passage deserve particular attention because they reveal some of the fundamental values of Old Babylonian families.

The best-known rite of incorporation is the marriage ceremony.[2] It

[2] See Greengus 1966; 1969; Renger 1973a; Veenhof 1976; Wilcke 1985:241-284; Klíma 1986; Sauren 1986; Westbrook 1988.

realizes and validates the transfer of a woman from the realm of the one family group to that of the other. The wife is not a natural member of the family; she must change places in order to become part of it, acquiring a new status in the process. The transaction was concluded in several phases, the central event being the wedding in the house of the bride. Here groom and bride made a formal statement of mutual acceptance, declaring themselves to be husband and wife. This performative illocutionary act was witnessed by the respective families. In celebration of the marriage, which had become a reality as soon as the solemn words had been spoken, the guests joined in the *kirrum*, a common meal with a generous supply of food and drink.[3] An important effect of the table communion was the creation of a bond between the two families; by partaking of the same food and drink, the two families were knit together. Henceforth, there would be *salātum* (family ties) between them, according to the wording of an Old Babylonian letter.[4]

In addition to the ceremonial meal, characterized as a rite of 'mutual ingestion' in the anthropological literature, the various phases of the wedding were accompanied by other symbolic acts. To mark the engagement the groom anointed his bride to be.[5] The act was customary in transactions of real estate as well, where it was designed to create a community between seller and buyer: by anointing each other, seller and buyer created fictitious family ties between them.[6] The anointing in the setting of the betrothal served a similar purpose: the man incorporated the bride in his family group.

Another marriage act was the veiling (*pussumu*) or covering (so with the Sumerian term d u l$_6$)[7] of the bride (*kallatu*, Sumerian é - g i$_4$ - a) by the groom. Though this rite of investiture is often neglected in studies of the Babylonian marriage, its significance should not be underrated. The custom is attested in a string of texts. According to a Babylonian pseudo-prophecy, painting an idyllic tableau of family relations, 'the bride will be veiled and she shall humbly serve her husband.'[8] The Epic of Gilgameš describes the face of the dead as being covered (*katāmu*) 'like a bride'.[9] A similar conclusion concerning the bride can be deduced from the investiture of the *ēntu*-priestess at Emar, since the rite of consecration mirrors the investiture of the

woman at her wedding. The ritual prescriptions say that the priestess shall have her head covered (*kuttumu*) 'like a bride'.[10]

Whilst the role of the veil in the wedding ceremonial is sometimes acknowledged, it has hardly been noted that the garment occurs in a dual capacity. Many studies limit their observations to the bridal veil as a symbol of chastity or virginity. Thus the ceremonial function of the veil at the wedding has been summarized by saying that 'the bride came to the groom veiled (or, sometimes, he himself would veil her), so that he might unveil her in privacy.'[11] What has frequently gone neglected, however, is the far more important role played by the veil as a symbol of belonging. The summary just quoted confuses the two aspects by failing to distinguish between the veil worn by the woman at the outset of the ceremony, and the veil with which she was covered by her new husband. Yet the two situations must be distinguished; the veil worn by the bride as she came to her husband is not the same veil which the husband later put on his new wife.

The veiling of the bride by the husband is well attested in Mesopotamian texts. An Old Babylonian example is found in the epistolary archives from Mari. As Šibtu, the daughter of the King of Aleppo, was wedded to Zimrī-Līm, envoys from Mari came to bring the marriage gift (*biblum*) and to put a veil over the princess.[12] Here it is not the husband who veiled the bride, but emissaries acting in his name. Yet though the actual veiling might be performed by others, the juridical person responsible for the veiling was the husband. The significance of the act is made explicit in the Middle Assyrian Laws (§ 41). They rule that the man who wishes to turn his concubine (*esirtu*) into his legal wife is to veil her (*pussumu*) in front of five or six witnesses, while publicly declaring her to be his wife. The small ceremony constituted a valid marriage act. A public veiling by the husband, so the text suggests, was the non-verbal part of a rite by which he proclaimed his bride as his wife.

The custom may well go back to the third millennium. In Sumerian texts the rite by which a marital relationship was confirmed or reconfirmed included the covering of the woman by her husband. The Sumerian verb d u l, rendered in Akkadian by *katāmu*, literally means 'to cover'. The object used to cover the woman was a piece of cloth, so that it is possible to translate d u l as either 'to clothe' or 'to veil'. A Neo-Sumerian court protocol of a remarriage has recorded the words pronounced by the husband to the woman he had earlier divorced: 'I want to cleanse myself with you, I want to

---

[12] t ú g *kutummê eli marti niddi*, AEM 1/1 (ARM 26), 10:13-15.

veil (d u l) you (again).'[13] Veiling or clothing the woman could either initiate the marriage with her, or reaffirm or renew it. The veil had come to be so intimately connected with the wedding ceremony, that in Sumerian the verb d u l, 'to cover', developed the connotation 'to marry'. Of the poor man's daughter it is said in a proverb that her love is cheap. 'She is a woman whom the man with whom she lies does not clothe/veil (d u l), who is not given as his wife (d a m - a - n i).'[14]

The general purport of the husband's veiling his bride is clear: he thus legally wedded her. But what was its specific significance? A clue to the solution is found in a phrase belonging to the terminology of the marriage contracts. An Old Babylonian marriage document says that a man called Mār-Sippar has 'taken' a woman called Tabbītum, 'for marriage and for clothing and feeding her.'[15] What is referred to in the Sumerian texts with the verb d u l, 'to cover (with garments)', occurs in the Old Babylonian terminology as 'clothing' (*labāšu*). The provision of the woman with clothes was one of the core responsibilities of the husband. By putting a veil upon his bride he publicly assumed this responsibility and demonstrated thereby that he accepted the woman as his wife.[16] The veiling by the husband was primarily an act of clothing. The gesture was symbolic, focusing on the head of the bride as a *pars pro toto*. By veiling his wife, the husband clothed her and incorporated her into his family.

Excommunication by Divestiture

The social significance of the rites of veiling and clothing is elucidated by the reverse actions. It might be expected that a woman would lose the right to wear a veil in the event of divorce. In fact, the only passage where such a symbolical penalty may be referred to is found in a Neo-Babylonian marriage agreement. The relevant lines are difficult to decipher and their interpretation is of necessity provisional.[17] Instead of unveiling as a symbolic denudation, however, a number of texts hint at an actual stripping of the woman. In legal

[14] OECT 1, Pl. 13 i 7-9, translation by T. Jacobsen in Gordon, E. I. 1959:482.

[15] CT 48, 51 [7] *ana aššūtim u mūtūtim* [8] *ana labšūssa u aprūssa īḫussi*. The text has been collated and translated by Westbrook 1988:122-23. Westbrook translates *apāru* as 'hatting'. Following a suggestion by J. C. Greenfield, I prefer to take *apāru* as a by-form of *epēru*, which may be translated as 'to provide for (with victuals)'.

[16] Note that the ritual anointing might be interpreted along similar lines, since a husband was under the obligation to regularly provide his legal wife with 'rations of grain, wool, and oil' (VAS 8, 9:12-14; cf. CT 48, 51; 61:12'-13').

[17] Joannès 1984:75, lines 77-78. Joannès reads the relevant passage *ina* t ú g *šir²am tikkašu tuparreq*, 'elle dégagera sa nuque de la casaque.' For a different interpretation see Roth 1989:111-112.

documents from Nuzi and Ḫana denudation occurs as an act of divorce.[18] The standard phrase runs 'to strip off the garment and to drive out naked.' Such is the fate of the wife should she reject her husband, or after his death go to live with another man, or give family possessions to a 'stranger'. In each case mentioned, it is the wife who has disrupted the family. Denudation is not her punishment for dishonouring her husband, but the result of her disrespect for the solidarity of the family she has married into.

A variant of the phraseology found at Nuzi and Ḫana occurs in legal texts from Ugarit, Emar, and El-Qiṭār. Testamentary texts from Emar say that the widow who marries outside the family is to put her clothes (t ú g - m e š = *ṣubātū*) upon a stool, after which she is free to go wherever she likes.[19] An analogous penalty could be imposed on male members of the family. A deed of inheritance from El-Qiṭār warns the heirs that the one who contests the validity of the will is to put (his) clothes on the chair and leave the house, so that he will wander about unprotected.[20] According to a comparable text from Ugarit the son who does not recognize the premier position of his widowed mother must put his garment (túg ú - è = *naḫlaptu*) on the door-bolt and go off (*ipaṭṭar*) to the street.[21] In the same vein it is written in a Ugaritic adoption record that the adopted son, should he misbehave in any serious way, is to put his garment on the door-bolt and go out (*itteṣi*) into the street.[22] The family provided its members with clothes.[23] The one who was forced to return his garment was stripped of his social skin; his ties with the family were severed. He had to go out on to the streets alone, without the protection of the family, and with no claim to its possessions.[24]

In Old Babylonian times, the separation of the woman from her husband and his family usually took less dramatic forms. The current symbolic act to signify the rupture of the marriage was the cutting of the hem of the

[23] Cf. the frequent request for clothes in family correspondence, see AbB 2, 83:18-19; AbB 5, 160 r. 3'-5'; AbB 9, 106:16-22; TCL 18, 84:6-22; 18, 111 (translated in Oppenheim 1967b:84-85). On the theme see Zaccagnini 1983:237.

[24] Cf. Sigrist 1993:387-388. Was clothing distinctive by expanded family?

woman's garment (*sissiktam batāqu*).[25] Tearing one's garment in half was an acknowledged gesture to signify that one wished to dissociate oneself from someone or something.[26] Cutting the hem of one's wife's garment, in conjunction with the repudiation formula 'she is not my wife,' constituted the divorce. The act was as symbolical as the covering of the woman by the man with the hem of his garment: the former must be understood as the annulment of the latter. It has also been suggested that the *sissiktum* is identical with the bridal veil: cutting it or biting it off would then be an aggressive form of unveiling, reducing the woman to the liminal state in which she carried neither the veil of her father nor that of her husband.[27]

The ceremonial stripping and the deposition of the garment are the opposites of the veiling and clothing of the bride; the latter signified incorporation into the family, the former separation from it. The fact that a formal divestiture could be inflicted on both men and women supports the social interpretation of its opposite. The investiture of the bride, if her being veiled or ceremonially clothed may be so referred to, was not intended to underscore her charm, nor was it meant to induce a temporary departure from the profane world, as Arnold van Gennep once suggested.[28] In ancient Babylonia the bride was veiled or otherwise clothed by her husband to publicly demonstrate her entry into his family, with all the ensuing rights and duties. As long as she was married she had the right to wear the veil as a symbol of her belonging to the family of her husband.

Through the introduction into a different family, marriage provided the woman with a new identity. She received a new name: henceforth she would no longer be known as 'the daughter of NN_1' but as 'the wife of NN_2'. Her husband's name was the symbol of her safeguard and her identity from her marriage onward. A son might flatter his father by saying that the latter's 'good name' (*šumum damqum*) had been placed on him: he thereby implied that he was under his father's protection and shared in his social prestige.[29] In a similar way did the woman live under the shelter of her husband's name. That is why the excommunication from her husband's family left her naked, in the same way it did the disinherited son: they lost their family name, and thereby a part of themselves. Their nudity, partial or complete, symbolized this loss of identity. Cut off from the family they were free—yet theirs was a freedom inspiring fear rather than relief.

The Care and Feeding of the Ancestors

To be incorporated in a family meant to be incorporated in a community that embraced several generations. During different periods in their lives, some of these generations were contemporaries of one another: grandparents, parents and children might even live in the same house. Yet the generations that had died also continued to have an impact. The dead were included in the community of the living. This continuing communion with the earlier generations was manifested and, in a sense, realized through the cult of the ancestors.

To fully appreciate the nature of the society constituted by the family, an analysis of the forms and function of the ancestor cult is indispensable. An introduction into the matter may be found in the Old Babylonian version of the Gilgameš Epic. As Gilgameš set out for his journey to the Cedar forest, the elders of Uruk pronounced a valediction of blessings and advice. One of their counsels to the hero concerned the daily cult to his dead father:

> When you see the night fall, dig a well:
> there must always be clean water in your flask.
> Cool water you should sprinkle for Šamaš,
> be mindful of the divine Lugalbanda.[30]

Though this advice may seem unrelated to the cult of the dead, it is not. Lugalbanda was the father of Gilgameš. Šamaš is mentioned because the dead resided in the underworld, and the sun god acted as a mediator between the dead and the living. During the time of day Šamaš was with the living, but when evening fell, the sun descended to the world below and met the dead. The 'cool water' libated to Šamaš was intended for Lugalbanda. A wealth of texts reflecting actual practice (such as letters and deeds of adoption) show that the cult of the dead was by no means a mere literary ideal.

One of the duties of a pious son was to bring regular offerings to the ancestors, and in particular to his own father. Though the duty was incumbent on all the children, the main responsibility for the cult of the dead lay with the one who had succeeded his father as paterfamilias. Normally, this was the eldest son. Testamentary decisions from Old Babylonian Nippur show that the eldest, in addition to a preferential part, received such paraphernalia of the domestic cult as the 'ceremonial table' (b a n š u r · z à - g u - l a , *paššūr sakkê*).[31] In his capacity as the new head of the family, he

---

[31] Prang 1976:16, 28; 1977:224.

was to 'uphold the family and the ancestral spirits.'[32] Since the son did not receive his authority by delegation from the ruled, but by transmission and assumed devolution from the ancestors, his leadership in the cult of the ancestors had the attendant effect of legitimizing his position.[33] Only rarely did a daughter achieve this position.[34]

The advice the elders of Uruk gave to Gilgameš assumes that offerings to the dead were a daily ritual. A technical term for this day-to-day care of the ancestors is *kispu ginû*, 'regular funerary offering', found in a Middle Babylonian text.[35] Also in Old Babylonian times, the word *kispum* (from the verb *kasāpu*, 'to break in small pieces') is the standard term for the cult of the ancestors. It designates primarily the presentation of food. Such food, offered on a daily basis, was simple: after a short invocation, the ancestors were given a bowl of fine flour, and water was poured for them.[36] Because these daily rites were quite informal, little mention is made of them in the texts. Some references to this daily cult have gone unnoticed, furthermore, because the dead are in this connection at times referred to as the 'gods' of the paterfamilias.[37] The sufferer who complains that he is treated as though 'he ate his food without invoking his god, and neglected his goddess by not bringing the flour offering' does not refer to the temple cult, but to the portions the ancestors were to be given daily.[38] The text implies that the offerings to the dead coincided with the meals of the living.

On special occasions more solemn rites were performed, including the presentation of a full meal. In ancient Babylonia, the usual time for this solemn repast fell at the end of the month.[39] This time is referred to as the *ūm bubbulim*, the day(s) when the moon has been 'taken away' (*babālu*). Its Sumerian equivalent u $_4$ - n á - a , 'resting day', must probably be interpreted as a reference to the repose of the moon.[40] The invisibility of the moon, due to its conjunction with the sun, lasts between twenty and fifty-six hours,

[38] *BWL* 38 [19] *ilšu lā izkur ēkul akalšu* [20] *īzib* ^{d}*ištartašu masḫaʳtuʾ lā ubla.*

[39] Tsukimoto 1985:46-48 (Old Babylonian); 57-60 (Mari); 62-65 (Third Dynasty of Ur); 79 (Middle Assyrian); 110 (Neo-Assyrian); 123-124 (Neo-Babylonian).

[40] See Livingstone 1986:264 nn. 28-29; Sallaberger 1993.1:60-61.

which means three nights at the most. This period of lunar invisibility may be termed the interlunium.[41] In Akkadian it can also be referred to as the *rēš warḫim*, literally the 'beginning' of the month, but actually a designation of the end of the month, covering the period of the moon's disappearance until its first reappearance.[42]

The cuneiform evidence shows that, from the third through the first millennium BC, the interlunium was consistently associated with funerary rituals. Already a mid-third millennium text from Lagaš associates the funerary meal with the interlunium ([u $_4$] - n á - a - k a).[43] Evidence from the Ur-III Period points to the same association.[44] A Sumerian incantation to the sun god from the beginning of the second millennium also mentions the 'day of the dark moon' as the day of the funeral offerings.[45] To illustrate the continuation of the practice in Old Babylonian times we may quote from a letter written by a *nadītum*[46] (a woman dedicated to a god and living in a cloister) to her brother.

> As you, my brother, know, this year you have sent me neither garlic, nor onions, nor *sirbittum* fish. When I do not write you, you forget about me! I am now sending Muballiṭ-Marduk to you. [Make] preparations to send me one shekel silver worth of garlic, one shekel silver worth of onions and *sirbittum* fish. (If not,) what will I contribute throughout the year to the *kispum* offering of your family at the time of the moon's disappearance?[47]

The letter suggests that the monthly *kispum* was a family ritual in which all living members were assumed to participate, if not in person then at least by making a material contribution. The phrase 'throughout the year' indicates, moreover, that it was celebrated each month of the year.

The days of the disappearance of the moon were in some respects frightening. According to the hemerological tradition, the days of the interlunium, around the 29th or the 30th of the month, are dangerous.[48] A lexical list calls the 30th, identified as the 'day of the *kispu*', an 'evil day'.[49] The practical consequences are illustrated by a section of a hemerological compendium

dealing with the 29th of the month. For each month, the entry opens by saying that one should not go out through the gate.[50] One was well advised not to undertake a journey, and also other activities had better be suspended. People used these 'holy-days' to come together as family for a festive meal.[51] Delicacies they could not afford on normal days, such as meat and quality beer, were now on the menu. It is probably in the context of this feast that the monthly *kispum* was offered. As the family joined in a meal of plenty, it did not forget its ancestors; the latter received their share of the dishes.[52] Also in respect to the dietary customs, then, past and present generations lived in synchronism.[53]

Once a year there was a kind of All Souls' Day. In Old Babylonian times, it normally fell in the fifth month known as Abum (August).[54] The Sumerian writing of this month's name is n e - I Z I - g a r. A later text offers an etymological explanation by saying that in the month Abu, 'braziers are kindled, a torch is raised for the Anunna gods.'[55] The Anunna gods (or the Anunnaki) are the gods of the underworld; by the time this text was committed to writing, the ghosts could be included in their number.[56] 'Raising a torch for the Anunna gods' was a mortuary rite addressed at the gods of the netherworld, including the dead. Was there indeed an annual 'feast of torches' at which 'families entertained the ghosts of their dead'?[57] In spite of occasional doubts,[58] such seems to have been the case indeed. As part of the All Souls' festival there was a vigil during which lights had to be burned. This explains why the *Maqlû* ritual, whose calendrical setting in Neo-Assyrian times is the night and early morning of Abu the 29th, assigns such a prominent role to Girra, the god of fire.[59] Parallels from the ancient world to such a torch-lit annual death watch are known.[60]

---

[50] Labat 1965:126-129 no. 59.

[51] A later ritual calendar (Labat 1965:128, no. 59:2) prescribes that on the 29th of Ayyar, people were to 'hol[d a festive] meal (*nigûtu*)'.

[52] This suggestion has already been ventured by Bottéro 1972:97-98; see also Bottéro 1980b:38.

[53] Tsukimoto's dismissal of the possibility that the *kispum* was integrated in a family meal cannot be accepted, the only evidence being adduced coming from Mari (1985:60).

Though the proceedings of the special *kispum* ceremonies are not known in detail, its essential elements can be reconstructed without great difficulty. To mark the invisible presence of the ghosts, a chair was set up on which they were presumed to seat themselves. Such a 'chair for ghosts' (g i š - g u - z a g i d i m, *kussû eṭimmē*), known from a lexical list,[61] occurs once in a first millennium *kispu* ritual. During the course of an occasional *kispu*, the one performing the rite is to set up a chair 'for his family ghosts' (*ana eṭemmē kimtišu*).[62] Such chairs (or rather thrones) were usual in the cult for the royal dead as well.[63] In the family rituals of the common people, these chairs may have stood around the *paššūr sakkê*, the ceremonial table which belonged to the inheritance of the eldest son.[64] This table was used only on solemn occasions.[65]

In Commemoration of the Dead

The central rite of the cult of the ancestors is the invocation of the dead by their name (*šumam zakāru*). Often quite modest, the food offerings of the ancestor cult are attendant only to the recitation of the name. The leader of the ritual, usually the eldest son who has assumed the position of paterfamilias, is called the *zākir šumim*, 'the one who invokes the name'. Also, from the perspective of the dead, the main purpose of the cult of the ancestors is to ensure that their names do not perish; their identity is to be preserved. At the same time, the piety towards the forefathers endows the living with a family identity that is anchored in the past. In addition to fostering cohesion, then, the cult of the ancestors reinforces a sense of identity in those participating.

One of the Old Babylonian texts to throw some light on the *kispum* ceremony of private families is the prayer to the moon god Sîn commissioned by Sîn-nāṣir. It illuminates the importance of the invocation by name. The

62 *BBR* 52:12-14.

63 For the Ur III period see Sallaberger 1993.1:147 with n. 696 (showing that a chair was not unusual in non-royal funerary rituals either). A royal *kispum* ritual from Mari indicates that the offerings were brought 'in the room of the thrones' (*ina* é g i š - g u - z a - ḫ á), see Birot 1980: lines 7, 10. The first millennium prohibition to 'remove the chair' (*kussû nakkuru*), found in tomb inscriptions, has its background in the offerings for the dead (see Fadhil 1990:478). The custom of bringing the funerary offerings to the throne of the deceased ruler is reflected in the Ugaritic ritual of *KTU* 1.161 = RS 34.126, see Bordreuil & Pardee 1991:151-163.

64 Prang 1976:16.28; 1977:224.

65 Such as the wedding, see OB Gilg. P iv [14] *bītiš emūtim iq[rū²inni]* [15] *šīmat nišīma* [16] *(x-)x-ar kallūtim* [17] *ana paššūr sakkî eṣēn* [18] *uklāt bīt emi ṣayāḫātim*, 'They invited me to the house of the father-in-law where it is the custom of the people to celebrate the marriage. I heaped food on the ceremonial table, delightful dishes for the house of the father-in-law.' On the reading of line 16 cf. K. Hecker, in TUAT 3/4 (1994):652, note to line 146.

prayer was meant to be recited at the break of dawn, as the moon went down to the world of the dead.

[S]în, you are the god of heaven and earth.
[In the mo]rning I am pouring water to you
[for the f]amily (*kimtum*) of Sîn-nāṣir, the son of Ipqu-Annunītum.
Release the family (*kimtum*) of Sîn-nāṣir, the son of Ipqu-Annunītum,
that they may eat his bread and drink his water:
Išme-Ea son of Šamaš-nāṣir, his wife and his family (*kimtum*);
[Il]tani, *nadītum* of Šamaš, his daughter;
[Sîn]-nāṣir, son of Išme-Ea;
ʳKasapˡ-Aya, *nadītum* of Šamaš, his daughter;
Sîn-iddinam, son of Sîn-nāṣir;
Iddin-Ea, son of Išme-Ea;
Amat-Aya, *nadītum* of Šamaš, his daughter;
Di-Utu-binduga, his son;
Ebabbar-nu-u'ulše-ḫegal, his son;
Eḫursag-mušallim, his son;
Ipqu-Ea, son of Išme-Ea;
Amat-Mamu, *nadītum* of Šamaš, his daughter;
Nidnuša his son;
Ibni-Ea his son;
Iqīš-Ea son of Išme-[Ea], his wife and [his] family;
Ipqu-Aya son of Išme-Ea, Abī-mattum his wife [and his family (?)];
Lamassani, *nadītum* of Šamaš, his daughter;
Ilšu-ibnišu his son;
Sîn-nādin-šumi his son;
Sîn-kabit-biltum, son of Sîn-nādin-šumi;
Ikūn-pî-Sîn son of Ipqu-Aya, whom .... have struck to death;
Sîn-erībam son of Ipqu-Aya,who sleeps (*ṣallu*) in Maškan-Adad;
Ipqu-Annunītum son of Ipqu-Aya, Bēlessunu his wife.
[R]elease the family (*kimtum*) of Sîn-nāṣir son of Ipqu-Annunītum,
that they may eat [h]is [br]ead and drink his water![66]

The fact that the prayer is addressed to Sîn need not be inspired by a special devotion to this god: Sîn is addressed here, like Šamaš elsewhere, as a deity who can mediate between the dead and the living. He can 'release' (*wuššuru*) the dead from the netherworld, as Šamaš can 'make the spirit approach its family.'[67]

---

66 BE 6/2, 111:1-33, studied in detail by Wilcke 1983:49-54.
67 Alster 1991, line 114.

The body of the prayer consists of a litany of names. Though the modern reader of such a text may be overcome by a feeling of monotony, this is less likely to have happened to the original audience. To Sîn-nāṣir, these names had significance: they were the ancestors from whom he descended and in whose company he was at home, here and in the hereafter. In the prayer for the family of Sîn-nāṣir, five generations have been brought together. Last in the list are Sîn-nāṣir's own parents, Ipqu-Annunītum and his wife Bēlessunu. Retracing the succession of the generations, however, the list goes back all the way to Šamaš-nāṣir, the grandfather of Sîn-nāṣir's grandfather. In the end, then, the patrilinear genealogy embraces five generations. In ordinary families, this is the maximum. As a rule, the *kispum* is brought only to dead kin which the eldest generation alive still remembers from having seen them. That is why the list in standard *kispum* invocations does not go beyond three generations: it specifically mentions father and grandfather, mother and grandmother, and brother and sister; the remaining ancestors are only referred to in the vaguest of terms as 'family, kin, and relatives'.[68]

The list of Sîn-nāṣir's ancestors is as interesting for the names it mentions as for those it omits. The place of the women deserves to be noted. Only two classes of women are represented: mothers and women defined as *nadītum* of Šamaš. A frequent but not entirely adequate translation of the term *nadītum* is 'nun'. In Old Babylonian times, it was customary among upper class families to dedicate one of their daughters to Šamaš of Sippar, or to the god of some other city, such as Marduk of Babylon. These women were viewed as concubines of the god in question; they were not allowed to bear children. Because their integration into the household of their god was mainly symbolical, they were the only female offspring to remain within the family. Other daughters married and went off to join other families, where they were included in genealogical lists as wives and mothers—much as the wives and mothers in Sîn-nāṣir's list. These wives and mothers did not enjoy the same position as the fathers, apparently. While the names of the latter are always given, the mothers are at times referred to anonymously as 'his wife'. Only Bēlessunu is mentioned by name.

Genealogical lists are family history in telegraphic style. It must be stressed that the ancestor cult is the setting in which such genealogies functioned and—presumably—originated; the cult also fostered a sense of connection with the past. A close reading of the prayer shows that it goes beyond the mere enumeration of names. It provides the skeleton of a family history. Some of its bones are fleshed out by the inclusion of additional

---

[68] See, e.g., *KAR* 227 r. iii 9//*LKA* 89 r. 3.

information. Thus Sîn-erībam, an uncle of Sîn-nāṣir, is said to 'sleep' (*ṣalālu*, the usual euphemism for the post-mortal condition) in the town of Maškan-Adad. Ikūn-pî-Sîn, another uncle, has met with a violent death, since he is said to have been 'slain' (*maḫāṣu*). These data are mentioned, presumably, because unlike the other ancestors, Sîn-erībam and Ikūn-pî-Sîn were not buried in the family plot; the details are added to explain their absence. A third uncle was apparently the black sheep of the family, since not even the names of his wife and children are given.[69] Such details suggest that the monthly family reunion—the usual setting of the *kispum*—was also the occasion on which family memories were kept alive.

Gods and Ancestors

Asleep in the earth, the ancestors lived with the gods of the netherworld. By the first millennium BC they had come to be included in the general category of the Anunnaki, the gods of the world below. This is hardly a mere confusion of notions; also older texts make no clear distinction at times between the gods and the dead, implying that both groups have similar powers. This raises the question of the status of the dead: were they regarded as gods, or was that a mere metaphor?

The study of what may be called the ontological nature of the dead cannot be limited to the Old Babylonian evidence, if only because of its paucity on the matter. A suitable entry into the subject is furnished by Middle Babylonian texts from Emar, a city on Mesopotamia's periphery.[70] Quite a number of the inheritance texts from Emar mention the 'god' or 'gods' of the family. The reference to the 'gods' occurs in various formulations. The most complete type must be translated: 'The gods (belong to) the main house. The main house is the share of PN, my eldest son.' Concomitant with the position of principal heir was the duty to minister to the gods. In the words of the traditional formula, the heir had to invoke (*nubbû*), to honour (*palāḫu*) and to tend (*kunnû*) 'the gods and the dead' of his (or her) father.[71] Possession of the main house and the responsibility for the cult of 'the gods and the dead' are two sides of one coin, apparently. The link is based on the presence of the gods in the main house. So much is implied in the translation of d i n g i r -*lí* (*ša*) é g a l as 'the gods belong to the main house.'

The binomial expression 'the gods and the dead' (*ilī u mētē*) is peculiar. It contains a key to the understanding of the nature of the family gods. An

analysis of the verbs used in connection with 'the gods and the dead' shows that the cult they received was mortuary. The most frequent verb is *nubbû*, best rendered as 'to call upon', the equivalent of *šuma zakāru*, 'to invoke', in other texts. The second verb, *palāḫu*, 'to honour', goes with a funerary cult as well: 'honouring' the dead implies their provision with victuals. The verb *kunnû* has a similar connotation; it is rarely used in connection with the cult of the gods, and far more often in the context of burial rites. All this suggests that the 'gods' of the Emar inheritance texts refer in fact to the ancestors. The expression 'the gods and the dead' is best taken as a hendiadys: the dead are called 'gods' on account of their privileged state. The gods entrusted to the care of the main heir, then, are the material symbols of the family ancestors. As the new paterfamilias, the main heir is to continue their cult.

The insights gained from the Emar tablets can be helpful in the analysis of family religion in ancient Babylonia. It is true that Emar is at the periphery of the Mesopotamian culture. Also, the texts written at Emar use a terminology that sometimes differs from the conventional idiom in records from the Mesopotamian heartland. The same phenomenon can be observed in Akkadian texts from Nuzi and Susa. A difference in terminology need not coincide, however, with a difference in conceptual outlook. In fact, aspects of the Mesopotamian view of life that have not been grasped from a study of the Old Babylonian texts may sometimes be discovered through the study of peripheral texts. The divine nature ascribed to the dead is a case in point.

Indications about the divine state of the dead are not entirely lacking in Old Babylonian sources. Such Old Babylonian divine names as Ikrub-El ('El has blessed'), Itūr-Mer ('Mer has returned'), Ikūnum ('He is steadfast'), and Iqūlam ('He has paid attention to me') are morphologically theophoric (or hypocoristic) human names; and such was indeed their original status.[72] Like the names Bēlšunu ('their lord'), Šumi-aḫiya ('the name of my brother') and various others, they belong to mere mortals. After their death, the people who bore these names were venerated like gods, however, and their names were treated as divine names.[73] This onomastic evidence articulates a phenomenon which might easily escape notice: in Babylonia, the dead belong to the realm of the gods. A proper understanding of the importance of the family rituals for the dead is not possible without a grasp of the divine nature of the ghosts.

---

[72] Cf. the entries Ikūnum and Jakrub-El in the *RLA*.

[73] See Stol 1991:203-205, and contrast Huffmon 1971:289. In a personal communication, Stol has added the names Amat-Zarriqum (CT 6, 31b:4) and ^{d}A.ba-^{d}En.líl-gim (OECT 8, 20:11), Cf. also Išar-āliššu, Išar-kīdiššu, Išar-mātiššu and Išar-padā(n), in origin Old Akkadian personal names, but attested as divine names in Old Babylonian times and later (see W. G. Lambert in *RLA* 5:173, 174).

Another indication of the fact that the dead were conceived of as gods in Old Babylonian times is found in a euphemism for dying. The expression occurs mostly in Old Babylonian records of adoption. The moment of death of the adoptive father or mother is sometimes referred to in these texts as the point at which his or her gods call on him or her to join them.[74] The word 'gods' is always in the plural. Since most Babylonians had only one god to whom they were especially devoted, there is reason to suspect that the 'gods' of these texts are not gods in the ordinary sense of the term. According to the euphemism, moreover, the gods 'address an invitation' (*qerû*); the verb is normally used for an invitation to a meal.[75] There is no evidence that the Babylonians believed that the dead would dine with the gods; the dead were 'gathered to their fathers', as the biblical idiom has it. It is these deceased 'fathers' who are referred to as gods in the phrase *ištu ilūšu iqterûšu*, 'after his gods have called on him (to join them).'[76]

The belief in the divinity of the dead is already present in Sumerian texts. In wisdom counsels and hymns the 'mother' is regularly put in parallelism with the 'god'.[77] This does not mean that the family god was incarnate in the father and passed from his body to the bodies of his children, as has sometimes been claimed.[78] The terminology should rather be seen as a reflection of either the authority of the paterfamilias while still alive or the deified state ascribed to him after death. The 'death of [one's] god', mentioned in a Sumerian hymn to Utu is a retrospective reference to the death of one's father.[79] The reference to ghosts as the 'divine dead' in a Sumerian

---

[74] For a convenient survey of most of the relevant texts see *CAD* Q 242-243.

[75] The interpretation of *qerû* as 'to take away' (so *CAD* Q 243) is unfounded. There is not one text for which this meaning is assured. The idiom has been misunderstood by the *CAD*, because it failed to see that the 'gods' are in fact the ancestors.

[76] Note also the plural of *eṭemmū* in CḪ r. xxvii 39 (g i d i m - g i d i m -*šu*) and VAS 1, 54, end: *ina šaplāti eṭemmūšu mê zakûti liltû*, 'May the spirits of his ancestors drink clear water below'. References courtesy M. Stol.

[77] *SP* 1.145 'Accept your lot and make your mother happy, do it promptly and make your god happy'; 1.157 'A dishonest child—his mother should never have given birth to him, his god should never have fashioned him; 1.161 'Born from a mother, [fashioned] by a god'; *Instructions of Šuruppak*, lines 259-263 'The words of your mother and the words of your god you must not discuss. A mother is like the sun god Utu, she gives birth to humans; a father is like a god ...; a father is like a god, his word holds good' (for the translation see Wilcke 1978:211, 230-231). The latter text shows that it is the human father who is likened to or qualified as 'god' in these texts.

[78] *Pace* Jacobsen 1976:159; cf. Klein, J. 1982:295-297.

[79] The expression is found in the Utu hymn edited by Cohen, M. E. 1977, line 44 (n a m - ú š d i n g i r - z a - k a m), and in the Utu hymn edited by Alster 1991, line 135 (n a m - ú š d i n g i r - r a - n a). Alster's suggestion that this refers to the personal god as the personification of the man's personal luck must be rejected. Elsewhere in the Utu hymn, the expression 'his god' refers to the ancestor(s) as well (e.g., line 75). The qualification of the god's death as 'the destiny of mankind' (g i š - š u b n a m - l ú - u l u $_3$,

incantation against spectres (*šipat* ^{d}a d $_{6}$(LU$_{2}$xBAD) b a - u g $_{7}$) fits with this evidence.[80]

The conception found in Sumerian texts informs the use of the divine determinative for Lugalbanda in the Gilgameš epic; the divine determinative is affixed to his name because, being a ghost, he has entered the realm of the gods. Against this background, the inclusion of the *eṭemmū* in the group of the *ilānu* (or the equation of the two groups) in Middle Babylonian texts from Nuzi cannot be dismissed as peripheral;[81] nor can the hendiadys *ilīya u mētēya* ('my gods and my dead') in texts from 13th century BC Emar be regarded as a departure from the Babylonian views. The dead are 'the gods that dwell in the underworld', as a Neo-Assyrian text has it.[82] Hence the ghosts of one's parents can be referred to as the 'god of the father' and the 'goddess of the mother' (d i n g i r *abi*, ^{d}i n n i n *ummi*).[83]

The fact that divinity is ascribed to the ancestors explains the taboo on sexual intercourse with 'the daughter of one's god'. A cuneiform commentary to this expression specifies that 'the daughter of one's god' means 'one's sister'. Though this interpretation has at times been dismissed as erroneous, there is no valid reason not to accept it. Relations with 'the daughter of one's god' are prohibited because they are incestuous.[84] As a man is often qualified as 'the son of his god', meaning 'the son of his (now deified) father',[85] so a woman may be called 'the daughter of her god', meaning 'the daughter of her (now deified) father'.[86]

Where the Ancestors Sleep

The fact that Gilgameš can bring his libations to Lugalbanda at any station on the way to the Cedar forest shows that the cult of the dead was not limited to one consecrated place. Ordinarily, however, the cult of the dead was conducted in the house of the family. Such domestic devotion is also mentioned in the Epic of Gilgameš. When Gilgameš and Enkidu have slain the Bull of Heaven, Gilgameš takes its horns and has them made into libation vessels. He fills them with oil and dedicates them as ointment utensils 'for his god

Lugalbanda' (*ana piššat ilišu ^{d}Lugalbanda iqîš*). They were hung on the bed in the sleeping-room of the paterfamilias (*ušērimma itattal ina urši ḫammūtišu*).[87] It has been suggested that this implies 'that Gilgamesh kept a statue or statuette of him [i.e., Lugalbanda] in his bedroom where he anointed it regularly.'[88] Though the suggestion is based on information from the first millennium version of the Epic, there is evidence to suggest that it holds good for the time of Hammurabi as well.

An important passage in this connection is found in *Dumuzi's Wedding*, a Sumerian composition known from a poorly preserved Old Babylonian tablet.[89] The text describes the wedding of Dumuzi and Inanna in analogy with the usual wedding ceremony among humans. Having obtained the hand of Inanna, Dumuzi takes his spouse home. As the pair reach the house, Dumuzi turns to Inanna and says:

> O my bride, come to my ...
> O Inanna, ... the house of my god.
> To the house of my god I have brought you.
> In the presence of my god you will sleep at my side,
> on the ceremonial seat of my god, o Inanna, you will sit at my side.[90]

The place referred as 'the house of my god' (é-dingir-ĝá) cannot be separated from Dumuzi's own house, or rather: the house of his family. The 'god' of Dumuzi, then, is within the house. The reference to the connubial bed 'in the presence of' (igi) the god suggests that the god was believed to dwell in or near the bedroom of bride and bridegroom. This was the bedroom of the paterfamilias, a room of which Dumuzi, as head of the new household, had taken possession. Here he would sit, together with his spouse, on the 'ceremonial seat' (zà-gu-la)[91] that had once belonged to his father, referred to in the text as 'his god'. We know about the existence of the 'ceremonial table' (banšur-zà-gu-la), inherited by the eldest son, and used on solemn occasions; the ceremonial seat presumably went with it. Dumuzi intimates, in other words, that Inanna would enjoy all the

rights of the mistress of the house. His reassurance was apparently necessary, for he had later to repeat it to allay Inanna's fear that she would end up as a domestic servant.[92]

A Sumerian hymn to the sun god, meant to be recited during a ceremony for the dead, speaks about the ancestor as eating, drinking and sleeping in his own house.

> Let the dead man eat in front of his house,
> let him drink water in his house,
> let him sleep in the shade of his house.[93]

Eating and drinking are activities the dead can engage in only when their descendants provide them with food and drink. Since it may be assumed that the offerings were enjoyed at the place where they were presented, the natural locus of the cult of the dead, according to this hymn, is the family house. This is the place, too, where the ancestors are said to sleep. If the dead eat, drink, and sleep in the house, they must of course be present there; this presence must be taken literally, it seems.

Indeed, the concrete background of the idea of the ancestors sleeping in the family house is the practice of burying the dead within the house. 'Sleeping in the shade of one's house' is an 'allusion to the common practice of burying the dead in private houses', as the editor of the Sumerian hymn writes.[94] We have one reference to this practice in an Old Babylonian letter.[95] Other literary evidence for intramural burial is found in later sources. The myth of Erra and Išum has a passage in which the constructor of a house is pictured as saying: 'These are my living quarters: I have made them and will relax within them; and when my destiny has carried me off, I will sleep therein.'[96] A first millennium ritual to dispel a bad dream also implies that the ancestors are present in the bedroom. As soon as the sleeper is awoken from his nightmare, he is to touch the floor of the bedroom, to light

---

[92] Cf. Jacobsen's translation of column iv, 5-9 (1987:22): 'I have not carried you off into slavery, your table will be a [splen]did table, will be a splendid table, at the splendid table I eat! Your table will be the splendid table, will be the splendid table, you, you will eat at [the splendid table.]'

[93] Alster 1991, lines 151-152: lú-úš-e igi é-a-na ḫé-gu$_7$-e a é-a-na ḫé-nag-nag gizzu é-a-na-ka ḫé-ná-ná. For igi in line 151 there is a variant giš (= ú ?). One would expect inda, 'bread'.

[94] Alster 1991:28 (correct 'buring' into 'burying').

the lamp, and to 'bless' (*karābu*) his 'god' and his 'goddess'.[97] Was the unpleasant dream provoked by feelings of guilt towards deceased parents? The belief that 'neglected ghosts may send evil dreams' was not uncommon in antiquity.[98]

Excavations at Ur and other places have shown that in the houses of the Old Babylonian upper class, the dead were interred underneath the floors.[99] These burials date from the time of the occupation of the houses; the dead and the living dwelt together. The customary room for the intramural burial is the second largest of the house.[100] This room is situated, as a rule, in the recesses of the house.[101] It must be identified with the bedroom of the paterfamilias, whose claim to legitimate succession would be underscored by the silent approval of the ancestors. That the dead were to be placed in the quietest room of the house may be inferred, too, from the Sumerian term for the offering to the dead, viz. k i - s ì - g a . The name is derived from the designation of the grave and means 'place of silence'.[102] Since the dead were not to be disturbed, it was not unnatural to bury them beneath the room that offered the highest degree of privacy; which, in the ancient Near Eastern house, is the bedroom.[103]

It should not be inferred, however, that intramural burial was a condition for the ancestors to receive a cult. The archaeological evidence shows that not all dead received intramural burial; both inside and outside the city, separate cemeteries have been found.[104] It is difficult to believe that the people buried there were not included in the cult of the ancestors. Even people who had disappeared, and who might be either alive or dead, were included in the *kispum* ceremony. The fact is illustrated by the case of a father and his lost son.

[97] Oppenheim 1956:343, tablet 79-7-8, 77 r. 16'-17'.

[98] The quotation is from Tibullus II vi 37: *ne tibi neglecti mittant mala somnia manes*. For another possible allusion to intramural burial in a first millennium ritual see Tsukimoto 1985:125.

[99] See Strommenger 1964; Gasche 1989:60-61; Krafeld-Daugherty 1994:174-235.

[100] So Luby 1990, according to Van de Mieroop 1992:37. Luby's dissertation was inaccessible to me.

[101] Cf. Krafeld-Daugherty 1994:186 'Gemeinsam ist den Hauskapellen, dass sie möglichts weit vom Hauseingang entfernt liegen und somit für Fremde zum unzugänglichsten Bereich des Hauses gehören.' Krafeld-Daugherty identifies the domestic chapels with the rooms used for intramural burial.

[102] See Lambert 1987a:403-404.

[103] The parallel with the innermost sanctum of the god in his temple is interesting: the image of the god stood in the *kummu* (a g r i g), a term that can be rendered as 'bedroom', 'private quarters'. The cella was indeed a place where no light penetrated, and where noises were reduced to muffled sounds.

[104] Barrelet 1980 (who is too sceptical about the occurrence of intramural burial, however).

> My son Sukkukum disappeared from me eight years ago and I did not know whether he was still alive and I kept making funerary offerings for him as (one would) for a dead person. Now they have told me that he is staying in the town of Ik-barî in the house of Ibni-Ea the charioteer and the goldsmith, the son of Ṣilli-Šamaš.[105]

It is possible that these dead—real or presumed—who did not physically 'sleep' in the family house were present there in the form of a statuette or some other symbol. The Epic of Gilgameš refers to a statue of the deceased Enkidu, and implies the existence of a statue of Lugalbanda.[106]

The Authority of the Ancestors

Even in death, the ancestors were by no means powerless. They dwelt with the gods and wielded divine power. Being kin, they were kind at core; only when the living misbehaved did they turn into adversaries. The forefathers exercised an authority that was protective as well as disciplinary; they acted as tutelary spirits. In this they continued to play the part of parents—only this time with powers well beyond those of ordinary mortals.

The tutelage of the ancestors was regarded as a safeguard of the integrity of the family or clan (*kimtum*). Threats to this integrity were manifold. First in line was the curse of infertility which would lead to an 'extinguished brazier' (*kinūnum belû*), an image of the interrupted lineage.[107] A first millennium prayer uses the epithet *mudeššû zēri*, 'providing abundant seed', for the 'god' and 'goddess' of the house.[108] The expression does not refer to the fertility of fields or flock, but to human procreation. Expectations concerning the ability of the deified kin to provide their descendants with offspring are also hinted at in *Dumuzi's Wedding*. Just before Inanna is brought into 'the house of [Dumuzi's] god' where, in the presence of the god, she is to sleep with Dumuzi, the latter asks his god for male offspring.[109] This does not mean that 'the ancients believed that children were conceived only when the personal god and goddess of husband and wife, the family deities, entered the bodies of the couple in the act of procreation and made them fertile.'[110]

[110] *Pace* Jacobsen 1987:22 n. 6. Jacobsen's translation of column iii, 7 ('O my master,

The spirits of deceased kin did not need to enter the bodies of the couple to grant them offspring; yet their blessing was indispensable.

The integrity of the family has a moral as well as a physical aspect; the tutelage of the ancestors included both. As protectors of the moral integrity of the family, the dead kin might be appealed to as a collective referent. This notion is particularly well attested in Assyrian letters from the Old Babylonian period. A woman, asking her brother for money, urges him to 'please the god and the spirits.'[111] The god is the family god, and the spirits are the ghosts of the ancestors. Someone acting against the interests of a given family 'shows contempt' towards its ancestral spirits.[112] Because these spirits embody the family conscience, they can also be invoked in protestations of innocence, alongside the god of the city and the family god. A striking example is found in the correspondence between Enna-Suen and his son. The father blames his son for declaring that he, Enna-Suen, cheats him. The refutation of this incrimination is followed by the words:

> Aššur, Amurrum, and the spirits of my fathers may be my witnesses that I do not cheat you! And is this not enough (to convince you) that you have put a curse into my mouth?[113]

The oath of innocence was a means to clear one's name. Central to such an oath is a conditional curse by the gods (and, in this case, the ancestors): the juror brings a divine punishment over himself should his assertion be false. A conditional curse (here euphemistically called a 'blessing', *ikribum*[114]) invoking the ancestors as witnesses is also found in later texts from El-Qiṭār and Emar, where the 'spirits' of the father are referred to as 'the god[s] of the father'.[115]

---

go in to her in the house') must be corrected. The Sumerian reads l u g a l - m u é - a k u$_4$ - r a - n i, and means 'as my lord entered the house.'

111 BIN 4, 96 [15] *ṣubatē* [16] *ana kaspim ta*$^{?}$*irma* [17] *kaspam kunukma* [18] *[š]ēbilam kima* [19] *ilam* (d i n g i r) *u eṭemmē* [20] *tagammiluma* [21] *la aḫalliqu* [22] *epuš*, 'Convert the clothes into silver, put the silver under seal and send it to me. 112 BIN 6, 59 [8] *u ištu uṣūni eṭemmē* [9] *[ša a]bīni lū uqallilma* [10] *[u] nīāti ana ṣaḫḫurūtim* [11] *[lū iškunniāti]ma*, 'And since he left he has shown contempt towards our father's spirit and [even] us he has thereby [treated] as small persons.' The translation is that of Larsen 1976:288.

113 *Aššur* ^{d}*Amurrum u e-ṭé-mu-ú ša a-bé-a liṭṭulāni lā asalliukani u annītum maṣātma ša ikribam ippīa taškunu.* I owe the reference to this quotation from the unpublished letter kt 91/k 139 to prof. K. R. Veenhof (Leiden). For comparison one might cite *KTK* 18 r. 11': *Aššur ilki a abini liṭṭulā*, where *abini* may in fact refer to the deceased father.

114 The meaning 'curse' for *ikribum* is also attested in Old Assyrian in Lewy 1926, 15:25 ('before their god[s] an *ikribum* came out of the mouth of their fathers') and CCT 4, 31a:28 ('he does not bear you any grudge and [even] uttered [*pāšu ublam*] an *ikribum* to that effect'). I owe both references to K. R. Veenhof.

115 Arnaud 1991, 70 [11'] *[mann]ume ša awātē annûti* [12'] *[unakk]ar il* (d i n g i r -

The appeal to the ancestors as moral referees is usually motivated by tensions within the family: a woman feels neglected by her brother; father and son are on bad terms. Incidentally, the ancestors are invoked against outsiders. Those who treat a family disrespectfully may be accused of contempt toward the spirit of its father. It may be assumed that such accusations were addressed to persons who had personally known the father during his lifetime; their behaviour after his death was felt to be an insult to his memory. It is clear from these references that the ancestral spirits, together with the gods of the family, symbolized the family identity. Anyone acting against the interest of the family elicited the displeasure of its ghosts; those promoting its interests, on the other hand, would be followed by their blessing.

From the exorcistic rituals against angry ghosts, mainly known from texts from the first millennium, one might gain the impression that the ancestors were fundamentally malevolent, and that the main function of the *kispum* was to keep them at bay. This view is certainly wrong. The central motive of the *kispum* was *do ut venias* ('I give that you may come') rather than *do ut abeas* ('I give that you may go away'); the purpose of the rite was communion and the maintenance of mutual good-will. Those who performed the *kispum* rites wished to perpetuate the compact between the dead and the living. The family and its ancestors were to 'bless' each other, to say it in Babylonian terms. The closing lines of the Genealogy of the Hammurabi Dynasty, a text recited during the royal *kispum*, are illuminating in this respect.

> And any dynasty not recorded on this tablet,
> and any soldier who fell while in arms for his lord,
> royal sons and royal daughters,
> all humanity from where the sun rises to where its goes down,
> all who have no one to care for them or to call them[116]
> come ye, eat this, drink this, and give your blessing
> to Ammiṣaduqa the son of Ammiditana, king of Babylon![117]

The purpose of the *kispum*, according to this text, was the obtaining of the blessing of the dead. One finds this idea in a variety of texts from different

J. 1966:96 [32] *palû* (b a l) *ša ina ṭuppi annî lā šaṭru* [33] *u rēdû* (a g a - u š) *ša ina dannat bēlīšu imqutu* [34] *mārē šarri* (d u m u - m e š l u g a l) [35] *mārāt šarri* (d u m u - m í - m e š l u g a l) [36] *awīlūtum kališin* [37] *ištu ṣīt šamši* (^{d}u t u - è - a) *adu ereb šamši* (^{d}u t u - š ú - a) [38] *ša pāqidam u sāḫiram la išû* [39] *alkānimma anniam aklā* [40] *anniam šitiā* [41] *ana Ammiṣaduqa mār* (d u m u) *Ammiditāna* [42] l u g a l k á - d i n g i r - r a ^{ki} [43] *kurbā*. For the translation see also Lambert 1969.

places and periods.[118] The 'blessing' was mutual: the living were to bless the dead by invoking their name and presenting them with food and drink, and the dead would bless the living with peace.

To have the blessing of one's ancestors is to have their approval; to have the blessing of one's offspring is to have their gratitude. For both parties involved the manifestation of mutual acceptance was important. 'The word of the living is precious to the dead, the word of the dead is precious to the living,' as the Sumerian hymn to the sun god says.[119] The central moment in this contact between the dead and the living was the *kispum*. It constituted the rite by which the family proclaimed and, by the same token, reaffirmed and reinforced its identity. Outside the family, there was no such identity. Only under the roof of the family home would there be kin to call you by your name after your death; out on the street one died nameless. That is why the ale-wife Siduri could give no better advice to Gilgameš than to start a family and have children.[120] The only immortality he could hope for was ancestorhood; ancestorhood would provide him with an identity lasting longer than a lifetime.

---

[118] In a Neo-Assyrian letter addressed to the crown-prince the ghost of the queen-mother is said to 'bless' (*karābu*) the prince because he has shown reverence for her ghost, see *LAS* 1, 132 [5] *eṭemmaša* [6] *ikarrabšu kî ša šû* [7] *eṭemmu iplaḫuni.* For a discussion of the evidence see *LAS* 2:190. An Ugaritic funerary ritual ends with the repeated request for 'peace' (*šlm*)—for the king and his offspring, for the queen and her offspring, and for Ugarit and its city quarters (*KTU* 1.161:31-34).

CHAPTER FOUR

THE VENERATION OF FAMILY GODS: A LOCAL FOCUS OF IDENTITY

The principal means by which a Babylonian might authenticate a legal document is by impressing it with his cylinder seal.[1] A seal is not a signature; it was the equivalent, rather, of an identity paper. The seal's impress on the clay of a contract showed that its owner accepted the binding force of the document.[2] The legend of a seal usually states the name of the owner, his patronymic, and the name of the god whom he serves. These three data provided the essential information concerning a person's identity. Self-identifications in formulary prayers from the first millennium BC follow the same pattern: 'I am A, son of B, whose god is C and whose goddess is D.'[3] In both the legends of the seals and the self-introductions in the prayers, the individual defines his identity in part by his personal god or gods. These personal gods, worshipped by families and kin groups, are normally local gods with a sanctuary in the city district or the neighbourhood. Through the worship of such gods, families asserted the local dimension of their identity.

The Legends of the Seals

The usual legend of the Old Babylonian cylinder seal consists of three short lines: the first stating the name of the owner of the seal, the second defining him as 'son of So-and-So', and the third as the 'servant of god So-and-So.' Instead of the name of a god properly speaking, some seals have the name of a king (either alive or deceased) or a temple (notably the Ebabbar). The individual is thus characterized as a 'son' (d u m u , *mārum*) and as a 'servant' (ì r , *wardum*); the filiation implies identification with a family, the servanthood association with a deity (or a king or a temple, both being looked upon as divine). What is the nature of this association?

Interpretations of the expression 'servant of god A', found on the Old Babylonian seals, can be divided in two groups. Some scholars take the notice as a reflection of the devotion of the owner of the seal: they believe the god someone is said to serve is his 'personal' god, that is, the god (or

---

2 Cf. Renger 1977:79.
3 Mayer 1976:46-56.

goddess) to whom he feels a particular affection and whose cult he holds in high honour.[4] Others read the expression as the registration of the fact that the owner belonged to a temple bureaucracy. They argue that the term 'servant' refers to a legal status. To prove their point they make a comparison with those seals defining the owner as the 'servant' of a named king rather than a god. If the designation 'servant of king B' means that the person in question belonged to the palace administration, or that he was politically subordinate to the king, the variant 'servant of god A' should be explained along similar lines.[5] A third group of scholars simply suspend judgment. One of them declares that 'we do not know the basis of the association between the deity and the man or its consequences, cultic or otherwise.'[6]

The material that is available does not justify the scepticism professed by the third group of scholars. Careful study of the seal inscriptions has already led to serious progress in the understanding of their significance.[7] Thus the interpretation of 'servant' as a reference to the professional occupation of the owner must be abandoned. A number of inscriptions mentioning both the religious profession of the owner and the god of whom he is servant show that the two do not necessarily match. The view that 'servant of god A' means that the man in question was a temple official is apparently unfounded. An example may illustrate the point:

> Šalim-pāliḫ-Marduk,
> son of Sîn-gamil,
> *šangûm*-priest of Šamaš,
> servant of Marduk.[8]

Apparently, the god this man was privately associated with (Marduk) was not the one he served in his professional capacity (Šamaš). Other seals make a similar distinction.[9] This favours the interpretation which sees in 'servant of god A' a reflection of personal devotion—also when there is no reference to a professional association with a given deity.

The view which takes 'servant of god A' as a statement of a professional relationship may be challenged from another angle as well. The principal argument in its favour would seem to be the occurrence of the phrase

---

4 Thus, e.g., Krausz 1911; Langdon 1919:51 n. 1, 52 n. 2.

6 Oppenheim 1977[2]:198.

7 Notably Charpin 1990a, to whose work much of the what follows is indebted.

8 Seal impression on TCL 1, 69 r.

9 E.g., von der Osten 1934, no. 263 (Apil-Yatum, son of Nabi-Sîn, *pašīšum*-priest of Inanna, servant of Ea); de Ward 1920:91 (Imgur-Sîn, *pašīšum*-priest of Ninlil, son of Anebabdu, servant of Damu); Jean 1931, 22a (Zaziya, *pašīšum*-priest of Gula, son of Šu-Ninšubur, servant of Ninšubur).

'servant of king B.' By tacit consensus, the latter phrase is taken to imply that the owner of the seal is attached to the court. Such may or may not have been the case, however. Even before their death, kings enjoyed a status not inferior to that of the gods; they were the object of an adoration bordering on worship.[10] Oaths invoke the names of gods and kings alike; similar powers were ascribed to them. Royal names are also found as theophoric elements in personal names, such as Hammurabi-ilī, 'Hammurabi-is-my-god', or Ilūni-šarrum, 'the king-is-our-god'.[11] If kings can be treated as gods, why should they not occur in a divine capacity in the legends of the cylinder seals? In some cases it is evident, moreover, that the king mentioned in the place of the personal god was deceased.[12] This does not imply that the kings who are referred to in a divine capacity are by definition dead; yet the relationship between worshipper and deified king obviously differed from the relationship normally obtaining between employee and employer. It may be concluded that the association between the individual and the god (or king) mentioned in his seal is not based on the former's position as a temple or palace official. The last line of the seal legend is the expression of a private devotion.

Greeting Formulas in Letters

By their nature, seals are stylized and formal expressions of identity. It cannot be taken for granted that they reflect actual religious moods and practices. We must therefore probe for the reality behind the seals. One avenue of investigation that may take us some way toward this goal is a study of documents of day-to-day life; family correspondence falls into that category. Amid the various events and affairs discussed in Mesopotamian letters, the references to matters of religion are relatively rare, it is true, yet they are by no means lacking. In epistolary texts gods are traditionally referred to in two capacities: as powers that may bestow their blessing upon the addressee, and as supreme witnesses to (and, as the case may be, retributors of) human behaviour. In the first capacity they are found in the opening statements of the letters.

To win the goodwill of the addressee, the rules of the epistolary genre require the writer to begin by saying: 'Thus says B: May god C and god D

---

[10] Cf. Chapter Two, n. 141.

[11] See Klengel 1976b; 1983:8 n. 7. Cf. EA 198:1-2 'To the king, my lord, my personal god.'

[12] See Klengel 1983:15 n. 22. Cf. BM 96956 (reference courtesy K. R. Veenhof), a text from the reign of Abi-ešuḫ (1711-1684) with an impression of the seal of Sîn-iddinam the son of Nūrātum, 'servant of Hammurabi' (1792-1750).

keep you in good health,' or some other pious wish. Normally the reference is to two gods; sometimes one, and exceptionally three or more. A mere glance at a collection of Mesopotamian letters suffices to establish that, the contents of the wishes being quite similar, the deities invoked to effectuate these blessings often differ from the one letter to the other. Letter writers were apparently at liberty to select the names of the gods themselves. Assuming that the gods were not chosen at random by the letter writer, what criteria commanded their selection? Do these opening statements afford an insight into the actual religion of a given family?[13]

Inquiries into the motives explaining the choice of deities in the formula of greetings have been hampered by the wish to find one fixed rule; such a rule, apparently, did not exist. The habits that govern the selection cannot be translated into a 'law'. The general considerations of the letter writers are clear: they wish to mention the gods that can effectively bestow the desired benefits because they stand in an acknowledged relationship to the sender, to the addressee, or to both; yet the translation of this concern into the actual choice of deities is variable.

At times, the gods invoked have a relationship with the sender alone. The *nadītum* women in the service of Šamaš usually open their letters by invoking the blessing of their 'Lord' and their 'Lady' upon the correspondent. They sometimes add that Šamaš and his consort Aya (the gods referred to by these epithets) will give their blessing 'for my sake' (*aššumiya*), by which they mean, as other letters show, that their intercession with the divine pair will lead their gods to extend their care to the addressee. In cases like this, the salutatory address tells little about the beliefs of the recipient of the letter.

Letters written by *nadītum* women constitute a minority of the epistolary corpus, however. In correspondence between people living in the secular realm, there usually is a reference to one or more gods with whom the recipient of the letter is somehow connected. According to earlier studies, the gods mentioned are normally those of the cities in which sender and recipient lived; since each Mesopotamian city had its patron deity (Marduk in Babylon, Zababa in Kiš, Tišpak in Ešnunna, and so forth), and correspondence was often between two persons living in different cities, the frequent occurrence of two gods is to be expected.[14] Pressed for further precision, scholars have suggested that good manners required the letter writer to first mention the god of the addressee and only then his own city god.[15] It must be

---

[13] For a study of the background of the Old Babylonian greeting formulas see Dalley 1973.

[14] See Schroeder 1918.

[15] So Landsberger 1929:300.

immediately added, though, that the rules of epistolary decorum were applied with a great amount of freedom.

A perusal of the several thousands of Old Babylonian and Old Assyrian letters shows the presence of another pattern, too. There are quite a number of letters in which the writer calls upon the personal god of the addressee. Some examples illustrate the practice.

> May Šamaš and your god keep you in good health![16]

> May Šamaš, Marduk and Amurrum your creator keep you in good health forever for my sake![17]

> May Šamaš and the god of your husband keep you in good health![18]

> May Šamaš and Ninšubur your creator keep you in good health forever for my sake![19]

These few cases reflect a pattern: the personal god of the addressee comes last, and may be mentioned by his name and the epithet 'your creator', or simply as 'your god' or—when the writer is addressing a woman—'the god of your husband'. The gods previously mentioned are often Šamaš or Marduk, or both. Their mention need not be related to the city of the letter writer: under the Hammurabi dynasty, Marduk is mentioned as the 'national' god, whereas Šamaš seems to owe his place (always first in line) to his role as 'universal' god. Šamaš, in other words, is not invoked in his capacity as city god (which would imply that one of the correspondents were by definition at home in either Sippar or Larsa, which manifestly is not always the case), but because of his omnipresence as the sun god.[20] If there is a traditional order in which the gods are mentioned, then, it goes from the general ('Šamaš') to the particular ('your god').

Once the pattern is established on the basis of a few unambiguous references, it becomes possible to recognize personal gods in deities not explicitly designated as such. When a letter having Larsa as its destination mentions Šamaš and Gula as those who grant the addressee good health, we can be fairly sure that Gula is the personal goddess of the recipient.[21] Likewise, a

---

16 AbB 13, 65:4-5.
17 AbB 13, 161:4-5.
18 AbB 12, 129:3.
19 AbB 9, 132:4-6.
20 Note the frequency of the *aššum Šamaš* formula in letters from various parts of Mesopotamia, see Veenhof 1978. Cf. the equivalent rhetorical question 'Is not Šamaš our (common) god?' in AbB 10, 178:5.
21 AbB 13, 138:4-6. For the destination see AbB 13, p. x.

blessing by Šamaš and Ašnan in a greeting formula presumably means that Ašnan is the personal god of the recipient.[22]

Once again, one must beware not to take a custom for an inflexible rule. Though the rule according to which the order goes from the general to the particular is usually valid, the god who is last mentioned may also be the god of the letter writer. An example of this phenomenon is found in a letter of Ur-Utu, the *galamaḫḫum* priest of Annunītum in Sippar. He flatters a potential benefactor by evoking the admiration and moral respect which the latter's intervention might elicit: 'May those who see me invoke a blessing upon you, my lord, before Šamaš, Marduk, and Annunītum.' The order suggests that Annunītum was the personal goddess of the writer—which other evidence confirms to be the case.[23]

In spite of their standardized forms and obligatory nature, the greeting formulas of the letters offer room for a personal touch. The reference to the personal god of the recipient is not omnipresent; yet its regular occurrence shows that the relationship between a man or a woman and his or her god was a matter of concern to others as well. By alluding to it, they demonstrated their sensitivity to the religious identity of their correspondent. Clearly, the commitment to a personal deity was not only a private matter. One's religious identity, materializing in the devotion to a particular god, was also a social identity.

The Familial Context of Private Devotion

To call the god mentioned on the seal and in the letters the 'personal god' may easily convey a wrong impression. When we speak of a 'personal computer' we refer to a computer that is meant for personal use, normally by one individual only. The gods the Babylonians privately worshipped were not personal in this sense. Babylonians were not devoted each to his particular deity: the cult of the 'personal god' was collective, as the evidence shows.

In a limited number of cases we possess the seals of various members of one family. A synoptic study of these seals reveals that, within a given family, different generations mention one and the same god as their personal deity.[24] One Iddin-Amurrum from Larsa is 'servant of Amurrum', as was

---

22 AbB 13, 146:3.

23 Van Lerberghe & Voet 1991, 68:3'-4'. Ur-Utu is also known as the author of a letter prayer to Annunītum (de Meyer 1989). Since letter prayers were normally addressed to the personal god, this is a case, it seems, where professional service and private devotion coalesce.

24 Charpin 1990a:61-69.

his son Māri-Amurrim;[25] the brothers Etel-pî-Sîn and Waqrum from Ur, sons of Šamaš-nāṣir, both claim to be 'servant[s] of Nimintabba'.[26] Other examples abound. The personal god was passed on from father to son and from son to grandson.[27] He was part of the heritage, so to speak, and as such the god of the patrilineal family.

A family's loyalty to one and the same god over several generations shows that it would be mistaken to say that the god mentioned in a personal seal is the god of the owner's private predilection; he had not personally chosen this god. To judge by the seals the room for choice must have been very small. The fact is illustrated, too, by the practice of sons using the seal of their father.[28] The seals are statements of a family identity rather than an individual identity; therefore, their transmission from father to son need not cause surprise. On the death of his father, the eldest son succeeded to the former's position as paterfamilias. It was his role, henceforth, to represent the family. The transfer of authority was materialized in various ways, one of them being the transmission of the seal. Just as the possession of the royal seal was a means to demonstrate royal authority by commission,[29] so the seal of the father was a visible legitimation of the authority of his successor.[30] The god mentioned in the father's seal was also his son's, not because the son had decided it that way, but by virtue of his membership (and now leadership) of the family.

To judge by the evidence of the cylinder seals, devotion to a particular deity ran in the family: if a man defines himself as a servant of, say, Adad, there is a fair chance that his son and grandson will do likewise. Their devotion follows the family tradition. The fact that the god of the paterfamilias was a god of the other members of the family as well is also evident from the letters, where the expressions 'your god' and 'the god of your father' are used indiscriminately to refer to the same deity. The phenomenon is particularly well attested in the correspondence of Assyrian merchants travelling between the Assyrian homeland and the trading colony at Kārum Kaniš (modern Kültepe in Central Turkey). Their letters, written around 1900 BC,

---

25 Charpin 1990a:62-63.

26 Charpin 1990a:61.

27 A similar conclusion was already reached by Hirsch 1966:57 and Stol 1980:187-188 and n. 9.

28 For examples see Charpin 1990a:73.

29 See Charpin 1992a:70-74.

30 Cf. the observation by Cunnison 1957:22 concerning 'positional succession' among certain clans in the border zone between Zaire and Zambia: 'Whenever a married person dies, he or she must be succeeded by a person who becomes sociologically the deceased, taking not only his role but his identity as well.'

abound with references to the personal god of the recipient.[31] The study of these references becomes particularly instructive when they can be traced to the same family archive. Compare the following phrases, both taken from letters addressed to Innāya, a major Assyrian trader.

> May Aššur and your god be witnesses![32]

> May Aššur, and Amurrum your god, and the shrine[33] of Aššur by which I have taken an oath, reject me (if this is not so)![34]

In letters dispatched by Innāya himself we find:

> May Aššur and Amurrum the god of my father be witnesses: I have not done anything to him![35]

> May Aššur and your [plur.] gods be witnesses![36]

> May Aššur, your [plur.] gods, and the god of my father be witnesses![37]

These few examples (which could easily be multiplied if the correspondence of other merchants were drawn upon as well) support some of our earlier observations. Here, too, there is a movement from the general to the particular: first Aššur, the national god, is invoked, and then the personal god (of

---

[31] For studies see Garelli 1962:207-208; Hirsch 1966; 1972:35-36, Nachträge, 18; 1977.

[32] TC 1, 20:46, cf. Michel, C. 1991.2, 26 [46] *Aššur* ▪ *ilka li[ṭṭulā]*.

[33] The word *pì-ri-ku-um* is problematic. The only other occurrence is in CCT 4, 43a [31] *[maḫar] patrim ša Aššur i[lli]kū pì-ri-kam* [32] *ša Aššur it[mama umma] šūtma*, 'They went before the sword of Aššur. He took an oath by the *pirikkum* of Aššur, declaring ...'. Following a suggestion by Lewy 1950:25-26 n. 3, von Soden (*AHw* 866 s.v.) interprets *pirikkum* as a lion symbol on the basis of Sumerian p i r i g , 'lion'. Alternatively, Balkan 1967:399-400 n. 3 has suggested reading it as *bi-ri-qú-um*, a by-form of *birqum*, 'lightning'. The Old Assyrian *pirikkum* is connected, I believe, with the word *pi-ri-ik-ki-šu-*▪ in an Old Babylonian hymn to Amurrum, OECT 11, 1:12. In view of the parallel expression *šu-ub-ti-šu-un*, it is apparently a variant of *parakkum*, 'shrine' (cf. O. R. Gurney in his commentary, OECT 11:18). This meaning fits the Old Assyrian evidence. The *pirikkum* of Dagan is mentioned in a Mari text (ARMT 23, 284:3), and a text from Emar mentions an undefined *pirikkum* in connection with an oath (Arnaud 1986, 28:5). Note also the goddess *Ištar (ša) pí-ri-kà-ti* in Emar, presumably the 'Ištar (or simply 'goddess') of shrines' rather than 'Ištar of the lions' (cf. Fleming 1992:89 n. 73). For other cases of an oath by a shrine see van der Toorn 1986b.

[34] BIN 6, 97 = Michel, C. 1991.2, 44 [20] *Aššur u* [d]*Amurrum ilka* [21] *u pirikkum ša* <<*ša*>> *Aššur* [22] *ša atmā[ku]ni liddi*[?]*āni*.

[35] CCT 5, 1a = Michel, C. 1991.2, 96 [31] *Aššur* [32] *u* [d]*Amurrum ili abiya* [33] *liṭṭulā mimma lā ēpušušuni*.

[36] Donbaz & Veenhof 1985, no. 2 = Michel, C. 1991.2, 98 [7] *Aššur* ▪ *ilūkunu liṭṭu[lā]*.

[37] Donbaz & Veenhof 1985, no. 2 = Michel, C. 1991.2, 98 [18] *Aššur* [19] *ilīkunu u ili* (d i n g i r -*li*) *abiya* [20] *liṭṭulā*.

the writer or the recipient, or both). For Innāya, the latter is Amurrum. Since the god can be referred to both as 'your god' (in letters addressed to Innāya) and as 'the god of my father' (in letters written by Innāya), the personal god is evidently the 'god of the father': even after the father's death, the devotion of the paterfamilias determines the devotion of his son.

The 'god of the father' is not altogether lacking in texts from Babylonia proper.[38] In an Old Babylonian letter from Adab (modern Bismaya), the letter writer (a woman) appeals to Ninšubur, whom she calls 'the god of your father', to 'render a verdict about my affairs and your affairs'.[39] The man and the woman are brother and sister, and theirs is a dispute over the heritage. Since they have the same father, the god of his father is by definition the god of her father: he is the god of the family.[40] A second letter containing the expression is special, because it is addressed to 'the god of my father'.[41] Since this unnamed god is asked to have mercy on the supplicant for the sake of his family, 'old and young ones', he may appropriately be characterized as the family patron. A third occurrence of the expression is found in a personal lamentation not devoid of literary qualities; here the 'god of the father' is asked to intercede with Ištar.[42]

The characterization of the personal god as the 'god of the father' confirms what could be deduced from the witness of the seals: the god to whom the paterfamilias is devoted is also the god of his sons. To judge by the Sumerian evidence, the Babylonian practice goes back to the mid-third millennium at least. The personal god of the male adolescent was the god of his father. In one of the Sumerian literary dialogues from the 'tablet house', the teacher blesses his pupil by 'the god of [his] father', according to the most likely restoration of the slightly damaged text.[43] There are also historical examples of such family traditions. In the royal family of early Lagaš there was a veneration of the god Šulutul (or Šulluḫša, the correct reading of the name being in doubt) shared by father, son and grandson.[44] There is no reason to believe that such traditions flourished only in royal families. Like the Babylonians of the early second millennium, ordinary citizens in the third millennium were devoted to 'the god of their father'.

---

[38] The context of the expression is sometimes obscure, as in AbB 11, 15:20.

[39] AbB 5, 39 7 *[ya]tta u katta* 8 *[^{d}N]inšubur ili abika* 9 *[liš]āḫiz*.

[40] Because of the greeting formula 'May Enlil and Ninurta keep you in good health forever for my sake,' I assume that the woman is a *nadītum* living in Nippur.

[41] AbB 9, 141 = YOS 2, 141. For a justification of the translation of d i n g i r *a-bi-ya* as 'the god of my father' (*pace* M. Stol in AbB 9:89) see Groneberg 1986:103 n. 82.

[44] Edzard 1993:203-204.

The terms in which the Babylonians referred to their family gods are always relational. In addition to the customary expressions 'your god' and 'the god of your father', we find, where a woman is addressed, references to 'the god of your husband' (the husband being referred to as *bēlum*, literally 'lord'). One letter writer expresses the wish that 'Šamaš and the god of your husband keep you in good health';[45] another prays that 'Geštinanna and the god of your husband keep you in good health forever.'[46] The expression does not warrant the conclusion that 'women had neither a tutelary god nor a tutelary goddess.'[47] It is true that the ideal woman 'humbly serves the god of her husband,' as a Sumerian text has it,[48] but her devotion to this god may be as fervent and genuine as her husband's. Women were not free to choose the god they would worship; nor were most Babylonian men. The liberty to choose must not be confused with the measure of personal involvement and dedication.

The attachment of a wife to the god of her husband does imply inequality between men and women, however; a man would never be said to serve the god of his wife. The religion of women was always determined by men. There is not a single text from the second millennium that speaks about the personal god of a woman as 'her god', unless the woman in question is an oblate or a priestess.[49] As long as she is not married, a woman worships 'the god of her father' (*ili abiša*).[50] Her wedding altered the situation: henceforth, she was to serve the god of her husband (that is, to be more precise, the god of *his* father). If her family and her in-laws lived in proximity of each other, there is a fair chance that they were devoted to the same deity. When the distance is significant, though, the marriage could coincide with a religious transfer; the woman had to forget her paternal gods. The case of princess Kirûm, who was anxious to return home to worship the gods of her father, shows that the transition was not always easy.[51]

Bēltani, whose father had dedicated her as a *qadištum* (literally, a 'consecrated woman') to his god Adad, henceforth belonged to the god Adad; he now was 'her god', as the text says.[52] Likewise, the *nadītum* women, dedicated to Šamaš, Marduk, or some other god, speak of their divine masters as

51 ARM 10, 113:19-22.
52 Grant 1918, 260:14 *maḫar* ^{d}*Adad iliša*, cf. lines 2-4: ^{I}*Ibni-*^{d}*Adad abiša ana* ^{d}*Adad ilišu ana qadištim* (n u - g i g) *iqīš*.

'my Lord' (*bēlī*) and 'my Lady' (*bēltī*). Yet their position is exceptional, since they had entered the household of the god. Though the *nadītum* could marry (provided she remain without children), she was reckoned to belong to the house of her god—in spite of her material connections with the 'house of her father' (in whose ancestor cult she participated and was included after her death) or 'the house of her husband'. Ordinary women have an indirect relationship with the family god; it always takes place through their fathers or their husbands. That is why the husband incurs the blame when she errs or sins. 'If his wife curses his god, *he* bears the punishment of his god,' according to a view that found its way into the first millennium omen literature.[53]

The impression of exclusivity that is so often associated with the modern use of the term 'personal' would seem to find some support in the designation of the personal god as 'the god of my head' (*ili rēšiya*) in texts from the Old Babylonian period. Thus Yarīm-Līm, the king of Aleppo, asserts his readiness for combat in an oath 'by Adad the god of my city, and by Sîn the god of my head.'[54] In an inscription of the Assyrian king Samsī-Addu, the monarch curses his enemies also by 'Sîn the god of my head'.[55] The 'god of my head' occurs once more, this time in a strictly literary context, in the Old Babylonian composition *Man and his God*. The sufferer is said to utter loud complaints 'before the god of his head' (*maḫar ili rēšišu*).[56] Other occurrences are uncertain.[57]

Though it has been suggested that the expression 'the god of my head' is short for 'the god who lifts my head' (*ilu mulli rēšiya*), that is, 'the god who exalts me',[58] there is no need for such convoluted explanations. Nor is it likely that the word 'head' should be taken figuratively as the head of the family, or even the head of a lineage. The expression is attested predominantly in Akkadian texts from West Mesopotamia and Syria. In these western regions one also finds the expression 'the god of my head' with a

55 *KAH* I no. 2 vi 19.

56 Lambert 1987b:190, line 7. Lambert's translation ('the god, his chief') is based on his restoring *i-li-[im] re-ši-šu*. The restoration is required neither by traces of signs nor by reasons of grammar.

57 See AEM 1/1 (ARM 26), 108:6-7. If the bold restoration of Durand is correct, Addu would be 'the god of the head' of Yasmaḫ-Addu. We would have to assume, however, that Yasmaḫ-Addu had a different personal god than his father Samsī-Addu, who called Sîn the 'god of his head'. The expression 'of the head', qualifying a god as personal, is also found in Hittite sources, see *WdM* I/1:211.

58 Grayson 1987:51 note to line 132.

different Akkadian term for head, viz. *ilu ša qaqqadiya*.[59] Its significance is clear from the *Autobiography of King Idrīmi of Alalaḫ*: after a seven year long stay among the Ḫabirū, the king found that finally the storm god had returned to him, i.e., literally, 'to [his] head' ([d]i m *a-na* s a g - d u-*ya it-tu-ur*, lines 29-30); the divine return was followed by the king's successful recapture of the throne of Alalaḫ.[60] The words *rēšum* and *qaqqadum* stand for 'person, self', and the expression 'god of the head' can be rendered as 'personal god';[61] it is the equivalent of the late—and very rare—construction *il ramani*, 'the own god'.[62]

Arguably, the circumlocution 'god of the head' emphasizes the intimate connection between a man and his god. Yet this intimacy does not imply exclusivism. The cult of Sîn, whom Yarīm-Līm called 'the god of my head', was continued by his son Hammurabi; one of the latter's correspondents referred to Sîn as 'the god of your father'.[63] If there was exclusivism, it did not shut out one's male offspring, apparently. In fact, as may be inferred from both the seals and the letters, the personal god could be referred to as 'my god' or 'the god of my father' without distinction. There may have been an exclusivism of sorts with respect to other families, but within the family, different generations are united in a common devotion to the god (or gods) of the family. Their god is both a personal god and a divine patron of the family; they saw no conflict between the two notions.

If the 'god of the father' is the god of his sons, and also the god of his wife and daughters, why not simply call him the 'family god'? Indeed, the term seems appropriate from a modern point of view.[64] Yet the Babylonians themselves spoke seldom of a 'family god'. The expressions *il(i) bītim* and *ištar bītim* ('god of the house' and 'goddess of the house', respectively) do not refer to such family gods as Marduk, Ninšubur, Amurrum and the like, but to *numina loci* or deified ancestors.[65] One Assyrian text from the first millennium mentions 'the gods of the house of his father'.[66] Even if the

[64] Cf. Selz 1990:112: 'It can be shown ... that what is traditionally believed to be a 'personal god', also erroneously termed 'tutelary deity' ('Schutzgottheit'), is in fact a god of the family or the clan, presumably taking care of any member of that family.'

[65] For a discussion see 'Trouble Between the Generations' in Chapter Six.

[66] *ilānu ša bīt abīšu*, Luckenbill 1924:30 ii 62.

expression should be translated as 'his family gods', it would be late and without a parallel in texts from the second millennium. The closest equivalent is in an Old Babylonian letter to Iltāni the queen of Qaṭṭarā (Rimaḫ). The writer refers to 'the god who knows the house of your father'.[67] From the context it is clear, however, that the verb 'to know' has the force here of 'to elect': the writer congratulates the woman with her elevation to queen; since she is a daughter of Samu-Addu, the king of Karana, her accession to the throne is in line with the local dynastic traditions.[68]

The single instance of an expression that might be rendered as 'family gods' is found in a letter to the same Iltāni. With a variation on a traditional greeting formula, the letter writer expresses the wish 'that Adad and Geštinanna, the god(s) of our family (or clan, d i n g i r *kimtini*), honour you in the city where you dwell.'[69] Rīš-Adad, who uses this formula, is well acquainted with Iltāni from the time she still lived in Ešnunna; the reference to 'our family' implies that they were related and were hence devoted to the same pair of gods. This one occurrence of the term 'family gods' (family being understood in the wide sense of the term) is so far unique in the known texts. We must therefore conclude that the terms 'personal god' (**ili rēšim*) and 'family god' (**ili kimtim*) were both used by the Babylonians, but that preference was given to such terms as 'the god of the father', 'the god of the husband', or simply 'my god'. The terms 'personal god' and 'family god' fail to do entire justice to the hierarchical structure of the family and its religion; they are, in a way, too democratic. In a patrilinear society, a household worships the god of the patriarch, that is, the 'god of the father'.[70]

The Local Character of the Personal God

A question that is still unresolved concerns the criteria by which a personal god was chosen.[71] Though for most generations the family god was simply the 'god of their father', whom they had inherited rather than chosen, the devotion of the family to a particular deity must have had a beginning. What

The reference to the d i n g i r *kim-ti be-lí-ya*, 'the god of my lord's clan', in ARM 2, 50 r. 12', is based on an erroneous reading. The line reads either d i n g i r *it*[!]*-ti be-lí-ya*, 'God (goes) with my lord (at the side of the army)', or—more probably—[d]a l a d$_3$. m e š *be-lí-ya*, 'The good genius of my lord (goes at the side of the army)', see J.-M. Durand, *NABU* 1991, 34.

[70] Whether slaves were included in the community of worshippers is uncertain. The personal name Ili-awīlim-rabi, 'The-god-of-the-gentleman-is-great', carried by slaves (Stamm 1939:73 n. 2), contains a hint at the devotion of slaves to the god of their master.

[71] For discussions of this issue see Charpin 1990a:74-78; Edzard 1993:204.

was the motive of their distant ancestor who decided that this deity and not another one would be his god and the god of his children? Though a fully satisfactory answer to that question cannot be given yet, some characteristics of the nature of the relationship between a family and its god are beginning to emerge. In anticipation of the discussion to follow, it may be said that the principal correlation is topographic: the deity that the family worships is a god that normally has a sanctuary in the district or the neighbourhood where the family lives. Whether this is the cause or the result of the devotion cannot be established.

The quest for the motive behind the choice of the one god rather than the other is hindered by our ignorance concerning the identity of most Babylonian family gods. Personal names are of limited value for the reconstruction of family religion. In many cases the god of the family is also found as theophoric element in the name of the worshipper or his father. Šulpae-bani ('Šulpae-is-my-creator'), the son of Šulpae-mansum ('Šulpae-has-given') is—not unexpectedly—a servant of the god Šulpae;[72] likewise Māri-Amurrim ('Son-of-Amurrum'), the son of Iddin-Amurrum ('Amurrum-has-given'), is a servant of the god Amurrum.[73] Though the examples could effortlessly be multiplied, there are so many counter-examples that the identification of the family god on the basis of personal names is often a hazardous business.[74] Only when the same theonym occurs in the names of father and son is there good reason to suspect that they honoured the deity in question as their god. But what to make of a father by the name of Enlil-abī, whose son was called Sîn-iddinam, the latter having named his son Mannum-balum-Šamaš? Considerations of propriety, deference to tradition, and mere fashion were all factors in name-giving; apparently, they often took precedence over the wish to include a reference to the god of the father.[75]

From the limited number of instances in which it is possible to establish the personal god of a given individual, and sometimes of several individuals of the same family, certain patterns of choice emerge. It is necessary to remind ourselves first of the fact that a certain familiarity with the god of necessity precedes his choice as patron. On the evidence of the so-called god lists, the Mesopotamian pantheon was extraordinarily rich and ramified; the names of gods run in the thousands. Most of these gods were known only to the theologians of the time, though. Babylonian laymen did not have such a

panoramic view; they were acquainted only with the major gods of the pantheon and the gods they knew from their surroundings and their particular traditions.

A survey of the gods mentioned as personal gods on the cylinder seals shows that they were chosen from a relatively small group. Unlike such protective spirits as the *šēdum* and the *lamassum*, they are never anonymous.[76] The divine names on the seals can be divided in two groups: the one is constituted by the names of minor deities such as Šubula,[77] Wēdûm,[78] Bēl-ṣarbi,[79] Išar-kīdiššu,[80] Išar-padān,[81] Šatwak[82] and the like; the other by the names of major and well-known gods such as Adad, Amurrum, Ašnan, Dagan, Damu, Enki (and his Akkadian alter ego Ea), Enlil (rare), Gula, Marduk, Nabium, Nergal, Ninsianna, Ninšubur, Ninurta (rare), Nissaba, Šamaš (rare), Sîn, Zababa and a few others. The occurrence of both minor and major deities shows that fame was not the principal factor in the choice of a god.

The analysis of the catalogue of divine names on the seals, in combination with a search for the correlation between the worshipper and the identity of the god, yields three motives of choice. A study of the theonyms alone suffices to establish a general tendency to address the family worship to a deity below the highest level of the—locally differentiated—pantheon. A first indication to this effect is the absence of the goddess Ištar (or Inanna) as personal goddess on seals.[83] In view of the presence of other goddesses, the gender of the deity was no obstacle for her worship. Rather than to her sex, the absence of Ištar is to be related to the prominence of Ninšubur. Ninšubur was the minister of Ištar, and could in that capacity be asked to intercede

---

[76] The *šēdum* and the *lamassum* were protective spirits that could act as emissaries of the family deity. An Old Babylonian letter opens with the words 'to my father whose god, his creator, gave him an everlasting guardian angel' (TCL 17, 37 [1] *ana abiya ša ilšu bānīšu* [2] *lamassam dārītam iddinušum*). One neither prayed to such angels nor worshipped them. Only the family gods were worshipped. Most of the time one's *lamassu* was anonymous. In the cases where a specified deity is said to be a *lamassu*, the latter term serves as a functional epithet (Jacobsen 1989:74). On the *šēdum* and the *lamassum* see also A. Belkind *apud* Rosengarten 1971:158; Mayer 1978:494; Edzard 1993:206.

[81] Scheil 1909:133.

[82] UET 5, 476 seal 4.

[83] The only possible exception I am aware of is found in CT 47, 32 seal impression 6 which reads ì r ^{d}*Ninšubur*, ì r *Eš$_4$-tár*, which I would preferably understand as 'Warad-Ninšubur (son of) Warad-Eštar,' rather than 'Warad-Ninšubur, servant of Eštar.' The very rare seals that mention Ištar/Inanna as family god refer to a local form of the goddess, such as Inanna of Zabalam (Charpin 1990a:71 n. 88). Note also the mention of Ištar-ṣarbat in BE 6/1, 5:9 and TCL 1, 83.

with the goddess. An Old Babylonian prayer from Nippur shows that Ninšubur could indeed be worshipped as family god ('the god of my father') precisely because he was able to reach Ištar.[84] Letters to family gods often allude to their role as intercessors: the goddess Ninmug is asked to intercede with her consort Išum,[85] Amurrum's word is 'heard before Šamaš',[86] and an anonymous 'god of my father' is asked to plead for the letter-writer with 'your friend' Marduk.[87]

The absence of Ištar/Inanna on the seals alerts to the fact that some of the other high gods are either absent or very rarely mentioned as well. Anu never occurs, Šamaš only seldom, and the mention of Enlil or Ninurta is highly exceptional. The glyptic data are too abundant to dismiss such matters as pure coincidence. It seems that only kings could boast a private devotion to the highest gods. Since royal worship was never a strictly private matter, however, the kings who professed such devotion thereby made a political statement as well. They claimed to be superior to normal human beings to the point where they could freely communicate with the highest-ranking deities. Ordinary citizens considered intimacy with the upper echelons of the pantheon presumptuous. Though in their prayers they recognized the fact that these gods were ultimately in command, they tried to influence their decisions by the intermediary of lower-ranking deities.[88]

Another factor to play a role in the choice of deities is the profession of the worshipper. Its influence on the choice of a god was presumably limited, however, since there is only one group in Babylonian society for which a link between profession and devotion can be established, viz. those who had mastered the art of writing. Scribes tended to worship either Nissaba or Nabium as their god, also when there is no evidence that these gods had a temple nearby.[89] Nissaba and Nabium were both known as gods of writing; in the universe of the myth they are the secretaries of the gods. Because of the mythological role of these gods, part of their divine identity, scribes felt an affinity with them. As a scribe, it made sense to honour Nabium, who was after all the 'lord of the reed stylus' (*bēl qan ṭuppi*).[90] Thus Nabium-

[85] AbB 13, 164.

[86] AbB 12, 99:1-2.

[87] AbB 9, 141:8-9.

[88] The suggestion might be ventured that the occurrence of kings in the capacity of family gods on the Old Babylonian seals is to be explained in part by reference to the role of these kings as intermediaries between their subjects and the gods.

[89] Charpin 1990a:74-75. Cf. the wish of the teacher for his student: 'May Nidaba, Lady of guardian angels, be your guardian angel' (Kramer 1949:204, line 74 ^{d}n i d a b a n i n - ^{d}l a m a - r a ^{d}l a m a - z u ḫ é - a, var. ḫ é - à m).

[90] *CAD* Q 80 s.v. *qan ṭuppi*.

mālik, a scribe living in Lagaba (where Nabium was certainly not a main god), is referred to as 'servant of Nabium' on his seal. A flattering reference to his profession and his god is found in a letter in which he is described as 'a fine gentleman, whose reed stylus is directed by Marduk and Nabium.'[91]

The mention of Marduk *and* Nabium as those who endowed the scribe with his skill is representative of the religion of scribes in the sense that they very often worshipped two gods. Private devotion to a pair of gods was comparatively rare in Old Babylonian times. It occurred in three constellations: the two gods were each other's consort; one of the two gods was typically Amorite (Amurrum, Sîn, Adad, or Dagan); or one of the two gods was a patron of the art of writing (Nissaba or Nabium). When a seal mentions god X or goddess Y plus Nissaba or Nabium, we can be sure that the owner of the seal was a scribe.[92] Do these cases of devotion to Nissaba and Nabium imply that the gods of writing were present in the scriptorium in the guise of an image or a symbol? The possibility should not be excluded, seeing that Nabium is also 'the lord of the tablet house' (*bēl bīt ṭuppi*);[93] such patronage is likely to have been visualized in some form.

Of far greater importance than the first two considerations is the third and usually decisive factor of choice, viz. topographical proximity. The god Babylonian citizens elected to be theirs had to be near. In theory, this nearness meant physical proximity. Few gods being omnipresent, it was of little avail to have a mighty god as one's helper if he had his temple miles away. People wanted to worship a god within reach. When the god they worshipped belonged to the lower echelons of the divine hierarchy, there is a fair degree of probability that the god in question had a temple or a shrine in the neighbourhood. A few examples may be given in illustration.

About 25 km south of Babylon, on the Araḫtum Canal, lay the city of Dilbat (modern Tell Daillam). Shreds of information on the city and its

[93] RSOu 7, 36:8.

inhabitants have been recovered from several tablet finds.[94] One of the deities worshipped at Dilbat as personal god was Lāgamāl, an underworld deity whose name means 'No mercy'. We have the seal of Ḫuzalum, the son of Nâḫ-ili, who was a 'servant of Lāgamāl'.[95] In the family of Iddin-Lāgamāl the devotion to Lāgamāl is attested for several generations.[96] In Mesopotamian religion, the role of Lāgamāl is small. This family honoured him as its god because Lāgamāl, being the son of the city god Uraš, had a sanctuary at Dilbat.[97]

Another little-known deity is Nimintabba.[98] This goddess had a small temple in the city of Ur, built on the orders of king Šulgi. It can be shown that the people that lived in the vicinity of this building tended to have a particular devotion to the goddess.[99] The evidence is cumulative: a grave in the area contained a seal with the inscription 'Nimintabba'; a tablet found in the city quarter had a seal impression reading 'Nimintabba, who holds all the offices (m e), who loves hands that are pure.' More telling than these finds are the legends of several cylinder seals found near the temple. In their inscriptions, one Etel-pî-Sîn, son of Šamaš-nāṣir, is qualified as 'servant of Nimintabba'; so is his brother, Waqrum. Other 'servants of Nimintabba' from the neighbourhood were Nannasaga, a scribe and the son of Nanna-kuzu, and Šūmi-aḫiya, son of Ilī-awīlī.[100] Obviously, Nimintabba was a goddess of local importance. Those who lived near her sanctuary had a special veneration for her, and inclined to inculcate this veneration in their children.

The evidence from seals and prosopography is consonant, in some measure, with the impression conveyed by more literary texts. They suggest that, as a rule, people lived in topographical proximity to their gods. This fact explains why someone abroad, faced with sudden disaster, must first return home before he can ask his god to help him. A case in point is that of Yasîm-El, an official of king Zimrī-Līm stationed in Andarig. Having fallen ill he requests that he be released from his duties so that he might go home to sacrifice to his gods.

> Since the beginning of the year I am suffering from a severe illness. Two servants of my lord have already died. Now my illness is getting worse. I have consulted the diviner about my illness a number of times: the signs are

> inauspicious. This is what he said: 'Go, kiss the foot of your gods and strengthen your body.' However, should my lord wish that I stay in Andarig, I will stay. Let my lord send Ḫaššum ... that I may go and kiss the foot of my lord and bring sacrifice to my gods. At the end of the fifth day I can return to Andarig. If not, it is to be feared that my illness gets worse and that I fall out of the hand of my lord (forever).[101]

If the circumstances do not allow you to go home to visit your god, the best thing to do is to write him. Several letters to gods have been discovered.[102] The practice itself is described in an Old Babylonian letter:

> [I am] lying in the morass. [I have] wasted away through tears and weeping. This (evil thing) has blown me down. [On] my journey [I sent] my letter to Ištar [my L]ady. (. . . .) May they read [my letter] to my Lady. Let it be deposited [in] the sanctuary before Ištar in order that [the help] of my Lady reach me and I may sing [her praises].[103]

The writer is experiencing great difficulty (to which he refers with the traditional image of the morass); since he is away from home (*ina alākiya*), he must write to his goddess Ištar.[104] Once his message has been deposited in the sanctuary, he hopes, the goddess of the sanctuary will read it and send her help.[105] Her range of action extends beyond her own city, apparently, though her worshipper, far from home, has to send a message to the temple in his home town.

A humorous text from the first millennium, dealing with the difficulties of

[103] AbB 6, 135 r.4' *[...] ina nāriṭim nadi[āku]* 5' *[u in]a dīmātim u bikītim* 6' *[at]ašuš* 7' *[... ann]itum iddipamma* 8' *[ina] alākiya ṭuppī ana* ^{d}*Ištar* (^{d}i n a n n a) *bē[ltiya]* 9' *[aṣpur]* (...) 16' *[ṭuppi] bēlti lišašmû* 17' *[u ina s]imakkim maḫar* ^{d}*Ištar* (^{d}i n a n n a) 18' *[l]iššakinma* 19' *[naḫrā]r bēltiya likšudannima* 20' *[dalīliša] ludlul*. For the restorations cf. Albertz 1978:131-132. Unfortunately, the reverse of the tablet is in poor condition, which entails considerable difficulties for the interpretation. With Frankena (in AbB 6) I prefer to read ^{d}i n a n n a rather than ^{d}t i š p a k. It follows that the plea *ni-ra-am pu-uṭ-ṭ[e$_4$-]er* in line 15', 'Loosen the yoke', is not addressed to the goddess.

[104] In view of the fact that Ištar is never mentioned as a family goddess on the seals, the letter might have been addressed to the goddess through an intermediary. Note that the god of the father seems to be male (cf. line 7)—though Ištar can on occasion be referred to as an *ilum*.

[105] For the practice of depositing letters in the sanctuary see also Hallo 1968:79; Ellis 1987:238 and n. 22.

the Sumerian language, offers a further illustration of the local nature of the cult of the personal god. A citizen from Nippur afflicted by a wound goes to the city of Isin to be healed. After his recovery, he invites the priest who cured him to visit him in Nippur. When the priest accepts the invitation and arrives in Nippur, he does not find his former patient at home.

> 'My lord, he is not at home.' 'Where did he go?'
> 'He has gone to the temple of his god, Šuzianna,
> to bring an offering of thanksgiving.' [106]

The reason which prompted the subject to visit the temple was the recovery from his wound. Though healed in Isin by a priest of the goddess Gula, the man from Nippur visits the sanctuary of his god in his own town to express his gratitude. This text, as well as the letter previously quoted, shows that the cult of the personal god was normally conducted near (but not in) the house where one lived.

Assuming that topographical proximity is a dominant factor in the choice, and afterwards veneration, of a personal god, it is to be expected that in a number of cases the personal god and the city god would coincide. We know this to have been the rule in ancient Egypt in the period of the New Kingdom.[107] In Egypt the god of the city is conceived as the creator of its inhabitants. As such, he is entitled to daily prayers and material signs of reverence on the part of his subjects. Such regular worship is greatly facilitated, of course, by the presence of the god's temple. It is true that the ordinary Egyptian had very little access, if any, to the temple. Yet the temple's outer walls and its courts often served as centres of attraction for lay worshippers. People felt themselves to be closer to the deity here than elsewhere. For theological and practical reasons, then, one regarded the god of the city in which one was born as one's personal god.

As for ancient Babylonia, there is little evidence of the city god being the personal deity of private citizens. A record of a legal process from the city of Isin registers the fact that the judges have sent one of the litigants 'to his gods, to Šamaš and Gula, for an oath.'[108] We know that the divine pair Šamaš and Gula were the city gods of Old Babylonian Isin, but we cannot be sure that the personal suffix ('his gods') implies that the gods were the juror's personal gods. A letter to the Assyrian merchant Innāya refers, in one

breath, to both Aššur and Amurrum as 'your god',[109] which shows that the city god (Aššur), as distinct from the personal god (Amurrum), can nevertheless be called 'my/your/his god'. If I call a god mine, then, he need not be my personal god. In an asseveration of his reliability, a letter writer can say: 'Is not Marduk the god of my city? Is not Šamaš our (common) god?'[110] The fact that Šamaš is referred to as 'our (common) god' in this rhetorical question does not mean that he is the personal god of either one of the correspondents: as the sun god, Šamaš is universal and the god of every man and woman.

In spite of the ambiguity of the personal suffix, there are a few cases in which the personal deity of a given individual is undoubtedly identical with his city god or goddess. A certain Lulu-bani, inhabitant of the city of Marad between Babylon and Kiš, was a 'servant' of Lugal-Marada ('King of Marad'), according to his seal.[111] Lugal-Marada was the city god of Marad.[112] Another case is that of Ḫatnu-rabi, the ruler of Qaṭṭarā (Tell Rimaḫ). In a letter addressed to him, the goddess Ištar, the 'Lady of the Enclosure' (*bēlet-tarbaṣim*), is specifically designated as the ruler's personal goddess (*ilkāma šî*, 'she is your god indeed').[113] From other evidence we know that Ištar was the 'Lady of Qaṭṭarā' (*bēlti Qaṭṭarā*^{ki}).[114] It is possible that Ḫatnu-rabi's devotion to her hinged upon his role as king, however. Thus Hammurabi of Babylon could call Marduk 'his god', though the sources show that Sîn was his family deity.[115]

The second millennium evidence for the worship of the city god as one's personal god is extremely scant. The available data leave the impression that people chose to worship as their personal god a god in their vicinity, yet different from the divine city patron. Though the conclusion must be tentative, it is in line with the observation that there is often a difference between the gods invoked in official oaths (exculpatory and other) and the gods privately worshipped. The matter has been systematically studied for the little town of Kutalla, about 15 km east of Larsa. Its inhabitants appeal to Sîn and Šamaš in their oaths, but address their devotion to other gods.[116] Inspection

115 The situation of a king is exceptional in more than one respect. The king being the ruler of the nation, all the national gods are in a way 'his' gods. That is why Zimrī-Līm, king of Mari, can also call the river god Id 'my god' (AEM 1/1 [ARM 26], 191). Dagan is referred to as his god as well (AEM 1/1 [ARM 26], 232:7).

of local archives leads to similar conclusions. It is striking, for example, that among the various deeds and documents from Dilbat, there is not a single reference to Uraš, Dilbat's city god, as the personal god of one of the citizens.[117] The inhabitants apparently felt a greater sense of solidarity with their neighbourhood than with their city. Their identity is rather narrowly localized.

One of the reasons why families tended to worship a god of the neighbourhood concerns the connection between the family god and the family land. An Old Babylonian record of a judicial procedure in Dilbat conveys an idea of the role of the local god in disagreements over a house plot.[118] The procedure has been initiated by Marduk-kašid. This man made a statement under oath (by Ammi-ditāna, under whose rule the dispute arose) to the effect that the house sold by the sons of Zababa-nāṣir had never been theirs, but was his. The official who had taken his statement reported it to the king; the latter issued an order to the judges to investigate the matter. At the suggestion of Marduk-kašid they decided that the sons of Zababa-nāṣir must go to the temple of Marduk to prove their ownership of the house and the legitimacy of its sale. The parties complied and the sons of Zababa-nāṣir were able to produce the necessary evidence; a record of sale was kept in the central temple.

Dissatisfied with the turn things had taken, Marduk-kašid insisted that the matter could not be settled this way. Though he was forced to concede that the sons of Zababa-nāṣir had a title to the property, he contested their definition of its borders. To determine the exact boundaries of the property the parties had to go to the city district where it was situated.[119] Zababa was the god of this part of the city; he had a temple there, and the sellers, to judge by their patronymic, worshipped Zababa as their family god. With the help of the weapon of Zababa, called 'Binder-of-those-who-swear-by-it' (*dKāmi-tāmīšu*), the authorities established that the sons of Zababa-nāṣir stood in their right. Various neighbours, among whom the administrator of the Zababa temple, took an oath by Zababa (presumably by touching his weapon) in corroboration of the claim of the sons of Zababa-nāṣir. Neighbourhood solidarity, validated by the god of the neighbourhood, proved decisive in the enforcement of the rights of the Zababa-nāṣir family.

Amorite Family Gods

Not all family gods were gods of the neighbourhood. Certain sections of the Mesopotamian population were devoted to ancestral gods that had their sanctuaries in distant settlements of little demographic importance. These people did not see the city and its neighbourhood as determining their identity; they were far more sensitive to the clan they belonged to and the land of their ancestors. Their religious culture, manifesting itself also in the factors determining the choice of the personal god, can be described as Amorite. Between the Akkadian population in south and central Mesopotamia and the Amorites in the West (but increasingly present in the Mesopotamian heartland as well), there was a difference in lifestyle that did not leave the realm of family religion unaffected.[120]

Amorite family religion is rooted in a tradition of pastoral nomadism. Owing to the migratory nature of their lives, the early Amorites rarely worshipped as their personal deities gods that had their temple in the vicinity of their settlement. Since their settlements used to be temporary, their religious allegiance was not governed by topographical reasons. The social constraints that commanded their devotion allowed them to choose from a small group of deities whom they traditionally considered as their native gods. Their gods were not themselves migratory, as their worshippers were, but had their own fixed sanctuaries. The shrines were often confederal in the sense that they were used by a number of Amorite groups. Though politically speaking minor or insignificant, the towns where the sanctuaries were located continued to play an unmistakable role in the religious life of the Amorites. They were to be found, for the most part, in the areas which the Amorites considered to be the traditional land of their ancestors.

In the Old Babylonian period we find many Amorites in the Mesopotamian cities, also in positions of high command. Such urban Amorites often continued to honour their native traditions. As a matter of consequence, many of them distinguish between city god and personal god. Yarīm-Līm, the Amorite king of Aleppo, speaks of Adad as 'the god of my city' and of Sîn as 'my personal god'. In a letter addressed to his son and successor Hammurabi (not to be confused with Hammurabi of Babylon), the same distinction is made: 'in the name of Adad, the god of Aleppo, and in the name of the god of your father.'[121] Though the identity of this god is not specified,

---

[120] On the Amorites and their differences with the 'Akkadians', see 'Outside the City' in Chapter Two.

[121] ARM 10, 156:10-11 (the word *aššum* introduces a conditional curse, comparable to the *aššum Šamaš* formula).

there can be no doubt about the fact that the moon god Sîn is meant. In Assyria proper, the Amorite ruler Samsī-Addu also venerates Sîn as 'the god of [his] head',[122] that is, his personal god. By virtue of his political function, however, he can also refer to himself as 'beloved of Aššur'.[123] Since he reigned from Ekallātum, both Sîn and Aššur were distinct from his city god, viz. Adad.[124] What we see with these Amorite rulers, then, is an alliance of their native religious loyalties with the religious responsibilities and duties which their political office entails.

There is no evidence to support the hypothesis that Sîn owed his position as personal god of the kings in Aleppo and Ekallātum to the fact that he had a shrine or a small temple in these cities. In fact, the veneration of Sîn seems characteristically Amorite. It is hardly coincidental that also other kings of Amorite descent cultivated a devotion to Sîn. Sumu-abum, the Amorite founder of the first dynasty of Babylon, chiefly honoured Sîn in his year-names. His successors Apil-Sîn and Sîn-muballiṭ (note the names!) are associated in oaths primarily with Sîn, and only secondarily with Marduk. The special position of Sîn in this Amorite dynasty is also reflected in the prologue to the Code of Hammurabi. Hammurabi states that he is the seed of a dynasty created by Sîn[125]; he hails Sîn as his personal creator (*ilum bānī*),[126] and so does his son Samsu-ilūna.[127] Preceding the devotion to Marduk as the city god of Babylon, then, Hammurabi and his predecessors honoured Sîn as their personal god. Likewise, the so-called Manana dynasty at Kiš, also Amorite, had Sîn as its patron deity.[128] The particular devotion to the moon god, then, would seem to be specifically Amorite: it is the worship of Sîn-Amurrum, the 'Amorite moon god'.[129]

Other evidence for Sîn as a deity specifically of Amorites is found in the Mari letters. The temple of Sîn in Ḫarrān, situated in an area known as Zalmaqqum, was a religious centre for the Yaminite groups which inhabited the region. As the confederate chiefs of these various tribes made a pact to capture the city of Dēr, they came together in the Ḫarrān temple for a covenant ceremony in the presence of Sîn.[130] The Amorite devotion to the moon

god proved to have a long life. In much later times the Assyrian kings still claimed to have been created by Sîn.[131] Also the fervour for the cult of Sîn on the part of the first millennium Babylonian king Nabonidus, denounced as an aberration in Mesopotamian texts and still remembered in later Jewish tradition, is to be understood against the background of the ancient Amorite religious culture.[132]

Sîn (or his Amorite equivalent Eraḫ) was not the only deity receiving special veneration among the Amorites. As could be expected, the god Amurrum is popular among them, too. Amurrum (^{d}m a r - t u) or El-Amurrum (^{d}a n - m a r - t u) is the Amorite variant of the West-Semitic god El, just as Sîn-Amurrum is the Amorite variant of the Mesopotamian moon god.[133] Amurrum is a very frequent element in theophoric personal names among the Amorites. In many cases, the people who bore such names worshipped Amurrum as their family god. Specifically Amorite, too, is the joint mention of Sîn and Amurrum (or El-Amurrum) as personal gods on seals. It is particularly noticeable among Amorites in northern Mesopotamian cities, such as Kiš, Dilbat, Babylon and Sippar.[134] Though many of them carry good Babylonian names (such as Ibni-Zababa, Iddin-Marduk, and Uraš-nāṣir), their continued devotion to the two Amorite gods Eraḫ (Sîn) and El (Amurrum) is proof of their loyalty to their ancestral traditions.[135]

Another god who was popular among the Amorites, mostly among their Yaminite branches in Western Mesopotamia, is Dagan from Terqa. Such rebel Yaminite rulers as Yaggiḫ-Addu and Dādī-Ḫadun felt obliged to do obeisance to Dagan in his temple at Terqa, even when the city was occupied by royal troops from Mari.[136] Owing to the position of this god in Yaminite piety, it was of vital importance to the king of Mari to win the support of the clergy of the Dagan temple at Terqa. According to a prophecy from Terqa, Dagan would have been able to make the Yaminite leaders submit to Zimrī-Līm if only the king had acted so as to please the god.[137] Allegiance to

137 Dossin 1948:131, lines 29-31.

Dagan as a personal god is also found with the Amorite king Gugunum from Larsa.[138] Like other Amorite deities, Dagan can be mentioned in conjunction with a second god as personal deity on seals.[139]

One of the principal gods worshipped by the Sim'alite branches of the Amorites is the storm god Adad (or Addu) of Aleppo. In a prophecy addressed to Zimrī-Līm, the Sim'alite king of Mari, Adad claims to have raised the ruler in his lap, conferring on him the kingship when he had come of age.[140] Since it was not the king of Aleppo who brought Zimrī-Līm to the throne, Adad's claim must be explained in the light of his role as major god of the Sim'alite Amorites.[141] The devotion to Adad of Aleppo was widespread in the region between the Mediterranean and Mari. King Idrimi of Alalaḫ, born and raised in Aleppo, was a 'servant of the storm god' according to his seal.[142] The traditional allegiance to Adad could override the loyalty to the god of one's city, as is shown by the case of the family of Aqba-aḫum. Though dwelling in Terqa, the city of Dagan, the family was devoted to Adad as its personal god.[143] In some seal inscriptions, Adad is mentioned in conjunction with yet other gods.[144]

In the realm of personal or family religion, the Amorites differed from the Akkadian segment of the population mainly in that their gods were tribal rather than local. The adjective 'tribal' should not be confused with such pejoratives as 'primitive' or 'inferior'. The gods whom the Amorites worshipped were ascribed the same characteristics as the usual Mesopotamian deities. They can be said tribal on account of the mechanism by which their worship was perpetuated among the Amorites. Membership of a lineage or a descent group (here qualified as a 'tribe' in accordance with the terminology of the Amorites themselves) determined the religious loyalty. Whereas the city-dwellers of south and central Mesopotamia directed their devotion to gods from their city-quarter or neighbourhood, the Amorites venerated the gods they had inherited from their tribe. In their personal allegiance to tribal gods instead of city gods, there is a reflection of their nomadic past: the devotion of their nomadic ancestors was focused upon a god of supralocal importance, even if he had his sanctuary in a specific place.

142 *AfO* 99.

143 Rouault 1984: no. 8E. For the family in question see Kelly-Buccellati 1986:140.

144 In Sippar we find Amorites devoted to 'Sîn and Adad' (Owen 1976:12, seal a; Wilcke 1982:467); in Kutalla an Amorite devoted to Adad and Enki (Charpin 1980:286 no. 70).

The religion of the Amorites compares, to some degree, with that of the much later Safaitic nomads.[145] The Safaitic nomads, at home in the arid land between the Euphrates and the Hauran, numbered over a hundred clans (*ʾāl*), most of them belonging to either the ʿAwīd or the Daif branch. Each tribe worshipped its particular god, who could be referred to by name or simply as 'the One of clan X' or 'the One of clan Y'. Though their worshippers were mostly itinerant, the tribal gods used to have a temple of their own. Once a year, the members of a given clan met in the sanctuary for a solemn offering ceremony. These annual meetings were occasions for social interaction of a variety of sorts; they certainly contributed to a sense of cohesion within the clan. The picture of Amorite religion that is beginning to emerge from the Mari texts shows resemblances to this Safaitic model.

In the secondary literature on the Amorites one may come across the idea that groups of kindred Amorites could be referred to as 'the sons of the people of my/your/his god'.[146] By implication, this expression would mean that each tribe or clan had its own god, and that its members were the 'people' of this god. A closer look at the evidence makes it clear that the texts have been misinterpreted. The Akkadian expressions *mārē* (d u m u - m e š) *ni-ši ilīšu* (d i n g i r-*šu*)[147] and *māri ni-iš iliya*[148] do not mean 'the sons of the people of his god' and 'a son of the people of my god', respectively, but 'those bound to him by oath' and 'one bound to me by oath'. The error lies in the interpretation of *ni-ši* or *ni-iš* as *nišūm*, 'people', instead of *nīšum*, 'oath'. The *nīš(i) ilim* is the 'oath by god', and the *mār(i) nīš(i) ilim* is 'the one bound by religious oath'.[149]

The only text that could be quoted in support of the idea that kinship groups might be referred to as 'sons' or 'daughters' of the tribal deity is a record from Sippar dating from the reign of king Ammi-Ṣadūqa.[150] The text speaks of the mission of certain officials to collect temple taxes (referred to as *aširtum*, 'tithe'), consisting of barley, among 'the sons of the god and the sons of the goddess who dwell in the open country'[151] and to bring it to Sippar. The interpretation of this text is debated. Various scholars (including Landsberger) interpret the expression 'sons of the god/goddess' as a designation of certain religious communities in the northern peripheral

zones.[152] If this were its sense, the expression would be without a parallel. A more conservative interpretation takes the 'god' and the 'goddess' as references to Šamaš and Aya, the city gods of Sippar. The 'sons of the god' and 'the sons of the goddess' would then designate the rural population falling within the administrative realm of Sippar.[153] Considering the nature of the mission (viz. the collecting of temple taxes), the second interpretation seems the likelier of the two.

Conclusion

The existence of the Amorite model is a reminder of the cultural—and thus, by the same token, religious—diversity within Mesopotamia in the Old Babylonian period. For all elements of the population it holds true that their private religion is a form of devotion to their origins. Through the cult of their ancestors, they asserted and maintained a historical identity. The Akkadian (or 'native') part of the population moreover asserted and maintained, through the worship of their personal gods, a local identity. In the case of the Amorites this local identity was mainly an identity of origins. The Akkadian devotion to their family god was a devotion to the settlement, the district, or the neighbourhood where the worshippers were born and raised, and usually still lived. The Amorite religion of the 'gods of the fathers', on the other hand, was a loyalty to tradition and a sign of solidarity with those of the same descent.

CHAPTER FIVE

FAMILY RELIGION AND THE INDIVIDUAL: THEOLOGY AND ETHICS

The preceding chapters have described the cult of the ancestors and the devotion to a local patron deity as the two constituent parts of Old Babylonian family religion. Both aspects of family religion are group phenomena. Therefore, when family religion is said to foster a sense of identity we are speaking first of all about a collective identity. Through the cult of the ancestors and the devotion to the 'god of the father', the Babylonians shared in a group identity. By following the religion of their family and their neighbourhood, they identified on the one hand with their kin group and its past, and on the other with their neighbourhood and its gods. In so doing, they received a social identity with a historical and a local dimension. It was both collective and devolved, not based on individual distinction nor obtained by personal merit.

When trying to assess the significance of Babylonian family religion, however, we should not ignore its role in the life of the individual. Although it can be plausibly argued that personal religion in the modern sense of the word did not exist in early Mesopotamia, individuals were personally involved in the religion of the community. They constructed their personal identity in large measure upon the beliefs and values of that religion. Family religion provided, in addition to a corporate identity, the elements of an individual identity by offering the Babylonian a religious interpretation of biographical data and by holding out a certain code of behaviour. One might refer to these facets of family religion in traditional terms as its theology and its ethics: Babylonian family religion was indeed sustained by certain beliefs and supposed to validate certain moral values. Rooted in the milieu of the family, these beliefs and values provided meaning and orientation for the individual and allowed him to conceptualize a personal identity.

The use of the terms 'theology' and 'ethics' requires a word of caution. The Old Babylonian civilization never produced a system of abstract metaphysical propositions or a manual on morality. The beliefs and values of family religion are never formulated in separation from the social reality in which they function; when expressed, they are always found in context: people speak of their god as their creator or refer to an act of kindness as pleasing to their god. The fact that the tenets of family religion always

assume the form of a valuation of social realities gives fuel to the idea that they were conceived as a response to those realities. We may go one step further and affirm that the notions and concepts of family religion usually had the effect of legitimizing and consolidating the existing social order. The world was essentially as it should be because the gods had so wished it, which in terms of the individual meant that he owed his life and social position to his god. Accordingly, he had to conduct his life in such a way as to keep the social order intact.

Because the theology and ethics of Babylonian family religion are always related to human realities, they can be presented in the form of a biographical description. Neither the description nor the underlying ideology is an unbiased representation of the Babylonian reality. Since nearly all our texts emanate from the upper strata of the Babylonian society, the ideas and values they convey are basically those of the *awīlum* ('gentleman'). Among the Babylonian aristocracy, family religion served to underpin the position of the upper class by explaining their privileges as divinely endorsed. By legitimizing the status quo family religion justified the existence of social inequality as well. Yet despite their origin in the aristocracy, the beliefs and values of the *awīlum* seem to have functioned as a frame of reference for many ordinary people as well. It is only rarely that we catch a glimpse of religiously inspired or legitimized opposition against the privileges of the gentry. Most Babylonians, it seems, cherished religious notions and ideas very similar to those held by the class of the *awīlū*. Though not *awīlū* themselves, they tended to interpret their lives in analogy with the lives of the upper class.

Biography as Theology

The narrative which sums up the beliefs of a Babylonian gentleman is concerned with such basic biographical facts as birth, education, career, social standing, and death. These data are not presented as bare facts, however, but as religious events involving the personal—or family—god. A Babylonian from the early second millennium BC would find his identity not in the mere fact of his birth, but in the belief that his god has brought him to life. Other central moments of one's life are also perceived as interventions of the personal god. In this sense, the biographical narrative that is to furnish the answer to the question of personal identity is a personal creed.

A human life begins with conception: this formative event is ascribed to the initiative of the personal god. A name such as Ilī-bānî, 'My-God-is-my-Creator', captures the belief that the individual owes his life, from its remotest beginnings, to his god. Such names are miniature confessions illuminating the conceptual universe of family religion. Parents who called their son

Iddin-Enlil ('Enlil-has-given') or Iddin-Lāgamāl ('Lāgamāl-has-given') honoured Enlil respectively Lāgamāl as their family god, just as their son would do after them.[1] The belief in the involvement of the family god in conception and birth underlies one of the standard epithets given to the personal god. When addressing another person, one refers to his god as his 'creator' or 'begetter'.[2]

The theme of conception and birth also occurs in letters written to the personal god[3] and in compositions of edification such as *Man and his God*.[4] In these textual genres it is closely associated with the entry into human society.

> You have created me among men,
> and you have made me walk along the street.[5]

To 'walk along the street' (*sūqam etēqu*) is a consecrated expression denoting participation in public life. As the protagonist of *Ludlul bēl nēmeqi* has recovered from his illness, the narrator asks 'Who would have thought that he would see the sun? Who imagined that he would walk along the street?'[6] An Old Babylonian prayer to Ištar, known from two 13th century versions from Boghazköy (Turkey) and one Neo-Babylonian copy,[7] asks the goddess to restore the suppliant 'so that [he], with beaming appearance like a prince, may walk the street in the company of the living.'[8] Human life, according to these phrases, is more than a mere biological existence: it is always life in society; hence the importance of being able to conduct oneself 'like a prince'. The implication of social superiority only confirms the observation that such statements come from an élitist milieu.

Much about the role that the Babylonian will play on the human stage is thought to have been decided even before his entry into the world. Personal identity, from the Babylonian perspective, is not something chosen but bestowed. It is a topos in Assyrian royal inscriptions that the gods have looked upon the king with favour while he was still in the womb of his mother.[9]

---

[1] See the seal inscriptions of Iddin-Enlil (YOS 8, 113) and Iddin-Lāgamāl (TLB 1, 238). For a collection of Iddin-DN names from the third millennium see DiVito 1993:128, 131, 139, 160.

[2] E.g. TCL 17, 37 [1] *ana abiya ša ilšu bānīšu* [2] *lamassam darītam iddinušum*, 'To my father, whose personal god, his creator, gave him an everlasting *lamassum*.' For other examples see *CAD* B 94; Albertz 1978:102-104.

[3] See the section on Letters to the Gods in Chapter Six.

[4] See Lambert 1987b.

[5] AbB 12, 99 [5] *it<ti> amīlī tabnânnima sūqam* [6] *tušeṣeqanni*.

[6] *BWL* 58:31-32. Both *amār* ^{d}*šamša* and *etēq sūqa* are conventional compounds. The personal suffix, then, refers back to the expression as a whole. The translations 'his Sun' and 'his street' of *BWL* are to be corrected accordingly.

Such divine involvement before birth is not limited to princes and kings. A formulary prayer of the first millennium, to be used on a variety of occasions, says that the goddess Ištar assigns poverty and wealth to all humankind when they are still in the womb.[10] One's place in society, according to this view, is preordained by the gods—a comforting thought especially to those belonging to the upper class. The idea is not the product of later times. An Old Babylonian letter to a king mentions the 'good destiny' (*šīmtum ṭābtum*) decreed for him even before his birth (*ištu šassūrišu*, 'when still in the womb').[11] Human destiny has been predetermined by higher powers.

The idea of a social destiny imposed by the gods can be connected with a ritual performed on babies shortly after birth.[12] The Sumerian text of these rituals says that a newborn boy must be made to hold a 'baton' or 'weapon' (t u k u l) and an 'axe' (ḫ a - z i - i n). A girl, on the other hand, has to be touched with a 'spindle' (b a l a, Akkadian *pilakkum*, cf. Hebrew פלך) and a hair clasp (k i r i d). These objects were regarded as symbols of manhood and womanhood. The significance of the rite, which has been characterized as a consecration, lies in its stress on the importance of being male or female. No ambiguity is tolerated on this issue. That is why the biological gender of the child had to be ritually confirmed so as to make certain that boys and girls would also adopt the appropriate social roles. The variants of this ritual, known from Old Babylonian and even Hittite sources, do not alter its fundamental meaning: gender identity, including the ensuing gender roles, is accepted and celebrated as a divinely ordained fact of life; the relevant ritual serves as its religious validation.

Conception and birth are the beginnings of a lifelong relationship between the individual and his personal god. Once the god has put you on the track of life, he will also 'straighten your path'.[13] When it comes to ordinary people, there are hardly any references in the texts to divine protection in early youth. The Old Babylonian *Man and his God* contains an allusion, though, when it says

> You have caused me to be born (...)
> From the time I was young until my maturity (...)
> I have not forgotten all the kindness you have done to me.[14]

Personal names often contain the wish that the personal god who has created the name-bearer keep him healthy and strong. Such Old Babylonian names as Šamaš-libluṭ, 'Šamaš-may-he-be-healthy'[15] (note the Assyrian variant Pāliḫka-libluṭ, 'May-your-worshipper-be-healthy,' suggesting that it is the personal god who is addressed in the name), and Ilī-tabni-šuklil, 'My-god-you-have-created-make-it-perfect,'[16] attest to the belief in the enduring concern of the personal god for the well-being of his creature.

On occasion, the image of the personal god fostering his human child is found in connection with kings of the Old Babylonian period. In a prophecy spoken in the name of Adad of Kalassu, the god reminds Zimrī-Līm from Mari that he has reared him 'between my loins'; in another address Adad of Aleppo tells the king that he has reared him 'on my lap'.[17] The topos of divine nurture goes back to the third millennium. Thus, in a laudatory song on Šulgi from the third dynasty of Ur, the goddess Ninsun is said to have raised the king 'upon [her] own pure lap'.[18] The theme never wholly disappears and enjoys a distinct popularity in royal hymns, inscriptions, and prophecies of Neo-Assyrian times (e.g., 'I knew no father or mother, I grew up in the lap of my goddesses. As a child the great gods guided me, going with me on the right and the left'[19]). Though here applied to kings, the idea of divine parentage was widely held: it was thought to hold true for other people as well. Its overtones of legitimation, particularly noticeable in connection with kings, are always present in some degree: the solicitude of one's god legitimizes one's existence as a member of the élite.[20]

References to the care of the personal god are frequently found in formulae of greetings in Old Babylonian letters. Alongside the epithet *bānīka*, 'your creator', the personal god is often called *nāṣirka*, 'your protector'.[21] As protectors, the personal gods were responsible for the 'well-being' (*šulmum*) of their devotees; letter writers wish their correspondents eternal (*lū dari*) well-being 'before' (*maḫar*) their gods.[22] They may also express the wish that the god of the addressee not be careless (*egû*) in his protection.[23]

19 SAA 3, 3:13-15.

20 In this respect, the apologetic nature of many royal autobiographies of Neo-Assyrian times (see Tadmor 1984) is an accentuated form of all Mesopotamian autobiography. Or is the autobiographical genre by definition apologetic?

21 Cf. Salonen, E. 1967:21.

22 For examples see Salonen, E. 1967:31-32.

23 AbB 3, 50 [5] *ana šulmika ša* ^{d}*Marduk zākir šumika* [6] *ana naṣārika la igû ašpuram //*

To emphasize its extent, one can add that this protection is to surround its beneficiary 'on the right and on the left'.[24] The personal gods extend their care to their devotees either directly or indirectly. As major deities, they have power over lower-ranking spirits whom they can assign to their protégés. The usual name for such a beneficial spirit is *lamassum*, 'guardian angel'.[25] One neither prayed to such angels nor worshipped them; their invisible presence was witness to the involvement of a higher power.

In a poetic turn of phrase, the gods of a *nadītum*-woman can be asked to protect her 'like the purse of their hands'.[26] The image is that of the leather bag in which the merchant keeps his silver. By implication, the individual is likened to the most valuable possession of his or her god(s).[27] The mood on the part of the personal god is indeed presumed to be love and affection. The galamaḫḫum-priest Ur-Utu describes his personal goddess as *rāʾimat napišti*, 'caring for the living'.[28] Normally, a personal god is indeed not indifferent to his devotees;[29] is not *rāʾimka*, 'the one who loves you,' a standard epithet of the personal god?[30] The worshipper feels secure in the knowledge that he has unique value to his god; no one will be able to replace him.[31]

The immovable property of the *awīlum* might be viewed as a concrete token of the solicitude of his god. The personal god, say Sumerian texts, is 'a shepherd (s i p a) seeking pasture for the man.'[32] This is the Babylonian conception, too: people have the conviction that the land where they live is their share by divine decree. A passage from an Old Babylonian letter illustrates this view. Though generally positively valued, the involvement of the personal god can seem subversive to outsiders:

AbB 8, 148:5-7. Cf. AEM I/1 (ARM 26), 191 [11] *u ana naṣār napi[štiya]* [12] *bēlī ay ig[i]*, letter of Zimrī-Līm to the river god Id.

[24] AbB 11, 106 [5'] *imittam* [6'] *u šumēlam bēlī a bēltī* [7'] *ana naṣārika ay igû*.

[25] Cf. TCL 17, 37:1-2, see n. 2.

[26] AbB 6, 1 [11] *bēlki u bēletki kīma kīsi ša qātīšunu* [12] *liṣṣurūki*.

[27] The parallel with the צרור החיים, 'the bundle of the living' (1 Samuel 24:29), adduced by Röllig 1972:46, is not entirely appropriate because the Hebrew term refers not to a purse but to a bag or pouch containing a number of stones corresponding to the number of sheep entrusted to the shepherd.

[28] de Meyer 1989:41, lines 6', 15'.

[29] Hence the bewildered question 'Why have you become indifferent to me?' (*ammīni tuštaḫḫiʾam*), in the letter prayer AbB 9, 141:4.

[30] Cf. Salonen, E. 1967:48 and see AbB 1, 105 [1] *[d]Marduk rāʾimk[a]* [2] *ša ibnūka*. It should be noted, however, that the epithet is not applied exclusively to the personal god: in AbB 11, 119:27-30 the personal god is called *bānīka* while another god is said to be *rāʾimka*.

[31] AbB 9, 141 [5] *ša kima yāti* [6] *ana kāšîm* [7] *mannum li[dd]in*, 'Who will give you (again) someone like me?'

[32] Geller 1985:40, line 375 [d i n g i r l ú - ù l u s i p a ú] ⌜k i n⌝ - k i n - ⌜g á⌝ l ú - ù l u; cf. Falkowitz 1980:224-225.

> You and your brother there—who has released you that you can live there? You have ruined the land (first) entrusted to your care (lit.: the *ilku*-land) and now you sit there! I shall never forgive your crime, ever! (. . .) Have you no fear about sitting there? Perish the name of your god and your supporter,[33] who made you and your brother sit there![34]

The vehement tone of the letter suggests that the writer (Adad-šarrum) himself had assigned Lipit-Ea and his brother (the addressees) to the land where they were to perform their service (the *ilkum*). Apparently the brothers had ruined the land where they first worked, and were punished for their behaviour with forced labour. At the time the letter was written, however, they had been released and had settled elsewhere. Adad-šarrum ascribes their impertinence to their god, without whose consent they could never have settled in their new place. Yet the god that he regarded as their evil genius was probably considered a benevolent protector by the two brothers.

The support of the personal gods is especially vital when a human being is pushed beyond the normal confines of his existence. As a literary illustration of the phenomenon, Gilgameš is a case in point. According to the Old Babylonian version of the epic, the hero does not allow himself to be dissuaded from his plan to go to the Cedar Forest and fight Ḫuwawa, because he is certain that his god Šamaš will place his 'protection' (*ṣillum*, lit. 'shadow') over him.[35] In the same connection, Gilgameš discusses one of his dreams with his friend Enkidu.[36] Strange things have happened in his dream. Enkidu explains their significance.

> The ... whom you saw is Šamaš the protector:
> In difficult circumstances he will take our hand.
> The one who gave you water to drink from his water-skin
> is your god Lugalbanda, who honours you.[37]

---

[33] The epithet *mutakkilum*, 'supporter', applied to the personal god, occurs once more in an Old Babylonian dialogue, see Held 1961:6 i 29 the goddess *mutakkiltaki*, 'your (fem.) supporter'.

[34] TCL 1, 40 [4] *kata u aḫuku ašariš* [5] *mannum uwaššerkunūtima ašariš* [6] *wašbātunu ilkī tuḫalliqāma* [7] *u ašariš tattašbā* [8] *šēretka ana ūmī* (u$_4$-me-š) *kālišu<nu>* [9] *ul ubbak* (...) [20] *ana ašariš wa-ša* (text: *áš*)*-bi-im* [21] *ul tapallaḫ* [22] *šumi ilika* ■ *mutakkilika* [23] *ša kata u aḫaka ašariš* [24] *ušēšibu* [25] *liblī*. Cf. Ungnad 1914, 186; Landsberger 1915:523.

[35] OB Gilg. Y v 40, cf. YOS 10, 24 [20] *ṣilli ilim eli awēlim ibašši*.

[36] TIM 9, 43 [3] *ibrī šuttam aṭṭul* ..., 'My friend, I saw a dream ...'. For a study of the passage, known only from an Old Babylonian tablet from Tell Harmal (IM 52615), see von Soden 1959:215-219.

[37] TIM 9, 43 [13] ... *ša tāmuru* [d]*Šamaš nāṣirum* (text has *naṣrum*) [14] *ina dannatim iṣabbat qātni* [15] *ša mê nādišu išquka* [16] *ilka* (d i n g i r-*ka*) *mukabbit qaqqadika* [17] *Lugalbanda* ... Note that the image of Lugalbanda giving Gilgameš water to drink is a reversal of the normal situation in which the son quenches the thirst of his father's ghost. For the personal god as 'honouring' his protégé see also *OBRT* 118:12; 119:6. The construction with *qaqqadum* is also used in *qaqqadam naṣāru*, see TCL 17, 6 [11] [d]*Enki šû*

In the interpretation of the dream, Šamaš and Lugalbanda, the one the divine patron and the other the god and ancestor of Gilgameš, are pictured as his powerful companions. The image of the personal god as a 'friend'[38] and 'helper'[39] taking you by the hand is also found in other texts. Recovery from a severe illness is interpreted in this way in an Old Assyrian letter: 'Have no worry because of the fact that I fell ill: Aššur and your god have taken me by the hand and I have recovered.'[40]

The adventure of Gilgameš and Enkidu is experienced on a different scale by soldiers on campaign. In any war effort, the personal gods of the king, leader of the army, must lend their assistance. Some examples from the epistolary archives of Mari illustrate the point. As the armies of Zimrī-Līm of Mari and Ḫammurabi of Babylon have joined to take the city of Isin, one of the generals writes to Zimrī-Līm wishing for the help of the personal god of the king. 'May the [god] of [our] lord come [to our aid], so that the name of our lord be remembered in victory.'[41] The successful capture of the city of Larsa is announced in comparable terms. 'Today the god of my lord has gone ahead of the troops of my lord and the spear of the evil one and the enemy has been broken; the city of Larsa has been taken.'[42] This is the ideology of what has been inappropriately described as the 'holy war'.[43] It is, in fact, an application to the king of the concept of the personal god as a helper in distress.

Most Babylonians were neither explorers like Gilgameš nor warriors like Zimrī-Līm. Even if they did not expect to perform heroic feats or military triumphs, however, they aspired to success and prestige. They looked to their family god as to the one who could fulfil their wishes; devotion was motivated in part by desire. It was the hunger for social esteem which explains the intensity of the devotion of princess Kirûm to the god of her father Zimrī-Līm. Kirûm was married to Ḫaya-Sumu of Ilān-ṣūrā, a city in north Syria. Her life there was hardly enviable since she had to compete with

[43] Cf. Weippert, M. 1972.

her sister, married to the same man, for the position of queen. The surest way to victory was motherhood: one reason why the king of Mari had given Ḫaya-sumu his second daughter was that the first one was still without children—though the marriage with Kirûm had also political significance.[44] When the outcome of the battle was still uncertain, Kirûm expressed the wish to go to Mari. Her husband did not allow her to travel with him when he went there. On the eve of his return from Mari, Kirûm wrote to her father:

> Now when Ḫaya-Sumu returns to Idamaraṣ, may my lord send with him a chariot and a wagon, that I may go to my father and my lord. I want to bring sacrifice to the gods of my father and be successful over there.[45]

There is no indication in our texts of anything which would lead us to suspect that Kirûm is ill; the verb *šalāmu*, in consequence, cannot be understood as a reference to her recovery. Kirûm wants 'to be successful' and 'sit on the throne of the queen.'[46] When she situates her prospective success 'over there' (*ašrānum*) she is referring to Ilān-ṣūrā; as she writes she is in spirit already—or still—in Mari. For her success in Ilān-ṣūrā she feels dependent upon the intervention of the gods of her father; the gods of her husband she does not feel to be truly hers. In her other letters as well, Kirûm strikes one as a religious woman;[47] her desire to honour the gods she knows from her early youth seems authentic. The success she hoped for, presumably, was pregnancy and the delivery of a male child.[48]

The personal god is to make his worshipper walk 'with beaming face like a prince' among his fellow men.[49] He is to secure his good reputation. We can hardly overrate the importance attached to one's fame in a society where nearly everything took place in the public domain; esteem and respect were of essential importance. A 'good name' (*šumum damqum*), moreover, is an echo of social rank. It is in this sense that we have to understand the epistolary greetings wishing that the gods grant the addressee a 'good name'.[50]

[48] One might even speculate that this desire is hinted at with the verb *šalāmu*, since it is also used in the language of Mari for the delivery of children, see Charpin, *NABU* 1990, 138.

[49] *STC* II, Pl. 82 [84] *namriš eṭelliš itti balṭūti lubāʾ sūqa.*

[50] See, e.g., TCL 18, 150 [2] *ša DN$_1$ u DN$_2$ šumšu udamm[iqū]*; AbB 11, 84 [1] ^{d}*Marduk rāʾimka* [2] *šumam damqam ša tarammu* [3] *aššumiya lišrukakkum*.

And since a society which so much values prestige is asymmetrical, social status is closely linked to the fact that your god has established you in a 'superior position' (*ina līt̄im šuzuzzum*).[51] Especially in places where competition is fierce, such superiority is looked upon as a precious good. To a courtier one wishes that his guardian angels (*lamassū*) grant him long life 'in a superior position and in good reputation in the palace where you come and go.'[52] Such a wish could be further specified: 'May during the rule of Samsu-ilūna prompt acceptance of your requests be destined for you.'[53] In the royal administration a good reputation and a safe position go together; both are a gift of the personal god.[54]

Social eminence, which percolates down under the guise of a 'good name' among one's fellow men, can be achieved in different ways. The accumulation of capital, usually by husbandry, is a major means. A paterfamilias prays that his cattle pen expand and that his fold become wide.[55] Wealth was indeed taken to be a sign of divine favour, witness a passage from an Old Babylonian letter.

> Because the god has accepted your prayers, you are now gentlemen and men of property; all your affairs have prospered.[56]

The unnamed deity is the god of the family to which these men of eminence belong; their riches were his blessing. The same conviction underlies the clause of an Old Babylonian land tenure contract which specifies that the lessor can redeem his field with 'the money his god will bring'.[57] Divine support in financial matters could on occasion materialize in the form of a charitable loan. The case of Irra-Gašer, who took a loan from the temple of his god Išar-padān, is a case in point.[58]

Another road to social success was the appointment to a position of

political power. Since many of the prestigious offices were neither full-time nor remunerated, a solid financial situation was often a prerequisite. In these cases, an appointment as an official added honour to wealth. Though the nomination to office was a royal prerogative, one's personal god was assumed to be the true nominator. The belief is reflected in the congratulations sent to men in high office shortly after their appointment:

> When Marduk mentioned your name (*scil.* and you were appointed governor) I was very pleased, thinking: It is a gentleman who knows me, whose name has been mentioned; he will do for me what I want.[59]

The construction *šumam zakāru* is used here and in many other texts as a standing expression for 'to promote, to elevate in rank'.[60] It is also used for the promotion to kingship, as can be seen from a letter written to Iltāni shortly after her accession to the throne.

> I was very pleased to hear that the god has mentioned your name and has not withdrawn his protection (lit.: arm) from you. The god who knows your father's house has just honoured you.[61]

It is evident from this string of expressions that the letter writer gives a religious interpretation to Iltāni's career: her god (that is: the god of her father) does not forget her ('mentioning the name' is also the usual idiom for remembering); his attention is focused upon her; he knows her and grants her eminence.

The elevation to kingship can be viewed as the access to the highest level of the social hierarchy. The letter to Queen Iltāni from Qaṭṭarā (Tell Rimaḫ) shows that also this career was ascribed to the intervention of the personal god. The religious legitimation of political power was a matter of particular concern to usurpers of the throne, since they could not boast royal descent to support their claim to supremacy. An example in point is that of the man who adopted the illustrious name of Rīm-Sîn (after Rīm-Sîn I, the last king of the Larsa dynasty, 1822-1763).[62] Though Larsa was the seat of his kingship,[63] the reign of Rīm-Sîn II had begun in the city of Keš, according to a letter he wrote:

---

[62] For Rīm-Sîn II see Stol 1976:44-58.

[63] According to a bilingual Samsu-ilūna inscription, see Frayne 1990:387, lines 92-100.

> Thus says the divine Rīm-Sîn: In order to bring light to Yamūt-Bālum, and to gather its dispersed people, the great gods established the foundation of my throne in Keš, the city of my creatrix.[64]

The unnamed 'creatrix' of Rīm-Sîn II was the goddess Ninmaḫ. The first year-name of the king commemorates his rise to kingship by saying that it was the year 'Ninmaḫ elevated Rīm-Sîn to kingship over all the countries in the Keš temple, the temenos of heaven and earth.'[65] This is a case, then, where personal god and city god coincide. Having begun as a local ruler in Keš, with the endorsement of the city goddess, Rīm-Sîn soon extended his reign over the territory of Yamūt-Bālum, of which also Larsa was part.

The many facets of the care of the personal god can be summarized in the phrase that the god wishes to give his human servant life in abundance. That is why the most frequent formula for greeting in letters, saying that the gods are to keep the addressee in good health, uses a verb meaning 'to grant life' (*bulluṭum,* from *balāṭu*, 'to live').[66] The idea of plenitude is expressed in various ways. The god may be asked to 'sate' a human being with 'fullness of life'.[67] This 'fullness of life' (*lalē balāṭim*) includes old age (*šībūtum*), as a variant of the formula shows.[68] The personal god makes his protégés 'grow old' (*labāru*)[69] so that they can enjoy life for 'many days'.[70] With characteristic overstatement, these 'many days' are said to amount to as many as 3600 years ('May Šamaš keep you healthy for 3600 years'[71])—3600 being the number of plenitude, based on the multiplication of 60 by 60. The wish that people be 'eternal like the heaven and the earth'[72] can be seen as a variant: the love of the personal god is to manifest itself in the fact that his devotees have their fill of life.

Eventually, however, all people have to die. Death is 'the lord of the people',[73] and to die is the 'destiny' (*šīmtum*) of all humanity. The dying day is the 'day of destiny' (*ūm šīmtim*), on which one 'goes to one's destiny' (*ana šīmtim alāku*). Death being inevitable, the most one can hope for is to

die in good time and not before one's proper day (*ina ūm lā šīmtim*). The mere possibility of premature death shows that the destiny laid down by the gods is not immutable. The very prayer that says that Ištar assigns poverty and wealth in men's womb, also claims that she is able to 'reverse the destiny'.[74] The power to extend life beyond the appointed time, which Apuleius ascribes to the goddess Isis,[75] is also available to the Babylonian gods. Nevertheless, the day will come when the ancestors will call (*qerû*) their offspring to join them.[76] The euphemism (which refers to the ancestors as 'gods') implies that death does not mean annihilation but transition. At the end of his lifetime a man is gathered to his fathers, to be remembered and honoured by his own children and grandchildren.

The biographical pattern here described echoes the ideals of the *awīlum* class: birth is viewed not as a mere biological fact, but as the entry into a social world where the individual enjoys dignity and respect (he walks around 'like a prince', *etelliš*); the 'good name' his god has given him is the effect of his social rank; owing to his god's blessing he is a man of means (*rašû*) and an *awīlum*; because his god 'remembers' him (*šumam zakāru*) he has attained a position of honour and responsibility in the administration (such as the judiciary); his prosperity, materializing in fields and flocks, is likewise due to divine kindness; even old age and numerous offspring may be interpreted as characteristics of the social élite: to reach an age where one sees one's grandchildren is a realization of *awīlūtum*, according to the Old Babylonian omen literature.[77] The biographical pattern which emerges from the Old Babylonian letters, prayers, and didactic literature, then, is that of the prototypical *awīlum*, the aristocrat.

Family Religion and Moral Behaviour

Religion, in Babylonian parlance, is 'fear of the god' (*palāḫ ilim*). This term is not concerned with the acceptance of a set of propositions relating to metaphysical realities, but with proper religious and social behaviour. 'Fear of the god' is tangible in acts of human kindness and in dutiful observance of the cultic worship of the gods. It is the safeguard of social decency: as soon as people forget their gods they start using uncivilized language.[78] 'Fear of the

[75] *Metamorphoses* XI 6: *scies ultra statuta fato tuo spatia vitam quoque tibi prorogare mihi tantum licere*, 'Know that I alone have power to prolong your life beyond the span determined by your destiny.'

[76] See *CAD* Q 242-243. There is in fact not one text in which the verb *qerû* would unambiguously mean 'to take away, along, to lead away', *pace CAD*.

[77] YOS 10, 44 [70] *awīlum awīlūtam illak mār mārīšu immar*.

[78] Cf. *Erra* III 11-12: 'I shall make their words wicked; they will forget their god (*ilšin*),

god' is not belief (belief being tacitly taken for granted) but the manifestation of an attitude of reverence for the gods and love of one's fellow human beings. In the Babylonian view, religion must be regarded as the proper human response to the divine creation and providence.

In Babylonian family religion, the relationship between a human being and the god is supposed to be mutual: whereas the human is to benefit from the lasting assistance and support of the personal god (as reflected in the frequent epistolary blessing 'may your god attend to your wishes'[79]), the latter is to have his wishes fulfilled by his human servant ('May your god have no wish left'[80]). The conclusion of the Old Babylonian *Man and his God* epitomizes the reciprocity of the relationship more poetically. As the sufferer has recovered he is enjoined to henceforth return the generosity of his god.

> In future days you must not forget your god
> your creator, now that you are happy again.
> 'I am your god, your creator, and your comfort.
> I assigned alert watchmen to you, they are strong.
> The field will open up [for you] its vegetation,
> I will provide you with life forever.
> As for you, do not tarry to anoint the parched one,
> Feed the hungry one, give the thirsty one water to drink;
> may he who sits down with feverish eyes
> see your food, suckle, receive it and be pleased with you.
> The gate of peace and prosperity is open for you:
> (...) , go out, go in, you will be secure.'[81]

This didactic poem illustrates the transition from biographical description to ethical prescription. The experience of the kindness of his god (which is, after all, an interpretation of a set of biographical elements) is to lead the healed sufferer to display a comparable kindness to his fellow humans. His philanthropy will be a manifestation of his gratitude; it is in this way that he does not 'forget his god'.

The social ethics of the Old Babylonian *Man and his God* are the ethics

---

and to their goddess (*ištaršina*) they will utter the most blasphemous language.'

[79] This is a tentative translation of the idiom *ilka rēška ana damiqtim likīl* and its variant *ilka rēš damiqtika likīl*, see *CAD* K 517 s.v. *kullu* 5f 2'a'.

[80] The expression runs *ilka ṣibûtam ay irši*, see Salonen, E. 1967:46-47 and Röllig 1972:46.

[81] Lambert 1987b:192 [56] *aḫrētiš ūmī la tamaššû il[ka]* [57] *bānika kî tadammiqunim attā* [58] *anā ilka bānūk tukultuk* [59] *erûkum maṣṣarūya ■ dammūku[m]* [60] *eqlum* (a - š à) *marqi'ūssu ippetti[kum]* [61] *apallaškumma dāriš balaṭ[am]* [62] ■ *attā e tepṣi ubbulam pušu[š]* [63] *emṣa šukil šiqi ṣamiya māmī* [64] *u ša ušbuma išrabbuba i[nāšu]* [65] *liṭṭul akliška liṣṣub liḫḫur ■ liḫ[duka]* [66] *patiyetku abul šulmim u balaṭim* [67] *mumma qerbuš erub ṣī lu šalmāt*. Cf. von Soden 1990; Foster 1993.1:75-77.

of family religion. Also later texts know that the personal god 'is pleased' (*ḫadû*) when his servant 'gives food to eat, beer to drink, grants what is asked, provides for and honours.'[82] Such conduct, which the Babylonians called 'charity' (*usātum*),[83] was incumbent upon the social upper class. The following plea, concluding an Old Babylonian letter, is fairly characteristic.

> If you are really my brother and you worry about me, buy two shekel silver worth of barley from Ṣillī-Šamaš, whatever he charges you, and send it to me together with your own barley. Provide this charity for me! You are not unaware of my mood, my situation, and my poverty, are you? You are a notable. Come to my rescue![84]

The letter writer defines his own position as that of a *muškēnum*, which term has unmistakable economic overtones here: it refers to his lack of means. The appeal to fraternal sentiments ('If you are really my brother ...') shows that the writer construes his relationship with the addressee as though they belonged to the same family or clan; it is possible they actually did. On the evidence of their names, both Sîn-uselli (who wrote the letter) and Sîn-bēl-ilī (who received it) honoured the moon god as their deity. Yet in contrast with his 'brother', Sîn-bēl-ilī is a 'notable' (*wēdûm*). He owes it to his rank to show kindness. This is a case, it would seem, where two people from a partly common background are individually different on account of the social-economic classes to which they belong.

The social superiority of the wealthy was both legitimized and kept in check by the religion of the day. Economic disparity could be a source of conflicts, especially if the well-to-do took an attitude of contempt toward their inferiors. Those who suffered from the behaviour of the rich could remind them of their accountability to their god, as the following letter shows:

> Because the god has accepted your prayers you are now gentlemen and men of property. All your affairs have prospered. The land (lit. boundaries) of our family you have ruined. Under whose protection are you ruining us small ones? Fear (your god) and leave us small ones alone![85]

The letter writer accepts the fact that some of his fellow citizens enjoy a prosperity that his family has not. Yet he feels free to appeal to their notion of religion and morality to induce them to change their behaviour. With a rhetorical question he warns them that they cannot act with impunity. Though their god has blessed them with riches, they are not immune from his punishment. They must 'fear god' (*palāḫu*) since also the 'small ones' enjoy divine protection.

The role of family religion in social conflicts is especially visible when people have to deal with conflicts that involve members of the same family. An important concern of the family god is the maintenance of peace and solidarity among parents and children, among brothers, and among relatives in general. That is why the god is often called upon to act as witness and referee in family conflicts. Writing his brother Innāya, the Assyrian Būr-Aššur asserts his innocence and good intentions by calling the punishment of the family god over himself in case he should speak falsely.[86] In disputes over the inheritance, the god of the father is to render verdict about the division of the family estate.[87] In this respect, the family god fulfils the same role as the spirits of the ancestors. The behaviour of the members of the family toward each other had to be 'pleasing' (*gamālu*) to the ancestors and the family god alike.[88] If people of the same kin group betrayed the loyalty they owed one another, the family god was called upon to intervene and redress the situation by punishing the perpetrator.

A quite spectacular demonstration of the role of the family god in punishing crimes perpetrated within the family can be reconstructed from the royal archives of Mari. The case concerns King Zimrī-Līm and his daughter Šīmatum. This Šīmatum was the half-sister of Kirûm, and lived in Ilān-ṣūrā (north Syria) as one of the wives of Ḫaya-sumu. It is clear from the epistolary evidence that the court of Ilān-ṣūrā was divided in a pro-Elamite and an anti-Elamite faction; Šīmatum belonged to the former, Kirûm to the latter. Zimrī-Līm's correspondent, stationed at the court of Ilān-ṣūrā to report to the king of Mari, sided with Kirûm and described the behaviour of Šīmatum in harshly negative terms.[89] According to one of his letters Šīmatum would

---

[86] BIN 6, 97:20-22 = Michel, C, 1991.2, 44:20-22.

[87] AbB 5, 39 [7] *[ya]tta u katta* [8] *[dN]inšubur ili abika* [9] *[liš]āḫiz*. The judicial significance of the terminology is evident from a comparison with Dossin 1956:66 [5] *dŠamaš yattam u kattam lišâl* [6] ■ *lišāḫiz*, 'May Šamaš investigate my case and your case and (then) render verdict.' The same expression occurs in YOS 15, 19 (fc., reference courtesy K. R. Veenhof). The abbreviated formula is found in AbB 8, 106:4-5 and Al-Zeebari 1964, 25 r. 18'-19'.

[88] BIN 4, 96 [18] ... *kima* [19] *ilam* (d i n g i r) *u eṭemmē* [20] *tagammiluma* [21] *la aḫalliqu* [22] *epuš*, 'Act so that you please the god and the spirits, and I do not perish!'

[89] See Charpin in AEM 1/2:45.

have sent her father 'bewitched herbs' (*šammī ša kišpī*).[90] Another letter reports that the god of Zimrī-Līm punished his daughter for her insolent behaviour.

> Something else: Šīmatum, who speaks contemptuously about my lord—and my lord turned to the god concerning her, and the god of my lord took hold of her and cut off her fingers[91]—she has repeated fits of epilepsy.[92]

Since the conflict is with his own daughter, the god whom Zimrī-Līm consults is presumably his personal god, and therefore also the god of all other members of his family. His identity is not stated. The accusation of witchcraft had apparently been confirmed, since Šīmatum had her fingers cut off by the god (that is, a human acting on the god's behalf). Zimrī-Līm's man of confidence at Ilān-ṣūrā was convinced that the illness from which Šīmatum suffered was a divine punishment as well. He interpreted it as an act of the family god, since Šīmatum's crime was an offence against family ethics.

The role of the family god as witness of disputes and settlements is prominent in cases which concern the inheritance of the family estate. Two aspects of the presumed involvement of the family god underlie this practice. There is, on the one hand, the traditional position of the god as patron and tutor of the family; but the god is also implicated because the land which the family owns is ultimately his: it is the portion he has given them. Since real estate property has both public and private aspects, inheritance records often mention two divine witnesses:

> Erra-kāmi-nišī, Rīš-Erra, and Būriya, the sons of Šu-Ištar, had a lawsuit concerning the heritage. They divided the inheritance in the temple of their city god and (the temple of) their god (follows a description of the division). They will bring the food offerings of their god and of Marduk together.[93]

The two gods involved in the legal settlement are the national god Marduk (also referred to in the text as their 'city god', the city being the city-state), and the unidentified personal god of the three brothers.[94] Though the text does not say explicitly that the division of the paternal estate was made in two temples, this seems to be the most likely assumption. Another Old Babylonian inheritance record is more specific by mentioning 'the chapel of their god' (*ina išertim ša ilišunu*) as the place where the oath concerning the division is to be taken.[95] It is interesting to observe that the division of the estate by the sons of Šu-Ištar leaves their joint responsibility for the periodical contribution to the food offerings of the state god (Marduk) and the family god (*ilišunu*) unaffected.

In the capital of Elam (Šušan, later Susa) there was a colony of people from Larsa and its vicinity. Their inheritance settlements are ratified by an oath by Šušinak, the national Elamite deity, and an oath by their personal god. Take the division of the inheritance by Larsatu, Rabiya, Erištum and Bēltani—all persons with good Babylonian names. We have found the personal copies of the inheritance document of Erištum, Rabiya and Bēltani; they betray minor variations. The tablet of Erištum concludes:

> Whoever transgresses (the rules of this agreement): his hand and his tongue shall be cut off; he has touched the sacred symbol of Šušinak: he will die. They have sworn and touched the head of their god.[96]

To judge by another inheritance text, detailing the division of 'everything the god has given to mankind', the oath by 'their god' is to be distinguished from the oath by Šušinak and the Elamite king; the name of 'their god' is Adad.[97] The text confirms the fact that the division of the family property was to be supervised and ratified by both the national deity and the family god—also on foreign soil.

1909, 57; Sommerfeld 1982:44. The reading ^{d}ŠU.KUR in line 18 (so Kohler & Ungnad and Sommerfeld) must be emendated to read d i n g i r-*šu-nu*.

94 In view of the names of the three brothers, there is a fair chance that their god is to be identified with Erra.

95 CT 8, 3a:24, see also Schorr 1913, 194. Note that the official division of the inheritance could also take place 'in the *išertum* of the house of their father' in the presence of the emblem of the family god, according to Spaey 1993:420, CBS 1513 ^{37} *ištu ina kakkim* (g i š t u k u l) *ša* ^{d}*Adad ilišu[nu ...]* ^{38} *ina* é $^{?}$ *išertim ša bīt* (é) *abišu[nu ...]* ^{39} *awīlum awīlam ubbi[bu]* (reference courtesy M. A Gentleman's Religion

The statements of personal identity in the extant corpus of Old Babylonian texts reflect an acute sense of class consciousness. The only identity that really counts is that of the *awīlum*; the *muškēnum* is a 'nobody' (*mār la mammanim*), as the expression goes in first millennium texts.[98] Personal identity, in the Old Babylonian texts, is tantamount to being an *awīlum*: other identities are not honorific and are therefore discarded. Old Babylonian extispicy texts list the *mār muškēnim* (member of the *muškēnum* class) alongside the *mār almattim* ('son of a widow', i.e., a bastard), the *lā ḫassum* ('fool'), the *nakrum* ('foreigner'), the *mār mātim* ('country dweller'), and the *ṭardum* ('one driven out of town') as potential usurpers of the throne: all these persons are similar in that they lack the status and dignity of an *awīlum*;[99] they could be negatively defined as *lā awīlum*.[100]

The rules that dictate the behaviour by which the Babylonian is expected to respond to the love of his god are also at home in the upper class. The code of conduct represents the moral ideals of the *awīlum*. Babylonian philanthropy is as much an expression of genuine human concern as an assertion of membership of a social élite. Munificence and generosity are essential to the behaviour known in Old Babylonian letters as *awīlūtum*, 'gentility'. The writer who expresses the desire to see a display of *awīlūtum* on the part of his correspondent indicates that he hopes for 'an act of kindness' (*gimillum*, which in more archaic English could be rendered as a 'gentle' act).[101] Someone responding to this wish thereby demonstrates his readiness to accept the moral consequences of his position as an *awīlum*. The recovery reported in the Old Babylonian *Man and his God* is not just physical: it is the return to an earlier social status. Philanthropy, though presented as a manifestation of gratitude, is also public proof of restored prestige.

If philanthropy is a duty of the *awīlum*—and, by the same token, a demonstration of the fact that he is one—so is religious behaviour in the more narrow sense of the term. Though charity and philanthropy are anchored in the will of the gods (since proper conduct is supposed to 'please' the god), they cannot take the place of devotion. Devotion must not be confused with fervour. A true gentleman avoids extremes. The first millennium copy of an etiquette cast in the form of omens says that the man

99 See *CAD* Ṣ 27 s.v. *ṣabātu* 8, *kussû*.

100 Note the use of *lā awīlum* in Old Assyrian texts. For some examples see *CAD* A/2 57 *s.v. amīlu* in *la amīlu*.

101 Cf. BIN 6, 207 [15] *awīlūtam* [16] *tēpušma gimillam* [17] *[...] taškun*.

who is constantly visiting the god will be reduced to *muškēnūtum*; devotion must remain 'balanced' (*šitqul*).[102] A gentleman suffering such adversity that he feels he has become a *muškēnum* (*muškēnēkuma*) pleads with his god by referring to the sacrifice which he offers once a year—which is a frequency that can hardly be called excessive.[103] On the part of the human servant, the relationship with the god is one of mutual obligation. As long as he treats his god fairly, he expects to be fairly treated by the god.

Behavioural omens of the first millennium imply that the road to success ('obtaining a god', as the texts say literally) is religious in so far as a human must 'bless' his god.[104] The verb *karābu*, 'to bless', refers to an illocutionary act, which may be supported by gesture, proclaiming someone's qualities. To 'bless' one's benefactor, whether human or divine, is to speak highly of him in the presence of others; for the act to be truly effective, it must be witnessed by an audience. The 'blessing' of one's god is a daily duty, according to a first millennium wisdom counsel.[105] In real life only few people could live up to such ideals. There was, however, the possibility of substitution: instead of daily visiting the temple in person, one could dedicate a votive object to take one's place. Such objects frequently took the form of a statuette (*ṣalmum*) representing the individual in a pose of obeisance; the object was called a *kāribum* (fem. *kāribtum*). Archaeological excavations have yielded a number of such statues.[106]

The dedication of a *kāribum* image was more than just an act of piety. Indirectly, these statuettes sent out a message to other visitors to the temple and to society at large. Though formally addressing the gods, they were also enhancing the reputation of the dedicant with his fellow human beings. At times, the secret purpose is hardly hidden by the inscription on the statue. Let us take, for example, the text on a statuette from Larsa, presently kept in the Louvre (and hence known as 'L'Adorant du Louvre').

> For Amurrum his god: for the life of Hammurabi, King of Babylon, and for his own life, Lu-Nanna [...], the son of Sîn-leʾi, has fashioned a suppliant statue of copper, its face plated with gold, (and) dedicated (it) to him as his servant.[107]

The statuette which bore this inscription sent out a threefold signal: it proved the devotion of the dedicant to his personal god Amurrum; it showed his loyalty to the king; and, with its gold-plated face, it represented a public display of opulence. To say that the last two signals are side-effects, and that only the devotion of the worshipper matters, would be false. Reputation, respect and goodwill on the side of one's fellow human beings were hardly less important than the good graces of one's god.

In the Old Babylonian society the dedicatory worshipper statuettes were a culturally accepted means of creating a positive public image. It was, in a sense, a form of public relations. As regards their effects, these statues might be compared with the statues of honoured citizens which Greeks and Romans set up in their cities, or the portraits of wealthy benefactors which adorned the mediaeval churches. It is evident from references and allusions in the letters, that people were conscious of the social impact of such statues. Female votaries of Šamaš (the *nadītum* women), who interceded on behalf of their family, likened themselves to suppliant statuettes and took it to be their task to provide their family with a 'good reputation'.[108] Grateful people tell their benefactors that they wish to destroy their temple statues to personally take over the role of their *kāribum*;[109] they imply that they will henceforth make public their 'pleasant name' so as to put their adversaries to shame.[110] The prospective effect of a *kāribum*, whether a human intercessor or a statue, is to make the name and reputation of the dedicator 'enduring'.[111]

The religion of a gentleman, manifesting itself as philanthropy and devotion, was not devoid of self-interest. However noble the deeper motives of the *awīlum*, his religion was in effect a means of promoting his prestige.

Philanthropy and devotion were investments with social and religious capital as their returns. Goodwill and reputation are hardly less valuable than material wealth. The analysis of the available data shows that a gentleman's religion served the construction and maintenance of his identity: it furnished the backbone of an aristocrat's biography, and offered him the means to present himself as an *awīlum* to the outer world.

Person and Role

In order to put the question concerning the relationship between family religion and the individual in a correct historical perspective, it is proper to conclude this chapter with some general reflections on the notion of personhood. It has been argued that the theology and ethics of family religion provided the Old Babylonian not only with a group identity but also with a personal identity. To support this statement, we have traced the biography of an imaginary Babylonian *awīlum* and shown how its central moments and elements were interpreted and validated with the help of the concepts of family religion. It might be objected, however, that the identity which the Babylonians thus constructed and legitimized is not truly personal because it consists of clichés applicable to one social class as a whole. Such an objection implies that identity can be personal only if it is distinct from that of all other members of society. This was not how Babylonians would view the matter, as an analysis of their ego-documents shows.

An appraisal of the Babylonian conception of the person should begin with the reminder that the notion of personhood it is not a universal and innate category. The modern concept of person is in fact a long way removed from the views of the ancients. We think of a human person as a unique individual with his own character and feelings; he is, to speak in metaphysical terms, a soul. Such a view of the human person, however, is the fruit of a complex historical process. The modern idea of the person as a subjective reality was preceded by a cultural perspective which put much greater emphasis on the social role of the individual.[112] We have to remind ourselves that *persona* was the word for 'mask' (Greek *prosōpon*) before it came to designate the human person. In ancient cultures, such as Mesopotamia, the human person is understood as a character or a role, rather than as a personality; the individual is not a *personne* (person) but a *personnage* (character),

---

[112] See the fundamental essay on the subject called 'Une catégorie de l'esprit humain: la notion de personne celle de "moi"' by Mauss 1989[3]:331-362. Mauss's article, first published in 1938 by the *Journal of the Royal Anthropological Institute*, served as the point of departure for Carrithers, Collins & Lukes 1985.

to borrow the terms used by Marcel Mauss. There is no separation of the individual from the social pattern; social role and social status are not distinguished from the individual who enacts them.[113]

The observation that the notion of person is a historical category does not imply that the Babylonians had no sense of individuality. Statements to that effect would be invalidated by their use of individual personal names and by the presence of the first person singular in their language. Yet the Babylonian perception of individuality and personhood differs fundamentally from the modern concepts. In order to assess the difference it is instructive to study the autobiographies which the Babylonian civilization has produced. Autobiographies, whether fictional or authentic, are by definition selective, since they define the subject as much by what they mention as by what they choose not to mention. Regardless of their intention, they are limited by the perspective of their culture; as products of their age, they follow the forms of their age. A comparison with modern (auto)biographies reveals the characteristics of the Babylonian ones.

The differences between modern autobiographies and autobiographies from the past are so vast, that the very existence of the genre in antiquity has been called into question. A quotation from a monograph on modern autobiographies is illustrative.

> Some ancients wrote of great deeds done (*res gestae*); some wrote on memorable events they had witnessed (*memoir*); some reported why and how they sought to become wise men (philosophers' Lives); but none opened up their souls in the inwardness of genuine autobiography.[114]

Indeed, when autobiography is defined as introspection ('inwardness'), the ancient Babylonians had no autobiography whatever. The earliest example of an ego document in which the soul plays a prominent part are Augustine's *Confessions*. There are, however, a fair number of Babylonian compositions written in the first person dealing with reminiscences of the past life of the narrator which, if the rather modern definition of autobiography as an opening up of the soul is abandoned, can be seen as specimens of the autobiographical genre.[115]

The denial of the existence of autobiography in early Mesopotamia is best taken as an apposite comment on a characteristic trait of the autobiographical records which the Babylonians did produce. These are indeed marked by the absence of introspection. The Babylonians did not have an introspective

[114] Weintraub 1978:1.

[115] Cf. the definition by Longman 1991:40-41.

tradition, and had little sense of interiority. Subjectivity had not been invented yet. Such narratives as the Sargon birth legend, the autobiography of Idrimi, or the Adad-guppi autobiography, to name three random examples from different places and periods, remain on the surface of the events. At times, there are references to deliberations ('I said to myself'), intentions ('I decided'), or feelings ('I became afraid'), but those are all part of, or incidental to, the action. The person coincides with his or her actions. These actions may be extraordinary, just as the person may be exceptional, but the uniqueness of the individual is never made to reside in the inner life.

In fact, the Babylonian autobiographies are written as though their subjects had no inner life to speak of. A similar phenomenon occurs in non-biographical narratives. Stories such as the *Poor Man of Nippur*, or historical accounts such as those found in the Neo-Assyrian royal inscriptions, depict the events they report from the viewpoint of the outside observer: ambitions and other feelings are registered only in the measure in which they are perceptible by others.[116] Yet by its nature, the literary medium would lend itself well to a description and analysis of the man or the woman inside. If the Babylonians refrained from taking this course (as they did), it is not due to the insufficiencies of the medium they used.

Dreams are a related phenomenon that may help us grasp an essential aspect of the Babylonian anthropology, and so enable us to attain a keener appreciation of the ways in which they constructed their personal identities. Dreams in our mind are windows on the soul, because they disclose the inner life; their interpretation belongs to the province of psychology. But to most of the ancients, Babylonians included, dreams were messages from the gods. Their decipherment belonged to the domain of divination, which was ultimately a branch of theology. This is not the place to decide whether dreams come from below or above; what matters is the difference in perception between moderns and ancients. By reducing mental realities such as dreams to external factors (heavenly agents communicating with humans) the Babylonians demonstrated that to them the inner life had no autonomous reality. Individuals could therefore not be defined by their soul as distinct from their role.

The virtual absence of interiority and subjectivity in the Babylonian (auto)biographical tradition follows from the concept of person as a social role and character. Individual identity, in this view, is not what you are deep down, but what you manifest to be: it is public and social. Once this basic

---

116 Note the striking description of Gilgameš's grief at the death of Enkidu in OB Gilg. M ii 1'-13'. The state of mind of the hero is communicated to the audience by the description of what he does and says. For a study of the passage see Abusch 1993b.

fact is grasped, much about the Babylonian anthropology becomes transparent. In the Babylonian science of man there is little room for psychology; its place is taken, in part, by treatises explaining human emotions and behaviour in terms of signs with predictive (or diagnostic) value.[117] The 'laws' of interpretation are those of divination, not psychology (though the interpretations do reflect certain psychological insights). The concept of person as *personnage* is in line, too, with the priority of shame over guilt, of honour over self-esteem, and of success over integrity. To say that the Babylonians were incapable of feelings of guilt and self-esteem or a concern for personal integrity would be false; yet their culture valued a person primarily on the basis of his role performance.

In their construction of personal identity, Babylonians attached little importance to what they were in their own eyes; what mattered to them was their public image. To establish their personal identity they followed certain culturally accepted models; these can still be recovered from scattered references and observations in epistolary and more literary texts. The cultural patterns of identity construction existed in the minds of the Babylonians only in an inarticulate state, as unrecognized habits of thought and perception. Their culture, inculcated in them from infancy, predisposed them to see themselves in certain ways only. Departures from the limited set of models which informed their perception were viewed as irregularities. Babylonians interpreted their life in the light of the ideals of their class, and tried to be what these ideals demanded. The social identity of a Babylonian was not merely descriptive: it was, in many ways, a role to be performed and a career to be anticipated.

Since the disparate biographical elements of particular individuals conform to established patterns, the modern reader of Babylonian (auto)biographies is easily left with a feeling of disappointment. It seems as though the Babylonians were not people of flesh and blood, but stylized literary figures. This impression is deceptive because the Babylonians were no less human than we are. Thinking and speaking about themselves, however, they did not distinguish self from social station nor person from role. Their religion taught them to identify with the role for which they had been predestined, to follow the rules of their sex, and to act in accordance with their position in society. To them this amounted to a personal identity.

CHAPTER SIX

IN GOOD DAYS AND BAD DAYS: THE COMFORT OF FAMILY RELIGION

Concluding the survey of Old Babylonian family religion, the present chapter will explore some of the ways in which the Babylonians dealt with disturbance and change in their private lives. Some of these disturbances may strike the modern observer as quite harmless (such as the excessive crying of babies), while some will be readily recognized as major upheavals (such as forced migration). The ancients did not necessarily share our appreciation of these evils, however. It should be remembered that adversity, though related to actual facts, is not conterminous with them. It is an interpretation of the facts and, as such, a social construct. It is by cultural consensus that out of all kinds of events some are perceived as inauspicious and threatening, while others are deemed harmless. A study of the interpretation of, and the defence against, potentially disruptive circumstances illuminates the values and sensibilities of the Babylonians, and contributes to a better understanding of the role of family religion in their lives.

Trouble Between the Generations

The fact that events are inauspicious inasmuch as society perceives them as such is certainly relevant for our appreciation of the category of texts to be treated here first, viz. baby incantations. Two Old Babylonian specimens of the genre have been discovered to date; they must be read in the light of a third, indirectly related text, viz. an incantation against the evil eye.[1]

A translation of the shortest of the two baby incantations may serve as an introduction to the problem of these texts.

> O baby, inhabitant of the house of darkness, out you came and saw the daylight.
> Why do you cry? Why do you wail? Why didn't you cry yonder?
> You have woken the god of the house, the bull-man has been roused.
> Who was it woke me up? Who was it frightened me?
> The baby woke you up! The baby frightened you!
> As onto drinkers of wine, as onto the bar's *habitués*, may sleep fall onto him.[2]

---

[1] For the two Old Babylonian baby incantations see Farber 1989:34-39. The incantation against the evil eye has also been published by Farber 1981:60-68.

[2] Farber 1989:34 [1] *ṣeḫrum wāšib bīt ek[letim]* [2] *lū tattaṣâm tātamar n[ūr* ^{d}*Šamšim]* [3]

At first glance, this is nothing more than a 'truly charming lullaby', as a modern commentator observes[3]: a crying baby who keeps the household awake is put to sleep by the joint effect of a soothing song and the consumption of a few drops of wine.[4] A closer inspection of the text, however, suggests that this is more than just a lullaby.

The rubric of the text just quoted defines it as an 'incantation to calm a baby'.[5] We are dealing, then, with an 'incantation' (*šiptum*, Sumerian é n). One could argue, perhaps, that the term is used in a loose way, and should not be allowed to predetermine our understanding of the text. Later evidence is not in favour of this view. The Sumerian equivalent of the Akkadian rubric, viz. l ú - t u r - ḫ ú n - g a, is found in the so-called Vademecum of the exorcist (*āšipu*).[6] It also occurs as a rubric in some first millennium copies of baby incantations that had to be recited by the exorcist. To say that our incantation was originally just a folksong is mere speculation based on an impressionist reading.[7] From the one Old Babylonian copy at our disposal, we must infer that the text as we know it belonged to the professional lore of the exorcist. Its recitation, apparently, involved the services of a ritual specialist.

Why was the noise of a crying baby such a serious problem that its parents had to resort to professional help? As far as the baby is concerned, their reason was probably similar to the one modern parents have for consulting a specialist. Bouts of crying are normal for a baby, but incessant crying is not. The 'universal indulgence of babies by their elders', which one commentator refers to in connection with our text,[8] has its limits. These are certainly reached when a baby's crying is so excessive that the father sees no option left but to leave the house and take 'a road his child does not know,' to use the words of a first millennium baby incantation.[9] A baby who

[9] Farber 1989:42, line 47.

troubles (*dalāḫu*) his father and 'reduces his mother to tears' is a source not of delight but of anxiety.[10]

The Babylonian sensibility to noise of all kinds is well documented in the mythological texts.[11] Domestic peace and quiet were highly valued, and disturbances naturally caused annoyance. In the texts under scrutiny this annoyance surpasses the level of mere discomfort, because the sounds produced by the baby are regarded as omens predicting the collapse of the household. Also, the worry of the parents does not concern the infant (who is not a full person yet but merely the instrument producing the sound), but his crying. The description focuses on the effect of the harm upon the 'god of the house' (*ili bītim*) and the bull-man (*kusarikkum*). The baby has 'woken' (*dekû*) the god of the house, and has 'frightened' (*gullutu*) the bull-man. In a similar vein, the second Old Babylonian baby incantation says that the 'noise' (*rigmum*) of the baby deprives both the 'god of the house' and the 'goddess of the house' of sleep (*šittum*).[12] To say that 'the threat of the divinities of the household is surely playful'[13] is not to recognize the nature of the danger which the incantations are designed to combat. To modern ears the motif of sleepless house gods may sound like good fun perhaps, but to Babylonian ears it sounded serious enough.[14]

The Incantation Against the Evil Eye

To demonstrate that the baby's infelicitous effect upon the gods of the house is not just an attempt at humour on the part of the author of our incantation, it suffices to study the other side of the tablet. It contains 'an incantation against the evil eye.'[15] As nearly half of the tablet is missing, the beginning of the text has not been preserved. Some parts can be elucidated with the help of another Old Babylonian *šipat īnim*, 'incantation against the evil eye,' from Sippar.[16] For a proper understanding of the text it should be noted that the evil eye has the feminine gender. In the vision of the incantation, she is a bird-like creature that stretches its wings and flies around.[17]

16 Cavigneaux & Al-Rawi 1994:85-87, IM 90648.

17 See Cavigneaux & Al-Rawi 1994:85-87, IM 90648 7 *itruṣ kappīša* 8 *ušparrir idīša*, 'She stretches her wings, and spreads her pinions.'

The evil eye has secretly entered and flies around,
O, swooping-down *šuškallum* net, O, ensnaring *ḫuḫarum* net.
She passed by the door of the babies, and created rash among the babies.
She passed by the door of the women in childbed and strangled their babies.
She entered the storage room and broke the seal.
She dispersed the secluded fireplace and turned the locked[18] house into ruins.
She destroyed the *išertum*, and the god of the house has gone.
Hit her on the cheek, make her turn backward!
Fill her eyes with salt, fill her mouth with ashes!
May the god of the house return.[19]

There are obvious connections between this incantation and the 'incantation to calm a baby' on the reverse side of the tablet: both are concerned with new-born babies and with 'the god of the house'. The trouble described in this longer incantation seems more serious, however: the children do not just cry (though a rash will also have produced that effect), but they suffocate; the god of the house is not merely kept from sleeping, but abandons the house. At core, however, the nature of the problem is similar: the god of the house is disturbed, either by the excessive crying of babies or by the evil eye (or their combined effect), and threatens to go away or has in fact departed.

With the attack on the god, the evil eye attacks the heart of the house. The god has his dwelling place in the *išertum*, a spot that must be located in the recesses of the house.[20] The description of the route which the evil eye has taken is instructive in this respect, since it leads from the outer parts of the house to its private sector. In the Sippar incantation, the evil eye first kills the cattle ('She has hit the ox and brok[en its yoke], she has hit the pig and broken [its ...]'),[21] and then proceeds to the fireplace (*kinūnum*) and the *išertum*. In the incantation we are dealing with the eye makes her first stop at the door of the babies and the door of the women in childbed. These doors (including the immediate area to which the doors gave entrance) were situated on the outskirts of the house. Their location was based on the belief

[18] I read *ša-gi-ra-am* instead of Farber's *ša-gi-ma-am*, cf. Farber 1981:66. Following a suggestion by Abusch, I tentatively connect the word with the root SKR/ŠKR/ŠGR (*sekēru*, *sikkūru*, *šigāru*, etc.), 'to be closed, to be locked'.

[19] Farber 1981:61-63 1' *[i-n]u-um ip-pa-la-áš it-ta-na-ap-[ra-áš]* 2' *šaškallum sāḫiptum* 3' *ḫuḫārum saḫeštum* 4' *bāb laʾî ibāʾma* 5' *ina bēri laʾî ṣe[nn]etam iškun* 6' *bāb wāli[d]ātim ibāʾma* 7' *šerrīšina uḫanniq* 8' *īrumma a[n]a [b]īt qê* 9' *šipassam [i]šbir* 10' *kinūnam puzzuram usappiḫ* 11' *bītam ša-gi-ra-am tillišam iškun* 12' *imḫaṣma išertam* 13' *ittaṣi ili bītim* 14' *maḫṣāma lēssa suḫḫirāši ana warkadātim* 15' *īnīša mulli<ā> ṭābtam* 16' *pīša mulliā di-gi-ma-a[m]* 17' *il bītim litū[ram].* I follow Cavigneaux & Al-Rawi 1994:85 n. 19 for the reading of line 1'. For a different translation see Foster 1993.1:132.

[20] The connection between the *il bītim* and the *išertum* is also found in first millennium texts, see, e.g., CT 16, Pl. 29:83; K. 5219:12'.

[21] Cavigneaux & Al-Rawi 1994:85-87, IM 90648 5 *imḫaṣ alpam* (g u $_4$) *išteb[ir nīršu]* 6 *imḫaṣ šaḫâm* (š a ḫ) *iḫtepi ḫu-x*[...].

that women in childbed were impure; a later text estimates their impurity to last thirty days. Impurity also attached to new-born babies. For fear of contagion, both the mothers and their babies were kept separate from the other inhabitants of the house.[22] Pursuing her course from the women in confinement, the evil eye reaches the storage room which she enters by breaking the seal. From there she goes to the 'secluded fireplace', the social centre of the household only indirectly accessible to those not belonging to the family.

In the immediate vicinity of the fireplace lies the *išertum*. The term *išertum* (variants *ešertum* and *aširtum*) is notoriously difficult, amongst other reasons because it is easily confused with its homonym meaning 'tithe' or 'dedicated part'.[23] There can be no doubt, however, that the term here refers to an architectural feature.[24] The proximity between the *kinūnum* (fireplace) and the *išertum* can be inferred from the indication that the latter was situated 'in front of' the former.[25] The *išertum* (Sumerian z à - g a r - r a) might be defined as the ceremonial room of the house. Where it can be archaeologically identified, it proves to be as far removed of the entrance of the house as possible.[26] The term is often rendered as 'sanctuary'. The family gathered here on such solemn occasions as a wedding[27] or the division of the inheritance.[28] Together with the ceremonial table (the *paššūr aširtim*), the *išertum* belonged to the inheritance of the eldest son, as testamentary decisions from Old Babylonian Nippur show.[29]

The location of the god of the house in the recesses of the house must be taken into account when explaining the parallelism between the god of the

house and the bull-man (*kusarikkum*) in the baby incantation ('You have woken the god of the house, the bull-man has been roused'). The first impression conveyed by the text is that the two terms refer to the same reality; that the *kusarikkum*, in other words, is identical with the 'god of the house'.[30] Both the analysis of the text and the non-textual data available on the *kusarikkum* show that this cannot be the case. Whereas the god is startled out of his sleep (*dekû*), the *kusarikkum* is 'roused' (*negeltû*) and, more importantly, 'frightened' (*gullutu*).[31] A first millennium variant of this incantation uses the verb *garāru*, 'to panic, to become scared', in connection with the *kusarikku*,[32] which makes sense because the *kusarikkum* is supposed not to sleep but to be on guard against possible intruders. The usual location of this mythological creature, whose functions had been reduced to those of a protective spirit by the Old Babylonian period,[33] was at the entrance of the house.[34] The parallelism between the 'god of the house' and the *kusarikkum* is not synonymous, then, but complementary: from entrance to centre, the house is in turmoil.

The ultimate problem, both in the baby incantation and in the incantation against the evil eye, is neither the noise of the babies nor their impending suffocation, but the effect of these events upon the god (and goddess) of the house. The departure of the god, assumed by the incantation against the evil eye, is the final episode in a series of untoward happenings. Closer analysis of the chain of events leads to a better appreciation of the significance of the god's departure. The evil eye first brings rash among the babies; though basically harmless, the irritation of the skin is responsible for a continuous crying among the infants. Then she strangles the babies. The children having died, the eye surreptitiously enters the storage room. Her next act is the dispersion of the fireplace, which in Babylonian parlance is idiomatic for the dispersion of the family. The 'fireplace' is the heart of the house and symbolizes the presence and continuity of the family. Just as an 'extinguished

---

30 This seems to be the implication of Farber's interpretation of lines 6-8 as 'a short dialogue between the god of the house and the speaker' (Farber 1990:141).

31 It is not certain that the text is free of corruption: the term here translated as 'to rouse' is problematic; the editor of the text believes there is a word play involved between *negeltû* and *gullutu* (Farber 1981:69), but one could also argue that *i-gi-il*-TIM (transcribed in n. 2 as *iggiltêm*) is a corruption of a passive form of *galātu* ('to become frightened'). Farber later suggested that we are dealing with the phenomenon of popular etymology (Farber 1990:142).

32 Farber 1989:44 [58] *kusarikku igruruma* ..., perhaps to be interpreted as a plural; cf. 84 [358] d*Laḫmū igrurūma*, 'the hairy ones became frightened.'

33 See Wiggermann 1992:174-179.

34 The only Old Babylonian *kusarikkum* plaque found *in situ* comes from Ur. It was affixed to the outer wall of the so-called Ḫenduršaga chapel, see Opificius 1961:220, no. 402. For the chapel see Van de Mieroop 1992:140.

fireplace' (*kinūnum belûm*) stands for an extinct family,[35] the dispersed fireplace stands for a family in dispersion. The destruction of the *išertum,* forcing the god of the house to depart, puts the seal on this series of calamities.

The Identity of the God of the House

Who is the 'god of the house' so keen on his sleep that the noise of crying babies may induce him to leave? Speaking very generally, we may say that he is the divine patron and personification of the house and its inhabitants. However, a detour along some other evidence allows us to give a more specific answer.

The first point to be made concerns the fact that the term 'god' can also be applied to the dead. Various Middle Babylonian inheritance texts from Emar mention a 'god' or 'gods' belonging to the main house and inherited by the eldest son. These gods are the deified dead, as intimated by the fact that the son had to invoke (*nubbû*), honour (*palāḫu*) and tend (*kunnû*) them.[36] Indications about the divine state of the dead are not entirely lacking in Old Babylonian sources. Such Old Babylonian names as Ikrub-El and Ikūnum are attested both as human names and divines names; morphologically anthroponyms they became theonyms as the persons who bore them had died.[37] The description of the ancestors as 'gods' is also found in the euphemism for dying, *ištu ilūšu iqterûšu*, 'after his gods have called on him (to join them).'[38] In fact, the belief in the divinity of the dead is already present in Sumerian texts.[39]

In view of the evidence for the perception of the dead as gods, it is possible that the *ili bītim* mentioned in the baby incantations and in the incantation against the evil eye refers to the ancestor (or collectivity of ancestors) of the house, i.e., the family. There is both textual and archaeological support for this suggestion. A Sumerian hymn to the sun god, meant to be recited during a ceremony for the dead, speaks about the ancestor as 'sleeping in the shade of his house'.[40] The concrete background of the idea of the ancestors sleeping in the family house is the practice of burying the dead within the house. In Old Babylonian Ur, the dead were interred underneath the floors.[41]

41 See Strommenger 1964; Gasche 1989:60-61; Krafeld-Daugherty 1994:174-235.

They were placed in the quietest room of the house, as may also be inferred from the Sumerian term for the offering to the dead, viz. k i - s ì - g a , which name is derived from the designation of the grave as the 'place of silence'.[42] Since the dead were not to be disturbed, it was not unnatural to bury them beneath the room that offered the highest degree of privacy; which may be identified with the *išertum*.[43]

Since sleep is the usual state of the dead (to the point where a tomb can be called an *ekal ṣalāli*, a 'palace of sleep'[44]), the particular sensibility to disturbance by noise would fit the interpretation of the god of the house as the ancestor at marvel. He is not just an anonymous protective spirit, but the forebear who lies buried underneath the house. The 'goddess of the house' in the second baby incantation[45] should be interpreted along similar lines.[46]

The interpretation of the gods of the house as ancestors allows one to appreciate the progression of the disaster at yet another level. We have already noted the progression from periphery of the house to its innermost parts. There is a comparable progression along the line of the generations. After the death of the youngest generation (the strangulation of the babies), followed by the dispersion of the adults, the deceased ancestor is finally also made to leave. The spatial and the temporal axes converge: the intruder moves from periphery to centre, and from the offspring to the ancestor. The continuity between the baby and the ancestors is subtly brought out by calling the child an 'inhabitant of the house of darkness' (*wāšib bīt ekletim*). The principal 'house of darkness' which the Babylonians knew was the

[44] OIP 2:151, no. 41:1.

[45] Farber 1989:36 [13] *ištar bītim* [14] *ul iḫḫaz šittum*.

[46] The one other occurrence of a 'god of the house' in Old Babylonian texts is in a letter in which a *nadītum* orders that food offerings be placed 'in the temple of My Lady and the temple of the God of the House' (*i-na é be-el-ti-ia ù é i-li* é; AbB 2, 116:8-9.11). It is tempting to identify this god with Šamaš, but the fact that a Neo-Babylonian prayer mentions a 'God of the House' as a resident of the Ebabbar in addition to Šamaš (VAB 4, 258 ii 26) does not favour the assumption. The situation in first millennium texts is slightly more complicated The expression *il bīti* is used here for a protective genius of the house to be distinguished from the 'god of the father'. The one Old Assyrian instance of *ili bītim* rests upon emendation and must be dismissed: d i n g i r *-kà ù <i>-li bi$_4$-tí-ka*, 'your god and the god of your house' (CCT 3, 25:24-25 = Michel, C. 1991.2, 4:24-25) must be read as *ilka u libittika*, 'your god and your brickwork (= house).' Note the as yet unpublished text kt n/k 494 (quoted by courtesy Günbattı & Veenhof): [12] *teb²ānim* [13] *atalkānim* [14] *e-en$_6$* (IN) *A-šur ú e-en$_6$ li-bi$_4$-tim* [15] *ša a-bi-šu li-mu-ur*, 'Rise and come, that he may see the face ('the eye') of Aššur and the face ('the eye') of the brick(work) of his father.' The reference is probably to the city of Aššur and the paternal house. It is not impossible that the 'brick' has religious significance, though, e.g. as the deified first brick, cf. ARM 10, 9:19' (suggestion by K. R. Veenhof).

underworld, the dwelling-place of the dead.[47] In the baby incantations it is used as a metaphor for the mother's womb, but it alludes to the womb of Mother Earth as well.

The fact that the incantation is to be recited as a means of warding off the evil may be taken as an indication that the catastrophe of which the text speaks is still a virtual reality. This is the future, should no appropriate action be taken. The only reversal of fortune for which the incantation against the evil eye asks is the return of the god of the house.[48] Presented as the last in the series of events, the god's absence was regarded as a symbol of the definitive collapse of the family. To avoid that collapse the god must return to enjoy his ancestral sleep in the family's midst. The departure of the god, that is the ancestor, would mean a rupture with the past. The dead had to remain among the living, as benevolent spirits bestowing on their offspring blessing and protection. Their presence is deemed crucial for the continuity of the family. Hence the fear of their departure, which—ironically—could be caused by the very babies that were to perpetuate the family line (and who came from the 'house of darkness' where the ancestors had their abode).[49]

The comparison of the baby incantations with the incantation against the evil eye shows that there lies, at the heart of the former, a preoccupation with the historical continuity of the family. The excessive crying of babies is taken as a potential threat to the harmony between the dead and the living. Should the ties between the ancestor and his offspring dissolve, the family is doomed to dispersion and annihilation. Old Babylonian family religion, in its aspect of the cult of the ancestors, produced and maintained in its participants a sense of historical identity: they belonged to a close-knit social group firmly anchored in the past. When this sense of identity is put in jeopardy, the very existence of the family becomes problematic. A family without a past, that is without a sense of its past, is not a family but a collection of individuals. The annulment of the past, mythologically presented as the departure of the divine ancestor, would definitively deprive the family of its future. Seen from this perspective, the Old Babylonian baby incantations are more than just charming lullabies. This 'magic at the cradle' was ultimately

[49] Cf. the epithet *mudeššû zēri*, 'providing abundant seed (i.e., offspring)', given to the god and goddess of the house in a first millennium incantation, Sweet 1970:7, lines 5-6.

designed to preserve the family intact by maintaining peace between the generations, including the dead as well as the living.

The Ištar Prayer

The description of the domestic upheavals caused by the evil eye has a remarkable analogue in a prayer for help addressed to the goddess Ištar. Though the relevant passage is known only from a first millennium copy, the existence of two 13th century versions from Boghazköy (Turkey), one in Akkadian and one in Hittite, warrants the supposition that the prayer goes back, ultimately, to Old Babylonian times.[50] The complaint describes a situation that could be regarded as the sequel to the calamities listed in the incantation against the evil eye:

> Deathly silence reigns in my sanctum, deathly silence reigns in my ceremonial room.
> Over my house, my estate, and my fields deathly silence is spread out.
> My god has turned his face to some other place.
> My clan has been dispersed, my fold is broken up.[51]

The favours asked mirror the adversities:

> Speak, and may, at your command, the angry god be pacified,
> the goddess, who turned away in anger, come back.
> May my fireplace, sombre and smoking, lighten up again;
> May my extinguished torch take flame.
> May my scattered clan come together;
> May my cattle pen expand, may my fold become wide.[52]

The order of the various requests deserves to be noted. The return of the gods, whose absence was the ultimate stage of adversity in the incantation against the evil eye, heads the list of petitions; the restoration of peaceful relations with the ancestors (for it is they who are meant by the terms 'god' and 'goddess') is to be the turning-point in the sequence of unhappy events. Peace with the ancestors will be followed by the reinvigorated fire in the fireplace (*kinūnu*) and on the torch (*dipāru*), images of the warmth and light that characterize a thriving and lively household; as such they anticipate the imminent reunion of the 'scattered clan' (*sapiḫtu illatī*).[53] Restoration of the

[53] Cf. the conjunction of *kinūnum* and *suppuḫum* in Farber 1981:63, line 10'.

family as a multi-generational kin group, including the ancestors, is to be the prelude to the restored prosperity of the sufferer, materializing itself primarily in an abundance of livestock.[54]

The central place of the 'smoking' or 'dispersed' fireplace in both the Ištar prayer and the Old Babylonian incantations against the evil eye raises the question of its function in the household. In the two descriptions of domestic disorders, there is a close association of the 'fireplace' (and in the prayer to Ištar of the 'torch' as well) with the ceremonial room or shrine (*išertum, aširtu,* the term *sagû* being a poetic synonym in the Ištar prayer). The room in question was inhabited by the ancestors and probably served as a centre of their cult; did the 'fireplace' and the 'torch' have a role as well in the cult of the dead? Though the question has been answered in the negative by earlier studies,[55] a reassessment of the evidence leads to a slightly different conclusion.

The conjunction of 'the gods', 'the dead' and 'the divine lamp' (^{d} z á l a g - m e š) in Middle Babylonian texts from Nuzi implies an association of the lamp (and therefore fire) and the cult of the deified ancestors.[56] So does the injunction, found in a first millennium ritual to counteract an evil dream, to light the lamp and to 'bless' the 'god' and 'goddess' and the lamp.[57] These data do not permit us to say that the lamp (and by analogy the fireplace) served a cultic function. The relationship between the lamp (and the fireplace) and the ancestor cult is an association by virtue of proximity: the *išertum* and the fireplace were both in the private sector of the house. Hence the natural linking of the burning fireplace and the torch, heating and illuminating the house, and the pious observance of the ancestor cult. Instructive, in this respect, is a first millennium selection of behavioural omens:

> [If a man] touches a menstruating woman in passing:
> six days he will be im[pure].
> [If a man] does not honour his father:
> [his virility[58]] will soon be taken [away]
> [If] in [a man's] fireplace fire reignites regularly:
> the blessing[59] of the god is constant to him in his house.[60]

---

[54] Note the similar order in the Old Babylonian incantation against the evil eye from Sippar: the eye attacks first the cattle and finally the ceremonial room (Cavigneaux & Al-Rawi 1994:85-87).

[55] So Bayliss 1973:120.

[56] See Deller 1981:62-71.

[57] Oppenheim 1956, 343 r. 16-17. On the interpretation of 'god' and 'goddess' as ancestors see 'Gods and Ancestors' in Chapter Three.

[58] For the reconstruction of the text cf. *KAR* 386 r. 20 ... *du-us-su innetṭir* (k a r-*ir*), // Kraus 1939:36 i 2. Note also *BWL* 32:47 *inniṭir bāltī dūti utammil* (*Ludlul* I 47).

[59] For the reading see *AHw* 510a.

[60] *KAR* 300 r. [6] *[šumma amēlu m]usukkata ētiqtu ilput: 6 ūmē ul [el]* [7] *[šumma] abašu*

Formulated as omens, these are counsels how to behave in the realm of domestic religion and piety. Physical contact with a menstruating woman in the household renders the man impure and thus unfit for cultic actions. The domestic cult that is hinted at in the following lines is the 'honouring' (*palāḫu*) of the father, a term that includes the dutiful performance of the *kispum* offerings.[61] The ancestor cult is associated in the next line with a steadily burning fireplace, which will secure the blessing of the gods. The content of this blessing is not specified, but one readily thinks of offspring as the reverse of the situation in which a man's 'virility' would be taken away: 'not honouring the father' is the opposite of having a regularly burning fireplace, just as the absence of virility (entailing the lack of procreative power) is the opposite of the blessing of the god.

A truly cultic significance of the fireplace cannot be deduced from the texts. What they do show is that a 'burning fireplace' indicates the presence of inhabitants and, more or less as a matter of consequence, the continuation of the ancestor cult. Its reverse is the—among the Babylonians proverbial—'extinguished fireplace' (*kinūnu belû*), the symbol of a family without a future because of being without offspring.[62] The presence of children in the house is the best guarantee that the family line and the cult of the ancestors (the 'gods' sleeping underneath the house) will not be discontinued.

Letters to the Gods

Another source of information on the function of Old Babylonian family religion in the interpretation of individual misfortune and the subsequent attempts at its reversal is constituted by private letters to gods. These are written prayers meant to be deposited in the temple.[63] From the Old Babylonian period we know at least six Akkadian letters to gods, and they are probably just a small sample of the genre.[64] One of them is addressed 'to the

la ipallaḫ: arḫiš inne[ṭṭir dūssu] [8] *[šumma amēlu in]a kinūnišu išātu ittananpaḫ: kurbi ili ina bītišu sadrats[u]*

[61] See Arnaud 1991, 75:16' d i n g i r - m e š-*ia* b a - u g$_6$-*ia liplaḫ*. On the significance see van der Toorn 1994b:47.

[62] Landsberger 1916.

[63] In illustration of the practice see AbB 6, 135 r. 4'-20'.

[64] The six texts are (1) Kraus 1971; (2) AbB 9, 141 = YOS 2, 141; (3) Kraus 1983; (4) de Meyer 1989; (5) AbB 12, 99; (6) AbB 13, 164. UET 6/2, 402 (Akkadian, *pace HKL* 3 § 58), often ranged among the letter prayers, does in fact belong to the somewhat different category of the appeal-cum-oath records. In this case, the suppliant is a litigant who sets down the particulars of his case, swears his innocence, and invokes the curse of the god upon his opponent. It is then left to the god to adjudicate his case. For other instances of the genre see *KAR* 373 (cf. Ebeling 1951) and UET 4, 171 (cf. von Soden 1951). Biblical scholars may find a parallel here with the 'enemy psalms', such as Psalm 109.

god of my father',[65] one to an anonymous addressee, presumably a king,[66] the others to named deities (Ninsianna, Amurru, Ninmug, one most likely to Annunītum) usually called 'my Lord'[67] or 'my Lady'.[68] Considering the formal and material similarities between these prayers to known gods, on the one hand, and the prayer to the otherwise unidentified 'god of the father', on the other, it is likely that most of the Akkadian letter prayers written by private citizens were addressed to the family god of the suppliant. Amurru, Ninsianna, Ninmug and the others were addressed in their capacity as family gods.[69]

A beautiful example of a letter to a god is the message addressed to Amurrum. It deserves to be quoted in full.

> To my lord Amurrum, whose word is heard before Šamaš, speak: Thus says Ardum, your servant. You have created me among men, and you have made me walk along the street. Every year I prepare a sacrifice and offer it to your great divinity. Now the enemy has defeated me. Though I am a *muškēnum* my brothers have not come to my rescue. If (it so pleases) your great divinity, raise me from the bed on which I am lying. I shall prepare an abundant sacrifice and come before your divinity. (...) Do not allow my nest to be torn asunder. Then I shall make those who see me speak highly of your friendly divinity.[70]

The trouble that led Ardum to write to his god is his illness. Though he mentions that his enemy has gained the upper hand (*kašādu*), he does not ask his god for a release from human enemies. Perhaps the anonymous enemy was a demon held responsible for the illness.[71] Its also possible that

[69] A sub-category of the letter prayers is constituted by the letters from kings to gods. Akkadian instances of this genre come from Mari and Assyria, see AEM I/1:413-419, esp. nos. 191 and 193; ARM 1, 3, see Charpin & Durand 1985:339-342; see also J. M. Sasson, *NABU* 1987, no. 109 ; Borger 1971b:576 nos. 13.16.20. 21.23.24. By the intervention of the temple administration, gods could send a reply to the king, see, e.g., Ellis 1987; SAA 3, 41-47 [does no. 47 = K 2764 join with 81-2-4, 218, see *RLA* 3:545b?].

[70] AbB 12, 99 [1] *ana bēliya (be-el-ia)* [d]*Amurrum* [2] *ša ina maḫar* [d]*Šamaš qibīssu šamât* [3] *qibima* [4] *umma Ardum waradkama* [5] *ittamīlī (= itti amīlī) tabnannima sūqam* [6] *tušēteqanni* [7] ■ *šattišša niqi²am* (u d u - s i s k u r - s i s k u r - r e) *alaqqekuma* [8] *ana ilūtika kabittim* [9] *ippuš* [10] *inanna nakru ikšudanni* [11] *muškēnēkuma aḫḫū²a* [12] *ul i²arriruni* [13] *šumma ilūtika* (AN-*ka*) *rabitum* ŠA RA AM [14] *ina* [giš]*eršim* (g i š n á) *nadâku diki²anni* [15] *niqi²am* (u d u - s i s k u r - s i s k u r - r e) *ṭaḫdam* [16] *lulqe²amma ana maḫar ilūtika* (d i n g i r -*ti-ka*) [17] *lullikakku* [18] *x x x x x x x x* [19] *x x x x qinnī la ipparra[rma]* [20] *āmirū²a ana ilūtika* (d i n g i r -*ti-ka*) [21] *banîtim* [22] *ušakrib*.

[71] For another instance where the word *nakru* is used for demons see Meier, G. 1939:142 ii [8] *attunu nakrū šaggašūti*.

the term *nakrum* refers to Ardum's enemies in general, who profited from his illness to humiliate him. Since the letter is probably a school exercise,[72] the description of the adversity may have been vague on purpose.

At no point in this letter (nor in any of the other letters to gods) is there a reference to a possible conflict between the living and the dead. The illness of Ardum does affect the relations among the living members of the family, however. It is a regular part of the rhetoric of the letter-prayers that the suppliant emphasizes his own helplessness, the aloofness of his kinsmen, and his fear of the disintegration of his family. Ardum qualifies himself as a *muškēnum*, a term which here has overtones of poverty. Also in the plea for help from the one human being to the other, such 'poverty' is used as an argument to move the potential benefactor to pity.[73] In how far such poverty was real is a moot question. Ardum's brothers did not deem his poverty sufficient reason, apparently, to come to his rescue. Their unwillingness to help signifies to the sufferer the breakdown of the solidarity of the larger kin group. Should no change come about, his more restricted family (his 'nest', a poetic equivalent of *bītum*[74]) might eventually also be 'torn asunder'. Ardum perceives his illness as a force of disintegration that threatens both his extended and nuclear family; it is menacing, therefore, not just his physical well-being, but his identity as a member of the group to which he belongs.

The principal relationship which the illness shows to be flawed is that between the sufferer and his god, however. At this level, too, the individual's sense of identity is in disarray. As in some of the biblical Psalms, Ardum supports his call for help by references to the care he has formerly experienced from his god, as well as to his own loyalty and devotion. Amurrum is not just any god but his creator: 'You have created me among men, and you have made me walk along the street.' The 'kindness'[75] of his creator was returned by Ardum in the form of an annual sacrifice; the god has no reason, therefore, to be displeased with his servant. In order to move Amurrum to promptly help him, Ardum holds out a promise of an especially abundant offering of thanksgiving. His return to life, moreover, will also cause other people to speak respectfully of the god who healed him. The arguments are part of a negotiation which may look mercantilist, but which springs from a profound disquietude. What is at stake, ultimately, are the relations on which Ardum has based his life and from which he derives his identity.

Letters Addressed to Kings

The ancient Babylonians were not the first to write letters to their gods. Such letters also exist in Sumerian, and most of these are earlier than the Babylonian examples.[76] Whether they have had much influence on the genre as it was practised by the Babylonians may be doubted, however. Most Babylonian letters to gods are quite straightforward, resembling in their address the usual succinct openings of letters exchanged between humans. The only Babylonian letter-prayer whose florid address may be compared to the Sumerian ones comes from Nippur, and may in fact have been addressed not to a god but to a king. In the Neo-Sumerian and—less so—the Old Babylonian cultures, the difference between a king and a god is small. Even during his life, a king might receive honours like a god, and some of the petitions addressed to him bear close resemblance to prayers.

The letter from Nippur just mentioned is damaged in several places, with the result that the name of the addressee can only be guessed at. The theme of the text compares to that of the other letters to gods: the speaker is faced with severe but ill defined problems, the cause of which he believes to be the anger of his 'lord'. Guilt, whether real or presumed, is a major theme in this and most of the other letter prayers.

> My lord, for reasons unknown to me,
> has become angry with me,
> and I have no one to bring me to (his) attention.[77]

The anger of superiors normally has a reason: the person at whom it is aimed will usually have committed some offence.[78] In this case, however, the sufferer professes to be unaware of any fault or omission; the irritation of his lord seems unfounded. Due to their conflict he can no longer approach his lord personally, nor is there someone willing to draw his lord's attention to him. The *muḫassisum* whose absence is deplored is an intercessor reminding a superior of one of his subjects or servants. Goddesses may play this part in connection with gods,[79] officials and courtiers in connection with the king.

---

[76] For an introduction to the genre and a catalogue of texts see Hallo 1968. See also Ali 1964, B:6, B:7, B:8, B:16, B:17; Hallo 1976; 1981; 1982 (for a new edition of the text plus score see Borger 1991); Walker & Kramer 1982, 3; Hallo 1991.

[77] Kraus 1983:205-206 [19] *bēlī ana ša lā idâku* [20] *eliya išbusma* [21] *muḫassisam ul arši*.

[78] The underlying logic is illustrated by the rhetorical question 'Am I a slave who has sinned against his master, that my master does not remember me ?!' (Christian, J. B. 1969:20, no. 2 [4] *anāku wardum* [5] *ša ana bēlīšu ugallilu* [6] *bēlī ul iḫassasanni*)

[79] Cf. *Gilg* III ii 19 *Aya kallat liḫassiska*, 'May (his) spouse Aya remind (him = Šamaš) of you.' The translation 'may Aya, the bride, remind you (of him),' *CAD* Ḫ 125a, is a *contre-sens*.

The man who feels victimized by his lord is Sîn-nādin-šumim. The identity of his 'lord', however, is a riddle. The editor of the text suggested that the god Nabium was the addressee, because of a line which he translated as 'according to his name, [he has been called, *nabi*] with a lofty name.'[80] This, he argued, might well be a word-play on the name Nabium.[81] The argument does not carry conviction, however. From the opening lines of the petition one gains the impression that it is a human superior rather than a god who is being addressed.

> To my lord [x] (...) say:
> To the merciful, the helping, the forgiving one,
> Who takes pride in swiftly absolving:
> Say furthermore!
> As his name [he has received] a lofty name.
> When still in the womb a good destiny
> was his destiny: say for the third time!
> My lord, you are exceedingly clever,
> You are a hero whose word is pure truth.
> This is me, Sîn-nādin-šumim,
> the respectful servant,
> who very much trembles at your commands.
> I am your slave who, day and night,
> prays for you to god and goddess.[82]

The reference to the author's intercessory prayer suggests that his petition is addressed to a human ruler, since praying for one god to other gods would hardly make sense. A definitive answer about whether the addressee is human or divine cannot be given, however; though the remains of the letter favour the idea of its being addressed to a king, the very similarity between petitions to kings and letters to gods renders a firm conclusion impossible.

To illustrate the remarkable similarity between the Akkadian letter prayer from Nippur and the Neo-Sumerian pleas to kings, some excerpts from the letter by princess Ninšatapada, daughter of Sîn-kašid of Uruk, to Rīm-Sîn, the last king of Larsa (1822-1763), may be given in translation. The address is much like that of the Nippur text. The princess flatters Rīm-Sîn with a plethora of lofty epithets framed by the characteristic injunctions 'say' (ù -

[82] Kraus 1983:205 [1] *[ana b]ēliya [.....]* (...) [4] *qibi[ma]* [5] *gammāli āziri tayyā[ri]* [6] *ša arḫiš napšuru bā[štašu]* [7] *šunnišum[ma]* [8] *kīma šumišuma šumam ṣīra[m nabi]* [9] *ištu šassūrišu šīmtum ṭābt[u]m* [10] *šimassu šul[li]ssumma* [11] *bēlī le'ātum tuttaru* [12] *nirgallum ša siqaršu kinātum attāma* [13] *enma* [d]*Sîn-nādin-šumim* [14] *abdu pāliḫum* [15] *ša ana qibītika mādiš inakkudu* [16] *ūmi u mūši maḫar ili* (d i n g i r) *u ištari* [17] *suppêka ṣabtu* [18] *waradkama.*

na-a-du$_{11}$), 'say furthermore' (ù-ne-dè-dah) and 'say for the third time' (ù-ne-dè-peš$_5$), all three spoken to the messenger who was to read the letter to the king. This lengthy *captatio benevolentiae* is followed by a description of the sorry circumstances in which Ninšatapada finds herself:

> Since five years I have not been in my city,
> I live like a slave, and no one pays attention.
> Since you became silent my appearance has changed,
> My body half dead, I walk around with a stoop.
> When I clap my hands there is silence,
> the sound of my .... [?] I do not know.
> In my old age I am discarded like yesterday,
> I have been chased from my room and chamber.
> [I am] like a bird that is caught in a trap,
> and whose fledglings have fled from its nest:
> My children are in dispersion abroad,
> I have no one to do the work.
> My brickwork holds no attraction anymore,
> I am constantly moaning like a dove.
> The food I eat is filled with tears.
> I find no calm in my bed.
> Life is far away: they have accused me of sin,
> and turned me into a slandered woman.
> They have put my servant in my place,
> (saying) 'take care of the possessions'.
> My servant-girl does not mend my garment,
> and I have to dress in rags.
> Who will intercede for me?[83]

Amid the usual rhetoric, this complaint contains at least one specific detail: Ninšatapada reminds the king that five years have elapsed since she was last in the city where she used to be high-priestess by royal appointment.[84] After a change in government the princess lost her position; the purpose of her

plea is to have the king restore her to her former functions. All the other inconveniences Ninšatapada mentions are related to her demise as a priestess: that event has turned her world upside down, as she explains in telling detail. Though unjustly accused, her presumed guilt has brought her identity to a crisis: servants show her no respect, her family is dispersed, and life is simply miserable.

The Family God as Intercessor

It is useful to dwell for a moment on the petitions to kings, because they reflect a situation that can serve as a model for the understanding of the letters to the gods. The relationship between the king and his subjects, mediated by courtiers and officials, is the principal paradigm of the relationship that the Babylonians construed between gods and humans. Mirroring the political reality, the universe of the gods was presumed to be hierarchical. Within the context of the city, the city patron—e.g., Marduk in Babylon, Tišpak in Ešnunna—was at the top of the pyramid; the gods who had their chapels in the city quarters (the *bābtum*s) constituted the second echelon; though they might differ in rank, their position vis-à-vis the citizens was by and large the same, in so far as they could intermediate between the citizens and the city god. At a national level, the position of the god of the capital city (that is Marduk, under Hammurabi and his successors) in respect to the gods of the subordinate cities mirrored the unequal distribution of power between city gods and neighbourhood gods.

Since the Akkadian letters to gods are addressed to the family gods, most of whom were gods of the city ward or neighbourhood where the families had their domicile, they are appeals to intercessors rather than to the highest office itself. The role of the personal god as mediator is especially clear from Apil-Adad's letter to 'the god of [his] father'.

> To the god of my father say: Thus says Apil-Adad your servant: Why do you neglect me? Who will give you (again) someone like me? Send a message to your friend Marduk, that he absolve my guilt. Let me see your face, let me kiss your feet. Consider my family, old and young ones: if only for them have mercy on me. Let your help reach me![85]

The language of devotion ('Let me see your face, let me kiss your feet') does not disguise the fact that the author of this letter expects his god to perform

---

[85] AbB 9, 141 [1] *ana il abiya* [2] *qibīma* [3] *umma Apil-Adad waradkama* [4] *ammīni tuštaḫi'am* [5] *ša kima yāti* [6] *ana kāšîm* [7] *mannum li[dd]in* [8] *ana* [d]*Marduk rā'[im]ika* [9] *šupra[mma]* [10] *i'i[lt]i-x* [11] *lipṭ[ur]* [12] *pānīka [l]ūmu[r]* [13] *šīpīka lušši[q]* [14] ▪ *qinnī* [15] *ṣeḫerrabi amur* [16] *aššumišunu* [17] *rēmanni* [18] *na'ārka* [19] *likšudanni.*

the services of an intercessor. He approaches his god in the latter's capacity as 'friend' of Marduk, a god he feels he cannot very well address directly. Though the redeeming action is to be performed by Marduk (the absolution of guilt), Marduk can be reached only by way of the family god.

The mediatory role of the family god is evident, too, from an Old Babylonian prayer to Ištar.[86] The speaker is a man who worries about his future, because his virility has been taken away. He therefore turns to Ištar, goddess of love and procreation, hoping the deity will grant him health and offspring. Though addressing Ištar directly, he is aware of the crucial role of the god of his father.

> May the god of my father stand before you,
> may he [...,] Ištarītum, establish my destiny.
> May the god of my father stand before you,
> O Ištar, and speak about the absolution of my guilt.[87]

The personal god of the speaker—presumably Ninšubur, mentioned as the 'court official' (*sukkallum*) of Ištar earlier on in the prayer[88]—is to 'speak well on my behalf', as the man says:[89] The family god is the intercessor who pleads the cause of his protégé with Ištar, urging her to absolve his guilt, that he may regain his health and have good hope for the future. The god of the father takes the man by the hand, as other Old Babylonian texts express it, and leads him to his Mistress Ištar. It is a characteristic role of the personal god, witness the presence of the theme on cylinder seals and in the literature.[90]

Intercessory functions can be fulfilled by lower-ranking gods as well as by the spouse of the god whose favour is sought after. Comparable in this to a human wife with her man, a goddess can benefit from her intimacy with her divine consort to work on his emotions in favour of those whom she wishes to protect. This idea informs the letter prayer of one Ninurta-qarrād.

> Speak to my Lady Ninmug: Thus says Ninurta-qarrad your servant. Išum listens when you speak. For this sin I have committed, intercede for me with Išum.[91]

---

[86] The Old Babylonian prayer from Nippur will be published by Prof. Dr. B. Groneberg. She has kindly provided me with a preliminary draft of the crucial parts of the prayer, as well as a description of its content.

[87] Groneberg 1986:101 [13] *lizzi[ʳz] in[ʳa] [m]uttiki ilu abiya* [14] *liša-x-x-x ištarītum a[l]aktī lemdi* [15] *ina mutt[ik]i* [d]*Ištar x ilu abiya* [16] *lizzi[z]ma ennitī paṭāram liqbi.*

[88] Line 9' *ra-ap[x] ab [x x] ni-im* s u k k a l [d]*Ninšubur*, see Groneberg 1986:103.

[89] Groneberg 1986:101 [12] *iqabbi dumqī.*

[90] Cf. Renger 1972, who refers to OB Gilg P ii 32 *ṣabtat qāssu kīma* [ʳ]d i n g i r[ˡ] *iriddišu*, 'Holding him by his hand she leads him like a (personal) deity.'

[91] AbB 13, 164 [1] *an[a] bēltiya* [d]*Ni[n]mu[g]* [2] *qibima* [3] *umma* [d]*Ninurta-qarrad*

Ninmug is the consort of Išum. A friendly word from her, the author of this letter intimates, will work wonders with Išum. An analogous idea is present in the letter prayer by Ur-Utu from Sippar to his 'Lady' Annunītum.[92] He addresses the goddess not just as his personal deity, but also in her capacity as the consort of Adad. Owing to her intercession, it seems, the sin he was led to commit against Adad may possibly be absolved.[93] Another reference to female intercession concerns that of Aya with Šamaš on behalf of Gilgameš.[94]

Guilt and Shame

The difficulties which the authors of the Old Babylonian letters to gods experience are often analysed in terms of sin and guilt. Though the actual troubles are diverse and rarely specified, most of them are reduced to some offence the sufferers have committed, must have committed, or are alleged to have committed. In many cases, it would seem, their confession is based on inference: since their gods have turned away from them, they must have done something wrong.[95] They do not know exactly where they have gone astray. 'What have I done to you?', is one of their recurrent questions.[96] They are in the position of the sufferer who, in the Babylonian *Man and his God*, confesses his ignorance:

> My lord I thought it over in my mind,
> [I have considered it] in the heart:
> I do not know the sin I have committed.[97]

The theme of the unknown sin is standard in Babylonian penitential poetry. It is found in the Sumerian letter prayers, both to kings and to gods,[98] and in

later times in various types of individual prayer such as the *šuʾila* and the *šigû*.[99] In the Old Babylonian period the topos is found in a bilingual complaint (a forerunner to the *eršaḫunga* texts).[100]

An outright denial of guilt does not occur in the Old Babylonian letters to gods; nor would it make sense, from a Babylonian perspective, since it was evident from the situation in which the authors found themselves that somewhere along the way they had 'slipped', as the euphemism goes.[101] But though they could not simply brush their guilt aside, the letter writers did try to put their presumed offence in a favourable perspective. They argued their steadfastness in the annual offering of a sacrifice,[102] and intimated that their death would be an irreparable loss to their god.[103] And if their loyalty and devotion could not outweigh the sin they had committed, they took refuge in the idea that to err is human.

> As my Lady knows, there does not exist a servant or a maid-servant who is not to blame for a fault or an offence, he against his lord, she against her mistress.[104]

Since the personal deity 'loves' her protégé and 'cares for the living'[105] she is bound to understand the weaknesses inherent in the human condition. How could she not take pity and plead on his behalf?

Another argument that the letter writers use to persuade their gods to intervene in their favour takes advantage of the divine desire for gifts and prestige. Its most blunt expression is found in the message Ninurta-qarrād sent to Ninmug.

> When you have pleaded my case, I will bring sacrifice to Išum, my face bright with delight, and for you I will bring a sheep. When I give praise in front of Išum, I will praise you as well.[106]

Though more delicately presented, the motif of divine self-interest is found in several of the other prayers. In a letter to his god Amurrum, Ardum promises that he will prepare a sumptuous sacrifice for the god in return for his recovery. In addition, he will also encourage others to give praise to Amurrum.[107] Apil-Adad makes a similar vow to the god of his father: should his guilt be absolved, he will visit the god to kiss his feet in a gesture of adoration and worship.[108] The subtle reminder that the worshipper is irreplaceable plays upon the same register: there is no gain for the god in the death of a devout servant; the choir of his worshippers would lose a voice.[109]

The emphasis on the advantages that will accrue to the god (praise and sacrifice) may strike modern readers as being in bad taste. Did the Babylonians really think the gods could be moved to compassion by such crude appeals to their sense of honour and self-interest? Indeed it would seem they did. It could be argued—as it has in fact been done—that we should not attach undue importance to these promises of praise and worship since the Babylonians, just like the Israelites, did not know our notion of 'thanking'. Because the phrase 'I thank you' was not a part of their vocabulary, they resorted to praise as a means of expressing their gratitude.[110] This observation is only a partial explanation. It must be added that honour and prestige were vital concerns in the Babylonian civilization; the gods, inhabited by preoccupations much like those of their human worshippers, attached inordinate value to their public status and acted with a view to its promotion. When humans alluded to the divine concern for glory, they merely played upon feelings they considered universal.

The interrelated issues of honour, status and prestige are at the heart of the identity problems the ancient Babylonians analysed in terms of guilt. The actual adversities which have prompted the composition of the letters to the gods will have been as diverse as the authors of these texts themselves. There are references and allusions to childlessness, illness, poverty, and expulsion from office. One element that these misfortunes have in common is the loss of social esteem. The public opinion is a central concern to the sufferer.[111] He calls upon his god to help him because he can no longer

108 AbB 9, 141:12-13.

109 AbB 9, 141:5-7. The theme recurs in a less veiled fashion in younger texts, both Babylonian and biblical, see Mayer 1976:313-314.

110 See, e.g., Mayer 1976:307-309.

111 Cf. the accusation in TCL 17, 56 [14] *annikīam ina āli wašbā'ku'* ... [16] *išdīya tuqtallili*, 'You have damaged my status in the town where I live.'

'keep his head high'[112] and 'face the daylight';[113] his 'beaming appearance' and 'princely' gait have vanished.[114] As a scribe out of work puts it in a letter written to Zimrī-Līm: 'Like a proletarian I hang about in the streets ....'[115] Hostility and humiliation are the lot of the sufferer:

> I am an ailing old man (...)
> My brother treats me with contempt, taunting my misfortune
> My friend does not open his mouth in the street, he humiliates me.[116]

Such is the tenor of the other prayers and written pleas as well. In the surroundings of the sufferer people perceive his troubles as indications that some sin has been committed. Society ostracizes the presumed sinner by publicly ignoring him. Cast out by his peers, the individual finally loses his self-esteem.[117]

The dispersion and dissolution of the family is one of the most painful phases in the disintegration of identity. The fear concerning the dispersion of the family should not be construed as a fear of loneliness. The concern of the sufferer is the continuity of his family as an identifiable entity:

> Consider my family, old and young ones: if only for them have mercy on me.[118]

The worry of the writer, and the worry of people in a similar position, is that his family should be 'torn asunder'.[119] If that should happen, the line of generations would be finished, and the paterfamilias would lose his principal title to glory. Blessing formulas in letters do occasionally mention the addressee's 'family' (*bītum*) or 'offspring' (*pirḫum*) as the ground for divine goodwill.[120] The god has reason to save the paterfamilias, it is implied, because the entire family honours the god as its deity, not just the father. Yet it is primarily to him that the disintegration of the household would mean a

loss of status and identity: he would be left without a 'name', and thus without means of private or public identification.

It may seem strange that the collapse of identity should be interpreted in terms of guilt rather than shame. The explanation must be based on the distinction between cause and effect. If a contrast is made between shame cultures and guilt cultures, Mesopotamia belongs to the former category.[121] The Babylonians recognized the notion of guilt, yet not as an emotional state but as an objective condition. Power, honour and prestige were believed to follow in the footsteps of the gentleman; they were his divinely endorsed advantages. Within this frame of reference, the social decline of the *awīlum* was taken as a signal of a profound disorder. Whether it took the form of disease, childlessness, poverty, or dismissal by the authorities, the lapse into disgrace and anonymity was seen as the visible consequence of a hidden rupture with the gods. The contract with the gods had not been kept; the invisible *e'iltum* ('guilt', but more literally 'bond') which had seized the transgressor in consequence could be broken only by the gods themselves; as a mediator and intercessor, the family god had a crucial role in bringing about the release.

If family religion plays a role in identity construction (as it clearly does with the Babylonians), it is also called upon to come to terms with the situations in which identity is in crisis. Fortune is fickle by definition: the position one enjoys today may be given to someone else tomorrow; wealth may give way to destitution, health to protracted disease. To domesticate the inconstancy of life, the Babylonians devised a religious model to interpret the biographical course of the individual. This model was essentially conservative: it was conceived as a legitimation of the status quo. Yet it also offered an explanation—and, by the same token, a justification—of those events that were perceived as irregularities. Framed as a theodicy, i.e., an apology of the divine government of the world, it was in fact a means of providing the cultural perception of social distinction with a metaphysical foundation. Success was its ultimate yardstick. By reducing adversity to failure and suffering to sin, the doctrine of retribution left the disillusioned individual little choice but to avow ignorance and plead guilty.

Religious Identity in Situations of Diaspora

Dispersion of the family ranks high among the adversities that have been discussed in this chapter. Its occurrence was not uncommon. The frequent references to the 'gathering of scattered people' in royal inscriptions suggest

---

[121] For the distinction see Piers & Singer 1971[2].

that the dispersion of communities was a general problem in the ancient Near East. Most prayers that mention it have been written from the perspective of the one who remained behind. The feelings of those who had left can still be recovered from the names some of them gave to their children. People that carry such names as Mati-utta-ālī ('When will I find my city?') are clearly second or third generation migrants.[122] The move from one place to another, and thereby from one culture to another, is widely recognized as a source of stress and a threat to one's sense of identity. This observation would seem to apply more acutely to the Babylonians, whose sense of identity was strongly linked to the place where they lived. What were the effects of forced migration upon the family religion of the Babylonians?[123]

The discussion of the religion of migrants can be introduced by a biblical illustration. According to the author of 2 Kings 17:24-33, the fall of Samaria (721 BC) was followed by an Assyrian deportation of exiles from Babylon, Kuthah, Avva, Hamath and Sepharvaim to the cities of the former kingdom of Israel. These people adopted the worship of the god of the land (Yahweh), but they continued to worship their ancestral deities as well. The people from Babylon made an image of Banit,[124] the people from Kuthah made Nergal, the people of Hamath made Ashima, and the Avvites made Nibhaz and Tartak. The Sepharvites, for their part, demonstrated their loyalty to ancestral custom in a more gruesome fashion by burning their children in the fire to Adrammelech and Anammelech, the gods of Sepharvaim (1 Kings 17:30-31).

The biblical text stresses the close relationship between these gods and their worshippers; each group of exiles honoured 'its own god' (1 Kings 17:29, 33). The religion of the migrants differed from the official or public religion of the land in which they settled. For them, apparently, the two levels of religious involvement coexisted without clash or conflict. 'They feared Yahweh, but also served their own gods', as our author disapprovingly observes (2 Kings 17:33, 41). The combination did not shock the Mesopotamians and Syrians in diaspora: they were accustomed both to fulfil the obligations of their national religion and to worship their personal gods. The worship of Yahweh, supervised by a priest at Bethel, had taken the place of their former state cult; their private devotion remained with their own gods, though.

The biblical example of Mesopotamian migrants in the first millennium

may serve as an introduction to the discussion of migration and diaspora in the Old Babylonian period. In anticipation of a study of the evidence it can be said that most migrant Babylonians demonstrated a remarkable loyalty to their original gods. Though there may have been much that they did sacrifice in order to integrate into their new society, there were certain things they would not easily abandon. Religion was one of these. Like Aenaeas, who left Troy for Rome, they brought their gods along.[125] Their religion was part of their heritage; it marked their identity, and losing it would be losing a piece of themselves. Some selected cases may serve to illustrate these statements.

A first example concerns the presence of families from Uruk in Kiš.[126] An Old Babylonian archive dealing with the management of the royal date-palm plantations in the region of Kiš (modern al-Uḫaimer, about fifteen kilometres east of ancient Babylon) mentions a total of thirty-seven gardeners from Uruk. Since Uruk and Kiš are separated by some 200 kilometres, these men can hardly be considered hired labourers. They came to find refuge at Kiš after King Samsu-ilūna (1749-1712) lost control over Uruk.[127] These gardeners belonged to a much larger group of migrants from Uruk. Among them were also priests and scholars who brought their own religious traditions, expanding the religious life at Kiš with the worship of Ištar of Uruk, Nanaya, and Kanisurra.[128] The cult of these foreign deities appears to have met with little or no opposition, as the priests ministering in their cults inhabited the same quarter as the native priests of Kiš.[129]

Whereas the presence of priests of Ištar of Uruk, Nanaya and Kanisurra might arguably be interpreted as an indication that there has been a transfer of the official cult, there is evidence, too, of a transfer of private deities not found in the new pantheon of Kiš. A personal name like Uṣur-awassu-gamil[130] might be cited as a case in point, as Uṣur-awassu is a goddess connected with Uruk.[131] Yet theophoric personal names are not the most reliable source of information on family religion. A surer indication is presented by the cylinder seals of Marduk-mušallim and his son Nanna-mansum: the legends of these seals proclaim the owners to be 'servant[s] of the god Lātarāk'. Lātarāk is known as a minor deity worshipped in Uruk and its

---

131 See, e.g., Brinkman 1970:44.

vicinity; he survived as an apotropaic demon in later times.[132] His cult was apparently passed down from father to son, Lātarāk being the family god well before the family moved to Kiš.[133] Another family deity from Uruk mentioned in an Old Babylonian seal from Kiš is Sakkud.[134]

A second instance of a collective exile with an attendant transfer of deities and religious traditions is documented for the city of Ur.[135] Among the staff of the Ekišnugal temple at Ur there is a number of priests with titles known from the city of Eridu. Their complex Sumerian names reflect the high esteem in which these people hold the Eridu temples. As natives of Eridu they are devoted to Eridu's gods, most notably Enki (Akkadian Ea). The immigration of these men must have taken place toward the end of the third millennium.[136] Though dwelling within the walls of Ur, they jealously maintained a separate identity. Their social cohesion is evidenced by the fact that they often served as witnesses to each other's legal transactions.[137] The literary texts that were found in one of the houses of the Eridu priests at Ur (No. 7 Quiet Street) give an inkling of the possible role of these Eridu priests in the transmission of the Eridu mythology, not only from the one generation to the other, but also from the one city to the other. Since the population of Ur seems to have eventually fled to Central Mesopotamia, the topographical route of the literary transmission is slowly beginning to emerge.[138]

The two cases of migration just mentioned concern a one-way movement. There is also evidence of a two-way traffic of people and their gods. Various Old Babylonian texts from Larsa and its vicinity contain personal names composed with Elamite theonyms. Examples include, besides many others, Arad-Zugal and Kuk-Šatran.[139] These names attest to the presence of Elamite elements in the Larsa area. Elamite influence in the Larsa area is evident too from the personal seals of Šamas-tūram and Aḫi-šagiš, a father and son from Kutalla, since they are both a 'servant of Šušinak' the city god of Susa (Šušan).[140] A movement from Larsa to Elam could be inferred from the presence in Elam of Babylonians with such names as Erištum, Bēltani,

and Larsatum (lit.: 'She-from-Larsa').[141] Among their legal documents, there is a case where the personal god of the inheriting children is identified as Adad,[142] and one suspects that the unnamed family god in other documents should equally be identified with a Babylonian deity venerated in the region of Larsa. The fact that the cross-fertilization between Elam and Larsa was not restricted to the cult of certain deities is demonstrated by the presence of the expression *mimma ša ilu ana awīlūti ana rašê iddinu* ('whatever the god gives humans to possess'), characteristic of Susa inheritance texts,[143] and elsewhere found only in a text from Larsa.[144]

Are there instances of migration entailing a change of religious allegiance? One is tempted to answer in the affirmative on the strength of the case of Ibbi-Ilabrat, born and raised in Malgium, and later living in Kiš. The earlier of his two seals mentions Ilabrat and Usmû as his gods, the more recent one Sîn and Ninsianna. According to Charpin, the comparison shows that 'the choice of the personal god(s) on the seal is apparently not just a matter of family tradition; the change observed here attests to the integration of an individual originating from Malgium into the religious framework of the Babylonian kingdom.'[145] The reason for the change is not clear, though. Ibbi-Ilabrat was one among more than five thousand people from Malgium who had found their way to the region of Kiš.[146] Do we have to assume that all of them changed their Malgium gods for deities from their new country? Did Ibbi-Ilabrat have to change deities because of his special position, or had he beeen adopted, as client or son, by a local family?[147]

Religious 'conversion' on account of a migration was apparently highly exceptional. In fact, there are more examples of a change of personal god(s) by individuals that have not moved, than by people that have migrated. The *nadītum* Ramatum from Sippar is known in one seal as the 'maiden servant of the goddess Aya', which is what one expects of a woman in her position, and in another as a 'maiden servant of Enlil'.[148] Did she marry a husband devoted to Enlil? An appointment to a position in the administration could render it necessary to focus the religious devotion on the king instead of the traditional god of the paterfamilias.[149] These and similar possibilities could

account for all the known cases of change in private deities. In fact, the case of Ibbi-Ilabrat stands alone. The major part of the evidence points to the opposite direction: when people migrated, their gods migrated with them. If new gods were adopted due to a change of domicile, it was most likely because the individuals in question found themselves in entirely unfamiliar surroundings, and without other expatriates. Most of such changes, if not all, are bound to escape our notice.

The exceptional case of a change in religious allegiance is negligible by comparison with the many testimonies to the religious conservatism of Babylonian migrants. Their loyalty demonstrates their attachment to their origins. Through the cult of their ancestors, they asserted and maintained a historical identity; through the worship of their personal gods, they asserted and maintained a local identity. In the case of migrants this local identity was a question of origins. The Babylonian devotion to their family god was a devotion to the settlement, the district, or the neighbourhood where the worshippers were raised; physical separation from those surroundings did not destroy their attachment: in some cases, it only increased the love of their homeland.

Conclusion

The case of migrated families provides a specific instance of the function of family religion as a central focus of identity. The Babylonian sense of identity could be assailed by all sorts of events; migration is one of them, but illness, financial losses, and expulsion from office necessitated a reassessment of identity as well. Dramatic changes in the life of the individual stripped him of his attributed character and role; he was faced with a loss of identity. In an effort to retain or regain a sense of identity, people clung all the more fervently to the two characteristic elements of family religion, viz. the cult of the ancestors and the worship of the family god. In order not to be engulfed by the tides of change, they held on to the reality of their kin group through the cult of their ancestors, and of their social and local origins through the worship of their family god. When the circumstances might prove the vulnerability of the personal dimension of their identity, based as it was on identification with a class-related role, they could still rely on their broader collective identity, as a clan or kin group with its own home ground. Family religion was the effective symbol of this identity.

PART TWO

SYRIA
THE CONTINUITY OF FAMILY RELIGION

INTRODUCTION TO PART TWO

Identity, for the ancient Babylonians, was first and foremost collective and local. The Babylonians did not derive their identity from the achievements of their civilization, nor did they draw their self-esteem from the prestige of their rulers. The things that really mattered to them were their family and their neighbourhood; it was their reputation in these domains which they considered crucial. Their daily religion served to assert and substantiate their attachment to the group and area with which they identified. By the commemoration and cult of their ancestors they celebrated their link with the past; their genealogical identity, whether fictive or real, legitimized their position as full members of their family. Devotion to their local family god, persisting throughout their generations and preserved over considerable distance if need be, demonstrated the fact that they were rooted in a particular place, and remained attached to it.

Family religion in the Old Babylonian period combined the ancestor cult with the worship of the family god. In later periods and other parts of the Near East, this duality remained fundamental. The development of family religion among the Syrians, Aramaeans and Phoenicians is known only in fragments. Most of the relevant data come from Ugarit (ca. 1350-1200 BC) and Sam$^{\supset}$al (ca. 830-725 BC). The information that the texts from Ugarit and Sam$^{\supset}$al offer can be supplemented, in modest measure, by data from other places. The emerging picture of family religion in the West Semitic milieu is similar in essence to the Old Babylonian family religion. Even though it is primarily the family religion of the royal house, which may for that reason be termed dynastic religion, the analogy to popular religious practice in the Old Babylonian period warrants its being taken as representative of later family religion in general. The continuity with the earlier period is striking.

CHAPTER SEVEN

FAMILY RELIGION IN THE WEST: PERSISTING PATTERNS[1]

In contrast to Old Babylonian family religion, popular religious practice in the West Semitic world (with the exception of Israel and Judah) is poorly documented. The main source of information are the 14th-12th century texts from Ugarit (Ras Šamra). For all their importance in the area of mythology, these texts have little to say about the religion of ordinary families. In so far as they deal with family religion it is the religion of the royal house. It is only on the assumption that dynastic religion is the royal version of family religion that the insights obtained from the Ugaritic texts can be given a wider application. In this sense, the reconstruction of Syrian family religion on the basis of the Ugaritic texts amounts to an extrapolation from the evidence. A similar observation must be made in connection with the few documents of family religion with a provenance outside Ugarit, notably those of Sam$^{\supset}$al. The élitist bias which characterizes much of the Old Babylonian material is even more prominent in these West Semitic sources.

The principal observation about family religion in the West Semitic milieu of Ugarit around the 13th century BC and, almost half a millennium later, Sam$^{\supset}$al, concerns its dual nature: it consists of the cult of the ancestors and the particular devotion to a god who is looked upon as the divine family patron. There is, in this respect, a remarkable continuity with the Old Babylonian family religion described in the first part of this study. The one point on which Syro-Phoenician family religion departs from the forms of the Old Babylonian family religion concerns the entwining of the ancestor cult with the veneration of the family god. In the Syro-Phoenician conception, the dead are presumed to dwell with the family god; in the hereafter, they eat and drink with their god. That is why the post-funerary offerings are to be accepted by the family god before they can reach the family ancestors. Unlike the Old Babylonian customs, the temple of the family god could serve as the place where the dead were addressed.

---

[1] A preliminary version of this chapter was read and commented upon by D. Pardee from the Oriental Institute of the University of Chicago. Though I have benefited from his knowledge and insights, the responsibility for the views here expressed is entirely mine.

The Cult of the Ancestors

In their fundamental structures, families at Ugarit resembled the Babylonian families of the older period.[2] They were patrilineal and patrilocal. The paterfamilias had far-reaching powers over the other members of the family. Concomitant with his prerogatives were certain duties, some of which were of a religious nature.

A summary catalogue of the responsibilities of a paterfamilias is given in a passage from the Epic of Aqhat. The desire for a son who will ensure the continuity of the lineage is a major theme of the epic. The author treats this issue by focusing on king Dan$^{\supset}$el, whose distress over the lack of a natural successor is dispelled by a divine oracle promising him a son. To emphasize the importance of a male heir, the oracle lists his principal responsibilities. They are filial duties, it is true, yet duties to be performed by the son in his future capacity as paterfamilias. The tasks listed, in other words, are those a son is expected to fulfil when his father has grown old and the effective leadership of the family has been passed on to him. Dan$^{\supset}$el desires a son

[26] *nṣb. skn. ỉlỉbh*	who erects the stela of his god-of-the-father,

ṭḫ.ggh.bym [33] *[ṭỉ]ṭ*	who plasters his roof in the [fou]l season,
rḥṣ.npṣh.bym.rṭ	and washes his garments when they are dirty.[3]

The acts of filial piety suppose a situation in which the father has become too weak to take care of himself. In the old days he used to assert himself against ill-wishers and opponents; now it is his son who has to defend his honour. The usual domestic chores, such as the repair of the roof and the washing of clothes, have become too heavy for him; his son has to perform them in his stead. The image of the inebriate old man, staggering home on the arm of his son, may seem disrespectful, but was probably painted after life. The occurrence of the same theme in the story of Noah's drunkenness (Genesis 9:20-27) suggests that the care of the fuddled father was a classic requirement in the repertoire of filial duties. Projected upon the world of the gods, the topic

2 On the Ugaritic family see van Selms 1954; Bordreuil 1981.

3 *KTU* 1.17 i 26-33, cf. i 43-52; ii 1-8; ii 17-23.

is also found in an Ugaritic text describing a banquet for the gods organized by El. As the father of the gods returns home, the divine pair Ṯukamuna and Šunama have to support him.[4]

The religious responsibilities of the paterfamilias-to-be lie in two domains. In the temples of El and Baal, the son is to eat (*spʾ*, eat, devour) his emmer corn (*ksmh*)[5] and his portion (*mnth*). The text does not specify whether this was a royal duty only. If the eating in the temple here mentioned was a royal prerogative, it might reflect the common Near Eastern right of the king to eat at the table of the god.[6] On this interpretation, the text emphasizes the continuity of the royal lineage: the son will eat 'his' emmer and 'his' portion, i.e., the food first set apart for his father.[7] More probably, however, the text should be read as a reference to the general custom of celebrating a meal in the temple on religious fête-days. Such occasional sacrificial meals were well-known in the Near East.[8] Since the Ugaritic text also mentions such humble domestic tasks as the washing of clothes, the catalogue hardly originated in circles of the royal court. The fact that Baal and El are mentioned has no particular significance; they are simply the most obvious gods, El as the head of the pantheon and Baal as the patron of Ugarit.

The other area in which the heir is to be cultically active is that of the ancestor cult. The son has to set up (*nṣb*) the stela (*skn*)[9] of 'his *ʾilīb*', and the symbol[10] of 'his ancestor' (*ʿmh*). This first bicolon in the list of duties has long plagued modern interpreters, and even today there is no unanimity about its meaning. The principal issue is the nature of *ʾilīb*. Does the term

---

[4] *KTU* 1.114 [17] *ʾil.hʾlʾk.lbth.yštql* [18] *lḥẓrh. yʿmsn.nn. ṯkmn* [19] *wšnm* ..., 'El goes to his house, he makes his way to his court; Ṯukamuna and Šunama support him.' For the reading and analysis of the text see Pardee 1988b:13-74.

[5] On the meaning of *ksm* see Dietrich, Loretz & Sanmartín 1973:90-91; Healey 1984:115.

[6] See, e.g., Oppenheim 1977[2]:189.

[7] So, e.g., Koch 1967:216-217.

[8] Some Old Babylonian adoption contracts by *nadītum* women contain the proviso that the adopted son or daughter was to supply the adoptive mother with a piece of meat on the occasion of religious festivals (see Harris 1964:129-130. Note that the *piqittu* was to be consumed by the *nadītu* at the festival). The distribution of food portions on religious feast-days is also referred to in 1 Samuel 1:4-5, 'And on the day when Elkanah brought the sacrifice, he would give portions (*nātan mānôt*) to Peninnah his wife and to all her sons and daughters; and although he loved Hannah (his first wife), he would give Hannah only one portion, because Yahweh had closed her womb.'

[9] The word *skn* means 'stela' (not necessarily funerary), as now conclusively proved by the term *sikkanum* attested in texts from Emar and Mari. See Durand 1985a; Arnaud 1986, 125:35-41; 369:35; 373:23.27 etc. Note also Dietrich, Loretz & Mayer 1989.

[10] The interpretation of the word *ztr* is an unsolved problem. The interpretation 'marjoram', based on the idea that *zʿtr* is the parallel, is to be abandoned, see van der Toorn 1991a:44 n. 5.

refer to the family deity or the deified ancestor? The first solution has an impressive number of proponents.[11] Those who favour the second interpretation, however, have a stronger case. It can indeed be demonstrated that the *ʔilʔib* stands for the family ancestor(s), and should be distinguished from the god(s) for whom the family had a special veneration.

The question of Ugaritic *ʔilʔib* is complex because the term occurs in two capacities, viz. as a proper name in god lists and ritual texts,[12] and as a generic designation with a pronominal suffix in the catalogue of the Duties of a Son in the Epic of Aqhat. In view of this double usage, it has been suggested that the term stands for two distinct deities.[13] The *ʔilʔib* of the god lists would refer to the god Ilaba, whose earliest attestations are in Old Akkadian texts (*ca.* 2200 BC) and who was still worshipped by the Haneans as late as 1600 BC. His cult would eventually have found its way to Ugarit. In the Epic of Aqhat, on the other hand, 'his *ʔilʔib*' cannot refer to Ilaba; both the pronominal suffix ('his') and the parallel with *ʿmh*, 'his ancestor', militate against it. Here the term would designate a private and anonymous family god.[14]

Though not impossible, the solution that assumes that there were two words *ʔilʔib* (*ʔilʔib* I and *ʔilʔib* II) is hardly attractive. How are we to explain, for one thing, the contraction of *ʔil* and *ʾab* into *ʔilʔib* (**ʔib* < *ʾab*)[15] in the Aqhat passages, if the author wanted his audience to understand 'the god of (his) father' as distinct from the *ʔilʔib* designating Ilaba? The search for an explanation that is more satisfactory should be based on the assumption that *ʔilʔib* has one denotation: unless the evidence proves otherwise, the basic meaning of *ʔilʔib* must be the same in the god lists and the rituals, and in the Aqhat passages. In view of the pronominal suffix in Aqhat, the designation is generic; it refers to a type of numinous being.[16] To discover what type of god is

[11] See Obermann 1946:15 ('ancestral gods, house gods, family gods'); Koch 1967:214-215 ('Die erste Pflicht des Königssohns ist es also, für den Ahnen-Gott seines Vaters zu sorgen, dessen Kult getreulich zu üben, wie der Vater es getan hat. . . . Der Sohn verehrt dereinst nicht seinen Vater kultisch, sondern den Gott seines Vaters,' p. 215; see the opinion of the same author in Albertz 1980:114); Nougayrol 1968:45-46; Caquot 1969:259-260; Gese, in Gese, Höfner & Rudolf 1970:104-106; Lipinski 1973:197-199; Caquot & Sznycer 1974:421 note m; Vorländer 1975:157; Albertz 1978:88 and n. 518; Gibson 1978[2]:104 n. 3; Gray 1978:101-103; Mullen 1980:269. Cf. Müller 1980c:118, 120; de Moor 1990:242 ('Because Ilu is the ancestor of everyone, he is every ancestral god (*ʾilʾib*) and every *ʾilʾib* is ■ manifestation of Ilu').

[12] For references see de Tarragon 1980:154-156; Xella 1981a:386 s.v. *ilib*; see also Bordreuil & Caquot 1979:298-299.

[13] The suggestion goes back to Nougayrol 1968:46 n. 2.

[14] Lambert 1981.

[15] The unexpected vocalisation is paralleled by other such shifts, e.g., *ʔḫ* for *ʾaḫ*, *KTU* 2.41:18, The case of *ʔilʔib* is presumably one of vowel harmonization, cf. Healey 1995.

[16] Cf. Cross 1973:14-15.

meant, a comparison between the Ugaritic term and its Akkadian and Hurrians equivalents is helpful.

The Ugaritic form */ʾilu ʾibī/* is only explainable as vowel harmony triggered by the genitive case of 'father'. There can therefore be no doubt about the literal meaning of the term: 'the god of the father'. This analysis is supported by the Akkadian translation of the term, viz. d i n g i r *a-bi*, to be read as *il(i) abi*, 'the god of the father'.[17] The concordance between the Ugaritic and the Akkadian forms would seem to contrast with the Hurrian form *en atn* (*/enni attanni/*, plural */enna attanniwena/*). In this construction *en* ('god') occurs as an apposition to *atn* ('father'); it must be rendered as 'the god, the father'.[18] In view of the occurrence of *atn(-d)* without *en* in the parallel list RS 24.274:5,[19] the term 'god' qualifies 'father'. Unless one assumes a wrong translation (which would be a facile solution), the Hurrian form suggests that the Ugaritic and Akkadian constructions should be interpreted as genitives of identification (or as cases of a *genitivus epexegeticus*). There is, in other words, no difference between the 'god' and the 'father': *ỉlỉb* and *il(i) abi* refer to the father in his capacity as a god.

The interpretation of the term *ỉlỉb* here proposed is supported by two further considerations. Commentators agree that the catalogue of filial duties consists of six parallelisms. In the first one, *ỉlỉbh* ('his god-of-the-father') corresponds with *ʿmh* ('his ancestor'). Since *ʿm* refers to a human person ('kinsman, ancestor'), *ỉlỉb* is likely to do so, too. Its periphrasis as 'father (or forefather) deified after death' makes excellent sense of the parallel. A second consideration is based on the occurrence of the Akkadian forms d i n g i r *a-bi* and ^{d}i n n i n *um-mi* in the sense of the 'ghost of the father' and the 'ghost of the mother'.[20] It shows that the Akkadian form in the

---

[17] Contrary to the opinion of the editor of the bilingual god list, the sign d i n g i r in d i n g i r *a-bi* can hardly be viewed as a determinative (^{d}*a-bi*), '(the divine) father', *pace* Nougayrol 1968:46.

[18] See Laroche 1968:523. For references to the Hurrian term see Laroche 1976:63. Hurrian translations of *ỉlỉb* occur both in the singular and in the plural; the plural apparently leaves the meaning unaffected.

[19] Laroche 1968:504; cf. the synopsis on p. 510.

[20] Meier, G. 1944:142, line 37. One reason for translating d i n g i r *a-bi* in the *Bīt mēseri* passage as 'the ghost of the father' is the fact that Mesopotamian women as a rule did not worship a personal god of their own choosing. Their god was the god of their father or their husband (see Nashef 1975, confirming the diagnosis of Stamm 1939:73). Since mothers did not have their own tutelary goddess, then, ^{d}i n n i n *um-mi* can hardly be translated as the 'goddess of the mother'. As a matter of consequence, we should not translate d i n g i r *a-bi* here as the 'god of the father' either. The text speaks of a 'Hand-of-the-Ghost' affliction (š u - g i d i m - m a - k a), which suggests a mortuary context. These indications favour the understanding and translating of d i n g i r *a-bi* and ^{d}i n n i n *um-mi* as 'the ghost of the father' and 'the ghost of the mother'. For a fuller discussion of the passage and a case for the translation here adopted see Abusch 1987:58-59 n. 79.

bilingual god list need not be based on 'a false etymology'.[21] The scribes at Ugarit were quite aware of the fact that the spirits of the dead could be referred to in Akkadian as 'gods'.[22] Nor need this cause any surprise, since the West Semitic usage is similar—as will be shown below. In brief, we must understand 'the god-of-the-father' as a reference to the deified ancestor.[23] In this respect the Ugaritic *ʾilīb* parallels the ^{d}a - m u mentioned in cultic texts from Ebla, who also represents the posthumously deified father.[24]

A significant objection that might be raised against this interpretation concerns the occurrence of *ʾilīb* in the god lists and the cultic texts, since the presence of a generic term amid divine names is surprising. A closer look at the lists shows that the objection is not compelling. The order in which the gods are mentioned is almost invariably the same. A comparison of the Ugaritic lists[25] with the Hurrian god list found in Ras Šamra[26] yields the following correspondences:

ʾilīb	*en atn*	'god(-of)-the-father'
ʾil	*el*	El
dgn	*kmrb*	Dagan = Kumarbi[27]
bʿl	*tšb*	Baal = Tešub

Assuming that the order is hierarchical, it must be based on seniority. In West Semitic mythology, El is the father of Dagan and the grandfather of Baal; it can be plausibly argued, therefore, that *ʾilīb* (and thus *en atn*) represents the generation preceding El. In Ugaritic mythology, El is the divine patriarch and *ʾilīb* plays no role. The fact is quite understandable once it is accepted that *ʾilīb* stands for the ancestors of the gods. In a mythological universe where gods may be long-lasting and rejuvenating but not eternal, *ʾilīb* stands for the departed deities.

The interpretation of the first group of gods in the Ugaritic god list and its Hurrian equivalent as consisting of four generations is illuminated by the

[24] See Pettinato 1979:104; Archi 1988:107-109 (note that the correspondence between Ebla and Ugarit is greater than Archi suggests).

[25] Nougayrol 1968:45-46; cf. Herdner 1978:1-3. See also the slightly different order of the offering list known as the 'inédit Nougayrol', mentioned by Nougayrol 1968:45, and published by Bordreuil & Pardee 1992:42-53 (*ʾilīb, ʾil, bʿl, dgn*).

[26] See Laroche 1968:520-525. See also Diakonoff 1981:86.

[27] For the equivalence between Dagan and Kumarbi see also the Song of Ḫedammu, fragment 29, which shows that Kumarbi was supposedly living in Tuttul, the traditional seat of Dagan. See Siegelová 1971:70-71. Kumarbi is 'the Hurrian Dagan' (^{d}*Da-gan ša ḫur-ri*) mentioned in a Hanaean text (Thureau-Dangin & Dhorme 1924:271 r. 9-10).

parallel between the foursome *en atn*, El, Kumarbi and Tešub, and the succession of Alalu, Anu, Kumarbi, and Tešub in the Hurro-Hittite theogony text *Kingship in Heaven*.[28] In the two cases, the sequence is identical, El being the equivalent of Anu as the head of the pantheon. On the strength of the correspondence, the god *en atn* (and *ʾilīb* by implication) stands for a primeval deity whose reign had long since ended. He parallels Alalu who represents the 'Olden Gods' dwelling in the dark earth.[29] By virtue of the equivalence between Alalu, *en atn*, and *ʾilīb*, the Ugaritic deity can be regarded as the ancestor of the gods. He was the Ancestral Spirit whom they were to honour, as humans were supposed to honour their deceased ancestors.[30] The Marzeah of El[31] and the *ʾilīb* of the gods are in like manner modelled upon human customs and realities.[32]

Mentioned first in the god lists (*ʾil ṣpn*, which sometimes precedes *ʾilīb*, is a general heading referring to 'the gods of Mount Zaphon', i.e., the Ugaritic pantheon), *ʾilīb* is the prototypical ancestor of the gods. He has several parallels in the history of ancient Near Eastern religions. Hurrian texts refer to sacrifices brought to 'the gods, the fathers' (*enna attanniwena*) of Šauška and Tešub.[33] Also the Mesopotamian god Enlil has divine ancestors (a - a - a m a - ^{d} e n - l í l - l á) who received offerings.[34] The most famous of Enlil's ancestors is Enmešarra ('Lord of all the rites'), a god whose concept is the fruit of theological speculation.[35] Enmešarra stands for various archaic and forgotten deities, now consigned to the underworld. He is said to have passed on the kingship to Anu and Enlil.[36] As an ancestor of Enlil, he received offerings and prayers.[37] In Egyptian religion there are the eight primeval gods of Hermopolis, ancestors of the creator god, standing for such abstractions as 'watery chaos' (Nun and Naunet) and 'infinite space' (Huh and Hauhet). They received a funerary cult in the small temple of Medinet Habu.[38]

38 See Sethe 1929, §§ 65-154.

The interpretation of *ʾilʾib* as 'divine ancestor' fits the context of both the god lists and the Epic of Aqhat. According to the epic, the new paterfamilias had to set up the stela of the family ancestor; the second colon seems to refer to this stela as the symbol (*ztr*, a term which cannot yet be satisfactorily explained) of his 'paternal kinsman' or 'ancestor' (*ʿm*, cf. Hebrew *ʿam*, Akkadian *ḫammu*). The custom is well known from the Bible. According to 2 Samuel 18:18, Absalom set up a stela (*wayyaṣṣeb maṣṣebet*) for himself, because he had no son who would, as the custom had it, 'invoke his name'.[39] It follows that the erection of a funerary stela was normally incumbent upon the son. In the Aqhat passage this is true also when the father is still alive. 'Setting up the stela of the ancestor' appears to be the set expression for the cult of the ancestors; it seems unlikely that the son was expected to literally set up the stela of his father's ancestor (the personal suffix refers back to the father), as though his grandfather and those before him had not yet received a cult.

Both etymologically and semantically, *ʾilʾib* is close to Hebrew *ʾôb*, 'ancestor spirit', which itself derives from *ʾāb*, 'father'.[40] In distinction from the Hebrew term, however, the Ugarit word for ancestor designates the spirit explicitly as a god-like entity. The idea according to which the dead belonged to the realm of the gods is also found in other Ugaritic texts. It is evident from the synonymous parallelisms in a hymn to the sun goddess Šapšu:

[45] ... *špš* [46] *rpʾim.ṯṯk*	Šapšu, you rule over the Rephaim
[47] *špš.ṯṯk.ʾilnym*	Šapšu, you rule over the divine ones;
[48] *ʿdk ʾilm*	The gods are your company,
hn.mtm [49] *ʿdk*	the dead are your company indeed.[41]

The synonymous pairing of the Rephaim (a general term for the spirits of the dead, and most notably their higher echelons) and the 'divine ones', on the one hand, and the 'gods' and the 'dead', on the other, leaves no doubt about the deified state of the dead. In this respect, then, there is a convergence between the Old Babylonian data and the views of the later West Semitic texts. Another point of comparison, incidentally, is the role of the sun: though a goddess in Ugaritic and a god in Mesopotamian texts, the sun is in close contact with the ancestors, owing—presumably—to its nocturnal passage through the underworld.

---

[39] For a discussion of the passage see Lewis, T. J. 1989:118-120.

[40] This connection has been made by a large number of authors. See e.g. Albright 1942:203 n. 31; Eissfeldt 1951:42; Dietrich, Loretz & Sanmartín 1974; Margalit 1976:145-147; Xella 1981b:88; cf. Polselli 1982 (who connects *ʾilʾib* with *ʾab* 'sacrificial pit').

[41] *KTU* 1.6 vi 45-49.

The place where the son had to erect the stela of the deified ancestor is qualified as *qdš*. Derived from a root meaning 'holy, sacred', the term is usually interpreted as 'temple' or 'sanctuary'. The location deserves to be noted. Because the stela of the *ỉlỉb* can be viewed as a mortuary monument, one would perhaps not expect it to be placed in a temple. There is, however, no convincing way to explain *qdš* otherwise than as 'temple'.[42] The Aqhat passage suggests, therefore, a close connection between the cult of the gods and the piety toward the ancestors. It may be that the intimate link was a royal privilege; a survey of several Aramaic and Phoenician inscriptions from the first millennium BC will show that the topographical proximity of the cult of the family god and the care of the family dead was not uniquely Ugaritic, at any rate.

Archaeological evidence of a mortuary cult at Ugarit is scant at best and more likely wholly lacking. Contrary to a widely held opinion, there are no archaeological traces of a regular cult of the dead in a domestic context. Though 'there was apparently an underground burial vault beneath each house' at the city of Ugarit,[43] the location of the tombs cannot be used as evidence of a mortuary cult. The archaeological items that have been interpreted as sacrificial vases, libation devices, and cultic installations on top of the graves are all susceptible of non-cultic interpretations. Many of the complexes which the first excavator took for cemeteries have turned out to be houses; their presumed libation installations were in fact conduits for the use and disposal of water in the mundane buildings. The so-called 'windows' of the tombs show no connection between the house above and the tomb below. Considering the difficult access to the tombs, these 'windows' could hardly have been the location of regular libations and food offerings to the dead.[44]

The textual evidence of mortuary offerings in Ugarit is slim as well, especially since the two texts that are often mentioned in connection with the cult of the dead at Ugarit may well be wholly unrelated to it. Considering their prominent place in the discussion of the Ugaritic ancestor cult, these texts deserve to be dealt with first.

skn.d $š^{c}lyt$	Stela which Ṯariyelli dedicated
ṯryl.ldgn.pgr	to Dagan (in commemoration of) a *pgr*-offering
$^{r}w\,^{\flat}alp$ *lˀakl*	⌜and⌝ a bull to eat.[45]

---

[42] *Pace* Margalit 1989:271, who argues that *qdš* refers to the cemetery, defining its meaning as 'sacred precinct'. Note that Margalit interprets *skn* as 'storage-place' and hence 'tomb' (Margalit 1989:268).

[43] Caquot & Sznycer 1980:21.

[44] So Pitard 1994, *pace*, e.g., Spronk 1986:142-145; Archi 1988:103.

[45] *KTU* 6.13, as re-edited by Bordreuil & Pardee 1992:24-25.

pgr. d šʿly	*Pgr*-offering which ʿAzan dedicated
ʿzn.ldgn.bʿlh	to Dagan his lord (consisting of)
[- ʾa]lp.bmḥrṯt	[a b]ull with (its) gear.[46]

The inscriptions were found on stelae discovered in one of the temples of the city. Since they are dedicated to Dagan, it is generally assumed that Dagan was the main god of the temple in question.

Two reasons have been advanced to substantiate the claim that these texts are concerned with a mortuary cult: the use of the term *pgr* and the role of the god Dagan. Since the Hebrew term *peger* and the Akkadian word *pagrum* both mean 'corpse', Ugaritic *pgr* has been interpreted by association as a designation of a sacrifice for the dead; the beneficiary, not the sacrifice itself, would be a corpse.[47] The consistent connection between these offerings and Dagan (who in Mari could even be referred to as *bēl pagrê*, 'lord of the *pagrāʾum* offerings'[48]) would also suggest a mortuary significance of the offerings, on the assumption that Dagan has the traits of an underworld deity.

Neither element in support of the mortuary interpretation is certain. The relevant texts from Mari yield no evidence for the interpretation of the *pagrāʾum* offerings as mortuary; they were called *pagrāʾum* because they involved the sacrifice of slaughtered animals.[49] The term *pagrāʾum* qualifies the sacrifice, not the person to whom it is offered. The *pagrāʾum* offerings in Mari (as well as the *pgr* offerings in Ugarit) compare with the Hebrew *zebaḥ šĕlāmîm*, the sacrificial banquet at which a party of visitors enjoyed consecrated meat.[50] One king might invite another for the *pagrāʾum* offerings, not because they were sacrifices to the royal ancestors, but simply because they involved a festive meal.[51]

The connection with Dagan cannot be used as an argument in support of the mortuary nature of the *pgr* sacrifices either, since there is no indication that Dagan had connections with the underworld.[52] Dagan's only con-

---

[46] *KTU* 6.14, as re-edited by Bordreuil & Pardee 1992:24. KTU reads the last word as *bmḥrt* ('in the morning'?) and Healey 1988:106 as *bmḥrm*, 'in the holy place'. The corrected reading by Bordreuil & Pardee 1992 suggests a parallel with 1 Kings 19:21 '[Elisha] turned back from him and took the yoke of the oxen and slaughtered them; he boiled their meat with the gear of the oxen and gave it to the people, and they ate' (NJPS).

[52] *Pace* Roberts 1972:18-19. Cf. Healey 1977, who stresses the fact that the evidence

ceivable link with the underworld would be the designation or his temple in Terqa as é k i - s i - g a , a variant of the Sumerian equivalent of *bīt kispim*. Both the equivalence with *bīt kispim* and the identity of the possible *bīt kispim* with the temple of Dagan are problematic.[53] The fact that the *pagrā'um* ceremony took place in his temple is presumably related to his role as 'Lord of the Cattle' (*bēl buqāri*).[54] In first millennium BC Assyria Dagan's temple served as a kind of slaughterhouse.[55] On the basis of the currently available evidence, then, there is no compelling reason for positing a mortuary aspect to the Ugaritic *pgr* sacrifice.[56]

A more promising text in connection with the cult of the ancestors is the 'document of the sacrifice for the shades' (*spr.dbḥ.ẓlm*).[57] It has to be stressed, however, that this is a record of a funerary ritual performed at the burial of a king of Ugarit, presumably to be identified as Niqmaddu III.[58] Its principal concern seems to be the untroubled entry of the deceased monarch into the underworld and his insertion into the society of the dead. The rites of mourning focus on the throne and table of Niqmaddu, used as the symbolic embodiments of the deceased. The funeral of the king is an occasion, however, to bring sacrifice to his forefathers as well. The celebrant summons the dynastic ancestors to partake of the offerings and to grant peace to ᶜAmmurapi, Queen Ṯariyelli, and the city of Ugarit. The ancestors are referred to collectively as 'the assembly of Didānu' (*qbṣ ddn*), Didānu (elsewhere known as Ditānu) being the founder of the dynasty. Of his predecessors, the king invokes by name only his grandfather Ammiṯtamru and his father Niqmaddu—which suggests that ordinarily the cult did not embrace more than two or three generations of ancestors. Though the text is admittedly funerary in the narrow sense of the term, i.e., designed for the occasion of the funeral, it does reflect a belief in the ongoing existence of the dead and their need of food offerings.

Further textual evidence of mortuary offerings at Ugarit is either lacking

---

for the underworld character of Dagan is both scant and circumstantial (see also Healey 1995).

53 See Tsukimoto 1985:70-71.

54 Arnaud 1986, 373:43 and *passim*. See also no. 394:26-44 for the association of Dagan with domesticated cattle.

55 See Deller 1985:364.

56 This judgment is subject to revision, of course, as soon as new texts are forthcoming. According to an oral communication of J.-M. Durand, referred to by Bordreuil & Pardee 1992:25 n. 6, new texts from Mari would prove that the *pagrā'um* festival was a 'fête particulièrement en l'honneur des défunts de la lignée royale à laquelle tous les dynastes devaient assister.' Publication of these texts is eagerly awaited.

57 For the text see Bordreuil & Pardee 1991:151-163, where most of the relevant literature is listed. One may now add del Olmo Lete 1992:130-134; Loretz 1993:296-300.

58 On the text see Pardee fc.

or dubious.[59] It is likely that *KTU* 1.113, a list of kings' names, each one being preceded by the qualifier *ỉl*, 'god', was meant as an offering list,[60] in view of the fact that a comparable list from third millennium Ebla is definitely a record of sacrifices.[61] Another possible witness to the practice of a mortuary cult may be found in a text dealing with a banquet King Dan$^{\supset}$el celebrates for the Rephaim. The tablets are seriously damaged, to the extent where only small sections are still legible. One often recurring passage (restored where possible) may be quoted.[62]

[2] ... *[bb]ty.ảṣḥkm*	In my house I call you,
ỉqrả [3] *[km.bqrb.h]kly*	I call you in the midst of my palace:
ảṯrh.rpủm [4] *[tdd]*	May the Rephaim be present[63] in the place,
[ảṯrh].ltdd.ỉlnym	May the divine ones be present in the place.[64]

It must be stressed that the text has lacunae and that the restorations are uncertain. If the reconstruction here proposed is accepted, the fact remains that we are dealing with a mythological fragment. The use of myths as a source of knowledge on religious practice is fraught with difficulties. To say on the basis of the Rephaim texts that the inhabitants of Ugarit were accustomed to regularly invite the manes of their family to partake of offerings in their homes is an unwarranted extrapolation.

A survey of the archaeological and textual data does not produce overwhelming evidence of a mortuary cult at Ugarit, to say the least. Its existence must nonetheless be regarded as assured, if only on the basis of the mention of the ancestor stela in the catalogue of filial duties (*KTU* 1.17 i 26-27 and parallels) and the offerings mentioned in connection with the funeral of the Ugaritic king (*KTU* 1.161). The comparative evidence of Ugarit's Near Eastern environment must also be taken into account. It strongly suggests that the inhabitants of Ugarit engaged in a regular cult of the dead as well. Such is, in fact, the general opinion among scholars of Ugaritic literature; the point on which they may disagree concerns the mortuary interpretation of specific texts. An essential point to be noted in connection with the Ugaritic cult of the ancestors is its non-domestic nature—which is in consonance with the presence of the ancestral stela 'in the sanctuary' (*bqdš*).

---

[59] Spronk 1986:145 mentions *KTU* 1.142, which he interprets as the record of a sacrifice to someone 'who is in the grave' (*d.bqbr*). Note that the inscription is written on a clay liver model.

[60] For an analysis of the text (with references to further literature) see del Olmo Lete 1992:121-123.

[61] ARET VII 150, see Archi 1988:105-106. Note that the list from Ebla uses the determinative d i n g i r for the royal names.

[62] For the text see Pitard 1992.

[63] For the meaning of the verb *ndd* see van der Toorn 1991a:48 and n. 14.

[64] *KTU* 1.21:2-4 // *KTU* 1.20 ii 1-2; *KTU* 1.21:10-12; *KTU* 1.22 ii 3-6, 8-11, 18-21.

To close the discussion of the Ugaritic evidence on the cult of the ancestors, we must briefly return to the catalogue of the Duties of the Son. The lines dealing with the stela of the deified ancestor and the 'symbol' of the kinsman are followed by what may be considered the most disputed bicolon of the passage. The heir of Dan^{2}el will be someone 'who, on the earth, makes his smoke come out, on the dust, tends his place.'[65] Several scholars find a reference to necromancy in these lines: the 'smoke' (*qṭr*) would be a manifestation of the paternal ghost who would be 'brought out from the earth'. The same ancestral spirit would be referred to in the second colon as 'the protector of his place'.[66] This solution of the admittedly difficult text does not carry conviction: smoke would be a rather cryptic designation of the ghost, and the assumed practice would bestow unique features on filial piety at Ugarit. It makes better sense to take the smoke as an allusion to the domestic fireplace, which, as Babylonian texts show, was regarded by the ancients as a symbol of the family. Smoke ascending from the fireplace is a sign of the presence of life in the family home.[67] The male heir who continues the family line is to do so 'on earth' (*lảrṣ // l^{c}pr*, cf. *KTU* 1.2 iv 5, and note 2 Samuel 14:7 '... upon the face of the earth'): the term does not refer to the location of the fireplace, primarily, but to the world of the living in general. There is no reference here, then, to necromancy or any other involvement with the ancestors.

Most of the Ugaritic data on the cult of the ancestors come from the late 13th century BC. From scattered references in first millennium BC documents, it can be inferred that the practices known from Babylonian and Ugaritic texts continued to flourish for many centuries afterward. Their local variations cannot hide the fact that there was little alteration in the underlying concepts. One of the earliest relevant texts from the first millennium BC is the bilingual inscription from Tell Fekherye (ancient Sikan) in north-eastern Syria near the Turkish border.[68] The text is engraved upon a stone statue of king Hadad-yit^{c}ī which was set up in the local temple of Hadad. According

65 *KTU* 1.17 i 27-28 and parallels (see above for the Ugaritic text and context).

66 See Spronk 1986:149; Margalit 1989:272; Dietrich & Loretz 1991:85-86. See also, in a somewhat similar vein, Caquot 1987:8-10; Lewis, T. J. 1989:54, 60-65; Tropper 1989:132-133.

67 See Landsberger 1916. In 2 Samuel 14:7 we find a similar image ('Thus they would quench my coal which is left, and leave to my husband neither name nor remnant,' RSV), cf. Hoftijzer 1970:442 and n. 2; cf. the Akkadian expression 'You placed your flour on my charcoal' in AbB 12, 179:9-11.

68 For the text see Abou-Assaf, Bordreuil & Millard 1982; Kaufman, S. A. 1982; Greenfield & Shaffer 1983; Muraoka 1984. Though the text has been dated to the end of the second millennium, a date in the early first millennium is more plausible, see Greenfield & Shaffer 1985:48-49.

to the inscription, the king had dedicated the statue in order to obtain well-being, longevity, and prosperity for his dynasty. In view of its clasped hands and the reference to answered prayers ('that his prayers may be heard'[69]), the statue was meant to represent the king in an attitude of reverential prayer.

The relevance of the text for the mortuary cult follows from a curse formula in the concluding section:

> Whoever erases my name from objects in the temple of Hadad, my lord,
> May Hadad, my lord, not accept his bread and water from him,
> May Sala, my lady, not accept his bread and water from him.[70]

It has been judiciously observed that the combination of bread and water is highly uncommon for normal sacrifices; where they occur in a sacrificial context, we are dealing with mortuary offerings of the *kispum* type.[71] The text presupposes a situation, then, where a future ruler presents offerings to the dead under the invocation of Hadad and his consort Sala. The divine refusal of the offerings would presumably result in an estrangement between the impious ruler and his ancestors, and ultimately lead to disaster for the monarch.

The image of the dead eating and drinking in the company of the gods, implied by the Tell Fekherye inscription, recurs in the funerary monuments of the kings from Sam'al (modern Zenjirli).[72] The most explicit text is found in the dedicatory inscription on a colossal statue of Hadad (the storm god known as Baal in Phoenician texts), erected by Panammu I (*ca.* 750 BC).[73] The first line of the inscription is important for its interpretation, since it shows that the divine statue was erected by Panammu at his grave.[74] Some ten lines below, the inscription specifies that the statue of Hadad (*nṣb hdd*) was put in the burial room (if the word *ḥd[r]* is indeed the correct reading) alongside a funerary shrine (*mqm*).[75] The successor of Panammu is enjoined to pay homage to the statue, a homage from which the deceased Panammu is to benefit as well.

> And whichever son of Panammu should grasp the sceptre, sit on my throne, and establish his power, must sacrifice to this (statue of) Hadad here .... And whether he sacrifice to Hadad and invoke the name of Hadad in this way or that way, let him say: May the 'soul' of Panammu [eat] with you, and may the 'soul' of Panammu drink with you. Let him always invoke the 'soul' of Panammu with Hadad.[76]

The 'soul' (*nbš*) of Panammu is ascribed the ability to eat and to drink, and compares in this respect to the *eṭemmu* of the Akkadian texts. It is not a soul in the Christian sense, but the capacity in which the human being enters the underworld.[77] Interestingly, the spirit of the departed king is supposed to eat and drink 'with' (*ᶜm*), i.e., in the company of, his god Hadad. The duty to satisfy the spirit of the ancestor with offerings is incumbent upon the heir that had succeeded the king to the throne. Should he refuse to perform his filial obligations toward his dead father, Hadad will avenge the deceased by inflicting the son with starvation and insomnia (lines 23-24).

The Hadad inscription of Panammu I is interesting for yet another reason. Toward the end of the text mention is made of an oath (*nš*) by *ʾlh. ʾbh*, 'the god of his father,' as the expression is usually translated.[78] Nearly all commentators identify this god with Rakib-El, since Rakib-El is known to have been the patron god of the royal dynasty.[79] Yet, in other inscriptions from Samʾal Rakib-El is never referred to as the 'god of the father', but as 'the Lord of the House' (*bᶜl bt*, *KAI* 24:16; *bᶜl byt*, *KAI* 215:22) or as 'my Lord' (*mrʾy*, *KAI* 216:5). In view of the fact that the dead were ascribed divine status, there is a distinct possibility that the oath by 'the god of his father', referred to in this first millennium text, is in reality an oath by 'the spirit of his ancestor'. The adjuration would be similar to the one by the 'god(s) of my father' in a deed of inheritance from El-Qiṭār.[80] Judging by the parallels from contemporary Emar, these gods are ancestors.[81]

Though the evidence consists of isolated fragments divided over more

than half a millennium, the image of the ancestor cult which the Ugaritic and Aramaic data convey is remarkably consistent. The care of the family dead is incumbent primarily upon the eldest son who, in the context of the court, is also the natural heir to the throne. The periodicity of the offerings to the dead cannot be clarified on the basis of the available texts. What they do show, however, is the mediatory role of the family god in the contact between the living and the dead. The bread and water that are destined for the spirits of the departed (their 'souls', as the Panammu inscription has it) are to be offered to the divine family patron. He is to accept them first and then share them with the dead in his company. In the Syro-Aramaean conception of the afterlife, then, the dead are in the presence of their gods—unless this is just a royal privilege.

The Divine Family Patron

In the religious practice of families at Ugarit, in Syria, and Palestine, the cultic care of the ancestors is coupled with the veneration of a god or gods who are presumed to extend their protection over those families. The evidence of this side of family religion runs from second millennium Ugaritic texts to first millennium inscriptions, too.[82]

An Akkadian letter from Ugarit written by Rapʾānu to his sister Bin-Šipṭe opens with a formula of greeting that mentions 'all the gods of [our] family' alongside the gods of the land Tipat and the gods of Ugarit.

> Peace be upon you!
> May the gods of the land of Tipat
> and the gods of the land of Ugarit,
> and all the gods of our family,
> keep you in good health,
> and give you favour
> and satiate you with old age
> before the gods of [our] family
> —forever.[83]

The phrases are reminiscent of the greeting formulas of the Old Babylonian letters. As in those, the family gods are mentioned here in the last place: the order runs from the general to the particular. Considering the parallel with the gods of Tipat and the gods of Ugarit, the gods of the family must be

---

[83] *Ug*. 5:148, no. 55 [4] *lū šulmu ana muḫḫi[ki]* [5] d i n g i r - m e š *ša* [kur]*Tipat* [6] *u* d i n g i r - m e š *ša* [kur]*Ugarit* [7] *u gabba* d i n g i r - m e š *bīt ab[ini]* [8] *ana šulmani liṣṣurūki* [9] *u lišlamūki* [10] ■ *lišebbûki šībūt[a]* [11] *ana pāni* d i n g i r - m e š *bīt ab[ini]* [12] *adi dāriti*.

gods in the ordinary sense of the term. They are to be distinguished, therefore, from the family ancestors. Though the phraseology obeys the laws of courtesy, it contains an indication that Ugaritic family religion, like family religion in ancient Babylonia, was concerned with the ancestors as well as with the family gods.

Almost nothing is known about the veneration of particular gods by individual Ugaritic families. About the only evidence available in this area is onomastic, and the hazards of reconstruction based on theophoric names need not be rehearsed. The institution of the *marzeaḥ* (or rather *marzaḥu* or *marziḥu*) throws some indirect light on the matter, since it is a socio-religious group usually associated with a particular patron deity (Šatrana, Ištar ḫurri, and perhaps Anat) and hereditary in the paternal line.[84] Yet membership of the *marzeaḥ* was not based, it seems, on kinship ties. The interest of the institution in connection with the study of Ugaritic family religion lies in its possible analogy with the religious function of the kin group. In the absence of more data on the *marzeaḥ*, however, the possible parallel of its rites with those of family religion cannot be explored. This leaves us, once again, with a situation in which we must go by evidence either from the literature (that is, in our case, the epics) or relating to the royal family. In neither case can we be sure that the concepts and practices from these realms are representative of the general population of Ugarit.

The evidence from the epic texts comes primarily from the Epic of Kirtu (*KTU* 1.14-16).[85] The case of Kirtu has the value of a prototype. Like the biblical Job, Kirtu is an emblematic sufferer.[86] The prologue to the epic describes how Kirtu's entire family, wife and sons included, has perished through infant disease, illness, pestilence, shipwreck, and armed combat. His lineage seems extinguished:

21 *yᶜn.ḥtkh* 22 *krt*	Kirtu considers his family,
yᶜn.ḥtkh rš	he considers his wrecked family:
23 *mỉd grš.ṯbth*	His abode has been terribly devastated,
24 *wbtmhn.špḫ.yỉtbd*	the descendants have perished in their entirety,
25 *wbpḫyrh.yrṯ*	and the offspring in its totality.[87]

Overwhelmed by grief Kirtu withdraws to his private room (*ḫdr*) and cries. As he falls asleep, exhausted, he has a dream in which the god El appears to

---

[84] On the *marzeaḥ* see Spronk 1986:196-202; Pardee 1988b:55-57; Lewis, T. J. 1989:80-94; Smith, M. S. 1994:140-144, all with references to further literature. Note also the existence of the *marzaᶜu* institution in Ebla, see MEE 2:46 v ǁ 1-2 *in* u_4 *mar-za-u₉*; ARET 1, 3 v XI 3 u g u l a *mar-za-u₉*, see Xella 1986:22 n. 2.

[87] *KTU* 1.14.

him and informs himself after his wishes. A dialogue ensues, and in the end Kirtu is instructed to sacrifice and pray. His instructions having been complied with, El promises that Kirtu will remarry and beget children.[88]

The solicitude displayed by El suggests that he plays the role of family patron in the epic. There are a number of indications to support this view. At repeated instances, Kirtu is referred to as *nᶜmn ǵlm ỉl*, 'the pleasant one, attendant of El'.[89] The king is 'servant of El' (*ᶜbd ỉl*).[90] Their relationship is like that between father and son: El is Kirtu's 'father' (*ảbh*)[91] and Kirtu is 'the son of El, the descendant of the Compassionate and Holy One' (*bn ỉl šph lṯpn wqdš*).[92] The language reflects the royal ideology according to which the king belongs to the race of the gods ('Do gods die? The descendant of the Compassionate One will surely live!,' *KTU* 1.16 i 105-106). Yet this ideology is not unrelated to the basic tenets of family religion. The family god is the 'god who created me' (*ilum bānīya*), according to Babylonian sources. Though the terminology is more explicit in the Epic of Kirtu, El may be called Kirtu's father by virtue of his role as family god.

The role of El as family god of the kings of the Ugaritic epics is visible as well in the Epic of Aqhat (*KTU* 1.17-19). Danᵓel (whose name contains a reference to El) is explicitly referred to a number of times as 'the man of Rāpiᵓu' (*mt rpỉ*).[93] He is also called a 'servant' (*ᶜbd*) of El,[94] however, and it is El who blesses Danᵓel with offspring.[95] This suggests that El was the patron deity of Danᵓel, and that Rāpiᵓu is an epithet of El.[96] The name Rāpiᵓu means 'healer'; the word usually occurs in the plural as a designation of the spirits of the dead, known in Hebrew under the vocalization Rephaim. It has been speculated that the god Rāpiᵓu was president of the Rāpiᵓūma or Rephaim (the one being the Ugaritic, the other the Hebrew vocalization). Such a relationship seems indeed implied in a liturgical hymn to Rāpiᵓu which refers to the god as the 'King of Eternity' (*mlk ᶜlm*, *KTU* 1.108:1, r. 4'-5', 6', 7'),[97] and connects him to the 'Rephaim of the earth' (*r[p]ỉ ảrṣ*, r.

8'-9').[98] It should be noted that both *rāpiʾu* and *ʿlm* have been preserved as epithets of El in the Hebrew Bible, where we find a reference to ʾĒl rōpēʾ (according to the emendated text of Numbers 12:13)[99] and to ʾĒl ʿôlām (Genesis 21:33). If Rāpiʾu is to be identified with a major deity, El seems the most likely candidate.[100]

The image which the Ugaritic epics convey of family religion is purposefully vague owing to the legendary and prototypical sphere in which the narratives move. What we can confidently conclude is that the belief in a patron deity, represented in the epics by El, coexisted with the cult of the ancestors. In this respect the Ugaritic epics resemble the Old Babylonian Gilgameš Epic, in which Šamaš occurs as the patron deity of the hero, and Lugalbanda as his (deified) ancestor.[101] The similarity suggests that popular religious practice in Ugarit mirrored the forms known from the Old Babylonian period. The persistence of the cult of dead kin has been discussed above; actual worship of a family deity has left little traces in the texts. The only example known from the written sources concerns the dynastic god of the Ugaritic kings, the evidence for which will be discussed in the next paragraphs.

In the ritual texts from Ugarit a god referred to as *ỉl bt*, literally 'the god of the house', is attested six times.[102] An Akkadian tablet found at Baniyas, situated in the vicinity of Ugarit (Ras Shamra), refers to this god as the *ilu ša bīti* (d i n g i r *ša* é), which is a close equivalent of the Ugaritic term.[103] The 'god of the house' was present—presumably under the form of an image—in the house of the king (*bt mlk*), that is, the palace, according to *KTU* 1.39:12-13. The god seems to have been regarded as the main deity of the palace chapel, since his name opens the list of gods receiving offerings there.[104] His position was such, it seems, that the place where he and the

101 See OB Gilg. Y vi 40 *ina nubattika ḫiri būrtam* 41 *lū kayyānū mû ellūtu ina nādika* 42 *[ka]ṣûtim mê ana* ^{d}*Šamaš tanaddi* 43 *[lū] taḫassas* ^{d}*Lugalbanda*, 'When you see the night fall, dig a well: there must always be clean water in your flask. Cool water you should sprinkle for Šamaš, be mindful of the divine Lugalbanda.'

102 *KTU* 1.39:13, cf. 1.102:1; 1.53:8; 1.81:7; 1.115:3; 1.123:29. The expression has been interpreted as a plural ('the gods of the house') by Dietrich & Loretz 1981a:85; Freilich 1986:128 and n. 34. The Akkadian d i n g i r *ša* é suggests a singular.

103 See Lackenbacher 1985.

104 *KTU* 1.39:12-19, see de Tarragon in Caquot, de Tarragon & Cunchillos 1989:135-139 (with references to relevant literature). The same gods are listed in the same order in *KTU* 1.102:1-14, see Xella 1981a:328-331.

goddess Ušḫara had their images, was called the *bt ʾil bt*, 'the chapel (or temple, literally 'house') of the god of the house'.[105] The 'house' with which the god was connected must have been the house of the king, i.e., the royal family. The *ʾil bt* was the 'dynastic god'.[106]

On the basis of a passage in the royal ritual for Ušḫara-of-the-Lizard(s), it has been suggested that the god of the dynasty should be identified with a certain **Bbt*. The first three lines of the relevant text, *KTU* 1.115, read: *ʾid ydbḥ mlk, l ušʿḫʾr ḫlmz, l b b t ʾil bt*, frequently rendered as 'When the king brings sacrifice to Ušḫara-of-the-Lizard(s) (and) to *Bbt*, the God of the House.'[107] A god (or goddess, for that matter) *Bbt* is not attested in other Ugaritic texts; nor can he be identified with any deity known to us.[108] It is therefore preferable to take *lb* as a preposition meaning 'within': it is either a compound preposition consisting of *l* and *b*,[109] or the word *lb*, 'heart', meaning 'in the middle, in the centre'.[110] The text simply says that the image of Ušḫara-of-the-Lizard(s) was located in the chapel of the domestic (i.e., dynastic) god.

The principal clue to the identity of the *ʾil bt* lies in his being associated with the goddess Ušḫara. Their conjunction seems no coincidence. Several rituals texts confirm that the god and the goddess were regarded as a pair. *KTU* 1.39:12 lists sacrifices to be brought in the palace (*bt mlk*); the first pair of deities to receive these offerings consists of *ʾil bt* and *ʾušḫry* (line 13), after which various other gods such as Yam, Baal, and Yariḫ are mentioned. The same list (with the pair *ʾil bt* and *ʾušḫry*) is found in *KTU* 1.102. The pairing of *ʾil bt* and *ʾušḫr* in *KTU* 1.115 has already been mentioned. It is possible that the *ʾil bt* is paired with the *ʾilt* ⌜*b*⌝*[t]*, 'goddess of the house', in *KTU* 1.81:7-8; however, the text is damaged and the reading uncertain.[111] If

---

[105] *KTU* 1.115:1-3. I follow the translation proposed by Dietrich & Loretz in TUAT 2/3:319.

[106] Dietrich & Loretz in TUAT 2/3:319.

[107] So, e.g., Xella 1981a:105; de Tarragon in Caquot, de Tarragon & Cunchillos 1989:201.

[108] The occurrence of *lbbtm* and *w b bt* in the Ugaritic-Hurrian ritual *KTU* 1.116:8.10, is hardly to be explained as a reference to a deity. A Ugaritic topographical indication is more likely, cf. Xella 1981a:320. Hurrian *pipita* occurs as an adjective of the god Nubadig, but never independently, neither as an epithet nor as a proper name, cf. Laroche 1968:502. According to Fisher 1969:197 the name *bbt* 'should probably be related to Akkadian *bābtu* which would be some kind of a goddess of the gate.' Fisher is followed by de Tarragon (Caquot, de Tarragon & Cunchillos 1989:201 n. 175). The fact of the matter is that the Akkadian term *bābtu* does not occur as the name of a deity. The element ^{d}k á in anthroponyms is to be read as ^{d}Baba or ^{d}Bau, see *AHw* 95b. For a critical discussion of the phantom deity *Bbt see also Freilich 1986.

[109] So Freilich 1986:124.

[110] So Baruch Halpern in a written communication to the author.

[111] D. Pardee informs me that the ⌜*b*⌝ is represented only by the corner of a wedge.

correct, the proposed reconstruction indicates that the god had a female consort. On the evidence of the texts here reviewed we must identify this consort with Ušḫara or, more precisely, Ušḫara-of-the-Lizard(s).

The goddess Ušḫara (variant Ušḫaraya) is not a complete stranger to scholars of ancient Near Eastern religions. Her name is the Hurrianized form of Išḫara, who is well-known from Mesopotamian sources as an allomorph of Ištar in her capacity as a fertility goddess.[112] Her sacred animal is the scorpion, presumably on account of the striking manner in which these animals copulate.[113] The lizard (*ḫlmẓ*) is the chthonic animal with which this fertility goddess was associated in Ugarit.[114] We must assume that it is Ušḫara(ya) who is referred to as well with the expression ^{d}i n n i n *ḫurri*, 'the Astarte of Ḫurru', i.e., the Hurrian goddess.[115] An Akkadian legal document found at Baniyas contains a curse saying 'who alters these words, may the Astarte of Ḫurru and the god of the house destroy him.'[116] This 'Astarte of Ḫurru' (written *ʿṯtrt ḫr* in the Ugaritic god list, and occurring as *ʿštrt ḫr* in two Phoenician texts from the first millennium BC[117]) is none other than Ušḫara(ya) or Išḫara; the name Astarte functions here as a generic designation for 'goddess', comparable to its use in the name Atargatis < *Aṯtar(t)-ʿAnat, 'the goddess Anat'.[118] Oblique support of the identification of the Hurrian goddess with Ušḫara(ya) may be found in the fact that *ʿṯtrt ḫr* and *ʔušḫr(y)* never occur in the same text.

The patron god of the Ugaritic dynasty, then, had Ušḫara (or Išḫara) as his consort. What was his own identity? It has been proposed to identity him with Baal Zaphon on the basis of the phrase *lbʿl ṣpn ʔil bt* [. . .] in *KTU*

There are no indubitable occurrences of *ʔilt bt* in other Ugaritic texts.

112 On the goddess see e.g. Archi 1977.

113 For the scorpion as Išḫara's animal see Seidl, U. 1971:488 k).

114 The translation of *ḫlmẓ* as 'lizard' is based on the etymological connection with Akkadian *ḫulmittu*, 'lizard'. Since the *ḫulmittu* is said to possess four feet (CT 14, 17:12-13), its identification with the lizard is preferable to its interpretation as a snake.

115 For the interpretation of *ʿṯtrt ḫr* as 'Hurrian goddess' see Weippert, M. 1969:48 n. 86 (with references to *ʿ3stʾr3 ḫ3rw* as the Egyptian orthography of the goddess); Herrmann, W. 1974. Additional evidence for the identification of ^{d}i n n i n *ḫurri* = *ʿṯtrt ḫr* = Ušḫara(ya) = Išḫara is not lacking. The meaning of *ḫr* = *ḫurri*, 'from the Land of Ḫurru', is assured by the occurrence of ^{d}*Dagan ša ḫurri*, 'the Hurrian Dagan', as a designation of Kumarbi in a Hanaean text, see Thureau-Dangin & Dhorme 1924:271 r. 9-10. The use of the logogram i n n i n for Išḫara is current in personal names from Alalaḫ, see Wegner 1981:176. The objection that *ḫr* cannot denote gentilitial appurtenance (Puech 1993:328) is not valid, because *ḫr* = *ḫurri* serves as the designation of the Land (or civilization) of Ḫurru. Note also the variants Ušḫara/Ušḫaraya, Išḫara/Išḫaraya.

116 Lackenbacher 1985, lines 9-10: *ša unakkir awatē annāti* ^{d}i n n i n *ḫur-ri* d i n g i r *ša é liḫalliqūšu*, cf. RS 16.238:18-20 [^{d}i m] e n ḫ u r - s a g *ḫa-zi liqqur [ša minu]mmē ištu awatē [annāt]i inakkir*.

117 The evidence has been collected by Puech 1993.

118 See Drijvers 1986 (with references to relevant literature).

1.109:32-33, translated as 'to Baal Zaphon, the god of the house'.[119] Collation of the text shows that it reads in fact *lbʿl ṣpn ḫlb*, 'to Baal Zaphon of Aleppo'.[120] Some of the other passages adduced to demonstrate that Baal was the dynastic god at Ugarit are dubious as well. The supposed self-reference of the Ugaritic king as *mt bʿl ṣpn*, 'the man of Baal Zaphon', in *KTU* 2.44:10[121] occurs in a heavily damaged line. The reading of *KTU* appears good, but the context is so damaged that it is impossible to say whether it is a royal title. The supposed occurrence of the same expression in *KTU* 2:36 has proved a misreading.[122]

In spite of the negative assessment of some of the evidence mentioned above, it must nevertheless be admitted that Baal (or rather the storm god Haddu of whom *bʿl* is an epithet) is the most likely identity of the patron deity of the Ugaritic kings. No theophoric element occurs as often in royal personal names as *(h)d*, (H)addu.[123] Also, the ruler of Ugarit assures the Egyptian Pharaoh that he prays for the latter 'before Baal Zaphon my lord' (*l.pn. bʿ[l] ʳṣʾpn. bʿly*).[124] Along with 'the gods' in general, 'Baal the lord of Mount Zaphon' is the only divine witness invoked in juridical deeds. All the texts in which Baal Zaphon occurs are of particular importance to the king.[125] The clearest illustration is RS 16.144, in which Arḫalba (*ca.* 1340-1335 BC) stipulates that after his death none of his brothers may marry his wife and thereby lay claims to the throne. The curse invoked upon the possible offender involves the god of the dynasty: 'May Baal (ᵈi š k u r) drown him. The throne he shall not make prestigious, in the palace he shall not reside. May Baal the lord of Mount Zaphon (ᵈi š k u r e n ḫ u r - s a g *ḫa-zi*) drown him.'[126] In written agreements between the Hittite king and his Ugaritic vassal, dictated by the former, Baal Zaphon occurs a number of times as the last in a series of divine witnesses.[127]

---

[119] Garbini 1983:57.

[120] I owe the reading of the text to a personal communication of Pardee. In view of the fact that the formula *bʿl ṣpn ḫlb* is otherwise unattested and a seeming contradiction in terms, Pardee suggests that the term *ḫlb* here denotes an offering—a sense unattested in any other Ugaritic text. The supposed contradiction in terms may be more apparent than real, however. The cult of Baal Zaphon was widespread in the ancient Near East (note the various sites called Baal-zephon in Northern Egypt), and the local avatars of the god could well have been distinguished by the addition of a (second) toponym.

Analysis of the extant evidence, then, leads to the conclusion that the Storm God Haddu and the fertility goddess Ušḫara/Išḫara presumably were the family deities of the Ugaritic kings. Indirect confirmation of this conclusion may be found in the situation which obtained in the neighbouring cities of Alalaḫ and Emar. Išḫara is known to have been the city goddess of Alalaḫ.[128] King Idrimi referred to her as his Lady (g a š a n) and to the storm god (d i š k u r) as his lord.[129] In the inscription on his statue, Idrimi calls himself 'servant of the storm god, of Ḫebat, and of Isḫara, the lady of Alalaḫ, my Lady.'[130] A ritual text from Emar mentions Išḫara the 'Lady of the city' (g a š a n u r i^{ki}) immediately before Išḫara 'of the king' (*ša* l u g a l).[131] These are just scraps of evidence. They point to the prominence of Išḫara in the royal devotion in the West Semitic milieu; that the storm god enjoyed such prominence as well, under the names of Hadad, Baal, or Tešub, is well known.

Further evidence of the worship of family gods in the West Semitic world before 1200 BC is found in some of the Amarna letters, sent by Syrian and Palestinian vassals to their Egyptian overlord. In a message to Amenophis IV (1370-1353 BC), Akizzi, the ruler of Qatna, reports on a raid by troops of the Hittite king during which 'the god and the warriors of Qatna' have been seized.[132] The divine statue in question represents the sun god Šimige, whom Akizzi refers to as 'the god of my father' (d i n g i r *abiya*).[133] Since peace had been restored, Akizzi concludes that the god of his father (who is his as a matter of consequence) 'has returned' to him.[134] The expression 'the god of my father', used by Akizzi of the sun god, occurs as early as 1750 BC in a letter of outrage sent by King Iši-Addu to Išme-Dagan of Assyria. Offended by the paltry gift of Išme-Dagan, the king of Qatna exclaims that, 'by the god of my father' (*aššum ili ša abiya*), he would have preferred to receive no gift at all rather than such a ludicrous amount of tin.[135] Cultic inventories from Qatna also mention 'the god of the king' (d i n g i r - m e š l u g a l, d i n g i r l u g a l) and 'the god of the father' (d i n g i r - m e š *ša*

17.340 r. 21' (*PRU* 4:48-52); RS 18.06 + 17.365:7' (*PRU* 4:137).

128 Cf. Na'aman 1980. For the reading d i š t a r as Išḫara see Haas & Wilhelm 1974:138.

129 See the inscription of Idrimi's seal, *AfO* 99.

133 EA 55:53, 56, 59, 63.

134 EA 55: ^{59} ... *inanna* d*Šimige il abiya* ^{60} *ana muḫḫiya itūr*. For a similar expression see the statue of Idrimi, line 29-30: d i š k u r *ana qaqqadiya* (s a g - d u-*ya*) *it-tu-ur*.

135 ARM 5, 20:14-17.

abi, d i n g i r - m e š *abi*, d i n g i r *abi*).[136] They presumably refer to the image of Šimige.

Another reference to a family god in the Amarna letters owes its interest to the fact that it demonstrates that a dynastic god is not automatically conterminous with the city god of the king. For a number of years in the Amarna Age the city of Shechem was ruled by Lab^{3}ayu. Three letters which Lab^{3}ayu wrote to the Pharaoh have been preserved. In one of them he refers to the temporary capture of a town belonging to Shechem. Lab^{3}ayu observes that when the town was captured, his god (*ilī*, 'my god') was captured (*ṣabātu*) as well.[137] He calls the raiders 'despoilers of my father',[138] which presumably means that 'by taking the statue or image of the family god, Lab^{3}ayu's enemies had violated his family.'[139] The image of the god was located in the town where Lab^{3}ayu and his family came from.[140] Like Jerubbaal who would reign over Shechem many years later, Lab^{3}ayu was not a native from the city-state. His god was still the god whom he and his father used to worship in their home town.

The forms of family religion in second millennium Syria and Palestine persist virtually unchanged in the first millennium. The clearest illustration of the coexistence of ancestor cult and the worship of a family god is found in the inscriptions of the Sam^{3}alite kings. Alongside references to the commemoration and care of the ancestors, several kings make mention of Rakib-El as the god of their dynasty. Kilammu (ca. 825 BC) calls him 'lord of the house' in his inscription (*b^{c}l bt*, *KAI* 24:16), just as Panammu II some hundred years later (*b^{c}l byt*, *KAI* 215:22). The expression is the equivalent of the Ugaritic *ỉl bt* (*ilu ša bīti*), and should be interpreted in analogy with the latter. The 'house' is the dynasty to which both Kilammu and Panammu belong. As the god of their family, Rakib-El is by definition also their personal god. That is why Bar-Rakib, son of Panammu II, speaks of Rakib-El as 'my lord' (*mr^{3}y*, *KAI* 216:5). Sam^{3}alite kings from different lineages

---

[136] Bottéro 1949:33-37. The use of the plural ending - m e š does not imply plurality, as the simultaneous occurrence of the singular indicates. Compare d i n g i r - m e š-*šu* with d i n g i r *a-bi-ya* in EA 55:42, 53, 56, 59, 63. See also Bottéro 1949:34 and n. 1; Moran 1987:228 n. 6; Na^{3}aman 1990:255.

[137] EA 252:12-13, 29-30. For the text see Hess 1993:95-98. For another translation and commentary see Moran 1987:478-479; 1992:305-306. The interpretation by Halpern & Huehnergard 1982:228 of *i-le* as 'he is/was able' and 'I am able' is unconvincing.

[138] EA 252 ^{30} *šu-sú-mi a-bi-ya*. Once again, the reading and interpretation of the expression by Halpern & Huehnergard 1982:228 and n. 7 (*i-le šu-ṣú-mì ṣa$^{!}$-bi-ia*, 'I am able to send out my troops'), fails to carry conviction.

[139] Moran 1992:306.

[140] See Moran 1987:479 n. 1.

worshipped other gods: Baᶜal-ṣemed was the god of King Gabbar, and Baᶜal-Ḥammān of King Bamah (*KAI* 24:16).

The designation of the family god as the 'god' or 'lord' of the 'house' remained in use down to the Hellenistic and Roman periods. Bel is mentioned as 'the god of the house' of So-and-so (*ʾlhʾ byt* NN) in a graffito from Assur.[141] In Palmyra (modern Tadmor) archaeologists discovered an altar which had been dedicated by two men 'to Šamaš, the god of the house of their father' (*lšmš ʾlh byt ʾbwhn*, *CIS* II/3 no. 3978:6-7). Further south, in Petra, the expression 'Lord of the House' (*mrʾ byt*ʾ) has been found in various Nabatean votive inscriptions. It could be used to designate Al-ᶜUzza,[142] Dusares,[143] the 'god of T[eiman?]',[144] or an unnamed deity.[145] Considering the context, the title highlights the tutelary role of the gods in question.[146] A Punic inscription on a stela from Cirta mentions Baal-hammon in his capacity as Lord of the House (*bl bt*).[147] The terminology is in keeping with the expressions used in texts from Ugarit and Samʾal.[148] At the same time it has a link with pre-Islamic Arabia, where various gods could be called the Baᶜl of a named 'house', i.e., family or clan.[149]

Conclusion

The survey of the Syrian and extra-biblical Palestinian evidence yields a very fragmentary picture of family religion. It nevertheless provides a number of significant insights. The characteristic forms of family religion exhibited in the Old Babylonian texts were generally preserved in the later second and the early first millennia. Families honoured their ancestors by verbal rites and the presentation of offerings, and focused their religious devotion on the 'god of the father' or the 'god of the house'. In so doing, they anchored their collective identity in their lineage and their place of origin.

PART THREE

ISRAEL
FROM FAMILY RELIGION TO PERSONAL DEVOTION

INTRODUCTION TO PART THREE

The first part of this study was devoted to a description of family religion on the basis of the cuneiform texts from the Old Babylonian period. No attention was paid to the historical evolution of the ideas and practices of family religion. The available data were used to analyse the phenomenon at a synchronic level on the assumption that any attempt to discern developments in a religious system or sub-system should be preceded by an analysis of its forms and functions; these are best grasped by studying one historical phase. Once the forms and functions of family religion have been reconstructed, it becomes possible to take the next step and see which transformations they have undergone in the course of history.

The forms of Babylonian family religion, which were described in the first part of this book, will serve as a key to the understanding of the development of Israelite religion in the period between 1200-550 BC described in the following chapters. The earliest Israelites belonged to the groups of socially uprooted elements and itinerant nomads known in contemporary sources as Ḫabirū and Šosū. Their ethnic background was diverse: though several groups had come to Palestine from Edom and Transjordania, most Israelites had their origins in Canaan proper. Organized in families and clans, they settled the hill country of Palestine from 1200 BC onward. Here they formed a segmentary society consisting of largely independent villages, habitation being based on kin group co-residence. The Israelite family structures resembled those of the Old Babylonian society. Patrilineal succession and patrilocality were its predominant features; male offspring was regarded as essential to the maintenance of the family inheritance.

Owing to the fragmented nature of early Israelite society, the main forms of religious life were local manifestations of family religion. Family identity was anchored in the cult of the ancestors and in the veneration of a local god. The gods El and Baal enjoyed the greatest popularity as family gods. The structure of the early Israelite society was transformed by the emergence of the monarchy under Saul. For the first time in the history of Israel, local autonomy was transcended by, and made subservient to, the interests of the state. With the rise of the state there also arose a state religion. This state religion was not initially a national religion; the picture of early Israelite religion as a national religion is a projection upon the past of later realities. The religion of the Saulide state was in essence an extension of Saulide

family religion. Saul being devoted to Yahweh as his family god, he promoted Yahweh as the patron god of the new state. In so doing, he used the idiom of family religion and applied it to the relationship between his subjects and the state god.

The introduction of a state religion did not leave the traditional forms of family religion unaffected. From now on the two would be in competition, due to which family religion was increasingly reduced to the private realm, the religion of state being the public religion. In addition to a religious politics designed to diminish the impact of family religion (e.g., through the ban on necromancy and an economy with no regard for the sacral value of the family inheritance), the state tried to create a national identity by the promotion of the exodus narrative as a national charter myth; the main national festival, celebrated each year in the national temples, centred around this myth. To increase their control over their subjects, the authorities tried to bring the traditional family religion within the orbit of the state cult through the identification of El with Yahweh, and by the admission of the cult of Baal to the state temples.

The fall of Samaria in 621 BC and the disintegration of the Northern Kingdom spelled the end of both Israelite state religion and Israelite family religion. Their place was to be taken by a national religion and personal devotion. Though the conditions of the transformation are intimately related to the political events of the time, the intellectual impetus that brought it about came from the Deuteronomic movement. The Deuteronomists stood in the Ephraimite prophetic tradition exemplified by such men as Elijah, Elisha and Hosea. Having migrated to Judah after the defeat of the Northern Kingdom, the Deuteronomists saw it as their task to provide the Israelite exiles with a new identity. The migrants from the former Northern Kingdom had been cut off from their soil; the physical link with the ancestors and their local gods had been severed. The Deuteronomists took advantage of this situation and declared the traditional forms of family religion illicit. Making a virtue of necessity, they insisted that each new generation was entitled to a fresh start, and that each person had individual responsibility. Attendant measures made local shrines a redundancy. Henceforth there was to be one national temple only, just as there was only one God. Devotion to Him, by the observance of the Law, was to supplant all other forms of religious involvement.

CHAPTER EIGHT

FAMILY, HOUSEHOLD, AND CLAN IN EARLY ISRAELITE SOCIETY

In contrast to Babylonia and Ugarit, early Israel was an essentially rural society. The majority of the peasant population lived in towns that were much smaller than the Mesopotamian and Syrian cities. Whereas places such Nineveh and Babylon might cover an area of up to 2500 acres, the Israelite cities were seldom larger than 25 acres. In the earliest stages of Israelite history, the circumference of most settlements did not even exceed two acres; the inhabitants were usually related to one another by ties of kinship. To grasp the characteristics of the Israelite society and to gauge its influence on the forms of religious life in first millennium Palestine, it is necessary to consider its emergence.

The name 'Israel' is widely used in biblical studies to refer to Ephraim and Judah conjointly, which is, strictly speaking, incorrect. Historically, Israel designates the Northern Kingdom, also known, since the mid-ninth century BC, as Samaria. It must be stressed that Israel and Judah have separate origins, distinct characteristics, and different histories.[1] To avoid confusion, some scholars recommend the use of the adjective 'Israelian' for everything pertaining to the Northern Kingdom, reserving the term 'Israelite' for the union of Ephraim and Judah.[2] In this study, preference has been given to the more traditional term Ephraimite whenever there was a danger of misunderstanding. The chapters that follow will focus on Israel in the narrow definition which, in geographical terms, means that the Samarian highlands and the plateau of Benjamin are at the heart of our investigation.[3] The Samarian highlands (today often referred to as the central hill country) are known in the Bible as 'the hill country of Ephraim' (*har ʾeprayim*). Except for its southern border, it forms a natural unit in the landscape of Palestine. In biblical times it was also a distinct cultural zone. It is in this area that the emergence of the Israelites becomes archaeologically tangible; it is here, too, that the territorial state of Israel arose, with all the attendant effects upon the culture and religion of the Israelites; it is this area, also, that saw the

competition between state religion and family religion. The conflict-ridden coexistence of two types of religion in the Northern Kingdom prepared the ground for the success of the religion of personal commitment preached by the Book of Deuteronomy and illustrated, in varying ways, by the sect of the Rechabites and the life of Jeremiah.

Who Were the Israelites?

The earliest mention of the Israelites is found in the stela which Pharaoh Merneptah erected in 1207 BC to celebrate his victory over his Lybian and Palestinian enemies.[4] The Israel passage comes towards the end of the inscription.

> Plundered is Canaan with every evil,
> Carried off is Ashkelon,
> Seized upon is Gezer,
> Yeno^{c}am is made as that which does not exist
> Israel lies fallow, it has no seed;[5]
> Ḫurru has become a widow because of Egypt.

In contrast to Ashkelon, Gezer and Yeno^{c}am, cities which the Egyptian writer provided with the marker of topography, the term 'Israel' is written with the determinative used to designate people. This suggests that the earliest Israelites, living in Canaan, were not confined to one or more urban centres. The stela allows only a very general localization of the Israelites. Assuming that Canaan and Ḫurru are general designations of (parts of) Palestine, the order of the four slain enemies (Ashkelon, Gezer, Yeno^{c}am, Israel) presumably corresponded to the marching route of the Egyptian army: progressing inland from the coast, it defeated the Israelites on the way back from Yeno^{c}am (which lies in northern Palestine). This would lead to a tentative localization of Merneptah's Israel in central Palestine.

The ethnic origins of the Israelites cannot be established by the Egyptian text: it offers evidence only of the presence in Palestine of a group of people, of indeterminate numbers, known as Israel, and having a non-urban mode of life. To speculate that this group was once in Egypt, had fled from there, and had entered Palestine from Transjordania, is filling in the gaps in our documentation with biblical historiography. Since the tale of the exodus is

[4] For the text see Fecht 1983; Hornung 1983; von der Way 1992:85-99. For an English translation of the text see *ANET*^{3} 376-378. The historicity of Merneptah's Syro-Palestinian campaign has been defended by Yurco 1986; 1990. For studies dealing specifically with the significance of the stela for the reconstruction of early Israelite history see Engel 1979; Ahlström & Edelman 1985; Stager 1985a; Ahlström 1986:37-43; Bimson 1991.

[5] *Yyzr3r fk.w bn-prt=f*, see von der Way 1992:98 line 169.

known from first millennium BC sources only, its use in the reconstruction of Israelite history in the second millennium is a dubious undertaking. The archaeological indications suggesting that the Israelites were a group of newcomers who had invaded or infiltrated the country from outside are few and ambiguous. On the basis of the material culture of the Early Iron Age settlements in the central hill country from 1200 BC onward, it would seem that most of their inhabitants originated in Palestine itself.[6]

In fact, the very use of the term Israel for the population of central Palestine before the first millennium BC is subject to caution. The Merneptah stela shows that there were Israelites in Palestine around 1200 BC, but to say that all the Early Iron Age settlers of the central hill country were Israelites courts the danger of misguided associations. The Israelites of 1200 BC were not a nation; they constituted a group of non-urbanized people named presumably after their eponymous ancestor Israel, a theophoric anthroponym meaning 'El-does-battle' or 'El-reigns-supreme'.[7] To avoid confusion with the Israelites as we know them from the biblical records, the early settlers of the hill country are best designated as proto-Israelites. The fact that the later inhabitants of the central hill country are known as Israelites does not prove that they are the direct descendants of Merneptah's Israel. There is a relation, certainly, but that relation may well have been one in which groups of new settlers identified with an earlier population group and adopted its name.[8]

Earlier Egyptian texts dealing with south and central Palestine often describe its population as consisting of Šosū (*š3św*)[9] and ʿApirū (*ʿprw*).[10] Neither term is an ethnic name; they are social appellations. The Šosū were Asiatic people with a nomadic lifestyle; they lived in tents, owned cattle, and practised seasonal transhumance.[11] The Šosū might be qualified as Bedouins —which is, to be sure, an anachronism, but a useful one, conveying some of

[6] For recent treatments of the question see Weippert, M. 1979; Halpern 1983:47-106; Lemche 1985:407-432; Callaway 1985:43-46; Ahlström 1986:25-36; Finkelstein, I. 1988:336-348; 1990:682-685; Edelman 1991.

[7] For a survey of the etymology of the name Israel, including references to the relevant literature, see *HAL*[3] 422.

[8] Lemaire 1973 suggests that the Israelites (the *Bĕnê Yiśrāʾēl*) took their name from the clan of the *Bĕnê ʾAśrīʾēl* located near the border between Ephraim and Manasseh. In illustration of the phenomenon of a people taking the name of one of its constituent groups Lemaire refers to the cases of Switzerland (Schweiz), which took its name from one of the three first confederate cantons (Schwyz), and of France, which owes its name to the Franks who occupied only a small part of Gaul after the fall of the Roman Empire (Lemaire 1973:241-242).

[11] See Giveon 1971; Weippert, M. 1974.

the principal connotations of the native term.[12] The ᶜApirū are to be distinguished from the Šosū.[13] Unlike the latter, they are never characterized as nomads; their most usual occupation, according to the Egyptian evidence, was that of mercenaries. The Egyptian term ᶜApirū goes back to the Akkadian word *ḫabiru*, which derives from the verb *ḫabāru*, 'to leave home by force, to be exiled'.[14] The *ḫabirū* were 'uprooted elements' or 'social outcasts'; they are referred to at times in the Akkadian Amarna letters with the logographic writing SA.GAZ.MEŠ, which is the Sumerianized transcription of Semitic *šaggāšu*, 'killer, robber'.[15] These people are also qualified as *munnabtūtu*, 'fugitives', i.e., politically displaced elements.[16]

Though reflecting a later period, the biblical data concerning David and his men exemplify the nature and lifestyle of *ḫabirū*.[17] As the relations between Saul and David deteriorated, David became a fugitive and retreated to the Judaean desert. He was joined by his family and a mixed assortment of desperados:

> And all kinds of people in distress, and all kinds of people in debt, and all kinds of malcontents, gathered to him; and he became their leader. And there were with him about four hundred[18] men.[19]

With this band of individuals David roamed through central and southern Palestine. The ways in which the group of runaways supported itself varied. They could hire themselves out as mercenaries to a local ruler (1 Samuel 18); they might claim protection money in the form of provisions from wealthy farmers (1 Samuel 25:4-8); or they might raid towns and cities (1 Samuel 27:8-9). David and his men were indeed 'hebrews', i.e. *ḫabirū*, as one of the Philistine military commanders observed (1 Samuel 29:3). Their lifestyle conformed to the behavioural patterns ascribed to the *ḫabirū* about whom Palestinian rulers complained in their letters to their Egyptian overlords in Amarna.

The historical connections between the Palestinian *ḫabirū* (*ᶜapirū*) of the cuneiform and hieroglyphic documents, on the one hand, and the biblical

Hebrews, on the other, have long been disputed, but their reality is now generally accepted. The name 'Hebrew' (*ʿibrî*), used predominantly of Israelites by non-Israelites,[20] goes back to *ḫabiru*; from a social appellative, 'Hebrew' eventually became the name of a people. Since the Palestinian *ḫabirū* were bands of Canaanite outlaws and drop-outs, large groups of the later Israelites were presumably of Canaanite descent. The background of other segments of the Israelite population lay in a nomadic milieu; they came from the ranks of the Šosū.[21] The ethnic origins of such nomads may have been quite diverse. Since the border between Transjordania and Palestine never represented an insurmountable barrier, the assumption that at least some groups of proto-Israelite settlers originated from outside Palestine is not unreasonable. There is evidence—onomastic, literary and archaeological—of a partially common background of the Israelites and the Edomites, which might be due to the Edomite ancestry of some groups in Israel.[22]

The ethnic background of the proto-Israelites was not homogeneous. The majority of the population of the central hill country was of Palestinian extraction; they did not differ from the Canaanites, apart from the fact that they were socially uprooted and in pursuit of a new social environment.[23] The principal distinction between the proto-Israelites and the Canaanites was social and not ethnic. The religious culture of the proto-Israelites was Canaanite by inheritance, too. In this respect, the biblical polarization of Israelites versus Canaanites is ideologically inspired and historically incorrect. It is probable that some of the early Israelites were not Canaanite in origin; the worship of Yahweh, a god unknown in the West-Semitic milieu, is a major indication to that effect. Yet these non-Canaanites were a minority. Even if they eventually succeeded in attaining social and cultural superiority, most of their compatriots had their roots within Palestine.

Patterns of the Israelite Settlement [24]

The hill country of Ephraim (central Palestine) and Manasseh (north Palestine) plays a special role in the history of Israel since it is here that those who came to be known as the Israelites left the earliest traces of their presence. A

summary of the archaeology of the area can provide a historical backdrop to the Israelite settlement.

In the Middle Bronze Age (ca. 2200-1550) the central hill country enjoyed a period of peace, stability and prosperity. Evidence of this florescence are the remains of the many fortified towns which provided accommodation to the majority of the population.[25] By the middle of the millennium the decline set in and by the end of the Late Bronze Age (ca. 1550-1200) only a few towns and some scattered hamlets were still inhabited. The hill country had become sparsely settled and economically backward.[26] Especially in Ephraim, the southern half of the Samarian highlands, the situation had deteriorated considerably; only five Late Bronze Age sites are archaeologically attested, as against some sixty from the Middle Bronze period.[27]

The abandonment of many towns did not mean that their role was entirely finished. There is evidence for the continued use of urban cemeteries in the Late Bronze Age. Apparently, the descendants of the former inhabitants wished to bury their dead in a ground hallowed by memory and tradition.[28] A similar phenomenon occurred in connection with some of the urban sanctuaries of the Middle Bronze period. Faunal remains of the Late Bronze period show that the sanctuary of Shiloh, for instance, remained in use for sacrificial purposes—even as the town itself was no longer inhabited.[29] Though the population of the Late Bronze Age Canaanite towns had become nearly completely desedentarized, they did not leave the hill country. Having adopted a nomadic or semi-nomadic way of life, they continued to visit the old urban centres for funerary and sacrificial purposes.

The Early Iron Age witnessed a sudden increase of settlements. Whereas in Ephraim only five or six Late Bronze Age sites have been discovered, the Early Iron Age sites run into 120.[30] Sedentarization started in areas conducive to field crops and pasturage, which points to the pastoralist background of the settlers. First the eastern part of the Ephraimite hills was resettled; only later were the western slopes and hills inhabited. The explanation of this phenomenon should probably be sought in the difficulties of deforestation, an obstacle that did not face the settlers on the eastern side. All the Early Iron Age sites were at some distance from the cities; the latter were apparently still inhabited as the process of sedentarization got under way.[31]

About half of the new settlements consisted of only a few houses. The other half were small villages and towns. Settlements whose built-up area exceeded one and a half acres, such as Ai and Raddana, did not even make up a fourth of the total figure. Translated in terms of population size this means that only two or three out of ten new settlements had a population exceeding a hundred persons. One of the largest sites could accommodate about eight hundred people.[32] These larger towns were more or less evenly spaced apart; there was often a limited number of small villages and hamlets in their immediate vicinity.[33]

The situation in the more northerly situated region of Manasseh was slightly different. The environment was far more suitable to habitation here than in Ephraim. Twenty-two Late Bronze Age sites are known from Manasseh, as compared to a hundred sites from the Early Iron Age.[34] The settlements were larger than those in Ephraim; about half of them could be characterized as medium-sized villages. Most of the sites are located on the edges of the larger valleys. In some respects the settlement in Manasseh followed the same pattern as in Ephraim: the early sites are concentrated in the east, those in the west representing a secondary stage of the settlement. Here, too, the problems of deforestation are the most likely explanation. The new settlements are found alongside and between the towns from the Late Bronze Age, such as Shechem, Tirzah and Hepher. The population of the latter may be qualified as urban. There is thus a coexistence, and to some degree cohabitation, of an indigenous sedentary element and new groups in the process of sedentarization.[35]

The new settlements in Ephraim and Manasseh have a number of characteristics in common.[36] Most of the towns are unfortified and relatively small. In the larger settlements, such as Raddana, the houses form a pattern of five or six compounds; the large village is organized as a cluster of hamlets.[37] Usually the houses stand in a circle, their entrances facing a common courtyard. The large open spaces within the villages served as livestock paddocks. The architecture is almost completely domestic; it is extremely rare to find remnants of buildings with a public function. Nearly all the houses belong to

---

32 The population size is estimated by multiplying the size of the site by a density factor of 25 persons per dunam (Finkelstein, I. 1988:193). The major site here selected is Ḫirbet Marjama (= Baal-shalishah, 2 Kings 4:42 ?), see Mazar, A. 1976; Zohar 1980; Mazar, A. 1982b:171-174.

33 Finkelstein, I. 1988:192-193.

34 Zertal 1986b.

35 Finkelstein, I. 1988:80-91; Mazar, A. 1990:335.

37 See Callaway 1985:34; Stager 1985b:18-23.

the 'four-room house' type or its variant the 'three-room house'. This type is usually considered characteristically Israelite, even though it has Middle Bronze Age antecedents and has also been found outside Israel proper. Regarded as specifically Israelite, too, are the so-called 'collared rim' jars, a prevalent type in the pottery of the new settlements. The open areas within the settlements contained small silos that were dug in the ground and could be covered by a stone. The settlers grew grain, but corn cultivation must have been a new skill to them since their houses lacked appropriate storage facilities. Another remarkable feature is the absence of objects or sherds from elsewhere. It shows that the villages were basically self-sufficient and did not engage in trade.

The Sociology of the Early Israelite Settlements

To discover the social structure of the early Israelite settlements, the archaeological data must be supplemented by information extracted from the biblical records. The joint evidence suggests that most of the new settlements were inhabited by one extended family or clan only. Co-residence usually implied, or was construed to imply, consanguinity. It has been observed, in connection with early Israelite society, that

> in early times clan and dwelling-place, which in the conditions of ancient Israel means clan and town, often coincided. We must imagine the numerous townlets of the countryside each preponderantly inhabited by members of the same clan.[38]

Biblical evidence in support of this statement includes the genealogies in which place names are identified with personal names (e.g., 1 Chronicles 7:31). Toponyms often preserve the names of the founding families of the settlements; the pattern is evident in such names as Hazar-Addar (חצר־אדר), 'Enclosure of the Addar family' (Numbers 34:4), Gibeath-Phinehas (גבעת פינחס), 'Hill of the Phinehas family' (Joshua 24:33), Ramathaim-zuphim (רמתים צופים, read רמתים צופים), 'Height of the clan of the Zuphites' (1 Samuel 1:1; cf. 9:5),[39] and Atroth-shophan (עטרת שופן), 'Encampments of the Shophan family' (Numbers 32:35).[40] Interesting, too, are such territorial

---

[38] de Geus 1976:138. Cf. Gottwald 1979:316: the *mišpāḥâ* 'had a vital regional or neighborhood character which might be coextensive with a rural neighborhood, a cluster of small settlements, a single settlement and environs, or a segment of a large settlement.' See also Frick 1989:90.

[39] The *-ayim* ending has probably locative force, see Rainey 1978:5.

[40] Stager 1985b:24 mentions Gath-rimmon, 'Estate of the Rimmon family' (Joshua 19:45) as another instance. Since this place-name occurs already in the Amarna letters (EA 250:46), it cannot be taken as evidence of the Israelite settlement. The name Gath-Hepher

designations as Eretz-shalisha (ארץ־שלשה), 'the land of the Shalishah family' (1 Samuel 9:4; cf. 1 Chronicles 7:37), Eretz-shaalim (ארץ־שעלים), 'the land of the Shual family' (1 Samuel 9:4; cf. 1 Chronicles 7:36), and Eretz-Zuph (ארץ צוף), 'the land of the clan of the Zuphites' (1 Samuel 9:5; cf. 1 Samuel 1:1).[41]

In the Early Iron Age, most Israelite towns will have been dominated by a single family. Ophrah, the unidentified town of Gideon situated near Samaria, is called 'Ophrah of the Abiezrites' (Judges 8:32). The 'men of the town' (*ʾanšê hāʿîr*, Judges 6:27) belonged to the clan of Abiezer of which Joash, Gideon's father, was the head (cf. Judges 6:34).[42] Another case in point is the city of Nob. It was a city of priests (1 Samuel 22:19) under the leadership of Ahimelech the son of Ahitub. Because Saul suspected Ahimelech of having conspired against him, he decided to execute the priest with his entire family (*bêt ʾāb*, 1 Samuel 22:16). As a result, a total of eighty-five priests were killed (1 Samuel 22:18), which probably amounted to the entire male population of the town. If they are referred to as a *bêt ʾāb*, it is because the family of Ahimelech the son of Ahitub enjoyed such prominence that the other inhabitants of the town were thought of as belonging to the same group. What the text calls a 'family' was a clan, i.e., a social unit of putative common descent.[43]

The original coincidence of clan and settlement has led to the survival of clan names in toponyms. In the Samaria ostraca, administrative notices from the beginning of the 8th century BC, seven clan names known from the Bible occur as regional place names.[44] In biblical genealogies, the seven clans in question are said to go back to the children of Manasseh (Joshua 17:2-3; Numbers 26:30-33), Manasseh being known, not only as one of the tribes of Israel, but also as the name of the region around Samaria. The clans that lived in the area gave their names to their respective settlements. Settled social groups, because of their physical immobility, were defined as much by their village as by their lineage, and often no distinction was made between the two.

The close association between clan and town is noticeable as well in the organization of territorial leadership and judicial authority. The Israelite

---

(Joshua 19:13; 2 Kings 14:25) presents a similar case, since Tel Gath-Hepher contains traces of urban settlement of the Late Bronze Age, see Gal 1992:18, 56.

41 Mazar, B. 1986:46-47; Stager 1985b:23-24.

42 Cf. the observations by de Geus 1983:226.

43 For this definition see Sahlins 1968:52. Cf. Westbrook 1991:134-136 who suggests that Ahimelech was the head of 'the house of his father' because its inheritance was still undivided.

44 Rainey 1967; Shea 1977; Kaufman, I. T. 1982; 1992.

towns were largely autonomous units. Theirs was a form of self-government in which the 'men of the town' (*ʾanšê hāʿîr*), that is all the adult male inhabitants, had a say.[45] Leadership lay with the *zĕqēnîm*, the 'elders', also known as *śārîm*, 'chiefs'.[46] Their title suggests that age was the criterion on which they were selected, but this may be misleading. A senator or an alderman is not necessarily advanced in age. Judging by the equivalent terms *ḥōrîm*, 'aristocrats' (1 Kings 21:8.11) and *gĕdōlê hāʿîr*, 'prominent men of the city' (2 Kings 10:1-2), the elders are 'the grown-up men of the powerful families who *de facto* have the power to rule.'[47] They can also be referred to as *nĕdîbîm*, 'nobility'.[48]

The leadership of the elders included judicial authority.[49] In a segmentary society such as ancient Israel, judicial authority was vested in different institutions, each corresponding with a particular level of social organization. Conflicts within the family (the *bêt ʾāb*) were adjudicated by the paterfamilias (cf. Genesis 31; 38).[50] At the level of the clan, on the other hand, the peaceful solution of conflicts was the joint concern of the heads of the constituent families. Clans being largely conterminous with towns, disputes between families were presumably adjudicated 'in the gate'. Here 'the men of the town' met in a judiciary council at which the elders presided (cf. Deuteronomy 21:1-9.18-21; 22:13-21; 25:5-10).[51] It was incumbent upon the elders to direct the proceedings in such a way as to negotiate a solution that would have the support of the community. They were acting as 'judges' (*šōpĕṭîm*), a position they assumed when the circumstances demanded it.

The relationship between 'the men of the town' and the elders will have varied. In Succoth, for instance, which reportedly had seventy-seven 'chiefs and elders' (Judges 8:14), it would seem that the elders were conterminous with the family-heads of the town.[52] Yet it can hardly be expected that the families that made up a given clan were consistently equal in size, wealth,

[47] Pedersen 1926:36.

[48] On the existence and the role of the aristocracy in Israel see van der Toorn 1985:102-110.

[49] On the judicial system in ancient Israel see Macholz 1972; Weinfeld 1977; Whitelam 1979; Wilson 1983a; 1983b; Niehr 1987.

[50] Wilson 1983b:233.

[51] For a classical description of the distribution of justice 'in the gate' see Köhler 1953:143-171.

[52] McKenzie, J. L. 1959:535 suggests that the 'elders' of Succoth actually consisted of the entire male population. Much depends, of course, on the size of the city. In the city-state of Emar there were at least eighty notables in the Old Babylonian period, see AEM 1/2 (ARM 26), 256:14-15.

and importance. Also in a primarily rural society, some people do better than others. Notwithstanding statements to the contrary, the Israelite clan was not egalitarian.[53] We should therefore reckon with the presence in the clan of leading families, whose heads would naturally predominate in its council; they were the 'elders'. By implication, the circle of 'elders' will normally have been smaller than that of 'the men of the town'.

The predominance of a single family could lead to the eclipse of the elders by the paterfamilias of the leading family. Though formally one of the elders, he would in reality have the position of a local chieftain. Such was the situation in the clan of the Abiezrites which looked upon Gideon as its leader (Judges 6-8). The Hebrew term that corresponds to the function of 'clan leader' or 'spokesman of the elders' is *nāśîʾ*.[54] A portrait of such a local chieftain has been preserved in the relatively late Book of Job.[55]

> When I went out to the gate of the town,
> and set up my seat in the city square,
> the junior men would see me and withdraw,
> the senior men would rise and stand;
> Chiefs would refrain from speaking,
> putting their hand to their mouth;
> the voices of the leaders would die down,
> and their tongues would cleave to their palate.
> Every ear would hear and bless me,
> every eye would see and approve me,
> when I came to the rescue of the poor who cried,
> of the fatherless who had none to help him.
>
> Job 29:7-12

The passage intimates that the chief did not owe his position to a formal election, but to the general recognition of his superiority. Because of the respect he commanded with the other 'chiefs' (*śārîm*) and 'leaders' (*nĕgîdîm*) of his town, his opinion prevailed and his words carried the greatest weight.

In the early period, the local chief could also be referred as 'the judge' (*šōpēṭ*), as in the Book of Judges. Even up to the days of Isaiah, there was an overlap between the offices of the *šōpēṭ* and the *śar*, the 'leader' (Isaiah 1:23). By extrapolation, the judge was probably also a political and military leader in earlier times. In cities where one of the elders tended to eclipse the others, the 'judge' would be a chief with administrative, judicial, and military

---

[53] Cf. Kippenberg 1982[2]:36-37. Contrast the view of Mendenhall 1976:137 and Gottwald 1979:passim (cf. p. 853 s.v. Egalitarianism), who consider the Israelite clans to have been pragmatic and egalitarian.

[54] See Thiel 1980:108.

[55] On the sociological background of the Book of Job see Albertz 1981.

responsibilities.[56] Such chiefs are presented in the Book of Judges as national figures, leading Israel in battle and seeing their people through some difficult moments. It has long been acknowledged by biblical scholarship, however, that the judges were operating on a more local scale; they seem to have been the heads of their clans.[57] Theirs was not a formal function but a position; some facets of their leadership, such as their military role, were temporary.[58]

Family and Clan

The current Hebrew term for family, *bêt ʾāb* (plural *bêt ʾābôt*),[59] means literally 'the house of the father'.[60] It is the customary view among biblical scholars that it designates the extended family.[61] By common definition, the extended family embraces three to four generations: husband and wife, possibly one or two elderly parents, sons, both married and unmarried, single daughters, grandchildren in the paternal line, and in some cases unmarried uncles, aunts, or cousins. In addition to its consanguineous members, the family included slaves and retainers (e.g., manumitted slaves who had decided to stay with their former master), their wives, and their children, if any. The membership of the *bêt ʾāb*, thus defined, could run into more than fifty persons.[62]

It has been argued, in defiance of the prevailing opinion, that the *bêt ʾāb* refers to the nuclear family of about six or seven individuals.[63] If the *bêt ʾāb* was indeed 'the smallest social unit' in ancient Israel,[64] it is unlikely that it should only designate the extended family. Indeed, there are a number of

57 See Sapin 1982:10.

58 Cf. Wilson 1983b:240. In exceptional circumstances, the city council could be forced to accept the leadership of someone who did not belong to the native families, but who might secure effective protection against attacks from marauders, see Reviv 1966.

59 Cf. Joüon/Muraoka § 136*n*. The construction **bātê ʾābôt*, used by some authors (e.g., Halpern 1983:242.243), is not found in the Hebrew Bible.

60 For literature on the *bêt ʾāb* see Pedersen 1926:46-60; Causse 1937:15-17; Rost 1938:43-59; Mendelsohn 1948; Elliger 1955; Chamberlayne 1963; Porter 1967; Rodd 1967; Andersen 1969; Weinberg 1973; de Vaux 1976³.1:37-43; de Geus 1976:133-156; Thiel 1976; Gottwald 1979:285-292; Thiel 1980:110-116; Scharbert 1982; Lemche 1985:245-290; Stager 1985b:18-23; Meyers 1988:128-138; Westbrook 1991:12-14. For comparative purposes the social organization of Arab groups, modern and ancient, is frequently adduced, see Henninger 1943; Tannous 1944; Ashkenazy 1949; Dostal 1956; Scharbert 1958:72-87 (with extensive bibliography); Ammar 1970.

61 Thus, e.g., de Geus 1976:134; Thiel 1980:110; Scharbert 1982:213-237.

62 Gottwald 1979:285: 'a thriving *bēth-ʾāv* might easily comprise from fifty to one hundred persons.'

63 Lemche 1985:245-290; 1988:93-99.

64 So de Geus 1976:134.

texts in which the term *bêt ʾāb* is used for the nuclear family. Thus in Judges 14:19 the term refers to Samson and his parents, a family of just three persons (cf. *vv.* 2, 9). Admittedly, the *bêt ʾābôt* mentioned in the Bible are frequently large. It could be objected, however, that many biblical figures are men of importance who were able to support such households; their families need not be representative of those of ordinary Israelites. To do justice to such considerations, we should not seek to impose our sociological categories upon the Hebrew term. An exhaustive analysis of the usage of *bêt ʾāb* leads to the conclusion that the term can designate the nuclear family, the extended family, or the lineage.[65] The term, in other words, cuts across the current anthropological classifications.

Since the term *bêt ʾāb* is susceptible of different definitions, it is necessary to step back from the lexicographic problem in order to establish the usual family situation of the Israelites. One of the biblical passages providing us with some details about the size and structure of the Israelite household is Leviticus 18:6-16.[66] Though the text does not use the term *bêt ʾāb,* it is directed against acts of promiscuity committed in the context of the Israelite family. The chapter addresses the Israelite male in the prime of his life, head of his family, his aged parents still alive. In a series of injunctions, all sexual contacts with individuals related by kin (*bāśār*, literally 'flesh') are prohibited. Mother, sister, granddaughter, half-sister, maternal aunt, paternal aunt, daughter-in-law, and sister-in-law are listed as illicit sexual partners for a man; father and paternal uncle are prohibited as sexual partners for a woman. On the assumption that the law forbids those contacts for which there were ready occasions, the chapter proves the actual co-residence of the family group.[67] The prohibitions show that the family, comprising up to four generations in the direct line, actually lived together.

The inference from Leviticus 18 appears to be at odds with the statement that 'the main part of the [Israelite] populace consisted of small nuclear families.'[68] It would also seem to contrast with the archaeological evidence which shows that only very few structures in the Early Iron Age settlements were large enough to accommodate an extended family of the size adumbrated in Leviticus 18. The ground plans of excavated Iron Age dwellings indicate that twenty persons was the absolute maximum which a house might accommodate.[69] Pillared houses in the hill country possessed an interior

---

65 Lemche 1985:251-259.
66 See in particular Elliger 1955; Porter 1967.

68 Lemche 1988:93.
69 de Geus 1976:135.

space of less than fifty square metres; for those in the steppe the interior space did not exceed seventy-five square metres.[70] According to ethno-archaeological research on the relation between floor area and household size in traditional societies, about ten square metres of roofed dwelling area is needed per person.[71] This would mean that the average Israelite house could accommodate about four persons: father, mother, and two children.[72] It is physically impossible that a kin-related group of about twenty or so persons would share the same domestic quarters.

If the idea of the extended family as a domestic unit must be abandoned, then, what about the physical proximity of the kin-related persons mentioned in Leviticus 18? New insights into the residential patterns of the ancient Israelites may provide an answer. The archaeology shows that the individual Israelite house was often linked to one or two others by common walls. Though in close contiguity, each house had a separate entrance that could be reached from a courtyard shared by the others. Such clusters of dwellings are characteristic of the residential organization at places like Raddana and Ai. Compounds of this kind from the later Iron Age can be isolated in such settlements as Tell Beit Mirsim, Tell Far^{c}ah, and Tell en-Naṣbeh. It has been suggested that these compounds were inhabited by an expanded family or a group of interrelated families.[73]

Ethno-archaeological parallels based on modern and early modern Arab residential patterns can be adduced in support of this reconstruction. Some authors point to the phenomenon of the *za^{c}ila*, 'joint family', consisting of father, mother, children, wedded sons and their wives and children, unwed paternal aunts, and sometimes even unwed paternal uncles. The *za^{c}ila* tends to occupy a compound of dwellings built close together or even attached to one another. The land it owns is farmed collectively; upon the death of the paterfamilias it is divided among the heirs. In agricultural villages, this is the usual organization; in towns and cities the nuclear family is more important.[74]

The description of the Arab joint family matches many of the characteristics generally attributed to the extended family in early Israel. The relatives that make up the *za^{c}ila* compare to the persons mentioned in Leviticus 18. When the archaeological evidence is added to the ethno-archaeological evidence and the biblical descriptions, it becomes very likely that the Israelite *bêt*

ʾāb was often, in fact, an expanded family. Though its members did not live in the same house, they lived in close proximity to each other. Many activities were performed in common; the residents of the multiple family compound formed a unit; they were 'one flesh'.[75]

It is now possible to look afresh at the terminological issue. Though the *bêt ʾāb* can refer to the nuclear family (Judges 14:19), it is usually larger: it includes, in addition to the parents and their children, the spouses of the sons and their offspring, and possibly unmarried relatives, servants, and retainers (Judges 18, cf. 17:5.12; Micah 7:5-6). In most instances, then, the *bêt ʾāb* consisted of a compound of two, three or four houses, in which the brothers 'dwelt together' (Deuteronomy 25:5; Psalm 133:1).[76] The one 'house of the father' consisted of more than one actual house. While it is true that most Israelites lived in small nuclear families, it is equally true that most *bêt ʾābôt* were expanded or joint families. The size of the *bêt ʾāb* will have depended on a number of factors: the fertility of the couple, the health of the children, the presence of male offspring, and last but not least the financial resources of the paterfamilias. The regular clusters of two or three houses, attested for the Early Iron Age, suggest an average of about fifteen persons per *bêt ʾāb*.[77]

A 'house' in the Hebrew terminology is both a social unit and a material structure. To illustrate the two levels of meaning of the term *bayt*, 'house', the story of Micah and the Danites may be quoted (Judges 17-18). The Danites convinced the Levite who was acting as a priest to Micah that it would be preferable for him to be the priest of an entire 'tribe and clan' (*lĕšēbeṭ ûlĕmišpāḥâ*) than of 'the house of one man' (*lĕbêt ʾîš ʾeḥād*, Judges 18:19). The 'house' of one man is clearly a reference to Micah's family. His one 'house' was spread over a number of buildings, though: hence the use of the plural in Judges 18:14 ('Do you know that in these houses there is an ephod with teraphim and a metal-coated image?') for the more usual singular elsewhere (cf. Judges 17:4, according to which the image was 'in the house of Micah'). The relation between the plural and the singular is made explicit in Judges 18:22: Micah's family (i.e., his sons and their families) lived in 'the

[75] For a description of dwelling patterns of family groups on the basis of some biblical texts see Gottwald 1979:291.

[76] Thiel argues (1980:113) that these texts, in their very allusion to the co-residence of the extended family, indicate that the prevailing patterns of dwelling had become based on the nuclear family. They would idealize a past situation. Thiel works on the mistaken assumption, however, that extended family co-residence should occur in undivided dwelling-spaces (1980:110).

[77] Cf. the estimated number of about twelve to fourteen persons per extended family in antiquity, see Burch 1972.

houses that were adjacent to (*ʿîm*, i.e., clustered around) the house of Micah'. Since Micah was a man of wealth, his family (his 'house', Judges 18:25) probably comprised a significant number of males, though they were no match for the six hundred men of the tribe of Dan (Judges 18:26, cf. *v.* 11).

The very designation *bêt ʾāb* implies patriarchy.[78] In this respect, the Israelite family reflects the male-dominated character of the ancient Near Eastern world. Women were almost invisible in the Israelite society. Whereas men might be seen discussing in the city gate or at the local sanctuary, it was considered inappropriate to address a woman in the public areas of the city. Only outside the gate, in the fields or at the well, might women be spoken to.[79] The traditional place of the women was at home and in the family. Here too, however, they did not freely mingle with the men of the household. Especially in the upper classes, women had their own quarters in the house, presumably in the upper storey.[80] Like her Babylonian sister, the Israelite woman was expected to remain indoors most of the time. For many hours of the day her principal form of contact with the outer world was visual; through the lattice of the window she could look at life in the streets below.[81]

Leadership within the family lay with the paterfamilias or, should he be too old, his first-born son, the *bĕkôr*. The latter is referred to as the 'brother' or 'eldest brother' by his own generation, and as the *dôd*, 'senior paternal uncle', by the next. David's family was convened by his 'brother' (1 Samuel 20:29); the leadership of Saul's family lay with his *dôd* (1 Samuel 10:14-15), to be identified with Ner the father of Abner and son of Abiel (1 Samuel 14:50-51). In connection with the term *dôd*, it should be noted that it is not a mere equivalent of *ʾaḥi ʾāb*, 'brother of the father', but a designation of the oldest brother of the father having the status of paterfamilias.[82] It is in this capacity that he can act as president at the sacrificial meal of the family (1 Samuel 10:13-16),[83] as director of family burials (Leviticus 10:4; Amos 6:10), and as redeemer (Leviticus 25:49).[84]

78 On patriarchy in Israel see Mace 1953:65-75.

79 See de Geus 1995:77.

80 de Geus 1995:80.

81 See Judges 5:28; 1 Samuel 19:12; 2 Samuel 6:16; 2 Kings 13:17; Jeremiah 9:20; Joel 2:9.

82 For discussions of the term *dôd* see Pedersen 1926:74; Stamm 1960; Ap-Thomas 1961; Rodd 1967:20; Sanmartín Ascaso 1977.

83 On his return to Gibeah Saul reports to his *dôd*, not his father. The name of Saul's *dôd* is Ner, a brother of his father and a son of Abiel, according to 1 Samuel 14:49-51. It is perhaps due to the leading position of Ner that he is made the father of Kish and hence the grandfather of Saul in 1 Chronicles 8:33; 9:39.

84 The Hebrew term *dôd* is the etymological correspondent of Amorite *dādum*, and the

The Israelite family was patrilineal and patrilocal. Upon her marriage, the woman adopted the family name of her husband (Isaiah 4:1; Tobit 2:8) and—sometimes after an intermediate stage during which she periodically received her husband in the house of her parents[85]—moved in with her in-laws. Male descendants, whether wedded or unwedded, remained in the family household. It was not until the death of the paterfamilias that the *bêt ʾāb* would normally split: the ancestral estate (*naḥălâ*) was divided between the sons, with a preferential portion for the first-born.[86] If the circumstances did not dictate otherwise, it was the first-born, too, who inherited the family compound and succeeded his father as paterfamilias. The division of the *bêt ʾāb* led usually to the creation of new *bêt ʾābôt*, often located in the vicinity. Only when the arable land grew insufficient to feed the interrelated families was there a need for some of them to move and found a new settlement (sometimes referred to as a 'daughter' settlement) where they could cultivate new land. This situation would repeat itself periodically—though not too often, considering the average of between two and three children per family.

There were firm ties between the *bêt ʾāb* and its *naḥălâ*, inheritance, the term used for the parcel of land that the family owned. The inheritance was the 'inheritance of the fathers' (*naḥălat ʾābôt*, 1 Kings 21:3). It could not simply be sold or exchanged, even if its sale would be to the material advantage of the family (1 Kings 21:1-4). An important reason why the family land was inalienable was that fact that the ancestors were buried there.[87] Upon his death, the Israelite was to be buried 'in the grave of his father (and mother)' (Judges 8:32; 2 Samuel 2:32; 17:23; 19:37; 21:14). Continuation of the cult of the ancestors, hardly less important among the Israelites than among their neighbours, was contingent upon the continued possession of the estate. Attachment to the land was thus inspired not only by sentimental motives, but also by considerations of family piety. The land was more than an economic asset; it represented the family, joining the ancestors with their progeny and objectifying the irreducible bonds of kinship and descent upon which the early Israelite society was founded.[88]

Clan and Tribe

According to Joshua 7:14-18, the *bêt ʾāb* is part of a larger social group called the *mišpāḥâ*. Though the latter term is frequently rendered as 'family'

in English, the word 'clan' seems more appropriate.[89] In spite of the occasional parallelism between *bêt ʾāb* and *mišpāḥâ* (Genesis 24:38-41[90]; Exodus 6), the two terms stand for distinct realities.[91] In the social fabric of ancient Israel a central role devolved upon the *mišpāḥâ*. A correct understanding of the term is essential for the reconstruction of the early Israelite society.[92]

In the systematic of Joshua 7:14-18, the *mišpāḥâ* is a collection of related *bêt ʾābôt*. In current anthropological terminology it might be called a 'lineage', i.e., a group of interrelated but autonomous families.[93] The binding element of the lineage group is descent from a common paternal ancestor. If the lineage persists for a sufficient amount of time and thus acquires permanent significance, it becomes a clan. The change in terminology follows from the inevitable doubts surrounding the reality of the kinship claims. The clan in traditional anthropological usage is a unit of putative rather than demonstrable common descent.[94] The Hebrew terminology does not have a one-to-one correspondence with the modern anthropological jargon. By our standards, a large *bêt ʾāb* might be a clan. It would not do, however, to write off the Hebrew terminology for being inconsistent; as a rule, the *bêt ʾāb* designates the joint family, and the *mišpāḥâ* the clan.[95]

The *bêt ʾāb* cannot subsist without the *mišpāḥâ*. Whereas the former is exogamous, the latter tends to be endogamous: most people married outside their immediate family, but inside their clan.[96] Though both biblical and comparative evidence shows that intermarriage did occur between leading families of different clans,[97] clan exogamy remained an exception. Custom encouraged a man to marry a woman from among the girls of his clan (his 'brothers' and his *ʿam*, 'people', Judges 14:3).[98] One of the considerations in favour of endogamy was economic: the marriage money would thus

---

[89] *Pace* Gottwald, whose rejection of the translation 'clan' is based on the idea that the clan is by definition exogamous, which cannot be proven for the *mišpāḥâ* (1979:301, 315). Gottwald concedes, though, that the *mišpāḥâ* was in a variety of ways functionally comparable to the clan (1979:315-318).

[90] See on the terminology used here Westbrook 1991:21-22.

[91] *Pace* Pedersen 1926:47 who states that there is no sharp distinction between the two; though perhaps not sharp, the distinction is real enough.

[92] For literature on the *mišpāḥâ* see, in addition to the studies mentioned in note 60, Rogerson 1978:86-101; Gottwald 1979:257-284; Thiel 1980:101-105; Halpern 1983:242-244; Levine, B. E. 1983; Zobel 1986; Meyers 1988:126-128.

[98] Cf. Neufeld 1944:138.

remain within the clan;[99] so would the paternal inheritance of orphaned women (Numbers 36:1-12).[100] Hardly less important, perhaps, was the social motive. The choice of a marriage partner followed the principle that the woman should not be too far removed from the family of the man, lest she introduce foreign elements. In practice this meant that marriage partners tended to belong to the same social group, in terms of both clan and class.[101] Also geographical proximity played a role: men were likely to marry a girl from their town or neighbourhood; since town or neighbourhood were usually coextensive with the clan, the marriage was likely to be within the clan as well. In the post-exilic era, endogamy acquired religious value. The virtuous Israelite married within his or her tribe (*fylē*) and lineage (*patría*, *sperma tēs patrias*, Judith 8:2; Tobit 1:9; 3:15; 4:12-13; 7:12).

The clan had to defend the interests of its constituent families.[102] The practice of the redemption of land is a case in point. Each family had the usufruct of a *naḥălâ*, a plot of land considered to be its ancestral inheritance. Under normal circumstances, the family lived off its land; in times of penury, though, it could be forced to sell the land. Should this come to pass, it was incumbent upon the nearest kin in the clan to buy it, according to the custom of the *gĕʾullâ*. Because the buyer, known as the 'redeemer' (*gōʾēl*), belonged to the clan, the land remained within the kinship group (Jeremiah 32:6-15). For the same reason, members of the *mišpāḥâ* had both the right and the duty to redeem the land of their 'brothers' that had been sold to outsiders (Leviticus 25:48). The *mišpāḥâ* ultimately bore responsibility for enforcing the right of vengeance (2 Samuel 14:7). The clan was a body with a corporate responsibility in juridical and ethical matters (Leviticus 20:5; 25:10.41; Numbers 27:11). In addition to these functions, the clan periodically engaged in religious community rituals (see 1 Samuel 20:6.29; cf. Exodus 12:21; Zechariah 12:12-14; Esther 9:28).[103]

Perhaps the core element of cohesion in the clan was the common title to the land. Though the ancestral real estate was linked to the *bêt ʾāb*, the outer limit of the right of inheritance was the *mišpāḥâ*. If a man died childless, his land passed to his nearest relative in the *mišpāḥâ* (Numbers 27:8-11). The relationship between the family and its *naḥălâ*, as compared to that of the clan and the *naḥălâ*, is perhaps best expressed by saying that the *bêt ʾāb* had

99 On the significance of the *mōhar* see Burrows 1938.

100 Cf. Gottwald 1979:265-267.

101 Cf. Pedersen 1926:64.

102 Cf. Gottwald's definition (1979:257) of the *mišpāḥâ* as a 'protective association of families' and a 'community of shared interests'.

103 See also Zobel 1986:91-92.

the usufruct of its parcel, whereas the *mišpāḥâ* owned it. What was inherited by the son was the land's possession, not its ownership.[104] As a corporate group, the clan had shared access to certain facilities, such as a communal cistern, a threshing floor, and a winepress, all implements whose possession would be somewhat of a luxury for the individual family. The system has been compared with that of the *musha* in the modern Middle East, based on the communal property of the land which is allotted every two years. The parallel has no probative value, but it is suggestive of the possible customs prevailing in the clan system.[105]

Since the common ties to the land were so important a factor in the *mišpāḥâ*, the clan was necessarily limited in size and mobility. The distance between the land which a family farmed and the place where it lived could not be too great, lest the time spent in traveling exceed the time spent labouring. Since a minimum amount of land is needed per person for subsistence, the *mišpāḥâ* could not grow indefinitely. The estimated figure for the population of a farming village in the later Iron Age is between three hundred and five hundred persons.[106] In the Early Iron Age settlements a figure of between a hundred and two hundred persons seems reasonable.[107] If the entire village were part of the *mišpāḥâ*, as often happened, the ordinary clan would not comprise more than five hundred persons, children, slaves, and retainers included.[108] Members of the clan would normally be tied to its main settlement because of their links with the land. Absence from the settlement was exceptional and usually temporary; for important events one returned to one's town of origin (cf. 1 Samuel 20:29).

One of the differences in connotation between *bêt ʾāb* and *mišpāḥâ* is the diachronic dimension of the former and the synchronic dimension of the latter. The difference is one of nuance, though: the *bêt ʾāb* is also a synchronic reality, just as the *mišpāḥâ* is diachronic reality as well. Yet when the emphasis lies on descent from a famous ancestor the favourite term is *bayt*, 'house, family, dynasty'. Josiah is from the 'house' of David (1 Kings 13:2); one would hardly say that he is from the 'clan' of the Davidides (but cf. Jeremiah 33:24, with a reference to the *mišpāḥâ* of David). Likewise, the descendants of Jonadab ben Rechab constitute 'the house of the Rechabites'

106 Cf. Köhler 1953:56-57.

107 Stager 1985b:23.

108 By this count, the clan of the Abiezrites was exceptionally large, since Gideon is said have commanded three hundred men (Judges 7:8; 8:4), which would mean a total population figure of well over a thousand. The figure of three hundred may be fictive, though, *pace* Thiel 1980:122 n. 44.

(Jeremiah 35:2.3); they are never referred to as a *mišpāḥâ*. The latter term, on the other hand, is used in the post-exilic period for guilds or corporations of craftsmen living in close proximity to each other (1 Chronicles 4:21).[109] Co-residence is essential to the *mišpāḥâ*; it lies at the basis of the extension of the term in post-exilic times.[110]

The role of the *mišpāḥâ* in ancient Israel, especially in the time before and during the early monarchy, was important. It is not true that 'its influence on the daily life of its members is quite limited.'[111] The individual Israelite may not have had his clan foremost in his mind; yet it is through his clan that he found his social, juridical, and religious identity. Certainly in the early period the nation did not play that role. The people with whom the individual identified were not his compatriots; his 'people' (*ʿam*) were primarily the members of his clan.[112] When the woman from Shunem assured Elisha that she was perfectly happy because she lived 'among (her) own people' (*bĕtōk ʿammî*, 2 Kings 4:13), she was not alluding to her nationality but to the fact that she was surrounded by her clan, and thus well-protected.[113] Likewise, when the young girls from Ramah told Saul that their people (*ʿam*) had a sacrificial meal (*zebaḥ*), they were referring to their clan (1 Samuel 9:12). The priest who had to marry a girl 'from his own people' (*mēʿammāyw*) had to marry inside his clan (Leviticus 21:14).[114]

An interesting example of the use of the—by itself very general—term *ʿam* in the sense of 'clan' is found in the story of the seduction of Dinah (Genesis 34). Shechem, the seducer of Dinah, was a son of Hamor, the chief man (*nāśîʾ*) of the 'land' (*ʾereṣ*), that is the territory, of the city of Shechem (Genesis 34:2). At the bidding of his son, Hamor tried to convince Jacob of the advantages of a connubium between the two families. They would become 'one people' (*ʿam ʾeḥād*, Genesis 34:16, 22), that is one clan. The mutual advantages of the fusion of two clans into one is the extension of the pool of marriage partners (Genesis 34:9, 16, 21) and the increase of the common property, consisting in land, livestock and cattle (Genesis 34:10, 23). Indeed, the clan is endogamous—whereas the family is exogamous—and shares the ownership of the territory. The clan of which Hamor is the chief is conterminous with 'the men of the city' (Genesis 34:20), an indication of the actual identity of clan and city. If *ʿam* in this story refers to

110 Cf. Causse 1937:18 'Le lien du sol tend à remplacer le lien du sang.'

111 *Pace* Lemche 1988:96.

112 On the *ʿam* as a consanguineous unit, see Halpern 1981:194-198.

113 Cf. Weinfeld 1977:68. Shunem, a border town in the territory of Issachar (Joshua 19:18), belonged to Israel (cf. 2 Kings 8:1-6).

114 Cf. Elliger 1966:290. Note that the LXX reads ἐκ τοῦ γενους αὐτοῦ.

a clan, it may well do so too in the Book of Ruth. When Ruth identifies with her widowed mother-in-law's 'people' (Ruth 1:15), she does so in response to the injunction to go to the 'house' of her own mother (Ruth 1:8); the contrast between Ruth's *bêt ʾēm* and Naomi's *ʿam* suggests that the latter designates the clan.

In early Israelite society, the principal forms of organization were the joint family and the clan; they constituted the social world of the individual, the milieu in which he moved.[115] The larger unit of the 'tribe'[116] was less significant a factor in the daily life.[117] A comparison of the roles of the clan and the tribe will readily illuminate this point. The clan has its judiciary—not so the tribe. When dissatisfied with the judicial proceedings at the level of the clan, one had to ask the king to intervene (2 Samuel 14:4-11; 15:1-6; 2 Kings 8:1-6) since there was no court of appeal at the level of the tribe. The clan engaged in corporate rituals (1 Samuel 20:6.21)—not so the tribe. All the local sanctuaries mentioned in the Bible or discovered by archaeologists appear to have been clan or town sanctuaries. Though sometimes attracting worshippers from villages in the region, they were never designed as tribal centres of worship. Nor can the existence of amphictyonic sanctuaries, serving the needs of a confederation of tribes and supported by them, be convincingly demonstrated.[118]

A majority of scholars agree that the genealogical model imposed on the tribal system is a fiction; the very variations in the names of the tribes, as well as the uncertainties whether a given group is a tribe or a clan, demonstrate the artificiality of the system. The tribal names are first of all territorial indications: names such as Ephraim, Judah, and Naphtali are originally not personal but geographical.[119] Those tribal names which are derived from anthroponyms, such as Manasseh, might still owe their use as a tribal designation to the fact that they had come to be associated with certain territories. Tribal identity, then, though expressed in terms of consanguinity, is primarily based on territorial co-residence. This means, as a matter of course, that

---

115 Cf. Mendenhall 1976:144: '... peasant societies beyond the immediate kin or village group tend to be nonexistent ....'

116 On the imprecision of the term see Rogerson 1978:86-101.

117 The amount of literature on the Israelite tribes is staggering. Among the more important publications see de Geus 1976; Thiel 1976; Gottwald 1979:245-256; Thiel 1980:105-110; Halpern 1983:109-183; Lemche 1985:274-285; Levin 1995. All these works contain more or less extensive bibliographies on the subject.

118 See, e.g., Thiel 1980:108-109. The failure of the hypothesis of pre-monarchic Israel as a tribal league has been demonstrated by de Geus 1976 and Lemche 1985. See also Engel 1983.

119 Thiel 1976:156-157; Ahlström 1986:37-43.

the tribal system is in no way 'nomadic' or 'semi-nomadic': it could hardly have come into existence before the Israelite settlement.[120]

Summary

The archaeological and textual study of early Israelite society shows that the expanded or joint family and the clan were the most prominent forms of social organization. They usually coincided with the resident groups of the modest Early Iron Age settlements in the central hill country. Except for the one reference to Israel in the Merneptah stela (whose interpretation is admittedly difficult), the only evidence for the existence of effective social structures at the level above the clan (such as the tribe or the nation) is literary. It is widely assumed to be an interpretation of geographical realities in terms of genealogical connections. In correspondence with the sociological picture of early Israel, the predominant forms of the early Israelite religion were presumably those of family religion.

120 See, e.g., Meyers 1983.

CHAPTER NINE

A HIDDEN HERITAGE: THE ISRAELITE CULT OF THE DEAD

Most of the early Israelites were originally uprooted Canaanites. Though their culture gradually developed specifically Israelite traits, the early forms of their architecture and pottery reflect continuity with the older Canaanite period. Also in respect to their religious culture, the Early Iron Age settlers of the hill country were the heirs of the West Semitic religious traditions as reflected in the texts from Ugarit and Samʾal. Since the family religion which is adumbrated in these texts by and large conforms to the Old Babylonian family religion, early Israelite family religion can be regarded as a variant of ancient Semitic family religion in general; which means that it consisted, like family religion elsewhere in the Semitic world, of an ancestor cult and the devotion to a local god. This chapter will explore and analyse the characteristics of the early Israelite ancestor cult.

Patrilineal Inheritance and the Cult of the Ancestors

Although the biblical records have largely been cleansed of references to a cult of the dead, the social framework within which this cult had its function has left its imprint on a multitude of passages. Family, descent and patrilineal inheritance are key notions in many a narrative. Thus the originally unconnected traditions about Abraham and Isaac, Jacob, and Joseph have been joined together by a fictitious genealogy: the one patriarch is presented as the son and heir of the other. The common inheritance is the divine blessing of Abraham, programmatically stated in Genesis 12:2 ('I will make you a great nation, and I will bless you, and make your name great ...'). This blessing is described as though it were a mysterious endowment bringing fortune and success to its possessors.[1] At Abraham's death, God transferred the blessing to Isaac (Genesis 25:11, ברך piʿel), and Isaac in turn transmitted it to Jacob (ברך piʿel, Genesis 27:27-29). Of the twelve sons of Jacob it was Joseph who eventually inherited the patriarchal blessing (Genesis 39:2-6). The blessing, passing from father to son to grandson, constituted the link between the generations.

---

[1] Cf. Scharbert 1973:829-832, 836-838.

In the patriarchal narratives the ancestral blessing fulfils the role that normally devolves upon the ancestral estate. The ancestral estate was the concrete blessing which successive patrilineal generations inherited. It was the 'inheritance of the fathers' (*naḥălat ʾābôt*, 1 Kings 21:3), and as such sacred property. To sell it to someone outside the family, even though he be the king himself, would amount to a religious offence, as the story of Naboth's vineyard exemplifies (1 Kings 21:1-4). One of the customs designed to prevent the alienation of the ancestral estate was the 'levirate marriage'. If a man died without leaving a son, his wife was not allowed to marry outside the family. One of her husband's kinsmen had to take her as his wife, and their first son was reckoned as the son of the dead husband himself. The procedure was designed to keep the land in the family.[2] By the same token, the name of the deceased was to be kept alive (cf. Deuteronomy 25:6). The two goals were intimately related owing to the fact that the dead were buried 'with their fathers' in the tract of land inherited by the family (Judges 8:32; 2 Samuel 2:32; 17:23; 19:37; 21:14; 2 Maccabees 12:39). If the family parted with the land, then, it would abandon its dead.

The intimate link between the land and the ancestors has left traces in many of the Palestinian toponyms. A fair number of both Canaanite and Israelite place names were originally personal names. The sites Jiphthahel (יפתחאל, some eight kilometres east of Nazareth, Joshua 19:12, 14), Jezreel (יזרעאל, Joshua 19:18, modern Zerin), Ibleam (יבלעם, Joshua 17:11-12; Judges 1:27, between Ephraim and the Jezreel valley), Jokneam (יקנעם, in the Jezreel valley), and Jokmeam (יקמעם, 1 Chronicles 6:53[68], in Ephraim) are all anthroponyms in origin.[3] If Judah is included in the survey such place names as Joktheel (יקתאל, Joshua 15:38, near Lachish; perhaps the same town as Jekuthiel, 1 Chronicles 4:18), Jokdeam (יקדעם, Joshua 15:56, in the south-central hill country of Judah) and Jekabzeel (יקבצאל, or Kabzeel, in southern Judah, Nehemiah 11:25) could be added.[4] These places were

---

[2] By marrying the wife of his deceased brother, and providing her with offspring, a man acted contrary to his own interests, for he forfeited the inheritance of his brother to the son born of the levirate union. This may have been a consideration in the Deuteronomic legislation, where it is stipulated that an indispensable requirement for the performance of the levirate duty was that brothers should dwell together on the unpartitioned family estate (Deuteronomy 25:5-10; see Davies, E. W. 1981). A similar concern to that of the Israelite Levirate marriage is reflected in the inheritance texts from Emar, see Arnaud 1987, 16:31-33; Tsukimoto 1991, 23:38. Compare the testamentary text from Nuzi in which the heir is forbidden to give the property *ana* ^{lú}*na-ka$_4$-ri*, see Lacheman 1976, 2:35 [IM 6818:35].

[3] Jiphthahel means 'May-El-open(-the-womb)'; Jezreel, 'May-El-produce-seed'; Ibleam, 'May-the-Ancestor-...'; Jokneam, 'May-the-Ancestor-Create(-Offspring)'; Jokmeam, 'May-the-Ancestor-Establish (scil. the family line)'.

[4] Joktheel and Jokdeam are of uncertain meaning, cf. Borée 1930:99-100. Jekabzeel means 'May-El-gather'.

apparently named after the ancestors whom later inhabitants believed had lived there. Their personal name was connected with their inheritance, presumably because their veneration played a role in the tradition of the population of these towns.

The concern for the survival of the name of the dead was deeply rooted in the mind of the early Israelites. To die without leaving a son was feared as a major misfortune. If there was no male offspring, a man had to take proper measures to ensure that the regular rites of commemoration would nevertheless be performed after his death. An anecdote about Absalom provides an illustration.

> During his lifetime Absalom had taken a pillar and erected it for himself in the King's Valley, for he thought, 'I have no son to invoke my name.' He named the pillar after himself, and it is called Absalom's monument to this day.[5]
>
> 2 Samuel 18:18

The text, referring to a 10th century BC Judahite practice, bears a close resemblance to the funerary rituals known from the Ugaritic and the Sam'alite texts. The parallel with the Duties of a Son in the Aqhat Epic suffices to show that Absalom's pillar was not to take the place of a son; it was the duty of the son to erect his father's pillar, and it is this task which Absalom took upon himself. Once the pillar was erected, the role of the son would be 'to invoke the name' (*lĕhazkîr šēm*) of his father. The analogy with the Sam'alite funerary inscription, in which successors to the king are enjoined to invoke the name of the dead Panammu, is not fortuitous.[6] The practice was known all over the Semitic world: one of the core duties of the living was to 'invoke' their ancestors.

In the texts from Babylonia, Ugarit, Emar, and Sam'al it is clear that the invocation of the dead was not limited to a verbal rite; the invocation was also an invitation to eat and to drink. To judge by the interdiction of offerings to the dead in Deuteronomy 26:14, the custom of offering food to the dead was not unknown in Israel. The Book of Deuteronomy was written by Ephraimite religious scholars during their Judaean exile after the fall of Samaria in 721 BC.[7] Many of the Deuteronomic polemics are addressed

---

[5] *wĕ'Abšālōm lāqaḥ wayyaṣṣeb-lô bĕḥayyāw 'et-maṣṣebet 'ăšer bĕ'ēmeq-hammelek kî 'āmar 'ên-lî bēn ba'ăbûr hazkîr šĕmî wayyiqrā' lammaṣṣebet 'al-šĕmô wayyiqqārē' lāh yad 'Abšālōm 'ad hayyôm hazzeh.* It is difficult to reconcile this information with 2 Samuel 14:27.

[6] For the Sam'alite phraseology see the section on the cult of the ancestors in Chapter Seven. An allusion to the idiom is perhaps to be found in Psalm 49:12, see Smith, M. S. 1993.

[7] For the provenance and ideological setting of the Book of Deuteronomy see Chapter Fourteen.

against native Israelite practices. Sacrifices to the dead were among these. At the payment of the tithe to the temple administration, Israelites had to make a formal statement about the ritual purity of their contribution:

> I have not eaten from it while in mourning, nor have I removed any of it while I was unclean, nor have I given any of it to the dead.[8]
>
> Deuteronomy 26:14

This declaration of innocence derives its sense from the practices it prohibits: feeding the dead with portions taken from the daily food of the living was a familiar custom to the audience of the Deuteronomists. Nor have the Deuteronomists been successful in eradicating the practice entirely. The 2nd century BC injunction to 'place one's bread on the grave of the righteous' (Tobit 4:17) shows that, centuries after the Deuteronomists, the piety toward the dead of some Jews still followed the time-honoured patterns.[9]

The Deuteronomic prohibition of food offerings to the dead is mentioned in one breath with the practice of the funeral repast in which the living participated. The phrase 'I have not eaten from it while in mourning' alludes to the banquet that was celebrated in connection with the burial of the dead. According to Jeremiah 16:6-8 this banquet was part of the normal funeral rites.

> Both great ones and small ones shall die in this land: they shall not be buried, nor shall they lament for them. People will not incise themselves or shave themselves bald for them. And they shall not break bread[10] on the occasion of the mourning,[11] to comfort him for the dead; nor shall they give them the cup of consolation to drink for his father or his mother. You shall not enter the bar to sit with them to eat and to drink.[12]

Some of these practices are denounced in the Book of Deuteronomy as incompatible with the privileged position of the Israelites as 'children to Yahweh' (Deuteronomy 14:1-2). The reason for their prohibition must be sought in the purpose of the rites: they were not merely expressions of grief,

[8] *lō᾽-᾽ākaltî bĕ᾽ōnî mimmennû wĕlō᾽-bi῾artî mimmennû bĕṭāmē᾽ wĕlō᾽-nātattî mimmennû lĕmēt.*

[9] The saying is to be compared with Syriac Aḥiqar (no. 10) which reads 'My son, pour out your wine on the graves of the righteous.' For a study of the saying see Greenfield 1990:199-201. See also Jesus Sirach 30:18 'Good things poured out upon a mouth that is closed are like offerings of food placed upon a grave.'

[10] Reading *leḥem* instead of MT *lāhem*, cf. LXX ἄρτος.

[11] Cf. the reference to the 'bread of mourning' (*leḥem ᾽ônîm*) in Hosea 9:4 (and Ezekiel 24:17.22, according to the emended text) which renders those who touch and eat it impure.

[12] Jeremiah 16 [6] *ûmētû gĕdōlîm ûqĕṭannîm bā᾽āreṣ hazzō᾽t lō᾽ yiqqābērû wĕlō᾽-yispĕdû lāhem wĕlō᾽ yitgōdad wĕlō᾽ yiqqārēaḥ lāhem* [7] *wĕlō᾽-yipărsû leḥem ῾al-᾽ēbel lĕnaḥămô ᾽al-mēt wĕlō᾽ yašqû ᾽ôtām kôs tanḥûmîm ῾al-᾽ābîw wĕ῾al-᾽immô* [8] *ûbêt-mišteh lō᾽-tābô᾽ lāšebet ᾽ittām* (MT *᾽ôtām*) *le᾽ĕkōl wĕlištôt.*

but attempts to bring about a ritual communion between the living and the dead. The living tried to reinvigorate the dead by infusing them with the substances that symbolized their own life: their hair, their blood, and their food. Such rites of *Selbstminderung* were ultimately meant to transfer a part of the vitality of the living to the deceased.[13]

The declaration of innocence prescribed by Deuteronomy 26:14, then, connects the offerings to the dead with the funeral meal of the living. Sacrificial rites in which the living and the dead conjointly participated are also alluded to in Psalm 16. In accordance with their preternatural state, the dead are referred to in this psalm as the 'holy ones' (*qĕdôšîm*) in the earth, that is, the nether world.[14]

> I have said to Yahweh: You are my Lord! I have nothing of value beside you.
> As for the holy ones who are in the underworld, the mighty ones ..... (...)
> I shall not bring their libations of blood, nor take their names on my lips.
> Yahweh is my allotted portion and my cup; you hold my lot.
> The lines have fallen for me in pleasant places, yea, my inheritance pleases me.[15]

The poet reacts against rituals for the dead in which libations were brought and the names of the dead were invoked. Whether blood was the actual substance of such libations may be doubted. Though the allusion is perhaps to acts of self-mutilation to make one's blood drip upon the grave, it is quite as likely that the substance of the libation is merely compared to blood. The mention of the 'portion' (*mĕnāt*) and 'cup' (*kôs*) of the poet suggests that he is thinking of a ritual in which the living enjoyed food (meat) and beverage (wine) as well. These are rites of communion with the dead by means of mutual ingestion.

A careful analysis of the relevant passage of Psalm 16 reveals the ideology behind the communion meals with the dead. In rather insistent manner, the poet uses the language ordinarily associated with the family inheritance. He speaks about his 'inheritance' (*naḥălâ*), his 'portion' (*ḥēleq*), and his 'lot' (*gôrāl*); the 'lines' (*ḥăbālîm*) by which the limits of the family land were established have fallen for him 'in pleasant places' (*bannĕʿimîm*). The

---

[13] *Pace* Spronk 1986:246-247, who emphasizes that the rites were an identification with the dead; their prohibition would be due to their association with the cult of Baal.

[14] For ארץ in the sense of 'underworld' see Tsumura 1988:260. Note also the Ugaritic expression *rpỉ ảrṣ*, 'the Rephaim of the underworld', in *KTU* 1.15 iii 3, 14.

[15] Psalm 16 2 *ʾāmart* (read: *ʾāmartî*) *laYHWH ʾădōnāy ʾāttâ ṭôbātî bal-ʿālêkā* 3 *liqĕdôšîm ʾăšer-bāʾāreṣ hēmmâ wĕʾaddîrê* .... (text too corrupt for translation) 4 ... *bal ʾassîk niskêhem middām ûbal-ʾeśśāʾ ʾet-šĕmôtām ʿal-śĕpātāy* 5 *YHWH mĕnāt-ḥelqî wĕkôsî ʾattâ tômîk gôrālî* 6 *ḥăbālîm nāpĕlû-lî bannĕʿimîm ʾap-naḥălāt* (read *naḥălātî*) *šāpĕrâ ʿālay*.

terminology of inheritance and land allotment is used here metaphorically, however. The inheritance the poet claims to possess is spiritual: it is Yahweh himself. The man who is speaking here is a temple servant; as a priest he had 'no portion or inheritance with Israel'; Yahweh was his portion and inheritance (Deuteronomy 18:1-2; Numbers 18:20; Ezekiel 44:28-30)—which means that he lived off the income of the temple cult.

The use of the terminology of inheritance in combination with a polemic against the ancestor cult confirms the intimate link between the possession of the family inheritance and the cult of the family dead. By their sepulture in the family land, it was clear that the ancestors owned that land. Their offspring had received it from them; in a sense, the children lived off their forebears. By forsaking the cult of the ancestors (i.e., by not offering the libations due to the dead, and by failing to invoke their names), the living would lose the moral right to their land. Family estate, ancestral graves, and ancestor cult were closely intertwined realities; they could not very well be disentangled. For the layman whose portion and inheritance consisted of a solid piece of land, the cult of dead kin was one of the main duties of family religion; it was his way of asserting his title to the land. For the welfare of his family, he would be well-advised not to neglect the cult of his ancestors.

The Periodicity of the Offerings to the Dead

Having established the existence of an Israelite ancestor cult, we may proceed to investigate the periodicity of the rites in honour of the dead. A study of the Babylonian material yields evidence of a monthly ritual during the time of the moon's invisibility (the so-called interlunium). On this occasion, families came together for a festive banquet which included offerings to the ancestors. Once a year, moreover, the Babylonians celebrated a kind of All Souls' Day. Presumably owing to the hazards of our documentation, the texts from Ugarit and Sam^{3}al contain no reference from which a comparable calendar might be reconstructed. The sources on early Israelite religion are both more diverse and profuse than those from Ugarit and Sam^{3}al; in spite of their theological bias, they may contain references or allusions to the calendrical setting of the sacrificial meals for, and in communion with, the dead.

One of the most promising avenues of investigation concerning the calendrical setting of Israelite family rituals is the study of 1 Samuel 20. The chapter contains an episode of the story of Saul and David, situated in the time when David was still one of Saul's courtiers. The narrator explains that David, knowing the hostile intentions of his master, wanted to stay out of Saul's sight. As the *ḥodeš* approached, however, he was expected to join in

the banquet (*leḥem*) for the royal family (1 Samuel 20:5, 18, 24-26).[16] The banquet had a ritual character: the table arrangement was fixed (*v.* 25) and participants were to be ritually clean (*v.* 26). David's presence was tacitly taken for granted, which underscores the conventional nature of the ceremony. At the end of the month, so this passage suggests, it was common to have the family come together for a meal in which domestic servants were expected to join as well.

To justify his absence at the table of his master and father-in-law, David pretended that he had family obligations in Bethlehem, his home town. His excuse shows that at least once a year the monthly family banquet required the presence of all family members who could not attend the gatherings on a regular basis. The special occasion was referred to as the 'annual (or periodical) sacrificial meal for the entire clan' (*zebaḥ hayyāmîm lĕkol-hammišpāḥâ*, 1 Samuel 20:6). Jonathan had to tell his father that David had been summoned by his brother to come home for this event (*v.* 29). The coincidence of the *ḥodeš* and the *zebaḥ hayyāmîm* does not mean that the *ḥodeš* itself was an annual event.[17] It merely shows that the date of the annual clan meal was variable. It was fixed from year to year, in such a way as to coincide with one of the *ḥodeš* periods.

Before we discuss the nature of the 'sacrificial meal for the entire clan' and its connection with the ancestor cult, the calendrical significance of the word *ḥodeš* needs to be established. It is generally held that the word refers to the new moon or, more precisely, to 'the day on which the lunar crescent becomes visible again' (*HAL*[3] 282-283); since this moment marked the beginning of the month, *ḥodeš* came to mean 'month' by extension. Neither meaning, however, fits the use of *ḥodeš* in 1 Samuel 20. According to *v.* 5 David intended to hide himself during the *ḥodeš*, due to begin the next day, 'till the third evening' (cf. *v.* 12). Though *šĕlišît* is often regarded as a textual corruption,[18] the details of our story suggest that the feast which was celebrated on the occasion of the *ḥodeš* continued at least a second and a third day.[19] Verse 27 speaks of 'the second day of the *ḥodeš*' [20] and *vv.* 19 and 20 refer to 'the third day (of the *ḥodeš*)'.[21] If *ḥodeš* should have its

[16] The proposed emendation of *yāšōb-ʾēšēb* into *yāšōb lōʾ-ʾēšēb* in *v.* 5 (Driver 1913[2]:161, following Wellhausen 1871, cf. LXX) is based on the assumption that the *ḥodeš* lasted but one day.

[17] *Pace* Caquot 1960:11-12.

[18] See, e.g., Driver 1913[2]:161-162, 164; Stoebe 1973:376.

[19] McCarter 1980:341.

[20] *Pace* Stoebe 1973:169, who admits that *haḥodeš haššēnî* is grammatically correct, but proposes to read *haḥodeš bayyôm haššēnî*.

[21] See McCarter 1980:337-338.

generally assumed meanings, the author would have shifted from the meaning 'new moon' to the meaning 'month' within the span of a few verses. Such a sudden shift is quite unlikely.

In 1 Samuel 20, *ḥodeš* is best interpreted as the Hebrew equivalent of the Akkadian *bubbulum*, the interlunium.[22] Several biblical passages concerning the *ḥodeš* in the First Temple period support this solution. They show that the days of the *ḥodeš*, like those of the *bubbulum* in Babylonia, were considered unpropitious for business activities. According to the prophet Hosea, accumulated riches could be devoured by the *ḥodeš* (Hosea 5:7). Originally for fear of unlucky consequences, commercial transactions were interrupted during this period (Amos 8:5). Similar to the *bubbulum* days, the *ḥodeš* was a period of increased ritual activity. People might benefit from the interruption of their daily work by paying a visit to a religious specialist such as Elisha, as illustrated by the remark of the husband of the woman from Shunem ('Why are you going to (the man of God) today? It is neither *ḥodeš* nor sabbath,' 2 Kings 4:23). The few days off were frequently spent in religious feasts (Isaiah 1:13; Hosea 2:13).

Unlike the Babylonian *bubbulum*, the Israelite *ḥodeš* is generally thought to fall at the beginning of the month, not at its end. The grounds for this common assumption are not very solid. In fact, both the early computation of days, from morning to morning, and the transfer of the Maṣṣôt-Festival from the 15th (Leviticus 23:6) to the 14th of the first month (Exodus 12:8), suggest that the Israelites used to follow the Egyptian custom of counting the months beginning from the disappearance of the last quarter of the moon.[23] In the early calendrical system, the interlunium was considered the official beginning of the month. The habit of counting the month beginning from the appearance of the new moon is a later development. The Akkadian expression *rēš warḫim* shows that the Babylonians also associated the 'beginning of the month' with the interlunium.[24] The story of 1 Samuel 20 would indeed make better sense if *ḥodeš* referred to the interlunium rather than to the first quarter of the moon.

In order to compare the rites of the Israelite *ḥodeš* with those of the Mesopotamian *bubbulum*, descriptive data dealing with the Israelite side of the matter are needed. The only passage alluding to festivities that are explicitly said to occur during the *ḥodeš* is 1 Samuel 20. The details given in the text concerning the 'sacrificial meal for the entire clan' are few, however. What we learn from the passage is that there was a communal meal at which

meat was eaten (the *zebaḥ*); that the 'entire clan' (*kol hammišpāḥâ*) had to be present; that it was celebrated in Bethlehem, the home town of David, presumably because this was the place where the clan had its inherited land in which the ancestors lay buried; and that David had been summoned by his brother, even though his father was still alive (1 Samuel 20:29; 22:3), which suggests that one of David's brothers—presumably the eldest—acted as the paterfamilias of his clan. On the basis of these data, it has been suggested that the *ḥodeš* clan sacrifice was in fact 'the occasion on which genealogical accounts were employed to invoke the names of dead ancestors.'[25] The hypothesis certainly fits the pattern of the ancestor cult elsewhere in the ancient Near East.

To illuminate the nature of the clan festivities mentioned in 1 Samuel 20, the data there obtained may be compared to the account of Saul's search through the hill country of Benjamin, his meeting with the seer at Ramah, and his return home (1 Samuel 9:1-10:16).[26] Among the series of narratives sometimes referred to as the 'Saul Cycle' or the 'Samuel-Saul Complex',[27] the story of Saul's search for the asses of Kish represents the earliest layer in the tradition.[28] If the record does not date from Saul's own lifetime,[29] its ultimate origins go back to at least the 9th or 10th century BC.[30] The outlook of the Saul Cycle betrays distinct affinity with the Ephraimite ideology of leadership: Saul is pictured as a ruler by divine designation (10:1) who proves himself worthy of his calling by his acts of military prowess (10:27-11:15). Thus Saul continued the tradition of the charismatic 'judges', and foreshadowed such figures as Jeroboam and Jehu. A Benjaminite himself, he is presented in the light of a Northern ideology.[31] The Ephraimite origin of the narrative, in addition to its antiquity, justifies its use as a source of information about early religious practice in the central hill country.

Saul is presented as the son of a landed aristocrat (a *gibbôr ḥayil*) from

25 Malamat 1968:173 n. 29; cf. Malamat 1989:105.

26 For a survey of the relevant literature see Campbell, A. F. 1986:18-19 n. 2. My interpretation of the passage assumes that Saul's meeting with the seer at Ramah, his participation in the sacrificial meal, and the curious events on his way home belong to the original strand of the narrative.

27 See Ishida 1977:27-28.

28 So already Wellhausen 1889[2]:245; 1905[6]:247-251.

29 So Ishida 1977:43 'It would seem that the fundamental unity of the narrative and its ultimate origin from the time of Saul cannot be contested.'

30 Schmidt, L. 1970:95-97 (the original narrative—9:1-8 and 10:2-4—was further elaborated around 850 BC); McCarter 1980:27; Campbell, A. F. 1986:18-21 (old narrative with 9th century prophetic redaction); Gordon, R. P. 1986:29.

31 McCarter 1980:27; Campbell, A. F. 1986 argues that the story is part of an early document, extending from 1 Samuel 1:1 to 2 Kings 10:28, and deriving from Ephraimite prophetic circles toward the end of the ninth century BC.

the territory of Benjamin (9:1-2). As he set out on a search for the stray asses of his father, he crossed over into the hill country of Ephraim, passed through the land of Shalishah, the land of Shaalim (i.e., Shual, see 13:17), the land of Imnah (1 Chronicles 7:30;[32] not 'the land of Benjamin'!), and the land of Zuph (9:3-5).[33] Here he made a halt at Ramah (cf. 7:17), also known as Ramathaim of the Zuphites (1:1), to consult a local seer (9:6-10) identified as Samuel.[34] Saul's stay at Ramah coincided with the time of the sacrificial banquet (*zebaḥ*) celebrated at the local shrine (*babbāmâ*; 9:12).[35] The population was not present in its entirety: only the men, about thirty in number, assisted at the meal (9:22). Samuel acted as the master of ceremonies; he 'blessed' the sacrifice prior to its consumption, and gave directions to the cook as to which portion was to be given to each of the participants (9:13.22-24). What was being celebrated was apparently the regular sacrificial meal for the 'people' (*ʿam*), i.e., the clan;[36] participation was mandatory for all its male members (cf. 20:6, 29).

The calendrical setting of the clan sacrifice of the Zuphites is not explicit in the text; it must be deduced from the context. It was a moment, apparently, of heightened ritual activity. Within the span of two days all sorts of cultic events took place. On the morrow of the clan banquet at Ramah, Saul met two men by the 'tomb of Rachel' at Zelzah (10:2),[37] three others by the 'oak of Tabor', going up to God at Bethel (10:3), and finally a band of prophets at Gibeath-elohim (10:5).[38] Back in his home town, Saul went directly to the local sanctuary (*bāmâ*), where the senior brother of his father enquired after the reason for his belated arrival (10:14-16). It is striking that most commentators of these chapters make no attempt to explain this—at first sight unlikely—coincidence of local religious events.[39] It is here suggested that they all are connected with the period in which the story is set, namely the interlunium.[40]

---

[32] Curtis & Madsen 1910:155; Edelman 1988:49.53-54.

[33] For a reconstruction of the itinerary of Saul see Edelman 1988.

[34] The identification is often regarded as the work of a later redactor, Schmidt, L. 1970:71-73; Campbell, A. F. 1986:19.

[35] For an interpretation of *bāmâ* as 'sanctuary' see Barrick 1975; 1980.

[36] For the use of *ʿam* with the meaning 'clan' see Halpern 1981:194-198 and the discussion in the preceding chapter. There is no discrepancy between the reference to the participants in the sacrificial meal as the people (*ʿam*, *v.* 12) and as the 'invited guests' (*haqqĕrūʾîm*, *v.* 13), *pace* Campbell, A. F. 1986:19.

[37] Tsevat 1962:112 reads צלח instead of צלצח on the basis of the Septuagint (or its *Vorlage*).

[38] Gibeath-elohim seems to be identical with Geba, cf. 1 Samuel 13:3. It must be identified with Gibeon, see the section on 'Saul's Gibeonite Origins' in Chapter Eleven.

[39] When an explanation is ventured, it is usually suggested that the events are connected with the new year festival in autumn, see de Moor 1972.1:12-14.

[40] It is not excluded that the description of the encounter with the band of ecstatic prophets (*vv.* 5-6, 10-13) is a later addition incorporating one of the aetiologies of the saying

Excepting the sacrificial ceremony at Gilgal (which is mentioned in a secondary layer of the narrative), the ritual activities described or referred to in this passage are connected either with different local *bāmôt* or with ancestral graves. Alongside the description of a sacrificial banquet presided over by Samuel in the *bāmâ* of Ramah, there are references to *bāmôt* ceremonies in Gibeath-elohim and in the home town of Saul (the two being either identical or in close proximity to each other).[41] Also the journey of the three men to God at Bethel implies a ritual gathering at the local sanctuary. Two burial spots are mentioned: the 'tomb of Rachel' (10:2; cf. Genesis 35:19-20)[42] and the 'Oak (*ʾēlôn*) of Tabor' (10:3) near Bethel. The latter is most likely identical with the 'Oak (*ʾallôn*) of Weeping' (Genesis 35:8) or, as it is called in *Jubilees* 32:30 and the *Targum Pseudo-Jonathan*, the 'Oak of Weeping for Deborah', near Bethel. Here, according to an ancient tradition, Deborah, Rebekah's nurse, was buried; possibly the word *tābôr* in 10:3 is a corruption of the name *dĕbôrâ*.[43] In later times, these graves were centres of popular devotion.[44] At the time reflected in the Saul narrative they seem to have been so already. In any event it is hardly likely that they are mentioned as mere topographical indications.

The author of our passage, then, intimates that Saul's meeting with the seer at Ramah took place at the beginning of a period, covering at least two days, of increased ritual activity combining sacrificial meals at local *bāmôt* with pilgrimages to ancestral graves. Since the text does not mention the period in which the events are situated, its identification rests on a few implicit clues. The comparative evidence from Mesopotamia situates the combination of mortuary rites with a communal repast in the days of the interlunium. We have seen that the *ḥodeš*, the Israelite counterpart of the Babylonian *bubbulum*, lasted up to three days. The length of that period would seem to agree with the data furnished by 1 Samuel 9-10. The absence of an explanation of the background of the cultic activities suggests, moreover, that the practices described were quite familiar to the readers, thus requiring no further comment. Such considerations qualify the interlunium as their most likely setting.

---

about Saul and the prophets (cf. Schmidt, L. 1970:111-117). Saul's return to his home town (*w*. 14-16) is an integral part of the narrative, however, *pace* Campbell, A. F. 1986:20.

41 On the relation between Gibeah of Saul and Gibeath-elohim see Chapter Eleven.

42 Tsevat 1962 makes a case for the identification of the site of the grave as Kiriath-jearim (also known as Baalah).

43 Bruno 1923:57 cites the reference to Tabor, Shittim, and Gilgal in Hosea 5:1 and suggests that these three places were Benjaminite sanctuaries.

44 See Jeremias, Joachim 1958:75-76, 119.

The assumption that Saul's anointment coincided with the beginning of the *ḥodeš* is corroborated by the otherwise unexpected move of the protagonist on his return. Instead of going home and reporting to his father, he first visited the local *bāmâ* where he was interrogated by his uncle. Surprised by what they find to be a strange home-coming, various commentators have proposed to read ויבא הביתה instead of ויבא הבמה in 1 Samuel 10:13.[45] Also the term *dôd* (usually translated as 'uncle') has been considered a textual corruption; some of those who maintain the Masoretic text urge that the word refers here to a Philistine official.[46] In the light of what we know about the family rituals held at the end of the month in other places of the ancient Near East, the Masoretic text makes perfect sense, however, without our having to posit a meaning of *dôd* other than the usual one. Saul hastened to the *bāmâ* to join in the family banquet presided over by his *dôd*, i.e., the senior brother of his father. The *dôd* was no mere uncle, but the brother of the father that acted as paterfamilias; he had social as well as religious duties (cf. Leviticus 10:4; 25:49; Amos 6:10).[47] In his capacity as paterfamilias, the *dôd* was responsible for the organization of the sacrificial meal during the *ḥodeš*; it was only natural, therefore, that Saul reported first to him and not to his father. This interpretation explains, too, why Saul was so anxious to put an end to his—until then unsuccessful—search for the she-asses of his father: he wanted to go home (1 Samuel 9:5) because he was expected to be back in time for the family banquet. Being one day late, he apologized to his *dôd*.

The interpretation of the clan sacrifice at the *bāmâ* as a ritual communion with the ancestors calls for a reassessment of a hypothesis championed by Albright and his students since the middle of the 1950s.[48] They took the view that the Israelite *bāmôt* were centres of hero worship. Though now generally abandoned,[49] the idea does contain elements of truth. The term 'hero worship', with its allusion to the beliefs and customs of the ancient Greeks, is infelicitous; family ancestors are not heroes in the generally accepted sense of the word.[50] Albright furthermore marred his case by building it largely on passages which he was forced to emend before he could use

50 Albright's parallel with Greece was intentional, see Albright 1957:253-254.

them. Nevertheless, the idea according to which local sanctuaries were used for purposes of the ancestor cult (in addition to the worship of local gods) is quite plausible. In the Sam'alite inscription of Panammu, the soul of Panammu is expected to feed on the sacrifices in the company of Hadad.[51] The Tell Fekherye inscription implies that the offerings to the dead were presented first to the family god.[52] According to the Ugaritic catalogue of the Duties of a Son, moreover, the ancestor symbol was to be erected 'in the sanctuary' (*bqdš*). Such data suggest that the cult of the ancestors could be actually performed in a local shrine.

A combination of the data from 1 Samuel 20 with those from 1 Samuel 9-10 provides a glimpse into the social and religious significance of the family gatherings at the end of the month, between the time of the moon's disappearance and the observation of the new moon. The available material points to a remarkable similarity between Babylonia and Israel in respect to the periodicity of the sacrifices for the ancestors, although there are also differences. Unlike the Babylonian *kispum* ritual, the mortuary rites hinted at in the First Book of Samuel take place outside the family home, viz. at graves and in local sanctuaries. The latter practice, especially, unknown in Mesopotamia except in connection with deified kings, may reflect specifically West Semitic customs, as it is also alluded to in texts from Ugarit, Sam'al, and Tell Fekherye.

The Teraphim

The use of the 'high place' (to maintain for a moment the conventional rendering of *bāmâ*) as the location for sacrifices to the ancestors implies that the dead were somehow present in the *bāmâ*. Two possibilities are conceivable: either the *bāmâ* served as, or found itself close to, a cemetery; or the *bāmâ* contained symbols of the dead.

The possibility of the *bāmâ* being near, or even coinciding with, the ancestral tomb finds support in the Panammu inscription, which was written on a statue of Hadad placed next to Panammu's grave. By force of analogy, one might assume that the *bāmâ*, being a sanctuary where sacrifices to the dead were brought, was normally near the cemetery. No archaeological evidence has been found to confirm this supposition. The second possibility, according to which the *bāmâ* harboured symbols of the ancestors, finds support in the Ugaritic texts. According to the Aqhat Epic, a paterfamilas had to erect (*nṣb*) a symbol (*ztr*) of the—dead—kinsmen (*'m*) of his family 'in the

---

52 See Chapter Seven, n. 70.

sanctuary' (*bqdš*, *KTU* 1.17 i 26 and parallels). Considering the parallelism in the bicolon, the location also applies to 'the stela of his deified ancestor' (*skn ʾilʾibh*).[53] There is evidence, both archaeological and textual, to the effect that the installation of ancestor images in the local sanctuary was an Israelite practice as well.

The archaeological evidence is admittedly slim. The so-called Stelae temple at Hazor might be cited as one of the rare examples of a sanctuary containing ancestor symbols. The schematic statues found *in situ* have been interpreted as ancestor images.[54] They are quite small, measuring about 20-25 cm in height; in some cases the lower portion was carved as a base so as to suggest a seated posture. In corroboration of their interpretation as ancestor symbols one could refer to the somewhat similar anthropoid busts, found in ancient Egyptian houses, which evidently had a function in the cult of the dead.[55] The Israelite images also resemble the pre-Islamic Arabian ancestor statues; they are about the same size, schematic in form, and usually in a seated position.[56] At Gozan (Tell Halaf) in East Syria graves were found between cult places; both graves and cult places were simultaneously used. The Iron Age city also harboured a sanctuary with a mixed assortment of images, some of humans and some of gods.[57]

The hypothesized presence of ancestor statues in the local sanctuaries of central Palestine finds textual support in a study of the teraphim (*tĕrāpîm*). Based on parallels in cuneiform texts from Nuzi, the teraphim are usually interpreted as household idols, similar to the Roman penates. However, the teraphim are not found in a domestic context only. In the local temple (*bêt ʾelōhîm*) of Micah in the hill country of Ephraim, there was an ephod with teraphim beside a precious silver-coated statue of a god (Judges 17:5). Though Micah's sanctuary was in origin a family chapel (Judges 18:19), the presence of a full-fledged divine image and the services of a professional priest conferred regional importance upon the shrine. According to Hosea 3:4, an ephod and teraphim belonged to the normal equipment of an Israelite cult place. As will be demonstrated below, these teraphim were ancestor statuettes.[58]

The word *tĕrāpîm*—invariably in the plural[59]—is found fifteen times in

58 On the teraphim see van der Toorn & Lewis 1995 (with references to earlier literature).
59 Note the occurrence of the plural marker in 1 Samuel 19:13, 16, where clearly a single object is meant. Johnson, A. R. 1962^2:32 n. 4 suggests that some forms of the plural may be

the Bible.[60] Analysis of the relevant texts shows that the word refers to a concrete object. The *tĕrāpîm* can be 'made' (עשׂה, Judges 17:5) and 'removed' (בער, pi^{c}el; 2 Kings 23:24). In Genesis 31:19, 30-35, Rachel is reported to have 'stolen' (גנב, Genesis 31:19) her father's *tĕrāpîm*. The story of Michal's substitution of the teraphim for her sick husband (1 Samuel 19:11-17) strengthens the conclusion that the *tĕrāpîm* was a material object. The narrator wished his audience to understand that the *tĕrāpîm* found itself upon the bed, and was mistaken for the body of David.[61] The interpretation of the *tĕrāpîm* as a cultic mask in this text is unconvincing. Were the *tĕrāpîm* merely a representation of the human head, it would be redundant to use the term *měra^{ɔ}ăšôtāyw*, the suffix of which refers back to *tĕrāpîm* (1 Samuel 19:13).[62]

The object which Michal used to deceive the enemies of David must have been roughly anthropomorphic as regards the upper part. The likeness to the human figure was nevertheless imperfect, since Michal had to take the precaution of putting the *kĕbîr hā^{c}izzîm* over the head of the figurine. The Hebrew expression refers most likely to a net of goat's hair (*HAL*^{3} 437), while the definite article indicates that it was an object normally to be found in an Israelite household. The suggestion that it served as mosquito netting is attractive.[63] We should picture it hanging over the head of the *tĕrāpîm* as a more or less transparent curtain. The rest of the *tĕrāpîm* was covered by a *beged* (mantle, piece of cloth). Both the *kĕbîr hā^{c}izzîm* and the *beged* were to prevent Saul's messengers from recognizing the *tĕrāpîm* for what it was by fencing it off from direct visual contact. The substitute would naturally stand the best chances of successfully passing for a human figure if it were life-size.[64] We cannot be sure, however, that such was the case. From Genesis 31:34 one gains the impression that the object was relatively small (30-35 cm), since it could be hidden in a saddlebag (*kar*). Michal's teraphim may have been of a similar size. In the dimness of the bedroom, Saul's messengers

---

occurrences of the singular with mimation.

60 Genesis 31:19.34.35; Judges 17:5; 18:14.17.18.20; 1 Samuel 15:23; 19:13.16; 2 Kings 23:24; Ezekiel 21:26[21]; Hosea 3:4; Zechariah 10:2.

61 The author's use of *^{ɔ}el* (*vv.* 13, 16) cannot be used as a decisive argument against the assumed presence of the *tĕrāpîm* on David's bed. Although the preposition *^{c}al* is more common in connection with *miṭṭâ*, 'bed', Genesis 49:33 and 1 Samuel 28:23 show that *^{ɔ}el* is used when something is placed upon the bed. Also, should the object have stood *beside* the bed, the messengers would have had no cause for wonder. Michal's stratagem was easily detectable, but she did not aim at a long-lasting delusion. She put the *tĕrāpîm* onto the bed to create temporarily the impression that her husband was indeed bed-ridden.

62 Cf. Hoffmann & Gressmann 1922:100.

63 Hoffmann & Gressmann 1922:100.

64 So Gordon, C. H. 1962.

looking from a distance for fear of contagion, a half-concealed statuette stood a fair chance of being taken for the shape of a human patient.

The data concerning the external form of the *tĕrāpîm* suggest that it refers to a statuette, which seems to be confirmed by the translations of the term in the Targumim (*ṣlm* or *ṣlmn*ᵓ) and the Vulgate (normally *idola*, sometimes *statua* or *simulacra*). Analysis of the textual evidence also gives a clue to its place within the house. Judging from the stories of Rachel's theft and Michal's ruse, the location of most *tĕrāpîm* was not conspicuous. Laban took some time to discover the disappearance of his teraphim; the transfer of the *tĕrāpîm* in the home of David was not noticed by Saul's messengers. This unawareness of any change could be explained by assuming that the *tĕrāpîm* normally stood inside the *ḥeder*, the dim bedroom at the back of the house.

There are a few passages in the Hebrew Bible which hint at a secondary function of the bedroom as sanctum of the household. According to Isaiah 26:20 the Israelites were to go to their *ḥădārîm* for prayer.[65] The choice of this place is natural, insofar as it guaranteed a certain amount of privacy. Also in the Ugaritic Epic of Kirtu, the protagonist withdraws to the *ḥdr* when he wants to pour out his heart to his god.[66] The relative seclusion of the bedroom made it a privileged place for ritual activities, and, one may add, for the installation of religious images. In Isaiah 57:8 it is said that some people had placed their *zikkārôn* 'behind the door and the doorpost'. Considering the prominence of the bed (*miškāb*) in the rest of the passage, we have to think of the entry to the bedroom. In the context of Isaiah 57:8, the *zikkārôn* probably refers to a 'memorial' for the dead.[67]

Having established that the domestic teraphim were statuettes normally placed near the entrance of the bedroom, we must still ascertain whether they represented gods or humans. The answer would seem simple enough. Since Laban referred to the stolen *tĕrāpîm* as his 'gods' (*ᵓelōhāy*, Genesis 31:30), the figurines apparently represented divine beings.[68] The simplicity of the answer is deceptive however. In biblical Hebrew the term 'god' is not applied exclusively to super-human beings who, according to the beliefs of a certain age, direct the course of the world. Deceased humans could be qualified as 'gods' as well. As the witch of Endor had summoned the spirit of Samuel to appear, she saw 'a god coming out of the earth'.[69] This 'god'

[68] So, e.g., Draffkorn(-Kilmer) 1957:222-223.

[69] 1 Samuel 28:13 *ᵓelōhîm rāᵓîtî ʿōlîm mīn-hāᵓāreṣ*.

was none other than the ghost of Samuel (1 Samuel 28:14). Another occurrence of the word 'gods' for ancestors is found in Isaiah 8:19, according to which the Judahites claimed that it was only natural for a people to consult 'its gods'; in a context of necromancy, these 'gods' must be identified with the dead, as the parallel expression ('the dead on behalf of the living') shows.[70] The isolated qualification of the teraphim as 'gods' does not necessarily imply therefore that the teraphim represented gods such as Baal and Astarte.

To decide between the alternative gods or ancestors it is necessary to consider the comparative evidence from the ancient Near East, on the one hand, and the functions ascribed to the teraphim, on the other. Some of the comparative data have already been passed in review in earlier chapters of this study. The most illuminating parallel to the biblical teraphim are the *ilānu* mentioned in the Nuzi texts (*ca.* 1400 BC). Ever since 1926, when some of the first Nuzi texts were published,[71] they have been called to the rescue to illuminate the significance of the teraphim.[72] On the strength of the parallel with the Nuzi *ilānu* it was concluded that the *tĕrāpîm* were household gods.[73] One fact which has largely been ignored, though, is that the Nuzi tablets do not only mention the 'gods' (*ilānu*), but also the *eṭemmū* (spirits of the dead) and the cultic lamp (^{d}z á l a g - m e š). Leaving aside the cultic lamp,[74] we note that in three texts the *eṭemmū* are mentioned alongside the *ilānu*. Two of them are documents of disinheritance. In JEN 478:6-8 we read that the disinherited son shall not 'have access to' (*alāku ina* or *ana*) the (household) gods (d i n g i r - m e š) or the *eṭemmū*, nor to the fields or the houses.[75] In the second text, HSS 19, 27, a grandfather solemnly declares that his grandson no longer has access to his possessions, nor to 'my (household) gods and my *eṭemmū*' (obv. 11). In the third text, a 'deed of inheritance', the testator stipulates that after his wife's death the one of his three daughters who will then live in the parental home is to 'honour' (*palāḫu*) 'the gods and my *eṭemmū*'.[76]

The terminology which these records use in connection with the house-

[76] YBC 5142:30'-31'; cf. Paradise 1987.

hold gods and the *eṭemmū* suggests that they are concerned with figurines (note especially the expression 'to have access to', *alāku ina* or *ana*). This interpretation is supported by the fact that another text prohibits the production of other, substitute 'gods'.[77] Apparently, the domestic religion at Nuzi placed the care for the *eṭemmū* on the same footing as the cult of the *ilānu*, performed in the presence of the sacred lamp. Moreover, the texts make it clear that the responsibility for the continuation of this domestic cult is linked not so much with the rights of primogeniture, but with the habitation of the family home.[78]

The nature of the Nuzi 'household gods' is illuminated by the references to the 'gods' in inheritance texts from Emar (modern Meskene). They show that the heir who received the main house also inherited the responsibility of the domestic cult. This cult consisted of the invocation and care of the ancestors, referred to in the Emar texts with the hendiadys 'the gods (*ilū*, d i n g i r - m e š) and the dead (*mētū*, b a - u g$_x$ - m e š)'.[79] In view of this hendiadys, it would seem possible that *ilānu* (gods) and *eṭemmū* (ghosts) in the Nuzi texts are used as synonyms as well. Since the heir was responsible for the funerary rites and the food offerings to the family dead in Babylonia in general, one would expect a reference to the ancestor cult rather than to the cult of anonymous *numina loci*. Another argument in favour of the interpretation of *ilānu* as ancestors is the reference to funerary offerings (*kipsātu* = *kispātu*) 'to the gods'.[80] If the parallel between the biblical teraphim and the Nuzi *ilānu* has any validity—as the contextual resemblance suggests—the teraphim would best be understood as ancestor figurines. The fact that they are referred to as gods is quite in consonance with the linguistic practice reflected in the texts from Nuzi and Emar.

Biblical confirmation of the interpretation of the teraphim as ancestor figurines can be found in their function in divination. According to Zechariah 10:2 the teraphim could be expected to 'speak (דבר, pi^{c}el) vain things', in which capacity they compared to 'soothsayers' (*qōsĕmîm*) with unreliable visions. Ezekiel 21:26[21] presents the consultation of the teraphim (*šā^{ɔ}al battĕrāpîm*) as a mode of divination resorted to by the Babylonian king during a military expedition. It is mentioned alongside other divinatory methods such as the shaking of arrows (belomancy, a practice well attested for the pre-Islamic Arabs[81]) and the inspection of the liver (hepatoscopy),

---

the three of them being subsumed under the more general category of 'soothsaying' (קסם). Against this background it becomes likely that the condemnation of the 'iniquity of teraphim' (*ʾāwen tĕrāpîm*, according to the emended text of 1 Samuel 15:23) is also directed against a form of divination, in view of the parallelism with 'the sin of soothsaying' (*ḥaṭṭāʾt-qesem*).

Caution forbids us to say, on the basis of Ezekiel 21:26[21], that the consultation of the teraphim was a Babylonian divination method. Yet the text contains one clue that illuminates the nature of this divinatory practice. Not only in Ezekiel 21:26[21], but also in 1 Samuel 15:23 and Zechariah 10:2, divination by means of the teraphim is related to the notion of קסם, 'soothsaying'. In pre-exilic writings this term is frequently associated specifically with necromancy, as can be seen in such texts as Deuteronomy 18:10-14, 1 Samuel 28 and Micah 3:6, 11.[82] This fact makes it plausible that the 'consultation of the teraphim' was a type of necromancy, which implies in turn that the teraphim are more or less the equivalent of the Rephaim, the spirits of the dead. The principal difference between the two resides in the fact that the teraphim were images; they were statuettes representing the dead.[83]

An important argument in favour of the identification of the teraphim with ancestor statuettes, finally, results from a comparison between 2 Kings 23:24 and Deuteronomy 18:11. The first text has recorded that Josiah 'destroyed the ancestor spirits and the soothsaying spirits and the teraphim' (*wĕgam ʾet-hāʾōbôt wĕʾet-hayyiddĕʿōnîm wĕʾet-hattĕrāpîm ... biʿēr yōʾšiyyāhû*). The second text (Deuteronomy 18:11) looks like the programme underlying Josiah's action. It enumerates various forms of divination that are deemed incompatible with the purity of Israelite faith. The author mentions 'the one who consults an ancestor spirit, and a soothsaying spirit, and the one who takes counsel with the dead' (*wĕšōʾēl ʾôb wĕyiddĕʿōnî wĕdōrēš ʾel-hammētîm*). In this list the 'dead' (*mētîm*) parallel the teraphim of 2 Kings 23:24. The parallelism is hardly fortuitous, considering the links between Josiah's Reform and the Book of Deuteronomy. The actual method of obtaining an oracle from the teraphim eludes us.[84]

An investigation into the nature of the biblical teraphim leads to the conclusion, then, that the early Israelites were well acquainted with the

---

[82] Cf. Stolz 1973:22-25.

[83] A similar conclusion was already drawn by Schwally 1892:35-37; Charles 1963²:21-23; Wohlstein 1961:37-38. See also Lods 1906.1:231-236 ('primitivement ... les esprits des ancêtres').

[84] Mainly on the basis of comparative evidence from ancient Egypt, Hoffmann & Gressmann 1922 have suggested that the teraphim were expected to give oracles by nodding or inclining their head (*Winkorakel*). Nothing in the Hebrew texts supports their assumption.

phenomenon of ancestor figurines. Such images were found both in the houses of the Israelites and in their local sanctuaries.

The Israelite Attitude Toward the Dead

Though the biblical records have been largely purged from references to the dead in their capacity as preternatural beings, there can be no doubt that in early Israelite religion they were considered to be 'gods'. Nor were such views mere theoretical beliefs. The dead received a regular cult, performed in the early period, it seems, in the local sanctuary where the ancestors were symbolically present by means of images (*tĕrāpîm*) or stelae (*maṣṣēbôt*). The domestic teraphim, moreover, were a daily reminder to the family of its own past. Owing to the presence of the ancestors, buried nearby and represented by the teraphim, the different generations of the family lived side by side in a community embracing both the dead and the living. To their descendants, the dead were very much alive.

The Israelite cult of the dead is in many ways a hidden heritage—hidden because deleted from, or at least disguised and obfuscated in, the written records. Though the fact of the ancestor cult can be established beyond reasonable doubt, it is no easy matter to gauge the feelings and sentiments which this cult inspired in the living. The religious scholars responsible for the collection, selection and editing of the biblical books were not particularly happy with references and allusions to the veneration of the dead in which their forefathers had indulged. They therefore endeavoured to eliminate or disarm any hints of a positive appreciation of the cult of the dead. The Masoretic vocalization of the customary word for spirits of the dead (רפאים) as *rĕpā'îm*, 'impotent ones', instead of the original *rōpĕ'îm*, 'benefactors' (Ugaritic *rāpi'ūma*), is just one indication to that effect.[85] The biblical texts as we have them are intended to suggest that most of the Israelites looked upon the dead as bleak shadows without power or influence. The impression conveyed by the authorized version of Israel's past is inconsistent, however, with the prominence of the ancestor cult. The mere performance of such a cult shows that there must have been a time when other feelings prevailed. A detour along the relevant evidence allows some of those feelings to be recaptured.

A largely untapped source of information on the Israelite ancestor cult are the personal names found in the Bible. Though the Hebrew scriptures give a tendentious view of Israel's past, the proper names they contain have hardly

---

[85] Note that the LXX has ιατροι (i.e., *rōpĕ'îm*) for MT *rĕpā'îm* in Isaiah 26:14 and Psalm 88:11.

been affected by its bias. Some names have been tampered with, it is true; the comparison of Ishbaal ('Baal-is-present') with Ishboshet ('Shame-is-present') evinces a case in point. Yet most names are authentic. Those containing the name of a deity (the 'theophoric' names) are particularly interesting to the historian of religion, since they allow an occasional glimpse of a religious life that has vanished from the rest of the written record.

Among the theophoric personal names found in the Hebrew Bible, there are a significant number that use certain kinship terms (such as 'father' or 'brother') instead of a divine name. The theophoric character of such names is evident from a comparison of the names containing the elements *ʾāb* and *ʾāḥ* with those having the element *ʾēl* (El or 'god') or the name of a deity (mostly Yô or Yehô). The correspondence is striking. Note for instance the names Abinadab (אבינדב), Ahinadab (אחינדב) and Jonadab (יהונדב). They show that 'father' (Abi-) and 'brother' (Ahi-) actually functioned as the designation of a deity (Jo-, or rather Yeho-, the abbreviated form of the name Yahweh). The interpretation of the Hebrew kinship names as theophoric is confirmed by comparative evidence from cuneiform sources. Amorite anthroponymics are a particularly rich mine of data. They contain various kinship terms serving as theophoric element, including **ʾab* (father), **ʾaḥ* (brother), **dād* (paternal uncle), **ḫāl* (maternal uncle), **ʿamm* (clan), and **lim* (people).[86] The theophoric use of kinship terms was apparently common in West Semitic name-giving.

The fact that kinship terms could be put on a par with divine names in theophoric personal names can be explained in various ways. Martin Noth, one of the first biblical scholars to seriously study the phenomenon, believed the kinship terms referred to the anonymous tribal god of the worshippers. He argued that the religion of the tribe was originally monolatrous; the members considered themselves related by blood to the one anonymous god they worshipped.[87] The idea squared with the work of his teacher Alt on patriarchal religion.[88] From an analysis of the accounts in Genesis, Alt concluded that the patriarchs never knew Yahweh. They worshipped family gods, referred to as 'the God of the Father' or 'the God of So-and-so.' These anonymous patriarchal gods seemed very similar to the anonymous clan gods postulated by Noth. The link between the two groups was established by Albright in 1940, when he suggested that the expression 'Fear of Isaac' (*paḥad Yiṣḥaq*), analysed by Alt as a designation of Isaac's tribal god, should be understood as 'Kinsman of Isaac', on the basis of

88 Alt 1929; 1940.

Palmyrene *paḥdâ* ('family, clan, tribe') and Arabic *faḫiḏ* ('next of kin').[89] The suggestion shows that Noth's interpretation of the kinship terms as references to tribal deities was consonant with a widely accepted reconstruction of the early stages of Israelite religion.

The issue of theophoric names constructed with kinship terms was tackled in a different manner by Stamm. Stamm wrote a book on Akkadian onomastics that in many ways paralleled the work of Noth on Hebrew names.[90] He too had to deal with the kinship names. In his analysis, Stamm departed from Noth on two counts. First he decided that not all kinship names were in fact theophoric. Quite a number of them had to be analysed as substitute names (*Ersatznamen*). The latter were given to children considered to be a substitute or a reincarnation of (recently) deceased kin.[91] The substitute names do not exhaust the entire range of kinship names, however. Also in Stamm's view, there remained a significant number in which the element *abī* 'my father' designates a god and not a human father. Stamm quotes in example such names as Abī-nāṣir, 'My father protects', and Abī-iddinam, 'My father has given (a child) to me'. The god who is referred to as 'father' in these names need not be an anonymous tribal deity, however. The term *abī* ('my father') is a common title given to major gods of the Mesopotamian pantheon. It must be supposed, therefore, that the term *abī* served as a substitute for the real name of the deity—which does not imply that the god was otherwise anonymous.[92]

Stamm's position has been adopted by other scholars as a way of coming to terms with some of the Hebrew kinship names. Rainer Albertz is one of these scholars. Whereas Stamm restricted his interpretation to personal names constructed with the element *abī*, Albertz widens the category so as to include names with the element 'my brother' (אחי) and 'my uncle' (עמי) as well. He regards these names as 'the remains of a primeval type of personal devotion'.[93] They show that the early Israelites (and the ancient Near Eastern peoples in general) conceived of their personal god as their 'father', their '(older) brother', or even as their 'uncle'. The names attest to the reality of 'personal religion' (*persönliche Frömmigkeit*—perhaps better rendered in English as 'private devotion') among the Israelites. This type of religion

92 Stamm 1939:54-55.

93 Albertz 1978:74 (and also n. 402).

drew its terms and concepts from the feelings and experiences of family life.[94]

In spite of its general acceptance, it is doubtful whether Stamm's explanation is correct. His recognition of the *Ersatznamen* is brilliant, even though he may have included too many names in this category. Yet his interpretation of those kinship names that are truly theophoric is difficult to maintain. It is true that *abī* can serve as an epithet of gods—though the one example which Stamm quotes is a bad choice since the text refers to 'the god of my father' rather than to 'the god, my father'.[95] Yet except the speculated cases in personal names, gods are never referred to as 'brother' or 'uncle' in relation to humans. Stamm parries the objection by restricting his interpretation to the *abī* names. In view of the similarity between the latter and those in which the elements *aḫī* and *ḫammī* are used, the separation is artificial. Also, it can simply not be proved that *abī* stands for a known deity. That would be the case only if one and the same individual were referred to now as Abī-iddinam now as Marduk-iddinam (or something similar). Thus, even though Stamm is more prudent than Albertz (who interprets *ʾaḫî* and *ʿammî* also as titles of known gods), there is insufficient evidence in support of his theory.

It seems strange, in hindsight, that neither Noth nor Stamm gave serious attention to the possibility that their explanation should be reversed. They were convinced that the kinship terms served as designations of a god—though they disagreed as to whether this god was an anonymous clan deity or an identifiable member of the pantheon. Yet their line of reasoning errs at a more fundamental level. In the eyes of the ancients, death was not a complete annihilation of the human person but a transition to another state of being. It is therefore possible that a deceased member of the kin group (father, brother, or uncle) be referred to as a god. The opposition which Noth and Stamm perceived was spurious to the ancients. To Noth and Stamm, a term like 'father' designated either someone's actual father or a god—the title being used metaphorically in the latter case. If fathers, brothers, and uncles were posthumously deified, however, it would be perfectly natural to have the terms occur as theophoric elements in personal names.

Since it has been established that the deification of dead kin was not uncommon in the ancient Near East, there is good reason to return to the position which Hugo Winckler took as early as 1898. He argued that the theophoric kinship names were evidence of an early Semitic ancestor cult.[96]

[95] Stamm 1939:54-55. For the correct interpretation of YBT 2, 141 (usually referred to nowadays with the abbreviation YOS 2, 141) see Groneberg 1986:106.

[96] Winckler 1898.

More recently, a similar view has been expressed by others. Discussing the Hebrew word *ʿam*, Lipinski writes that the proper names with the element *ʿam(m)* reflect 'an ancestor cult whose traces have apparently been deleted in the texts that were incorporated in the Bible.'[97] Indeed, if the theophoric elements *ʾāb*, *ʾāḥ* and *ʿam* refer to deified kin, the artificial separation of the *ʾāb* names from those using the elements *ʾāḥ* and *ʿam* becomes unnecessary. Nor is the fact that gods are never referred to as 'brother' or 'uncle' an issue any longer. The gods referred to in these theophoric names are not gods in the usual sense of the term, but deified ancestors.

Assuming that the interpretation of the theophoric kinship names as evidence of an early ancestor cult is correct (and everything points in that direction), what do they tell us about the nature of this ancient cult? First, it would seem, that the cult was addressed predominantly to male ancestors. The usual Hebrew kinship terms occurring as a theophoric element are *ʾāb*, *ʾāḥ* and *ʿam*. The interpretation of the former two as 'father' and 'brother' is beyond doubt. The word *ʿam*, traditionally interpreted as 'paternal uncle', might very well refer to the apical ancestor who gave his name to the clan or family. That would explain why the word could develop the sense of 'clan' and—subsequently—'people'.[98] The Amorite equivalent of Hebrew *ʿam* is *ḫammu*, as in Ḫammu-rabi.[99] Other Hebrew kinship terms used theophorically are perhaps *dôd* ('father's senior brother,' cf. the names Dodai, Dodavahu, Dodo) and *lĕmû* (in the name Lemuel, Proverbs 31:1.4). Both elements are also known from Amorite personal names; the one as Dādu (e.g., Dādu-rabi) and the other as Līm (e.g., Zimrī-Līm), etymologically connected with Hebrew *lĕʾôm*, 'clan, people'.[100] The occurrence of *ḥam* ('father-in-law') as theophoric element is doubtful.[101] In Hebrew anthroponymics there is not one feminine kinship term used as a theophoric element, in spite of the veneration of certain women such as Rachel (1 Samuel 10:2; Jeremiah 31:15). The ancestor cult was therefore apparently concerned primarily with patrilineal ancestors.

These ancestors were not just supplied with food offerings—they were indeed worshipped as gods. The often made distinction between the care of the dead and their veneration is unfounded with respect to the early Israelite ancestor cult. Many of the theophoric kinship names are names of adoration that throw into relief the exalted nature of the ancestor. 'The father is

---

101 Noth 1928:79. The possible equivalent in Amorite personal names is not *emu* but $^{(d)}$Am, see Huffmon 1965:166 s.v. ʾM.

excellent' (אביחר, Abjathar, cf. Amorite Abī-watar[102]), 'My brother is exalted' (אחירם, Ahiram), 'My Brother is (sheer) goodness' (אחיטוב, Ahitub), 'My Ancestor is lofty' (עמיזבד, Ammizabad, 1 Chronicles 27:6). The divine nature of the ancestor is made explicit in the name Ammiel: 'My Ancestor is god' (עמיאל, cf. אליעם, Eliam, 'My god, the Ancestor'). A similar significance is to be attributed to the name Ammishaddai (עמישדי), which proclaims the ancestor to be one of the Šadday gods, chthonic deities that were credited with powers of protection.[103]

Deified ancestors might intervene in the life of their descendants in more than one way. They 'know' their descendants (YDᶜ; אבידע, Abida, Genesis 25:4), and are ready to 'help' them (ᶜZR, אביעזר Abiezer, אחיעזר Ahiezer) and to 'come to their rescue' (YŠᶜ, אבישוע Abishua; cf. Amorite Aḫī-yašuḫ and Ḫammi-ešuḫ[104]). Their help consists in 'support' (אחיסמך Ahisamach, 'My Brother Offers Support'—Exodus 31:6) and kind judgement (DYN, אבידן Abidan). One of the specific blessings that ancestors may grant is offspring, as may be inferred from the name Abiasaph (אביאסף), 'The Father Has Added (a Child to the Family)'. The names Jeroboam, Rehabeam and Jokneam ('May the Ancestor create [scil. offspring]', Joshua 12:22; 19:11; 21:34) also refer to the multiplication of descendants and the extension of the family by the deified ancestors. Perhaps names formed with the root NDB ('to give freely') have to be interpreted in a similar fashion (Abinadab, Ahinadab, Amminadab); possibly, though, they are to be understood as 'My Father (Brother, Ancestor) is Noble'.

It must be admitted that the names give only a slight idea of the 'theology' of the ancestor cult. What they do show, however, is that dead kin were regarded as kind and benevolent. Ancestors were not vengeful beings that had to be kept at bay by all means. They were indeed 'benefactors', as the original vocalisation of the term Rephaim (*rōpĕʾîm*) implies. The kinship names reveal the sentiments of respect and dependency people felt towards their patrilineal ancestors. The dead were believed to take care of their descendants from beyond the grave. Having reached a preternatural state, they used their powers for the good of their family. Not only did they symbolize the identity of that family; in the final analysis, they were also responsible for its continuing growth and welfare.

In view of the importance of the ancestor cult in Iron Age Israel, there is little reason to dismiss the theophoric kinship names as insignificant relics of

---

distant past. As Jeffrey Tigay has demonstrated in his work on early Hebrew anthroponyms, the Israelites were usually aware of the religious significance of their personal names.[105] This is why, as the worship of Yahweh became the religion of state, the names of deities other than Yahweh gradually disappeared from the Hebrew onomasticon. If the cult of the ancestors had been condemned by the population during the First Temple Period, it might be expected that the theophoric use of kinship names would have been abandoned as well. The fact that it was not indicates that these names must be taken as a reflection of the ideas and feelings concerning the dead in pre-exilic Israel.

Powers and Functions of the Dead

Attempts have been made in the past to delineate the powers and functions which the early Israelites attributed to the dead. It has been suggested that the two principal virtues ascribed to the dead were healing powers and foreknowledge.

The ancestors have been thought to play a part in healing ceremonies because of the etymology of the verb רפא, from which the name Rephaim is derived. As רפא can have the meaning 'to heal', the Rephaim (or rather **rōpĕʾîm*) might arguably be understood to be 'healers'. In defence of the notion of the Rephaim as 'healers' some authors have speculated that King Asa's seeking help (דרשׁ) from 'doctors' (רֹפְאִים, 2 Chronicles 16:12) was criticized by the Chronicler, because the doctors in question were in reality the dead (רְפָאִים). The principal argument in favour of the emended vocalization supposes that seeking help from doctors does not exclude trust in God, whereas consulting the dead would—in the eyes of the later orthodoxy at least.[106] However, the change in vocalization is possible but not compelling. Since elsewhere in the Bible the skill of physicians is implicitly contrasted with God's healing powers (cf. Exodus 15:26), the two may have been judged incompatible in some circles.[107] Should the emendation nonetheless be accepted, the text would point to a consultation (דרשׁ) of the dead, i.e., necromancy, rather than their being implored as 'healers'.

To strengthen the case for the interpretation of the Rephaim as 'healing spirits', authors have also adduced the story of Michal's use of the teraphim in connection with David's—pretended—illness. This, they suggest, is an example of a ritual in which a teraphim is used for healing purposes. Those

105 Tigay 1986; 1987.
106 See Smith, M. S. 1990:130.
107 See van der Toorn 1985:76.

who defend this idea argue that the story is incoherent in its present form. The incoherence would only disappear if the text is understood as the cryptic description of a magical healing ceremony.[108] Here, too, etymology is marshalled to support the reconstruction, because it is argued that the word תרפים goes back to the root רפא.[109] Such explanations are unconvincing, however. The story of Michal makes perfect sense in its present form, and the chances that תרפים comes from the root רפא are very slim.[110] It should also be remembered that, though the scarcity of our data favours the resort to etymology, its importance is easily overrated. The connection between רפאים and רפא is indubitable, but the significance of that connection for the Israelite understanding of the dead is unclear. Until further information becomes available, caution suggests that we stay with the less specific meaning of 'benefactors' for Rephaim.

King Asa's suspected consultation of the Rephaim would be an instance of necromancy rather than a healing ritual under the auspices of the dead. There is certainly good evidence in our written records of the practice of necromancy.[111] In addition to the well-known example of necromancy reported in 1 Samuel 28 (Saul's visit to a female medium at Endor), there are various references to Judahite necromancy in the Book of Isaiah.[112] Also the women who sought to capture 'flying souls', described in Ezekiel 13:17-23, were necromancers: the 'souls' for which these 'prophetesses' hunted were spirits of the dead.[113] The divinatory use of the teraphim (שאל בתרפים) fits this picture. The dead had access to information beyond the reach of the living; they (or some of them) were *yiddĕʿōnîm* (from ידע, 'to know') as the

---

[108] Rouillard & Tropper 1987. Cf. Barnes 1929:179 who claimed that the *tĕrāpîm* was used to 'warn the would-be intruder that there is sickness about'.

[109] So de Ward 1977:5-6; Rouillard & Tropper 1987:357-361; Tropper 1989:335. Albright 1968:146 n. 43 suggests that *tĕrāpîm* is a 'contemptuous deformation of a hypothetical noun (**tarpaʾu*?) from the stem *rpʾ*, from which the name of the Rephaim is derived.' See also Loretz 1992:138-139.141-142.148-151.167-168. For a critique of this etymology see Hoffner 1967:233-234; 1968:62.

[110] Following a suggestion made by Benno Landsberger, Hoffner (1967; 1968) has argued in favour of an etymological connection between *tĕrāpîm* and Luwian/Hittite *tarpi(š)* which denotes a spirit that can on some occasions be regarded as protective and on others as malevolent (cf. Seybold 1976:1057). In lexical lists *tarpi(š)* is sometimes rendered by the Akkadogram *ŠEDU*, '(protective) spirit', which meaning seems to fit the biblical *tĕrāpîm* in more than one respect (*CAD* Š/2 256-259). In the absence of any convincing etymology of *tĕrāpîm* based on the Hebrew lexicon, Hoffner's view has gained wide acceptance. For a fuller discussion see van der Toorn & Lewis 1995.

[111] See especially Tropper 1989.

[112] See van der Toorn 1988:209-210.

[113] For the interpretation of *nepeš* ('soul') in the sense of 'spirit of the dead', 'ghost', see Michel, D. 1994. Note also the use of *nbš* (which corresponds to Akkadian *eṭemmu*) in the Panammu inscription *KAI* 214. For a discussion of Ezekiel 13:17-23 see van der Toorn 1994a:123.

texts say, 'wizards' possessing extraordinary knowledge. The polemics against necromancy are testimony to the popularity of a practice which seems to have flourished throughout the monarchic period.

The occurrence of necromancy in early Israel does not imply that the consultation of the dead was an essential part of early Israelite family religion. Though there are many interpreters throughout history who have asserted that Rachel's motive for stealing Laban's *tĕrāpîm* was to prevent him from using them in a divinatory fashion so as to detect Jacob's escape,[114] there is no unambiguous evidence for necromancy by lay people. The documented cases always involved one or more specialists. Though it cannot be excluded that necromancy was practised in the context of family religion, there is no proof to this effect. Nor is there reason to believe, in spite of the attempts to read a reference to necromancy in the Ugaritic catalogue of Filial Duties,[115] that necromancy was part of the ancestor cult in other Near Eastern civilizations.

If recourse to the ancestors for necromantic or therapeutic purposes occurred in the context of family religion (for neither of which we have compelling evidence), it was subservient to the far more fundamental function of the ancestors as providers and symbols of identity. The dead were honoured in the first place on account of their role as ancestors and forebears. They were the ones who had bequeathed the family estate and the family home to the living. The estate was the 'inheritance of the fathers' (*naḥălat ʾābôt*) or, to use an equivalent expression, the 'inheritance of the gods' (*naḥălat ʾelōhîm*, 2 Samuel 14:16).[116] Cursing those 'gods'—as one might curse a father or a mother (Exodus 21:17)—is prohibited in the same breath as cursing one's *nāśîʾ*, i.e. clan leader (Exodus 22:27). Piety toward the dead fostered a sense of unity and solidarity among the living comparable to the social peace that followed from respect for the head of the clan. Piety toward the dead was a social virtue; it could be seen as an extension of the honour paid to one's parents.[117]

The role of the ancestors as embodiment of the family identity is thrown into relief in a rule laid down in the so-called Covenant Code (Exodus 20:22-23:33).[118] In the oldest section (21:1-22:16), which goes back to the early

first millennium BC,[119] the legislators deal with the case of a Hebrew slave having served his master for six years. In his seventh year he is to be manumitted. Should the slave voluntarily decide to stay with his master, the latter is to perform a ceremony by which the servant becomes part the family.

> Then his master shall bring him to the gods, and he shall bring him to the door or the doorpost; and his master shall pierce his ear with an awl; and he shall be his servant for life.[120]

It is instructive to compare this text with the reformulated prescription in Deuteronomy:

> Then you shall take an awl, and thrust it through his ear into the door, and he shall be your servant forever.[121]

The most striking difference between the two texts concerns the absence of the 'gods' in the Deuteronomic passage. The author apparently felt the reference to the gods to be incompatible with the undivided loyalty to Yahweh as Israel's one national god. Yet the gods in question were not gods in the same way as Yahweh, because they were ancestors.[122] Their images were present 'near the door or the doorpost', as a glossator has added.[123] What we have here is a rite of passage in a case of adoption. By waiving his right of manumission, the slave entered his master's family for good. As a new member of the family he was to be presented to its forebears; he was bodily marked in their presence, and henceforth indissolubly part of the family.[124]

The rule concerning the adopted slave illustrates in paradigmatic manner the central place of the ancestors in Israelite families. In the early Israelite culture where individual clan settlements enjoyed a great deal of independence, the ancestor cult is bound to have played a major role in the day-to-day religion. In this respect the early Israelites did not differ from the ancient Babylonians or the people of Ugarit. Like them, they honoured their

[120] Exodus 21:6 *wĕhiggîšô ʾădōnāyw ʾel-hāʾelōhîm wĕhiggîšô ʾel-haddelet ʾô ʾel-hammĕzûzâ wĕrāṣaʿ ʾădōnāyw ʾet-ʾoznô bammarṣēaʿ waʿăbādô lĕʿōlām.*

[121] Deuteronomy 15:17 *wĕlāqaḥtā ʾet-hammarṣēaʿ wĕnātattāh bĕʾoznô ûbaddelet wĕhāyāh lĕkā ʿebed ʿôlām.*

[122] So, too, Schwally 1892:37-39; de Moor 1990:242 n. 102; Niehr 1991a:304. Cf. Lods 1906.1:236-238 ('*originairement* les ancêtres').

[123] The secondary nature of the phrase והגישו אל הדלת או אל המזוזה can be inferred from the repetition of the verb.

[124] An interesting parallel in reverse is found in the texts from Nuzi. Here we have textual evidence for the disherison of a son by breaking his 'clod' (*kirbānu*) in the presence of a symbol of the household gods—who are presumbly to be identified with the ancestors. The text in question is JEN 478:4-48; for a discussion see Malul 1988:81.

ancestors in words and acts and thereby asserted their sense of genealogical identity. The possession of the teraphim may indeed be regarded as a kind of legitimation, as earlier studies of the teraphim have stressed.[125] By keeping the cult of its ancestors, the family proclaimed its right to the land. The presence of the ancestors in the local *bāmâ*, moreover, could be regarded as the visible recognition of the fact that their descendants rightfully belonged to the civic and cultic community of the place. The celebration of the past justified the present.

125 For a survey see Greenberg 1962:240-241.

CHAPTER TEN

RELIGION BEFORE THE MONARCHY: THE GODS OF THE FATHERS

As in Babylonia and Ugarit, family religion in early Israel had two components: the cult of ancestors and the worship of local gods. The village sanctuary was a centre for both of these. The inhabitants of the Israelite settlements gathered periodically at their cult places for celebrations which were in part a display of piety toward the ancestors. Yet these sanctuaries were not mortuary chapels but holy places devoted to a god. Each Israelite settlement of some size had a deity to protect it; the god in question was venerated by the local population in the—usually modest—local Bamah (sanctuary). It is this second aspect of early Israelite family religion that will be described and analysed in this chapter. The emphasis of the investigation will lay on the two centuries preceding the rise of the monarchy under Saul. It is often referred to, following the biblical idiom, as the time of the Judges.

Unedited Evidence: Place Names

The search for the Israelite religion in the premonarchic period is ridden with problems, most of which follow from the nature of the biblical sources. Being the authorized version of Israelite history, the Bible illuminates the time and interests of its editors and revisers at least as much as the time and views of its authors. Unfortunately, the stages of writing, reviewing and redaction cannot always be clearly distinguished. An additional problem is the date of the written records; their original form is seldom older than the eighth or ninth century BC. Even a document as archaic as the Song of Deborah (Judges 5) is unlikely to be premonarchic[1]—in spite of assertions to the contrary. To speak about any historical period on the basis of written sources postdating that period by at least two-hundred years is always hazardous—even if the texts are to be seen as the repository of oral traditions of much greater antiquity. Human memory is unreliable; when eye-witness accounts are subject to doubt after only a few weeks, as forensic psychologists have demonstrated, how much more doubt should be attached to traditions spanning several generations.

---

[1] Ahlström 1977a; Soggin 1981a; Ahlström 1986:80; Axelsson 1987:52; Bechmann 1989.

These necessary cautions are not to be construed as a plea against the use of the Bible in the history of Israelite religion. In fact, the Hebrew scriptures remain of eminent value to the historian—on condition that they be used with intelligence and discrimination. One of the ways in which such discrimination can be exercised is by comparing the biblical information on a given period with relevant data that have not been subject to subsequent alterations. Evidence of this kind is available for the time of the Judges in the form of names, personal as well as topographical, and archaeological remains. By themselves onomastics and archaeology would be insufficient to provide the data needed for a remotely comprehensive view of early Israelite religion. In combination with the relevant biblical material, however, they yield significant insights into the religious climate reigning among the early Israelites in the central hill country.

The names that are relevant to the investigation of premonarchic religion fall into two categories: they are personal names, on the one hand, and place names, on the other. The main source for both is the Bible. The latter fact might seem to invalidate the argument that the testimony of the names can be used as an index of the reliability of the biblical information. The impression is deceptive, however. As argued in the previous chapter in connection with the 'kinship names' (that is, personal names in which a kinship term serves as a theophoric element), names have a life of their own. They are usually left unchanged, even when the narratives in which they occur have been submitted to substantial revision. Take such names as Bethlehem and Beth-shemesh. Both are theophoric, the one referring to the 'house' (that is, the temple) of the god Laḥmu (לחם),[2] and the other to the house of Šemeš (שמש, the equivalent of the Babylonian sun god Šamaš). The names were retained (though presumably reinterpreted) long after the cult of the deities in question had become extinct in these places. They are still witnesses, however, of a time in which the towns had temples for these gods.

The examples just given illustrate the importance of correctly dating the place names, since they reflect ideas and notions from the time the names were first used. The necessity of dating the names is less stringent when it comes to personal names. By naming a child, parents reconfirm the relevance of the message which the name of their choice conveys. The name itself is usually not original; in nearly every civilization people tend to select the names for their children from a traditional stock. Yet the active onomasticon (as distinguished from the passive one, consisting of names that are no longer in use) changes from the one period to the other. Studies of Israelite

---

[2] Borée 1930:77 § 21 no. 23. On Laḥmu see Wiggermann 1982.

anthroponyms have evinced changing patterns of name-giving.[3] One of the most striking discoveries of recent years, for instance, concerns the predominance of the name Yahweh as theophoric element in Israelite personal names, in the Bible as well as in epigraphical texts, during the monarchic period (*ca.* 1000-550 BC). This bears testimony to the wide recognition of the pre-eminence of Yahweh among Ephraimites and Judahites of the time. Though the onomasticon is a conservative element in any civilization, then, it is not impervious to change. Religious developments are reflected in the names actually given.

On the basis of the assumption that Israelite names of a certain period reflect the ideas and moods of that period, a study of the theophoric names of Israelites from before the monarchy can be expected to yield some insight into the religious loyalties of the early inhabitants of the central hill country. The relevant data, conveniently assembled elsewhere,[4] can be condensed in the form of a statistical analysis. If the results are to apply to the initial phase of Israelite religion, the onomastic researches must be limited to the names of persons belonging to the tribes of Manasseh, Ephraim, and Benjamin, since they constitute the core of the later State of Israel. The investigation has been based upon a scanning of all the biblical documents except 1 & 2 Chronicles, since the late date of these books throws serious doubt upon the authenticity of the names they give for the early period.

Of the thirty-three theophoric names from the period of the Judges attested for the areas of Manasseh, Ephraim and Benjamin, only seven refer to Yahweh as god; sixteen have the name El as theophoric element; and ten contain a reference to various other gods, most notably Baal (Jerubbaal, Judges 6:32; Ishbaal, 2 Samuel 2:8).[5] Though the sample is admittedly small, it contains the unmistakable suggestion that the worship of Yahweh—who was to become the national god of Israel in the tenth century BC—was the religion of a minority of the population. The majority of the earliest Israelites (or proto-Israelites) were devoted to a god they referred to in their personal names as *ʾēl*. Though the noun *ʾēl* is occasionally used as a generic designation, it functions mostly as a proper name in texts from the Late Bronze and the Early Iron Ages. A similar observation is valid in respect to the term *baʿal*, 'lord'. In view of the historical context of the names it must be assumed that important groups of the early Israelites worshipped the gods El and Baal.

The anthroponymic evidence must be interpreted in the light of the

Palestinian place names which originated between 1200 and 1000 BC.[6] They are found by selecting those biblical toponyms which do not occur in materials from before 1200 BC, such as the Egyptian Execration texts, the Amarna archives, and Egyptian royal lists.[7] Analysis of the names which meet this criterion shows that some name types were far more popular in the period of the Israelite settlement than they were before (e.g., the names formed from the root גבע, 'to be high', such as Geba, and Gibeah), while other types were simply not attested at all in the records prior to the Iron Age (e.g., such names as Baal-NN, Mizpah, Mizpeh-NN, Ataroth-NN, and Ramah).[8] When the places which bear names of these types are plotted on the map, they nearly all prove to be situated in the hill country, which confirms their analysis as predominantly, or even specifically, Israelite names. They constitute a source of information illuminating both the nature of early Israelite society and certain characteristics of early Israelite family religion.

The toponyms confirm the principal inferences drawn from the archaeological record as regards the socio-economic conditions prevailing in early Israel. Names containing such elements as *geba*^{c}, *gib*^{c}*â*, *rāmâ* ('hill' or 'height') and *miṣpâ* ('look-out', from צפה, 'to observe') indicate that the early Israelite settlements were often located on hilltops. Names containing the elements ^{c}*ăṭārôt*, 'enclosed encampments' (from the verb עטר, 'to surround'),[9] *geder* or *gĕdērâ*, 'enclosed (sheep)fold',[10] and *ḥāṣēr*, 'farm' or 'enclosure' show that the inhabitants came from a pastoralist tradition. Characteristically these elements occur in conjunction with a clan or family name. Examples include Ramathaim-Zuphim, 'Height(s) of (the clan of) the Zuphites' (1 Samuel 1:1; cf. 9:5),[11] Atroth-Shophan, 'Encampments of the Shophan family' (Numbers 32:35), Hazar-Addar, 'Farm of the Addar family' (Numbers 34:4), and Gibeath-Phinehas, 'Hill of the Phinehas family' (Joshua 24:33). The names are evidence of the close connection between settlement and family, land and lineage, co-residence and clan.

In the discussion of the early Israelite place names, toponyms beginning

---

6 The major studies of early Israelite toponyms are Borée 1930; Isserlin 1957; Rainey 1978; Aharoni 1979:105-130; Mazar, B. 1986:46-48.

7 The Palestinian place names in Egyptian texts have been collected and analysed by Aḥituv 1984. The work has received a very critical review by Knauf & Lenzen 1989 ('The reviewers do hope that somebody else will succeed where Aḥituv has failed.')

8 Isserlin 1957:135. Rainey 1978:3 misrepresents the view of Isserlin when he maintains that the occurrence of the element *geba*^{c} is not limited to the Israelite period, as if Isserlin 1957 had not already said as much.

9 For the term see Borée 1930:85; Mazar, B. 1986:46 n. 32.

10 For the meaning of the term see Mazar, B. 1986:46 n. 32.

11 The *-ayim* ending probably has locative force, see Rainey 1978:5.

with the element *baʿal* have sometimes been dismissed as non-Israelite.[12] The judgment is apparently based on the view that Baal is a non-Israelite deity, and could therefore not be referred to in the names the Israelites gave to their first settlements. For obvious reasons the argument is unsound. The *baʿal* toponyms meet the criteria set for defining a place name as specifically Israelite. It must be assumed, therefore, that they are genuinely Israelite.[13] In fact, it is precisely these names which yield information about the religion of the early Israelites. The optional variant Beth-baal-meon (בית בעל מעון) for Baal-meon (בעלמעון)[14] suggests that the *baʿal* toponyms are short for *bêt-baʿal* names, which means that they imply the presence of a house (that is, once again, a temple) for a god referred to as *baʿal*.[15] These names betray a predilection on the part of some of the early Israelites for the cult of the Canaanite storm god. Though *baʿal* can be used as an epithet for many gods (also Yahweh can be referred to as *baʿal*, see Hosea 2:18[15]), the religious milieu from which many proto-Israelites sprang favours the understanding of *baʿal* as a proper name. The Baal toponyms refer to a local manifestation of the storm god Baal.

Baal is not the only god found as a theophoric element in pre-monarchic Israelite toponyms. Another god with some popularity—judging by the frequency of his name as theophoric element—was El. Bethel (Genesis 12:8), Irpeel (ירפאל, Joshua 18:27), Jabneel (יבנאל, Joshua 19:33, in Galilee), Jezreel (יזרעאל, Joshua 19:18, in the territory of Issachar), and Jiphtahel (יפתח־אל, Joshua 19:14, in Galilee) can be mentioned as examples.[16] The occurrence of El toponyms is hardly surprising in view of the prominence of the god in theophoric personal names. Unlike the Baal toponyms, the El toponyms are not specifically Israelite. Most of them are pre-Israelite. They were simply maintained in the early Israelite period, which suggests, also in view of the El anthroponyms, religious continuity in the worship of El on the

---

12 Isserlin 1957:135.

13 The element *baʿal* is not attested in pre-Israelite place names. Syro-Palestinian toponyms compounded with Baal are attested only in Neo-Assyrian records of the first millennium BC. The hill country of Canaan is rarely mentioned in the Egyptian sources of the second millennium BC and we still do not know whether any of the biblical Baal toponyms antedate the Iron Age. But since most of them are located in the hill country, which was quite depopulated in the Late Bronze Age and was settled only in the Iron Age, most (or even all) of these sites must have been founded and named only at that time.

14 The name Baal-Meon occurs in Numbers 32:34; Joshua 13:17; 1 Chronicles 5:8; and Mesha's inscription (*KAI* 181:9). Beth-Baal-Meon (Joshua 13:17; *KAI* 181:30) and Beth-Meon (Jeremiah 48:23) are variants. The place is generally identified with Khirbet Maʿin, about 8 km southwest of Madaba. Since no Iron Age remains were found in the course of excavations there, Baal-meon's exact location has yet to be established.

15 So Rainey 1978:6.

16 See Borée 1930:99.

part of the early Israelites.[17] The complete absence of the name Yahweh from the Early Iron Age toponyms is striking.[18] Since theological considerations fail to explain this fact,[19] it must be taken as a reflection of the relative unimportance of the worship of Yahweh among the early Israelites.

The early Israelite Baal toponyms often consist of two elements (if we neglect for the moment the optional element *bêt*), viz. *baʿal* followed by a proper name. This name is frequently the name of a family or a clan. Somewhere in 'the land of Shalishah' lay Baal-shalishah, the cultic centre of the Shalishah clan (2 Kings 4:42), perhaps to be identified with Khirbet el-Marjame.[20] Other names which belong to the same type of toponyms are Baal-Hazor (2 Samuel 13:23) and Baal-Perazim (2 Samuel 5:20; 1 Chronicles 14:11). Baal-Judah (according to the emended text of 2 Samuel 6:2, cf. 1 Chronicles 13:6) and Baal-Tamar (Judges 20:33) were also early Israelite cult centres in the hill country.[21] Possibly the name Baal-Gad (Joshua 11:17; 12:7; 13:5) could be added to the catalogue. In all of these cases a local manifestation of Baal is defined by his relationship with a certain family, lineage, or clan. The compounded Baal names correspond with the non-theophoric toponyms carrying the name of a family or a clan. If the latter indicate that the early Israelite settlements were kin-based villages, the former tell us that the locally worshipped god was a family or clan god. The Baal toponyms refer to 'family cult places'.[22]

Put together, the onomastic evidence from early Israel suggests a pattern of religion which is both localist (to use a term that is free from the derogatory overtones of the qualification 'parochial') and family- or clan-orientated. The Israelite settlers of the central hill country lived as families or groups of related families (clans) in small compounds, where they cultically honoured a god whom they referred to as 'lord' of their family or clan. The parallel with Old Babylonian family religion is almost too obvious for comment, though one difference should be noted. Whereas the early Israelites seem to have combined the ancestor cult and the worship of a local god in one and the same sanctuary (though the statuettes of ancestors in their homes may have

---

[17] In addition to Baal and El, the toponyms refer to other gods as well. By and large, however, the gods El and Baal predominate in the relevant data.

[18] Excepting the reference to the Šosū of Yahweh, mentioned in Egyptian texts. These people are to be situated in Southern Edom, however, not on Canaanite soil. For a discussion of the Šosū see 'Who Were the Israelites?' in Chapter Eight.

[19] *Pace* Isserlin 1957:137, 'It looks as if YHWH, a jealous god, did not lightly permit his name to dwell in any place.' Isserlin is followed by de Moor 1990:39.

[20] See Mazar, A. 1976:138.

[21] Rosen 1988, *pace* Seow 1989:9 who argues that Kiriath-jearim was also known by the name '(Mount) Baʿalah'.

been the object of some form of veneration as well), the Babylonians knew a topographical separation between the cult of the ancestors (performed in a domestic context) and the worship of their patron gods (performed in the neighbourhood temples or, in the case of the Amorites, the amphictyonic sanctuaries).

Archaeological Remains

The witness of onomastics may be compared now with the archaeological data on sanctuaries whose foundation or use can be confidently traced to the period known as the Early Iron Age, i.e., ca. 1200-1000 BC.[23] In anticipation of a survey of the evidence, it may be said that only a very small number of cultic sites from the Early Iron Age have been found. Their number increases when earlier cultic areas which remained in use are included. Yet when strict criteria are applied—a necessary measure in the light of the inclination to speculate on the part of some archaeologists—the material remains of a proto-Israelite cult in the Samarian highlands are scarce. The lack of monumental structures is especially noteworthy; with the possible exception of the Migdal temple of Shechem, the excavations have yielded no traces of religious buildings designed to accommodate large groups of people.[24] The archaeological record conveys the image of a religion practised at a local level by relatively small communities. In continuity with the earlier periods, the gods they worshipped could be represented by theriomorphic and anthropomorphic images. Traces of a sanctuary that might possibly have served as a national cult centre have not been found.

The survey of the evidence will focus first on the holy places of the Canaanite cities which were still used in the Early Iron Age. In conformity with the prevailing opinion among modern archaeologists, it appears certain that the Middle Bronze Age traditions concerning the location of cultic sites were preserved among the Israelites—which is hardly surprising in view of the Canaanite background of many of the proto-Israelite settlers. Thus the fortified sanctuary of Megiddo, built in the Middle or the Late Bronze Age (stratum VIII) was re-used in the Early Iron Age (stratum VII-A).[25] Beth-shean, to give another example, has yielded remains of a number of Late

[23] For surveys of the material remains of Israelite cult centres (from both Iron I and Iron II) see Shiloh 1979; Ottosson 1980; Dever 1983; Ahlström 1984; Wenning & Zenger 1986:83-84 n. 23; Dever 1987; Holladay 1987; Weippert, H. 1988:407-410; Zwickel 1994 (reference courtesy M. S. Smith; Zwickel's study was inaccessible to me).

[24] The Arad temple from the 10th or the 9th century BC remains the earliest instance of an Israelite temple—and that temple is Judahite.

[25] Loud 1948:57-105; Aharoni & Shiloh 1993:1011-1013.

Bronze Age temples that were functioning in the Early Iron Age.[26] Neither place is situated in the central hill country, however. Even if we would not give credit to the statement that the cities in question became Israelite only in the era of the United Monarchy (Judges 1:27; 1 Kings 4:11-12), it must be admitted that they were peripheral in respect to the heartland of the Israelite settlement.

Cultic continuity in the central hill country is attested at Tirzah and Shechem. At Tirzah (Tell el-Farᶜah) the continuity concerns the city-gate. The Bronze Age construction continued to be used in the Iron Age. Its cultic function is evident from the presence of a basin (presumably used for libations) and four hewn stone pillars set on a base (presumably stelae or *maṣṣēbôt*) along the stretch of road that led from the inner gate to the town. The installation is most plausibly interpreted as a space for cultic activities. In biblical terminology, it was probably known as a 'high place of the gate' (2 Kings 23:8).[27] The cultic interpretation of the Iron Age building directly above the Middle Bronze Age subterranean sanctuary near the gate of Tirzah is less certain. Defended by Roland de Vaux,[28] it has been seriously contested by Mervyn Fowler.[29] The presence of two terracotta chalices could imply some cultic function of the building. If so, it would have served as a place of 'worship incorporated in domestic life'.[30]

The evidence for Shechem (Tell Balaṭa) is complex.[31] In the Early Iron Age, the new settlers of the hill country seem to have mixed with the native inhabitants, which means that the Early Iron Age evidence does not reflect strictly Israelite practices.[32] Stratum XI suffered massive destruction around 1100 BC, after which the site lay virtually unpopulated during the eleventh century. Several Bronze Age sanctuaries have been identified by the excavators. One of them would have continued to function in the early Iron Age until 1100 BC. This is the so-called *migdal* or tower-temple, associated by archaeologists and biblical scholars with the temple of El-Berith mentioned in Judges 9:4,46.[33] Though the interpretation of the Shechem tower building

32 Cf. Toombs 1979:73-75.

33 Mazar, B. 1962:634-635; Wright, G. E. 1965:123-128; 1967:360-361; Wright, G. R. H. 1968:16-26; Wright, G. E. 1978:1090.1092; Weippert, H. 1988:277; Campbell, E. F. 1993.

as a temple has been questioned in view of the absence of contemporary cultic objects within the edifice,[34] its cultic function must be considered a serious possibility.

The temple of Shiloh (Ḫhirbet Seilūn) is a problematic example of a sanctuary in the central hill country inherited by the proto-Israelites from the Canaanites, because the evidence for it is entirely circumstantial.[35] In a layer dated to the Middle Bronze Age (MB III) the excavators found cultic stands, small votive bowls, and a vessel in the form of a bull. They concluded that there must have been a sanctuary on or near the summit of the mound.[36] Its presence remains conjectural, however. Shiloh was destroyed by the end of the Middle Bronze Age. Some finds from the Late Bronze Age that have been interpreted as votive offerings led the excavator to postulate the continued use of the—still undiscovered—temple of Shiloh.[37] This hypothesized sanctuary would have served as a cultic centre in the Iron Age as well.[38] Alluring though this suggestion is, there is no firm evidence to support it. The most one can say is that the postulated temple makes sense of some of the evidence and fits with the biblical accounts. If there was indeed a sanctuary, however, it may well have been one of local importance only; the idea of Shiloh as a national religious centre in the Period of the Judges is entirely based on a historical reconstruction made in the Deuteronomistic History.[39]

In addition to traces of Israelite worship at traditionally Canaanite cult places, there is archaeological evidence of two open air sanctuaries built in the Early Iron Age. They could be regarded, so their discoverers claim, as the earliest examples of genuinely Israelite holy places. The one is located on Mount Ebal, north of Shechem,[40] on a site covering one acre. The oldest layer is surrounded by a stone wall; inside, on the highest point, there was a two metre wide installation which looks like the remains of a tower. In the

[38] Finkelstein, I. 1988:228-234; 1993:384-385.

[39] It is unlikely that the temple of Shiloh ever served as a national sanctuary. The author of Judges 21:12-21 considered Shiloh a minor cult centre, since he judged it necessary to specify that it was to be found 'north of Bethel, on the east of the highway that goes up from Bethel to Shechem, and south of Lebonah' (Judges 21:19). Shiloh's status as national religious centre existed only in the minds of later authors—more specifically in that of the Deuteronomists. See also van der Toorn & Houtman 1994:226.

[40] Zertal 1985; Kempinski 1986; Zertal 1986a; 1987; 1988; Finkelstein, I. 1988:82-85; Soggin 1988.

youngest of the two strata (still Early Iron Age), there is evidence of a newly constructed wall. In the centre there was a rectangular structure of field stones, measuring about eight by nine metres, with massive outer walls. The interior space was filled with ashes, earth, stones and faunal remains. On the southern side of the building were two large rooms or courtyards. The excavator interpreted the rectangular structure as a large altar, connecting it with the biblical references to Joshua's altar on Mount Ebal (Deuteronomy 27:4; Joshua 8:30-35).[41] Others, accepting the cultic interpretation, suggest that this was in fact the tower-temple of El-Berith of Shechem (Judges 9:4, 46).[42] It must be stressed, though, that the cultic interpretation of the building is not certain.

The second Early Iron Age sanctuary in the central hill country is the so-called 'Bull Site' between Dothan and Tirzah.[43] In the 1970's archaeologists discovered here, on the summit of a high ridge, a twenty metre circle of large stones. The open air enclosure may have contained a sacred tree. Inside, to the east, stood an erected stone, presumably a *maṣṣēbâ*. In front of it was a pavement on which offerings were found to have been deposited. The sanctuary was furnished with a bronze bull image which originally had inlaid eyes of precious stone. The figurine served as an object of worship. No traces of permanent settlement were found at the site itself, but five early Iron Age settlements have been found at a distance of about one kilometre, surrounding the cult place in a semi-circle. It is presumably from these small settlements, rather than from the more distant cities such as Dothan and Tirzah, that the worshippers came.[44]

In addition to the possible cases of temples and open air sanctuaries, there is some evidence of domestic cultic activity. At Raddana, the excavators found a platform in one of the few buildings of a joint-family compound. They took it to be the remains of 'a primitive family altar'. Scattered fragments of two offering stands found nearby increase the likelihood of the cultic interpretation.[45] A house in Hazor stratum XI (Early Iron Age), dating back to the time when the site was still an unwalled village, contained a bronze figurine of a seated male deity and cultic utensils. The house has been interpreted as an Israelite high place, but one might as well speak of a

domestic cult.[46] The remains of animal offerings in an eleventh century BC house in Tell Qiri (Ha-Zorea[c], north-west of the central hill country) also point to a domestic cult.[47] From the eleventh century, too, there are the remains of a court shrine at Tell el-Mazar in the Jordan valley.[48] Other examples of domestic shrines come from the tenth century BC. The cultic corners of Megiddo (locus 2081, stratum Va), with incense stands and upright stones at the entrance, might be mentioned in illustration.[49]

In sum, the archaeological evidence suggests that the early Israelite cult was consonant with a simple, agrarian, non-urban society; it did not require a large body of clergy nor an elaborate ritual.[50] In respect to the few examples of sacred architecture, there is both continuity and discontinuity between the Early Iron and the Late Bronze Age. Discontinuity is suggested by the sheer lack of major monumental temples in the central hill country. The area does not seem to have reached a degree of political unity where a central temple would have been functional. Continuity, on the other hand, is evident from the use of earlier sanctuaries, the practice of ritual activities in a domestic context, and the use of theriomorphic and anthropomorphic cult images. Combined with the evidence of the onomastic data, the archaeological record suggests that the early Israelites of the central hill country were self-sufficient in their religion. Their religion was a family or clan religion, with rituals conducted at local shrines, and focused on the patron god of the clan.[51] The principal gods who served as such were El, Baal, and Yahweh. The cult which they received, performed either at local open air sanctuaries or in one of the houses of the settlement, followed the forms of Canaanite worship.

The Sanctuary of Micah in the Hill Country of Ephraim

The onomastic and archaeological evidence of early Israelite family religion can be used to establish the plausibility of biblical data on local sanctuaries and rituals in the period of the Judges. The relevant texts are to be found in the Book of Judges, and some of them in the early sections of the First Book of Samuel. Three narratives in this corpus deal with local shrines: Judges

[50] Cf. Dever 1987:233.

[51] So too Halpern, who characterizes the pre-monarchic cult as 'extremely locally oriented' (1983:224) and who emphasizes the importance of 'the clan- or local religion which seems to have persisted to the time when Assyria devastated the entire Israelite countryside' (1983:224-225).

17:1-18:31 tells about the 'house of God' and the divine image of Micah from the hill country of Ephraim; Judges 6-8 contains the story of the local shrine of Gideon (or Jerubbaal) at Ophrah of the Abiezrites; and 1 Samuel 9:11-24 describes the sacrificial meal of Samuel and Saul at the high place (the Bamah) of Ramah-of-the-Zuphites. The three texts shall be discussed in the order in which they have just been mentioned.

The traditions about a local shrine in the hill country of Ephraim form the background of a narrative that is meant to discredit the sanctuary at Dan, its cult, and its priesthood (Judges 17-18).[52] It has been incorporated as an appendix to the Book of Judges because the events are set in the period of the Judges. The redactional additions in 17:6 ('In those days there was no king in Israel; every man did what was right in his own eyes') and 18:1 ('In those days there was no king in Israel') serve as a chronological frame (cf. 19:1; 21:25).[53] The actual date of the material is debated. Completely opposite opinions have been defended: while the text gives the one commentator 'the overall impression that the story originated in a very early (premonarchic) period',[54] the next interpreter regards the chapters as 'an example of late biblical narrative'.[55] What clues for dating does the narrative itself present ?

The principal chronological implication of the narrative lies in its polemical intention. Two originally independent Micah stories[56]—the one about the origin of his silver-coated idol (Judges 17:1-4), the other about the origin of the priest who served in his house (Judges 17:7-13)—have been combined. A redactional seam in 17:5 ('And this man Micah had a shrine, and he made an ephod-cum-teraphim, and he consecrated one of his sons who became his priest') shows where the narratives have been connected. The combined stories were elaborated into a polemical aetiology of the temple cult at Dan according to which both Micah's image and his priest wound up at Dan (18:30). The bull image of Dan, known from one or two other biblical texts (1 Kings 12:29), was thus given an inglorious history: it had been made from stolen silver, and came to Dan by foul means. The Mosaic priesthood of Dan (the Levite from Bethlehem is identified as Jonathan the son of Gershom, the son of Moses, in 18:30) scarcely appears

---

52 For literature see Soggin 1981b:264; Gray 1986:222-224.

53 Talmon 1986:39-52 suggests that the indication means to say that the events occurred between the time of Joshua and the period of the Judges. The posited equivalence between 'king' (*melek*) and 'judge' (*šōpēṭ*) does not carry conviction, however.

54 Boling 1975:259.

55 Auld 1989:263.

56 Note, e.g., the long form *Mîkāyĕhû* in 17:1-4 as opposed to the shorter form elsewhere in the narrative. For a detailed source-critical analysis see Moore 1918^2:366-370.

in a more positive light. It was the allurement of a steady income which convinced the priest that he should stay with Micah (17:10); greed for power and greater glory made him close his eyes to robbery and incited him to leave Micah for the Danites (18:19-20).

Though the satirical character of the narrative is evident, the identity of the party lampooning against Dan and its priesthood is a riddle. The solution must be based on the principle of *cui bono*: whose interests were served by this story? Various suggestions have been made. Many biblical scholars suppose the story has Judahite origins, because they construe it as a critique of the iconic worship current in Ephraim (and supposedly absent from the temple in Jerusalem). To say that the Book of Judges is 'a political allegory fostering the Davidic monarchy'[57] and for that reason critical of everything Ephraimite is the politicized version of this view. One could object, though, that one of the main targets of criticism in Judges 17-18 is a Levite from Bethlehem, precisely the place where King David came from. In fact, the expressions 'Bethlehem in Judah' (17:7) and 'Kiriath-jearim in Judah' (18:12) strongly suggest a northern provenance of the narrative. Why explain to a Judahite audience the location of places with which they would have been quite familiar?[58] An Ephraimite origin would explain the presence of these indications. If the narrative has indeed an Israelite background, as Martin Noth and others suggest, its authors must probably be sought among the priests of Bethel.[59]

A priest from Bethel might not appear to be the most obvious author of our story. On second thought, however, the possibility is less far-fetched than it seems. It is often not sufficiently realized that the sanctuaries of Dan and Bethel, though both apostate from a Judahite point of view, considered each other as rivals. Because the two of them were recognized as state sanctuaries by Jeroboam I (1 Kings 12:29-30), it is usually assumed that they were in sympathy with each other. The reality was different. The priesthood at Dan claimed Mosaic descent (Judges 18:30),[60] while the Bethel

---

[57] Brettler 1989:416.

[58] Noth 1962. So, too, Mayes 1974:45-46. Brettler's (1989:409 n. 79) dismissal of Noth's argument is too easy. He fails to take into account Judges 18:12, which invalidates his observation that 'a Judean writing for a general audience could have used this term to distinguish that place from others that are also named *bêt leḥem*.' While Noth's arguments in favour of an Ephraimite origin of the story are persuasive, his ultimate solution is not convincing. He believes it is the later priesthood of Dan which sought to consolidate its position by criticizing the previous priesthood.

[59] Also Gray 1986:224 considers the possibility of the story going back to royal priests at Bethel.

[60] Noth 1948:202; Schmid, H. 1968:98; Widengren 1970:36; Knauf 1988:158. Note that the name *Mĕnaššeh* ('Jonathan, the son of Gershom, the son of Manasseh') should

priests looked to Aaron as their ancestor (Judges 20:26-28);[61] the antagonism between these two groups is well documented.[62] Judging by the biblical records, the prestige of Bethel was greater than that of Dan. The absence of Dan in such Ephraimite literary works as the Cycle of Elijah and Elisha (1 Kings 17-2 Kings 8.13) and the Elohist source is noteworthy.[63] Yet the popularity of Dan as a pilgrimage centre (Amos 8:14) will hardly have pleased the Bethel priesthood, since it must have gone to the detriment of their income. If the chapters were a polemic against the state cult in the Northern Kingdom, as it is often supposed, why is Bethel not mentioned at all? The most plausible solution, also in view of the other indications, is to regard the Bethel priesthood as responsible for the combination of the two Micah stories into a piece of anti-Dan propaganda.[64]

Assuming that two previously existing traditions about Micah from the hill country of Ephraim were combined and reworked before 734 BC (when Dan was captured by the Assyrians), the content of the once independent Micah stories must go back to at least the early monarchic era. Micah compares with other small or great judges in the sense that he was a local celebrity. Judging by the amount of money his—presumably widowed—mother possessed, he was from a wealthy family. The story suggests that he was the chief of a settlement in the hill country inhabited by people most of whom were related by kin; they can be referred to as the 'house' of Micah (Judges 18:25). Such a 'house', in the biblical idiom, could easily amount to eighty-five persons, women and children not included (cf. 1 Samuel 22:11.18). Having set out against five men, Micah soon discovered that the men of his clan were no party for a group of six-hundred armed men.

Micah owed his fame in part to the possession of a richly adorned shrine. Some believe this means he was 'a prince or a petty ruler'.[65] Yet though Micah was clearly a man of means, it is unwarranted to assume that he ruled over a small territorial state. Nothing proves that the building of a temple and the installation of a son as its priest were royal prerogatives.[66] What is

---

be read as *Mōšeh* (Moses), as the suspended *nun* (known as *tĕlûyâ*) indicates its precarious character in the scribal tradition.

61 Cross 1973:199 refers to Judges 20:26-28 as 'an archaic tradition'. See also Gunneweg 1965:90.

62 See Cross 1973:195-215.

63 On the Elijah-Elisha narratives see Chapter Twelve; for the Elohist source see below.

64 Sensing the difficulty of the absence of Bethel in Judges 17-18, Amit 1990 has suggested that the narrative contains a hidden polemic against Bethel: the shrine of Micah (called בית אלהים *bêt ʾelōhîm*) should in fact be identified with Bethel.

65 Ahlström 1986:79; so already Ahlström 1963:25.

66 The phenomenon of a privately owned sanctuary has a parallel among pre-Islamic Arabs, where sanctuaries were usually in the possession of local nobility. The owner of the

presented as exceptional in the story is not the fact that Micah owned a shrine, but that this shrine had an expensive idol and was operated by a Levite, i.e., a professional from out of town. At the time in which the Micah traditions were spun, there was nothing extraordinary in the fact that a settlement of some size had a local shrine. Though owned by the town's headman, the chapel was apparently designed as a cultic centre for the entire population—a population that had kinship ties with the owner. If the shrine were a place of devotion for only a nuclear family, the consecration of a Levite priest would be slightly overdone. In this respect, then, the story reflects the religious situation adumbrated by the archaeological and toponymic record: religion in the early Iron Age was primarily a matter of the joint family or clan.

Unfortunately the story contains no detailed description of the paraphernalia and the organization of an early Israelite shrine. Yet a few points deserve to be noted. According to Judges 17:5 a shrine, in order to serve as a full-fledged sanctuary, had to be equipped with an ephod-cum-teraphim (*ʾēpôd ûtĕrāpîm*).[67] The significance of the expression was apparently lost in the process of textual transmission, in view of the fact that the terms are used as a hendiays in 17:5 and 18:14 (as they are, too, in Hosea 3:4), but torn asunder in 18:17, 18, 20.[68] The term 'ephod' would seem to be redundant in the present context, since the story speaks at length about the divine image which Micah possessed. Judging by the story of Gideon's altar at Ophrah, an ephod refers to an image of the god.[69] The teraphim are one or more ancestor statuettes.[70] Their presence in Micah's sanctuary confirms its function as a family shrine.

Micah's wealth is visible in the presence of a silver-plated image (allegedly made from the silver Micah had stolen from his mother, and which she had sanctified to God as a means of annulling her earlier curse over the culprit—whom she had not suspected to be her own son) and of a professional priest. Though framed as a lampoon, and bordering on a comedy of errors, the tale about Micah's shrine has a certain degree of historical plausibility. It compares with the information laid down in the Old Babylonian record of

---

holy place often appointed one of his sons as *sādin*, more a custodian than a priest. See Wellhausen 1927[3]:130; Henninger 1959:137.

67 The ephod-and-teraphim are presumably not variants of the image, but its accessories, see Gray 1986:222.

68 Something similar has occurred to the *pesel ûmassēkâ*, another hendiadys, referring to a metal-coated carved image. The construction was apparently misunderstood in Judges 18:17, 18, 20.

69 See on this subject van der Toorn & Houtman 1994:230.

70 See van der Toorn & Lewis 1995.

foundation of a chapel for Ḫaniš-and-Šullat.[71] The benefactor who donated this chapel to the god, had also appointed a professional priest to do service in the modest sanctuary. It is likely that the dedicant expected the sanctuary to be used by himself and his family, as well as by the inhabitants of the neighbourhood. Such a privately founded sanctuary, provided with a cult image and a priest, was a source of prestige among fellow citizens.

The Altar of Gideon

The second narrative to be considered is the story—or the collection of stories—about Gideon (Judges 6-8).[72] The complex character of the Gideon tradition becomes clear as soon as the relevant chapters are submitted to a literary-critical analysis. No division of the various episodes over two or more distinct sources has commanded general assent; there is only some agreement about the separation of the Deuteronomistic redaction from the earlier traditions.[73]

The chapters 6-8 are a heavily edited selection of older material, in consequence of which the narrative in its present form contains a fair number of doublets and internal tensions. Thus we have a hero with two different names: Gideon (*passim*) and Jerubbaal (6:32; 7:1; 8:29); two Yahwistic altars, one near the wine press under the terebinth (6:11-24), the other 'on top of the settlement'[74] (6:25-32); two requests to God for proof, one involving the miraculous combustion of an offering (Judges 6:17-24), the other involving a fleece of wool (6:36-40); two victorious battles, one against Oreb and Zeeb (7:25-8:3), the other against Zebah and Zalmunna (8:4-21). The latter were apparently held responsible for a killing among Gideon's clansmen at Tabor (8:18), an incident which has now disappeared from the narrative.

Outside the three chapters of the Book of Judges the name Gideon is unknown. The 'judge' from Ophrah is consistently referred to as Jerubbaal (Judges 9 *passim*; 1 Samuel 12:11) or—with intentional deformation—Jerubbesheth (2 Samuel 11:21). This fact suggests that the 'extended narrative of Gideon' was 'a re-telling of an earlier story (...) about Jerubbaal.'[75] The fact that Jerubbaal was provided with a literary alias bearing the name Gideon must be explained as an effort to clear Jerubbaal of all associations

---

75 Auld 1989:266.

with the cult of Baal.[76] The ingenious etymology of the name Jerubbaal on which the episode about the altar destruction finishes strengthens the impression that the Jerubbaal tradition is original.

The picture of Gideon as a nocturnal iconoclast serves to prove his devotion to Yahweh. It was in the interest of the editors of the story to emphasize this point, lest they attribute heroic feats to an idolater. Two historical motifs have been combined in the story of Gideon's destruction of the altar, viz. that of local skirmishes between Baal devotees and worshippers of Yahweh,[77] and that of the hero who asserts his claim to leadership by erecting an altar. While both motifs were bred by historical experiences, their combination into Gideon's act of iconoclasm belongs to the realm of legend.

The historical kernel on which the Gideon narrative is based is the role of Jerubbaal as headman of Ophrah[78] and warrior against the Midianites.[79] Since the Midianite presence in Transjordania is most plausibly dated to the end of the Late Bronze Age,[80] the tradition must go back to the early Iron Age. Jerubbaal's family ranked among the foremost of the Abiezrites at Ophrah. Gideon's self-depreciatory comment at the moment of his calling ('my kin group [*ʾalpî*] is the weakest in Manasseh, and I am the youngest in my father's household,' 6:15) is merely a conventional display of modesty, since the man had more than ten servants (6:27). His wealth gave him a position of leadership (6:34). The family owned a shrine on top of the hill on which Ophrah was built. It had the basic furnishings of a local sanctuary such as an altar (6:20-24), and a tree or wooden pole (6:11) referred to as its Asherah (6:25). Even more spectacular was its golden ephod of about 1,700 shekel in weight (8:24-27), a valuable attribute which implicitly symbolized the prosperity of the town in general and of Jerubbaal's family in particular. Although it was the property of one family, the shrine was a matter of

---

[76] It should be noted that this interpretation of the two names does not imply that there were two distinct historical figures, the one bearing the name Gideon and the other Jerubbaal. On the identity of the two see Emerton 1976. Emerton suggests that one of the two names is ■ regnal name—which seems not very plausible. Whether the name Gideon was chosen for its association with the verb גדע, 'to hew down' (Deuteronomy 7:5; 12:3), as Auld holds, is doubtful. On the etymology of the name see also Noth 1928:227; Emerton 1976:308 and n. 1.

[77] See Richter 1966[2]:164 n. 18; Smend 1975:176.

[78] Ophrah in Manasseh should not be confused with its homonym in the territory of Benjamin (Joshua 18:23; 1 Samuel 13:17). Ophrah in Manasseh has been tentatively identified with ʿAffuleh (*IDB* 3:606-607; Soggin 1981b:114), Farʿata (Naʾaman 1989:14-16), Tell Ṣōfar (Donner 1990), and a host of other sites. On its location see also Knauf 1991:36-39.

[79] Cf. Knauf 1988:34-42, esp. 37: 'Es erscheint glaubhaft, dass es Gideon-Jerubbaal gelang, mit 300 Mann seiner Sippe Abiezer (. . .) eine Midianiter-Gruppe zu schlagen und aus der Beute seinem Heimatort Ophra ein Kultbild zu stiften (. . .).'

[80] See Knauf 1983; 1988:21-23.41.91-96; Cross 1988:57-59.

concern to all 'the men of the town' (6:27-28). Since all the inhabitants of Ophrah belonged to the clan of the Abiezrites (6:24; 8:32), the shrine must have done duty as a clan sanctuary.

The Sanctuary at Ramah-of-the-Zuphites

The third narrative (1 Samuel 9:1-10:16) has a Benjaminite as its protagonist. The reason for its inclusion in the present discussion is threefold: the story has a northern origin, is generally acknowledged to be very ancient, and deals with a clan sanctuary in Ephraim. The sanctuary was located in Ramah, a town belonging to the clan of the Zuphites. As the interlunium sacrifice was going to be celebrated at the sanctuary, the thirty men of the town assembled for a meal of plenty. Samuel presided over the celebration. With the exception of Saul and his servant, all participants in the ritual belonged to the clan or 'people' (*ʿam*) of the Zuphites. It was their sanctuary, and they were its cultic community.[81]

The narrative contains some clues to the location, structure, and functioning of a local shrine. The establishment, called a 'high place' (*bāmâ*), was situated just outside the gate at a point slightly above the level of the town itself (cf. 1 Samuel 9:11-14.18-19.25).[82] This may be compared to the location of the shrine at Ophrah 'on top of the settlement' (Judges 6:26 *ʿal rôʾš hammāʿôn*, according to the emended text). An elevated spot was perhaps characteristic of such local shrines. Though the Bamah was an open-air sanctuary, it could include some roofed space. In 1 Samuel 9:22 it is said that the sacrificial meal was served in a 'hall' (*liškâ*), probably a room with benches along three walls.[83] The same word is used to designate the place where Hannah ate and drank at the sanctuary of Shiloh (1 Sam 1:9 LXX; cf. *v.* 18).[84] Since the shrine at Ramah could accommodate a party of thirty men, the room must have been relatively large. The meal is referred to as a *zebaḥ*, which implies the presence of an altar. A major effect of the ceremonies performed at that altar was the consolidation of the ties among the male population; sacrificial worship fostered solidarity and a sense of community.

---

[81] For a discussion of the background of the story see the section on 'The Periodicity of the Offerings to the Dead' in Chapter Nine. Another biblical illustration of a sacrificial meal at a local sanctuary is found at 1 Samuel 16:2-5 in connection with Bethlehem.

[82] Cf. Naʾaman 1987:20.

[83] *HAL*[3] 509-510; Note also Passoni dell'Acqua 1981 about the Egyptian background of the LXX translation of Hebrew *liškâ*. For a possible connection with Greek λέσχα see Burkert 1993.

[84] Cf. the observations by Weinfeld *apud* Biran 1981:149.

Despite their differences in scope and setting, the three early biblical narratives yield a remarkably uniform picture of the role of the Bamah in the Early Iron Age. According to the story of Micah, the local sanctuary belonged to the most prominent family of the town. This may well have been the case as well in Ramah. Samuel's presidency at the sacrificial banquet was more likely due to his social position than to his spiritual gifts. It should be remembered that he came from a family in which there was no financial obstacle to polygamy (1 Samuel 1:1-8), which suggests it belonged to an upper-class milieu. Even if the sanctuary belonged to one family, it was not a domestic chapel but a local cult centre catering to the needs of the entire community. This community was conceived of as a lineage or a clan; their ties were putatively kin-based. In biblical parlance they were a *bêt-ʾāb* (Judges 17-18), a *mišpāḥâ*, or an *ʿam* (1 Samuel 9:12). Usually, they all lived in the town where the sanctuary was located; it is almost impossible to distinguish between clan, on the one hand, and settlement, on the other.

The basic structures of the picture emerging from the literary evidence correspond with the scant archaeological remains of the early Israelite cult, as well as with the onomastic data. At present, there is no instance where the literary and archaeological data interlock; the sanctuaries of Ophrah and Ramah cannot be identified as yet.[85] However, the presumed existence of a local cult functioning at the level of the clan is well attested in the biblical records. The towns, inhabited by different branches of a family or clan, were the main cultic communities. There is neither archaeological nor literary evidence for a domestic cult performed by single nuclear families. Related families constituted one cultic body, the paterfamilias of the foremost family acting as its head. It need hardly be stressed that the local shrine known as the 'Bull Site' fits at marvel in this context, assuming the five settlements which surrounded it at close quarters perceived themselves as a unity.

In the earliest phase of Israelite religion it would seem that religion was predominantly a matter of the family or clan. The settlers of the central hill country lived in self-contained and largely self-sufficient communities; they did not look beyond the borders of their cluster of hamlets, their town or their village for their worship. At the same time the townships were the main social horizon for the families that lived there. Family religion was focused on the god of the settlement. This god was the patron of the leading family

---

[85] Edelman 1988:56 makes a case for the identification of Ramah with Khirbet Raddana, excavated between 1969 to 1972 (cf. Callaway & Cooley 1971). The village of Raddana was situated on an arid hilltop. It consisted of five or six house compounds and had no fortifications. Considering its size, it is unlikely that the village ever had more than sixty inhabitants (see Callaway 1985:34).

and, by extension, of the local clan and the settlement. Allegiance to the clan god was concomitant with membership of the clan. The clan god was commonly a god of the Canaanite pantheon, El and Baal being the most widely worshipped. The occurrence of Yahweh as clan god seems to have been exceptional. The god was assumed to act as the patron and protector of the clan, and served as the symbol of its identity.

The Religion of the Patriarchs according to the Elohist

On the strength of the evidence gathered so far it can be said that early Israelite religion consisted of a variety of local forms of family religion. In conjunction with the cult of the ancestors, it exhibited the characteristics of family religion as reflected in the Old Babylonian, Ugaritic and Sam'alite sources. The one element that is still lacking in our reconstruction concerns the transmission of the veneration of the local family god by the one generation to the other. This aspect, too, is documented in the biblical records. It can be found in the patriarchal narratives that speak about Yahweh (in the Yahwistic tradition), El or Elohim (in the Elohistic tradition) or El-Shadday (in the Priestly tradition) as 'the god of the father'.[86] Since only the Elohist, as we shall call the author of the Elohistic parts of Genesis,[87] has an Ephraimite background,[88] the focus of what follows will fall on the traditions about Jacob and Bethel.[89]

The Elohist pictures the religion of the patriarchs as family religion.[90] An illustration of the role of kinship in the devotion to the god of the father is to be found in the last chapter of Genesis. The story tells how Joseph's brothers, fearing that Joseph might avenge himself on them now that their father has died, sent him a message:

---

[86] See Alt 1929; 1940. Supporters of Alt's view on the religion of the patriarchs include Maag 1980 (originally published in 1958); Rost 1960:353; von Rad 1962[4]:179-189; Fohrer 1969:20-26; Schmidt, W. H. 1979:30; Mettinger 1988:53-74. For a critique of Alt see Hoftijzer 1956; Diebner 1975; Schmid, H. H. 1976:119-153, esp. 144; Van Seters 1980; Köckert 1988.

[87] The largely undisputed Elohist passages bearing on the religion of the patriarchs are Genesis 20; 21:8-20; 33:18-20; 35:1-8.14-20; 43; 46:1-5; 50:15-20. A few other relevant texts are to be put on the account of the Elohist, though they betray traces of a Yahwistic redaction: Genesis 21:22-34 [33 J]; 22:1-14 [11 J]; 28:10-22 [13-16.21 J]; 31:1-54 [3.49 J]. Genesis 46:1-5 is a redactional unit meant to connect the patriarchal traditions with the sojourn in Egypt and the Exodus traditions, see Schmitt, H.-C. 1980:57-62.163-169; Köckert 1988:82-83. The reference to the Exodus does not imply that the passage is by definition later than the rest of the Elohist corpus, considering the place of the Exodus motif in the Book of Hosea.

[88] See n. 110.

[89] On the Cycle of Jacob as a self-contained group of narratives see Blum 1984:175-185; de Pury 1991.

[90] Cf. Rost 1960:352-356.

> Before his death, your father gave this command, 'Thus you shall say to Joseph: Please forgive the crime of your brothers and their sin, for they did evil to you.' Now then, do forgive the crime of the servants of the god of your father.
>
> Genesis 50:16-17

The passage shows that the expressions 'your brothers' and 'the servants of the god of your father' can be used in parallelism. Being a son of one's father means that one is a servant of his god. In a prayer to 'the god of my father Abraham and the god of my father Isaac' (Genesis 32:10[9]), Jacob calls himself a 'servant' of the same god (Genesis 32:11[10]). Patrilineal kinship entails a common religious devotion.

According to the Elohist, the god of the one lineage is not the god of the other. Most instructive on the particularism of the family religion of the patriarchs is the story of Jacob and Laban. Jacob is a servant of the god of his father Abraham, whereas Laban worships the god of his father Nahor. Whether the theological identity of these gods is ultimately the same or not does not matter; they would be differentiated anyhow by their ties with their worshippers. As Jacob and Laban pledge not to infringe on each other's territory, their respective gods are called upon as witnesses.

> And Laban said to Jacob: See this heap of stones and see this pillar which I have erected between me and you; This heap is a witness and this pillar is a witness—I shall certainly not go over to you beyond this heap and you shall not go over to me beyond this heap and this pillar, for harm. May the god of Abraham and the god of Nahor judge between us.
>
> Genesis 31:51-53

The verb used in the last phrase is in the plural (*yišpĕṭū*, 'may they judge' or 'they shall judge'), because the god of Abraham is not identical with the god of Nahor. The plural contrasts with the use of the singular in Genesis 43:23, where 'your god and the god of your father' is the single subject of the action (*nātan*). An editor has tried to smooth away the polytheism of Genesis 31:53 by the insertion of the gloss 'the god of their father'. A similar concern has inspired the transformation of the plural of the verb 'to judge' into the singular in the Samaritan version and the Greek translation of this passage. Yet the text clearly distinguishes the god worshipped by Jacob ('the god of Abraham') from the god worshipped by Laban ('the god of Nahor').[91]

The distinction is also evident from another passage in the same chapter. As Laban charges Jacob with the theft of his idol he says:

---

[91] See Alt 1929:29-31 (= *KS* 1:27-28).

> It is in my power to do you (plural) harm; but the god of your (plural) father (*ʾelōhê ʾăbîkem*) said to me last night: Beware not to speak to Jacob either good or bad. But now that you have gone away because you longed for your father's house, why did you steal my god (*ʾelōhāy*) ?
>
> Genesis 31:29-30

The question suggests that there is a close relation between 'the house of the father', i.e., the family, and 'the god of the father'. Jacob argues with his wives that he owes his fortune entirely to the god of his father and in no way to Laban (Genesis 31:5, cf. 31:42). The women observe that they have neither portion nor inheritance in their father's house; they have become strangers (*nokriyyôt*)[92] to their family (Genesis 31:14-15). They therefore agree to make the transfer to the house of Jacob's father, which implies that their religious loyalty will henceforth be directed to the god of his father (cf. Genesis 31:16). Also, they are included in the expression 'the god of your (plural) father' (Genesis 31:29). Still Rachel's embezzlement of the teraphim—which Laban calls 'my god(s)'—indicates her reluctance to break with her father's family religion (Genesis 31:19).

The Elohist narratives provide a clue concerning the identity of the god of the patriarchs, and more especially of Jacob, through the names of the various sacred sites founded or visited by the patriarchs. An important site in the Elohist narrative is the altar at Bethel. On his way to Haran, Jacob passes the night at Bethel and has a dream in which he sees angels ascending and descending a ladder reaching into heaven (Genesis 28:10-12). To mark off this place of revelation, Jacob sets up a stone, pours oil on top of it, and vows to pay tithes if he comes home in peace (Genesis 28:18-22). According to Genesis 28:19, Jacob 'called the name of that place Bethel', which literally means 'House of El'. The name suggests devotion to El. Additional evidence for worship of El is found in other toponyms. Jacob fought with God on the banks of the Jabbok in Peniel (also known as Penuel), 'Face-of-El' (Genesis 32:31 [30]). The standing stone[93] which Jacob set up at Shechem was called 'El-is-the-god-of-Israel' (Genesis 33:20). The altar at Bethel built after Jacob's return from Haran was reportedly called 'El-of-Bethel' (Genesis 35:7).[94]

---

[92] Compare the use of the term *nakrum* in Akkadian texts to qualify the contrast between kin ('flesh and blood') and non-kin ('strangers'), see Chapter Two, n. 57.

[93] The text erroneously has *mizbēaḥ* instead of *maṣṣēbâ*; the latter would be expected after the verb *wayyaṣṣeb*. See for the correction Holzinger 1898:212-213; Jaroš 1976:70; Westermann 1981:637.

[94] Köckert 1988:85 and n. 186 objects that stelae are never given a name in the Bible, but fails to mention 1 Samuel 7:12 where the *ʾeben*, 'stone', which is named, is set up in the manner of a *maṣṣēbâ*. In the light of these names, the phraseology of Genesis 21:33 should probably be slightly altered. Instead of reading that Abraham called upon Yahweh ʾēl-ʿôlām

It should be noted that in Genesis 12-50 the word *ʾēl* is consistently used as a proper name. The appellative for 'god' is *ʾelōhîm*.[95] Thus the expression *ʾēl ʾābîkā* in Genesis 49:25 does not mean 'the god of your father', as it is often translated, but 'El your Father' (cf. Deuteronomy 32:6-7).[96] In the Blessing of Jacob it occurs in synonymous parallelism with Šadday.[97] The fact that El is a proper name has been obviated in some cases by the use of the definite article. Thus Genesis 31:13 has *hāʾēl bêtʾēl* versus *ʾēl bêtʾēl* in Genesis 35:7; Genesis 46:2 has *hāʾēl ʾelōhê ʾābîkā* versus *ʾēl ʾelōhê yiśrāʾēl* in Genesis 33:20.[98] It has been suggested that 'the article has been added in an attempt to destroy the titular use of the term here, altering its sense from "El" to "the god (of) . . ."'.[99] This theological correction may be written on the account of the Yahwist.[100]

---

at the tamarisk at Beersheba, it is preferable to understand that Abraham called the sacred tree by the name of ʾēl-ʿôlām. It is instructive to compare the phraseology of Genesis 28:19; 33:20; 35:7 with Genesis 21:33:

(a) Genesis 28:19 *wayyiqrāʾ ʾet-šem-hammāqôm hahûʾ bêt-ʾēl;*

(b) Genesis 33:20 *(wayyaṣṣeb-šām <maṣṣēbâ>) wayyiqrāʾ-lô ʾēl ʾĕlōhê yiśrāʾēl;*

(c) Genesis 35:7 *(wayyiben šām mizbēaḥ) wayyiqrāʾ lammāqôm ʾēl bêt-ʾēl;*

(d) Genesis 21:33 *(wayyiṭṭaʿ ʾešel bibʾēr šābaʿ) wayyiqrāʾ-šām bĕšēm YHWH ʾēl ʿôlām.*

It has to be assumed that a Yahwistic redactor of Genesis 21:33 made a contamination with another phrase current in J, viz. 'And he built an altar for Yahweh and he called upon the name of Yahweh' (*wayyiben-šām mizbēaḥ laYHWH wayyiqrāʾ bĕšēm YHWH*, Genesis 12:8; 26:25; cf. 13:4). A Yahwistic reworking may also be suspected in Genesis 22. The narrative of Abraham's sacrifice stems from the Elohist, with an interpolation (*v.* 11) and some editing by the Yahwist. His editorial hand is visible in the name 'Yahweh-will-provide' (*YHWH yirʾeh*, Genesis 22:14). The very practice of naming cultic sites and objects is specific to the Elohist tradition; hence the original name will likely have been 'El-will-provide'.

[95] *Pace* Rendtorff 1994.

[96] See Wyatt 1978:101-102.

[97] Cf. Smith, M. S. 1990:16-17. Because of the occurrence of El-shadday, Van Seters 1980:226 judges Genesis 49:25-26 to be a Priestly addition. Köckert 1988:79 n. 154 suggests that *wĕʾet* (thus the MT) is perhaps the correct reading after all.

[98] Köckert 1988:83.86-87 denies that *ʾēl* is used as a *nomen proprium* in Genesis 33:20 and 46:3, but fails to explains the resulting redundancy of El and Elohim.

[99] Wyatt 1978:103. Köckert 1988:83, who regards Genesis 46:1-5 as a later theological reflection, refers to Isaiah 42:5 (*hāʾēl YHWH*) as a parallel. The reference to Isaiah could be taken as a corroboration of the view which holds that by adding the definite article, the divine name was made harmless.

[100] In agreement with Van Seters 1975 and Schmid, H. H. 1976, I take the Yahwist (if we stay with the term) to be later than the Elohist. A study of Genesis 28 is instructive for the relationship between E and J. The basic story of Genesis 28:10-22 consists of *vv.* 10-12.17-22, which must be ascribed to E because of the use of Elohim and the connection with Genesis 35:1-8 (Schmid, H. H. 1976:120), the latter passage being commonly ascribed to the Elohist (Otto 1976; 1979:72-76). The Yahwistic redaction is by definition posterior to the Elohist. Note also Rendtorff 1983, who agrees that *vv*. 23-25 are an addition but refuses to ascribe them to J, and prefers to speak of one or more 'theologische Bearbeitungsschichten'. Blum 1984:7-35 regards *vv.* 11-13a$^{\alpha}$ & 16-19a$^{\alpha}$ as the original basis of the narrative, but fails to see that the terminology of 13a$^{\alpha}$ is characteristic of 'J' (note that *ʿālāyw* in the

There is other evidence suggesting that the Yahwist tried to adjust the theological implications of the Elohist narratives to bring them into line with his own views. A key example is the Bethel foundation legend in Genesis 28. Not only did the Yahwist insert *vv.* 13-16, adding to a nightly vision of angels a dream theophany of the more orthodox kind, but he also changed the wording of *v.* 21. As it stands now, the verse has Jacob promise: 'If I return safely to my father's house, then Yahweh shall be my god.' In view of the prominence of El in the Elohist narratives, this pledge is odd; it is far more likely that in the narrative as the Elohist wrote it, El was to benefit from Jacob's devotion. On his return from Haran, Jacob informed his family that he would build an altar 'for El who answered me on the day of my need and who was with me on the road I have walked' (Genesis 35:3), which suggests that El was Jacob's god. According to Genesis 46:1-3, Jacob did indeed worship El as the god of his father and as his god.

The cult of El as family god, as pictured by the Elohist, is conducted at topographically fixed sanctuaries. Bethel is probably the most important one. In response to the revelatory dream Jacob had on his way to Haran, he set up a stone, anointed it, and vowed to pay tithes on his return (Genesis 28:18-22). When he did return from Haran he built an altar at Bethel (Genesis 35:1.3.6-7). After a second vision at Bethel, Jacob set up a second pillar on which he poured a libation and which he anointed (Genesis 35:9-15). Though the stories apparently draw on different traditions, which has led to a duplication of altars and pillars, they are consistent in connecting the sanctuary of Bethel with the god of Jacob. The second sanctuary is at Beersheba, where Abraham established a place of worship by planting a tamarisk tree which he called *ʾēl-ʿôlām*, i.e., 'El-of-eternity' (Genesis 21:33). Many years later Jacob visited Beersheba to 'offer sacrifices to the god of his father Isaac' (Genesis 46:1). The narrator of the story implies that El the god of his father was in some particular way present at the cult centre of Beersheba (Genesis 46:2-3). Bethel and Beersheba are precisely two of the sanctuaries Amos fulminated against in his Ephraimite prophecies (Amos 5:5).

According to the Elohist, the cult of the family god included vows and sacrifices. Vows are especially important in the Jacob tradition since the Elohist has used them as a theological motif by which he could connect Genesis 28, Genesis 31:4-16 and Genesis 35:1-5.[101] Note the following correspondences:

---

phrase *YHWH niṣṣāb ʿālāyw*, Yahweh stood by him', refers to Jacob, not to the ladder).

[101] See Richter 1967:42-52.

> And Jacob took a vow saying, 'If God will be with me ... so that I come again to my father's house in peace, than 'El' shall be my god.
>
> Genesis 28:20-21

> The god of my father has been with me.
>
> Genesis 31:5

> I am El of Bethel, where you anointed a pillar and made a vow to me. Now arise, leave this land, and return to the land of your birth!
>
> Genesis 31:13

> Let us arise and go up to Bethel, that I may make there an altar for El, who answered me in my distress and has been with me wherever I have gone.
>
> Genesis 35:3

The artful use of the motif of the vow suggests that it is to be put on the account of the narrator. What it reflects, then, is the importance of vows as a means of personal religious involvement in the view (and time!) of the Elohist.

References to sacrifice are not lacking in the Elohist tradition, either. Jacob went to Beersheba to 'offer sacrifices (*zĕbāḥîm*) to the god of his father Isaac' (Genesis 46:1). The only other time 'sacrifices' (*zĕbāḥîm*) are mentioned in the book of Genesis is in Genesis 31:54 (also Elohistic), where Jacob is reported to have offered a sacrifice on the mountain near Mizpah. Set in the context of a covenant rite, this sacrifice has to be interpreted as a sacrificial meal. As such, it was consecrated by Jacob's invocation of the god of Abraham. Another type of cultic offering mentioned in the Book of Genesis is the 'burnt offering' (*ʿōlâ*) brought by Abraham on Mount Moriah (Genesis 22:13), also reported by the Elohist. Apparently, then, the Elohist did not deem it necessary to play down the cultic involvement of the patriarchs for theological reasons. He expected his audience to find no fault with the sacrificial worship of El as a family god.

By the standards of the Jewish community of the Second Temple period, the cult of the patriarchs was rather unorthodox. In addition to the mention of a sacrificial cult outside Jerusalem, the Elohist has Jacob erect a pillar (*maṣṣēbâ*) at various places (Genesis 28:18.22; 31:45; 33:20 [read *maṣṣēbâ* instead of *mizbēaḥ*[102]]; 35:14.20). These pillars cannot be regarded as mere memorial stones; the fact that they are anointed implies that they were believed to embody a divine presence (Genesis 28:18; 31:13; 35:14).[103]

---

[102] See note 93.

[103] On *maṣṣēbôt* in Iron Age Palestine see Mettinger 1995:140-168.

Jacob's vow to pay tithes over all his income is apparently made to the stone he had set up (Genesis 28:20-22). Evidence from the cities of Mari, Emar and elsewhere shows that the cult of stelas, which included offerings, was widely practised in second millennium Syria.[104] Such stelas were still worshipped in the first millennium.[105] They compare to the Hittite *ḫuwaši*-stones, set up in temples and in rural shrines as representations of the deity.[106] The role of erected stones in the Elohist version of the patriarchal history tallies with Near Eastern practices current in the second and first millennium BC, and fits both the archaeological and biblical evidence on early Israelite open-air sanctuaries (*bāmôt*).

The 'god of the father' described by the Elohist is neither anonymous nor itinerant. In this respect the classical view of patriarchal religion formulated by Alt in his influential monograph on 'the God of the Fathers' must be corrected. Alt posited a contrast between the personal god whom the patriarchs worshipped and who had no fixed abode (which led Maag to qualify the patriarchal deity as a *deus vagans* and a *deus migrans*),[107] on the one hand, and the various avatars of El bound to local Palestinian sanctuaries, on the other.[108] As argued by Eissfeldt and others, the patriarchal narratives (and especially the Elohist tradition) suggest that the family religion of many Israelites before the monarchy was focused on El.[109] In this respect, the witness of the Elohist agrees with the anthroponymic data, which showed a marked preference for El in theophoric names. It also corroborates the inference about the function of local sanctuaries drawn from the toponymic, archaeological, and biblical evidence.

The central importance of Bethel in the Elohist narrative supports the traditional view according to which the Elohist is from the Northern Kingdom—for which reason the traditional siglum E might as well be read to mean 'Ephraimite'.[110] Other considerations lead to the same conclusion.

108 Alt 1929:21-24 (*KS* 1:20-22).

109 Eissfeldt 1956; 1968a; 1968b. Among the other authors are Cross 1962:234-235; 1973:3-12.46-60; Gemser 1968:55; Koch 1988.

110 According to Craghan 1977:24 'The majority of authors still continues to place the Elohist in the northern kingdom in either the first half of the ninth century or the first half of the eighth century.' On the Ephraimite background of the Elohist see Cazelles 1966:810-812; Vriezen & van der Woude 1973[4]:164; Schüpphaus 1975:210; Eissfeldt 1976[4]:269-271 (undecided); Jenks 1977. Klein, H. 1977 emphasizes the place of Bethel in the Elohistic tradition, and suspects that the—now lost—Elohistic version of Exodus 32 (the story of the golden calf) framed Aaron in ▪ positive light as the spiritual author of the image (Klein, H.

The Elohist ignores the role of Hebron, both as a sanctuary and as a patriarchal burial ground. Considering the importance of Hebron as a political and religious centre in Judah, its absence from the Elohist narrative implies that the Elohist was either unaware of any patriarchal tradition connected with Hebron or reluctant to mention it. Such ignorance or disinterest is inconceivable for an author from Judah. The fact that the Elohist does mention the Judahite town of Beersheba is directly related to its popularity as a pilgrimage centre among Ephraimites (Amos 5:5; 8:14). The Elohist has little eye for questions of geo-political interest. The one time he does allude to such matters, it is in connection with the border between Israel and Aram (Genesis 31:44-54). The issue was relevant primarily for Israelite, not Judahite, politics.[111]

The date of the Elohist narratives must fall in the first millennium BC. Although it cannot be entirely excluded that a rudimentary nucleus of Jacob sagas originated before 1000, the central place of Beersheba in the Elohist version of the patriarchal tradition makes it unlikely that the latter could develop before 900 BC, since Beersheba was of no importance before the ninth century.[112] Another consideration concerns the central place of Bethel in the Elohist narrative. There can be little doubt that the Elohist took Bethel to be the central sanctuary of the country, since it is implicitly designated as the place where tithes were to be brought (Genesis 28:22). This means that the Bethel he had in mind is the religious centre promoted by Jeroboam I after the division of the kingdoms of Judah and Israel in 922 BC. Once again, then, a full-blown patriarchal tradition with a geographical focus in Bethel is hardly conceivable before the end of the tenth century BC. It is rather to be expected that even after Bethel and Beersheba had reached their status as main sanctuaries, it would be quite some time before they occupied a central place in tradition.

Because the Elohist is of northern provenance, his work must have been written before 721 BC (the fall of Samaria). Assuming that a period of roughly a hundred years was needed for the Elohist tradition to become consolidated around the sanctuaries of Bethel and Beersheba, the period in which the Elohist narrative saw the light is narrowed down to the century between 825-725. A supplementary argument for bringing down the earliest date possible to about 825 concerns the question of the Aramaeans. The

---

1977:252).

111 Jenks 1977:83-111 finds support for the thesis of a Northern provenance of E in its affinities with the early Northern prophetic movement as exemplified in such figures as Samuel, Elijah, and Elisha.

112 Mazar, A. 1990:436-437. Note that Blum 1984:202-203 dates Genesis 25-32* to the late 10th century BC.

story of Jacob and Laban who settle a dispute and mark a border between them reflects a time in which the Aramaean siege of Samaria (2 Kings 6:24-7:20) and occupation of Gilead (Amos 1:3) still rankled as recent memories. Since the territorial conflicts between Damascus and Samaria started around 850 BC (see, e.g., 2 Kings 6:8-7:20; 8:28-29; 9:14; 10:32-33), the Elohist is best dated between 825 and 800.[113]

Another approach to the question of the time and milieu of the Elohist is the comparison of the Elohist tradition with the books of Hosea and Amos, Hosea being an Ephraimite prophet and Amos having worked in Ephraim. The Book of Hosea (*ca.* 750-725 BC) displays familiarity with the Elohist narratives—or at least the traditions they contain—as can be seen from the critical account of Jacob's biography (Hosea 12:1-15).[114] The prophet denounces the corrupt cult of Beth-aven (Hosea 4:15; 10:5) and Bethel (Hosea 10:15), the former being either a deliberate deformation of Bethel or the name of its cult centre. Also Mizpah (Hosea 5:1) and Shechem (Hosea 6:9) are mentioned unfavourably. The sanctuaries against which the prophet Amos (790-750 BC) inveighs are those of Bethel (Amos 3:14; 4:4; 5:5), Gilgal (Amos 4:4; 5:5), Samaria (Amos 8:14), Dan (Amos 8:14), and Beersheba (Amos 5:5; 8:14). The occurrence of Beersheba is particularly striking: it shows that the place of Beersheba in the Elohistic tradition reflects its status in the Northern Kingdom as a pilgrimage shrine. Another interesting correspondence between Amos and the Elohist is the fact that both mention Bethel as the place where tithes were collected (Genesis 28:22; Amos 4:4).[115]

There is a striking correspondence between the Elohist, on the one hand, and Hosea and Amos, on the other, about the identity of the Ephraimite sanctuaries. Their judgment about these sanctuaries does not seem to have been the same, though. Unlike the prophetic books, the Elohist narratives contain not a trace of critique against Bethel and Beersheba. And yet the Elohist, Hosea and Amos participate in a similar climate. Just like Hosea and Amos, the Elohist has a prophet's outlook: he regards Abraham as a prophet; the mode in which God communicates with men is in the manner of the prophetic dream revelation.[116] This suggests that the Elohist had a prophetic

---

113 So also Klein 1977:257.

114 See the section on 'The Exodus as National Charter Myth' in Chapter Twelve.

115 Amos 4:4 also mentions Gilgal as a centre were tithes were collected. Is this the same Gilgal as the Gilgal where the man from Baal-shalishah brought Elisha bread of the first fruits (2 Kings 4:42, cf. 38) ?

116 The Elohist regards Abraham as a prophet (Genesis 20:7), and Hosea alludes to Moses as a prophet (Hosea 12:14). There is a parallel, too, in the way in which God is said to have made Abraham wander away from his family (Genesis 20:13), and that in which he

background himself; he may well have been an exponent of a 'north-Israelite prophetical-levitical circle'.[117] This circle might be identified with 'the sons of the prophets who were in Bethel' (2 Kings 2:3), considering the role of Bethel in the Elohist narrative.[118]

Conclusions

The Elohist narratives show that the terms and concepts of family religion were familiar to an Israelite audience of the eighth century BC. Such familiarity does not necessarily mean that the beliefs and practices in question were a contemporary reality. If they were not, however, they did not belong to the distant past either, as they could effectively be called upon to validate the religious customs of those days, such as the tithe at Bethel, and the pilgrimages to Beersheba. Family religion, with its characteristic worship of 'the god of the father' was still alive, if not in fact then at least in the minds of the audience. When the evidence from the Elohist is put alongside the archaeological and toponymical data, on the one hand, and the stories of local shrines from the time of the Judges, on the other, it completes the picture of family religion drawn earlier in this chapter. The devotion to a local patron deity, characteristic of the early Israelite settlements, was in fact a devotion to 'the god of the father', passed on from father to son and to grandson.

Several rhetorical vestiges outside the patriarchal narratives confirm the existence of the type of family religion here described. In the Song of Miriam (Exodus 15) it is said

> Yahweh is my strength and my vigour,
> he has become my salvation;
> this is my god—I will praise him,
> the god of my father—I will exalt him.
>
> Exodus 15:2

The same parallelism between 'my god' (*ʾēlî*) and 'the god of my father' (*ʾelōhê ʾābî*) occurs in the passage explaining the name of one of Moses' sons. 'And the name of the other was Eli-ezer ('My god is a help'), for he said: The god of my father was my help ...' (Exodus 18:4). This equivalence between 'my god' and 'the god of my father' has to be understood against the background of the notions and practices of family religion.

---

has taken Amos away from behind the flock (Amos 7:15).

[117] Jenks 1977:104 (Jenks errs when adding 'during the eleventh and tenth centuries'). It should be noted that the Elijah narratives contain no critique of Bethel either.

[118] Another prophet living in Bethel is mentioned in 1 Kings 13:11.

Both the forms of the religion of the patriarchs as described by the Elohist and the rhetorical vestiges of family religion in other parts of the Bible point to the presence of a phenomenon in Israelite religion that so far has been little studied. Outside the narratives about Abraham, Isaac and Jacob (the patriarchs who were regarded as the ancestors of the 'people', *ʿam*, of Israel as a whole), family religion is largely ignored in the Hebrew Bible. Being based on the Bible as its main source of information, the historiography of Israelite religion has focused on Yahwism as a the national religion to the detriment of the study of family religion. Yet family religion was the ground from which national religion eventually sprang. Witness the Elohist tradition, the Israelites of the early monarchical era were still familiar with the phenomenon. For their fathers, religion had been conterminous with family religion; their devotion had been concerned with their ancestors and their local god. The later generations who lived under the monarchy faced a different situation: when they did not abandon the religion of their fathers, they had to reconcile it with a new type of religion, promoted and patronized by the state, and focusing on Yahweh as the god of the Israelite nation.

CHAPTER ELEVEN

THE PEOPLE OF YAHWEH: SAUL AND THE RISE OF STATE RELIGION

On the threshold of the tenth century BC, early Israel was transformed from a segmentary society into a national state.[1] Concomitant with the political change a new type of religion manifested itself. Alongside the family worship of local gods, the first kings of Israel propagated a state religion meant to underpin their authority and to cement their kingdom into a nation. The central figure in these developments was King Saul. Before him there had been men of prominence, such as Jerubbaal and Samuel, who occasionally acted as chiefs; yet chieftainship left clans and families a large measure of independence, in matters of both government and religion. The rule of Saul meant a break with the old order. Saul was a king—indeed the first king of Israel.[2] He founded of a territorial state, established an administrative apparatus, and maintained a standing military force. By a system of prebends and other privileges Saul succeeded in gaining the support of several groups in which power was traditionally vested, such as the landed aristocracy who controlled the lineages.[3]

Despite Saul's epoch-making role, he is one of the most underestimated figures of Israelite history. Owing to a major ideological revision at the hands of Judahite authors, Saul's rule is reputed to have been a tragic failure.[4] The biblical historians looked at David and Solomon as the great kings of olden times who had laid the foundations of the Judahite state and whose dynasty would stand forever (2 Samuel 7:16). Within this view there was no room for the recognition that David and Solomon were the heirs of Saul—a truth hinted at by several indications in the records. After all, one of David's first official acts after the establishment of his rule was the transfer of the ark from Kiriath-jearim, in the heartland of the Saulide state, to Jerusalem. David did not attach a pan-Israelite significance to the ark as though it were an amphictyonic symbol. What he had inherited was the religious symbol of the

---

[1] On early Israel as a 'segmentary' society (Durkheim) see Crüsemann 1978:200-205; Schäfer-Lichtenberger 1983:333-367; Frick 1985:51-70.

[2] See Edelman 1992:991-992.

[3] This is what Edelman 1986:35-36 calls 'decentralized patrimonialism', using an expression coined by Max Weber.

[4] On the anti-Saul bias of the biblical records see Evans 1983.

Saulide state; by giving it pride of place in Jerusalem David projected his kingship as the legitimate continuation of Saul's.[5] A similar intention may be detected in Solomon's visit of Gibeon at the beginning of his reign (1 Kings 3:4-15); Gibeon had been the capital of the Saulide state,[6] and to have the clergy of Gibeon endorse his kingship was a fact of political relevance.

This chapter will focus on the significance of Saul for the religion of Israel. Though the changes occurring under Saul's rule were first of all political, he had a major impact on Israelite religion. As the head of state he promoted his god to the rank of national god; his temple in the capital became the religious centre of the kingdom. Its priesthood, sworn to loyalty, was expected to serve the king's best interests. Priests became the civil servants of a state religion. Since the religion promoted by Saul was closely related to his origins, an investigation into the family background of Israel's first king will precede the discussion of his rule.

Saul's Gibeonite Origins

The Bible presents Saul as the son of a landed aristocrat (a *gibbôr ḥayil*) from the land of Benjamin (1 Samuel 9:1-2). His home town is not mentioned in the genealogy of 1 Samuel 9:1-2. Elsewhere it is reported, however, that Saul was buried in his family tomb in Zela (2 Samuel 21:14).[7] This town is currently identified with Khirbet es-Salah[8] near Gibeon (el-Jîb). Since the Israelites were normally buried in the land of their ancestors, it may be assumed that Saul's family came from the close vicinity of Gibeon; its ancestral estate was less than five kilometres to the south of the city. Saul's Gibeonite origins explain why he is later presented as a descendant of Jeiel (var. Jeuel) 'the father of Gibeon' (1 Chronicles 8:29-40; 9:35-44).[9]

Although the genealogical link between Saul and 'the father of Gibeon' is perhaps artificial, the Chronicler was correct in suggesting that the proximity between Saul and Gibeon was not merely geographical. There was indeed a close association between Saul's family and the Gibeonites; it was based,

[5] See van der Toorn & Houtman 1994.

[6] See Bruno 1923:48-59; Blenkinsopp 1974; Edelman 1992:994.

[7] צלע, LXX εν τῇ πλευρᾳ, cf. Bruno 1923:49. The town was also known as Zela ha-eleph, mentioned at Joshua 18:28. LXX^{B} reads Σεληκαν and LXX^{A} reads Σηλαλεφ. For a discussion of the name and the site of this place see *ABD* 6:1072 (with references to further literature).

[8] See Schunk 1963:118 n. 41; Blenkinsopp 1972:58-59; Edelman 1986:214.

[9] Since the Chronicler ignores the fact that Saul belonged to 'the clan of the Matrites' (*mišpaḥat hammaṭrî*, 1 Samuel 10:21), and because Ner was Saul's uncle (1 Samuel 14:50, 51; 26:5, 14; 2 Samuel 2:8, 12; 3:25, 28, 37; 1 Kings 2:5, 32; 1 Chronicles 26:28) rather than his grandfather (1 Chronicles 8:33; 9:39), it may be that Saul's family tree has been secondarily grafted onto the Gibeonite list, see Edelman 1986:216.

ultimately, on ethnic affinity. This affinity can be indirectly demonstrated. There is, on the one hand, an overlap in the personal names attributed in 1 Chronicles 2:50-55 to the Gibeonites (including the inhabitants of Chephirah, Beeroth, and Kiriath-jearim—with Gibeon the constituents of the Gibeonite enclave, according to Joshua 9:17) and those given in the Edomite genealogies in Genesis 36.[10] On the other hand, a similar overlap with these genealogies is attested for Saulide names.[11] The anthroponymic correspondences are hardly a case of mere coincidence. They point to the fact that both the Gibeonites and the Saulides belonged to a strain represented also among the early Edomites.[12] The position of Doeg the Edomite as trusted servant of Saul is in consonance with this 'Edomite connection'. So is the fact that Saul spares the Kenites in his campaign against Amalek (1 Samuel 15:6), since the Kenites are associated with the Edomites.[13]

Though Saul's family came from Zela near Gibeon, Saul had his usual place of residence in Gibeah (1 Samuel 10:26; cf. 22:6; 23:19; 26:1), also called 'Gibeah of Saul' (1 Samuel 11:4; 15:34; 2 Samuel 21:6; Isaiah 10:29). This Gibeah (or Geba[14]) is identified as either modern Jaba^{c}[15] (about fifteen kilometres east of Gibeon) or Tell el-Fûl (about ten kilometres south-east of Gibeon).[16] Both identifications are problematic, however, since neither of them fits the literary data concerning Saul's itinerary in 1 Samuel 10:1-16. This text gives two topographical points of reference along the road from Ramah (either Ramallah[17] or er-Ram[18]) to Gibeah: Rachel's tomb in the

---

[10] Hur 'the first-born of Ephrathah (= Kiriath-jearim)' (1 Chronicles 2:50) may be compared with Hori a descendant of Seir (Genesis 36:22); Shobal the 'father of Kiriath-jearim' (1 Chronicles 2:50) with Shobal the son of Seir (Genesis 36:20.29); the Ithrites, a clan in Kiriath-jearim (1 Chronicles 2:53) are reminiscent of Ithran son of Dishon son of Seir (Genesis 36:26); the Manahathites descendants of Hur (1 Chronicles 2:54) are reminiscent of Manahath son of Shobal son of Seir (Genesis 36:54).

[11] Saul himself bears the same name as Saul king of Edom (Genesis 36:37, 38; 1 Chronicles 1:48.49); Aiah father-in-law of Saul (2 Samuel 3:7; 21:8, 10, 11) is the namesake of Aiah son of Zibeon son of Seir (Genesis 36:24; 1 Chronicles 1:40); Jeush, a far descendant of Saul (1 Chronicles 8:39), is the namesake of Jeush son of Esau (Genesis 36:5, 14, 18; 1 Chronicles 1:35); Ishmael the descendant of Saul (1 Chronicles 8:38; 9:44) is a namesake of the better-known Ishmael son of Abraham and father of desert-dwellers (Genesis 35:12-18); the name of Hanan (1 Chronicles 8:38; 9:44) may be compared with Baal-hanan king of Edom (Genesis 36:38, 39); Saul's clan-name Matri (1 Samuel 10:21) is given as Ματταρειτ in LXX^{A}, which comes very close to Matred the daughter of Mezahab (Genesis 36:39).

[12] For a fuller discussion of this point see Blenkinsopp 1972:14-27.59-62.

[13] Both points are made by Blenkinsopp 1972:61.

[14] On Geba and Gibeah as variant designations of the same place see Miller, J. M. 1975; Arnold 1992a:1008. Contrast Bruno 1923:126-129.

[15] Robinson, E. 1856.1:577-579; Miller, J. M. 1975; Edelman 1986:210; Arnold 1992a.

[16] Albright 1923; 1933; Schunck 1963:21.

[17] Ewald 1853^{2}:19; Bruno 1923:53; Albright 1923:122. Ramallah is twelve kilometres

territory of Benjamin at Zelzah and the oak of Tabor. Saul's destination is Gibeath-elohim, i.e., Gibeah (*vv.* 5.10). It must have been close to the town of Saul, since it is here that his family group, led by his uncle (*dôd*), was celebrating a sacrificial banquet at the 'high place'.[19]

If Gibeah were to be identified with either Jabaᶜ or Tell el-Fûl the itinerary of Saul would be incomprehensible. The journey from Ramallah (Ramah) to Tell el-Fûl is made along the main road between Bethel and Jerusalem. Going to Jabaᶜ, the traveller has to leave the Bethel-Jerusalem road at er-Ram and take the path leading to Jabaᶜ in the east. However, both Rachel's tomb and the oak of Tabor were situated west of the main road,[20] which fact seems to rule out the identification of Gibeah with Jabaᶜ. Rachel's tomb was located along the Wādi Dēr road that ran from Bethel to Gibeon and further south.[21] So was the Oak of Tabor.[22] Since Saul passed by both places, he must have followed not the main road to Jerusalem (which would take him to Tell el-Fûl) but the Wādi Dēr road to el-Jîb (ancient Gibeon) and Nebi Samwil (the elevation about 1500 meters south of el-Jîb). The description of the itinerary militates against the identification of Gibeah with Tell el-Fûl. The most plausible solution, it seems, is to understand Gibeah as a variant name of Gibeon (el-Jîb),[23] and to identify Gibeath-elohim in 1 Samuel 10:5 with Nebi Samwil where the 'high place' of Gibeon was probably located.[24].

In support of the identification of Gibeah and Gibeon it can be pointed out that גבעת האלהים ('Hill of God', 1 Samuel 10:5) is presumably identical with הר יהוה ('Mountain of Yahweh', according to the emended text of 2 Samuel 21:6, reading בהר instead of בחיר, cf. *v.* 9 בהר לפני יהוה). Though the Masoretic

---

north of Jerusalem. Ramah is perhaps to be identified more specifically with Ḫirbet Raddana, on the western edge of Ramallah, see Edelman 1988:56.

18 Arnold 1992b. Er-Ram is seven kilometres north of Jerusalem.

19 See Chapter Nine.

20 The tomb of Rachel must be situated between Bethel and Ephratah (Genesis 35:16-20), i.e. Kiriath-jearim (Psalm 132:6; cf. Delitzsch 1894⁵:763-765; Tsevat 1962; Cross 1973:94-95; Naᵓaman 1984).

21 Edelman 1988:55-56.

22 On the Oak of Tabor see 'The Periodicity of the Offerings to the Dead' in Chapter Nine. The tree must presumably be identified with 'the palm of Deborah between Ramah and Bethel in the hill country of Ephraim' (Judges 4:5). Naᵓaman 1987:18 identifies it with Bochim (Judges 2:1), itself identical with Beth-aven, which Naᵓaman surmises to have been an early Israelite cult place just outside Bethel.

23 So Bruno 1923:53-56; Blenkinsopp 1972:59; Demsky 1973:27-28; Edelman 1988:57-58.

24 Blenkinsopp 1972:7, 110 n. 28 (with references to relevant literature). According to Blenkinsopp's description 'Nebi Samwil lies about a mile south of el-Jîb with an elevation above sea level of some 2,835 feet, more than 492 feet higher than el-Jîb.' The elevation 'must have seemed an ideal site for religious worship' (Blenkinsopp 1972:7).

text locates 'the Mountain of Yahweh' in Gibeah of Saul (בגבעת שאול), the Septuagint reads 'in Gibeon of Saul' (ἐν Γαβαων Σαουλ). Because 'Gibeah of Saul' is the standing expression, a correction of 'Gibeon of Saul' into 'Gibeah of Saul' is the most plausible cause of the discrepancy between the Masoretic text and the Septuagint.[25] The passage about the execution of Saul's sons demonstrates that the cult place ('before Yahweh') of Gibeon could be referred to as 'the Mountain of Yahweh' (see also *v.* 9: 'on the Mountain before Yahweh'), and that the place-name Gibeon might be tampered with and changed into Gibeah. The latter conclusion is confirmed by 2 Samuel 5:25 (MT גבע; LXX Γαβαων). Considering the correspondence between 'the Hill of God' and 'the Mountain of Yahweh', and in view of the cases in which Gibeah or Geba stands for Gibeon, it must be assumed that the Gibeah mentioned in 1 Samuel 10:10 refers in fact to Gibeon.

If Gibeath-elohim is Nebi-Samwil and Gibeah another name for Gibeon (el-Jîb), Saul's itinerary on the way home makes perfect sense. Having taken the Wādi Dēr road from Ramah-of-the-Zuphites (probably Ramallah or Khirbet Raddana rather than er-Ram, considering the proximity of Bethel), Saul arrives at the city of Gibeon (1 Samuel 10:5, 10) before he reaches its 'high place' situated south of the city (1 Samuel 10:13). This reconstruction is consonant with the fact that Saul's family was from Zela. One would expect a clan settled near Gibeon to celebrate its clan sacrifices at 'the great high place' of Gibeon (1 Kings 3:4) rather than to assemble at the hypothetical locations of Gibeah or Geba, viz. Tell el-Fûl or Jaba^{c}—both smaller settlements and situated at considerably greater distance from Saul's patrimonial estate.

There is strong evidence, then, that Saul came from the vicinity of Gibeon and that the 'high place' of Gibeon was the sanctuary which his family group visited for their regular rituals. This fact has been obscured by the Deuteronomist who substituted the name 'Gibeah' for 'Gibeon'. Throughout the Deuteronomistic History there is a strong anti-Gibeonite bias.[26] This polemical attitude may help to explain why Gibeon virtually disappears from the biblical records that describe the period between Joshua and David, though the city reputedly possessed a well-known 'great Bamah' (1 Kings 3:4). The possibility should be considered that elsewhere in the Books of Samuel, too, 'Gibeah' serves as a variant name for Gibeon.[27] In view of his

---

[26] Kearney 1973.

[27] Cf. Edelman 1986:211 n. 15. Walters 1991:75 n. 1 argues that the connection between Saul and Gibeon is made by the Chronicler to show that Saul had been unsuitable for kingship from the beginning. He does not decide whether or not the connection is historically correct, though he considers it possible that the Masoretic text of the Books of

links with the city, it is quite conceivable that Saul made Gibeon his royal residence and the capital of his kingdom. If Gibeon was his home base rather than Gibeah, the toponyms have to be changed accordingly in 1 Samuel 10:26; 11:4; 15:34; 22:6; 23:19; 26:1—unless it be assumed that Saul had a second residence in Gibeah which he made the seat of power in his kingdom.

The Beginnings of the Saulide State

Saul's attempt to establish royal rule in Israel was favoured by the circumstances. An important factor behind the formation of the Israelite state was the population increase between the beginning and the end of the Early Iron Age (1200-1000 BC). For the Samarian Highlands the demographic estimations reckon with almost a tripling.[28] The increase was the result both of natural growth and of the on-going process of sedentarization.[29] At the same time many of the small sedentary villages typical of the period of the Judges were abandoned, whereas others developed into towns.[30] As settlers grew in numbers and concentrated in towns they exerted increased pressure on the limited natural resources.[31]

Two ways were open for handling the problem of access to resources: larger settlements could either maximize the yield of the surrounding land and supply the rest of their livelihood through trade, or push the settlement frontier further afield so as to extend the area of productive soil. Both courses were actually taken. By the improvement of agricultural techniques (e.g., through terracing)[32], as well as the exchange of local handicraft for victuals, some of the hill country sites were able to accommodate a rather large population.[33] Other settlers moved westward to the ecological frontier area of the hill country. Here conditions were less favourable for agriculture; entering into commercial relations with other production centres was a condition for survival. Due to the higher natural risks in the frontier zone, the more recent settlements were much more dependent on one another for risk reduction than the earlier sites.[34]

Samuel was purged of references to Gibeon.

[28] In the Early Iron Age sites west of the Jordan the population figure went from 20,000 around 1200 BC up to 55,000 towards 1000 BC. See Finkelstein, I. 1988:330-335.

[29] Finkelstein, I. 1989:59.

[30] Mazar, A. 1990:387-390; Dever 1987:235.

[31] For this point see Frick 1985:82.

[32] See de Geus 1975; Stager 1985b:5-11. But see also Finkelstein, I. 1988:202.

[33] The city of Tirzah (Tell el-Far^{c}ah, north) might be quoted in example, see Mazar, A. 1990:389.

[34] Finkelstein, I. 1989:58.

Both the maximization of production and the move to the west were conducive to forms of socio-political organization with a greater degree of hierarchy and complexity than before. In towns that had intensified their agricultural activity and diversified their economy in order to feed their populations, moreover, the inhabitants began to differ in rank and riches. There arose what may be called a landed aristocracy. A factor favouring the emergence of local chieftains was the collision between the Israelite settlers on the fringes of the hill country and the Philistine inhabitants of the coastal plain. The military confrontations between Israelites and Philistines—as well as the Amalekites and the Ammonites—are best understood as the result of the expansion of the hill country settlement to the annoyance of its close neighbours. Armed conflicts call for leaders—and in that sense the classical explanation of the emergence of the Israelite monarchy as the result of the Philistine threat is still valid. Saul's rise to kingship is to be understood against this background.

The beginnings of Saul's rule are now lost to the historian. From the scant references in the biblical text, it would seem that Saul established his authority by successfully challenging the Philistine claims to lordship over Benjaminite territory.[35] He was able to do so, not only by virtue of his tactical mastery, but because he commanded one of the first—perhaps the first—standing armies in Israel. According to 1 Samuel 14:52, 'when Saul saw any strong man, or any valiant man, he attached him to himself.' Allured by the prospect of prebends consisting of fields and vineyards (1 Samuel 18:15; 22:7), privileges of power (1 Samuel 8:12; 22:7), and a share in the booty (cf. 1 Samuel 30:21-25; 2 Samuel 4:2), many men joined Saul's forces. These 'young men' (*nĕʿārîm*), as they were called (2 Samuel 2:12-17; 16:2), became Saul's professional 'servants' (*ʿăbādîm*; 1 Samuel 18:5; cf. 2 Samuel 2:12-17). In order to minimize the danger of disloyalty and revolt, the key positions in the military were given to family members of the king. The commander-in-chief of the army was Abner the son of Ner, Saul's

---

[35] The story of Saul's being anointed king by Samuel is a retrospective attempt to legitimize his kingship, and the tale about Saul's designation by lot (1 Samuel 10:17-24) is historically suspect as well. A more plausible reconstruction of the events that led to Saul's kingship would have him prove himself a leader first by some military feat. According to 1 Samuel 11:1-15, Saul's first display of military prowess was the liberation of Jabesh-Gilead. It is unlikely, however, that an exploit in Transjordania would be the basis of Saul's authority in Benjamin. Though there is no compelling reason to doubt the historicity of the event, it must probably be placed at a later stage in Saul's career. The act which earned the first popular support for Saul's kingship was presumably the overthrow of the Philistine garrison at Gibeath-elohim, i.e., Gibeon (also known as Gibeah or Geba). Though Saul's son Jonathan was responsible for the defeat of Gibeah/Geba (i.e., Gibeon; 1 Samuel 13:2-4), the credit for the victory went to Saul.

uncle (1 Samuel 14:50); David, captain of Saul's bodyguard (1 Samuel 22:14 according to the Septuagint and the Targum; cf. 18:5), was bound to the king by marriage (1 Samuel 18:17-29). In addition to this professional army, Saul could summon a civil militia (1 Samuel 13:2).

The mercenary armed forces were not constantly engaged in battle; often enough they were content to make incursions into hostile territory for purposes of plunder (cf. 2 Samuel 4:2). Yet their principal task was the defence of Saul's kingdom and the extension of its sphere of influence. The Israelite state which Saul brought into being did not incorporate Judah and Galilee. According to 2 Samuel 2:9, the territory which Saul left as kingdom to his successor included Gilead, the land of the Ashurites, Jezreel, Ephraim, and Benjamin—which amounts to the major part of Central Palestine and Central Transjordania. In addition to Saul's territory properly speaking there were treaties with foreign city-states; the alliance with Jabesh-Gilead can be quoted in example.[36]

The creation and support of a standing army, as well as the conscription of civic soldiers, required a certain logistic and administrative apparatus. Too little is known about Saul's reign to make a detailed estimation of the size and importance of this administration. Assuming that the critique of the monarchy in 1 Samuel 8:11-17, though written at a later time, applies at least in part to Saul's performance as king (cf. 1 Samuel 22:6-7), the apparatus must have been substantial. The cultivation of the royal lands, producing the staple goods needed to support the soldiery, required a significant labour force (*v.* 11); so did the weapon industry (*v.* 11), and the royal kitchens (*v.* 12). David seems to have entered Saul's service as a musician, which suggests that there had developed a certain court-life with the attendant elegance and style. Saul does not appear to have been averse to the paraphernalia of power. At royal banquets, the participants had to observe fixed seating arrangements so as to demonstrate their subservience to the king (1 Samuel 20:25). Saul's use of traditional Near Eastern royal insignia—a crown and an armlet (2 Samuel 1:10)[37]—shows that he intended indeed to be a king after the fashion of the kings of the nations (cf. 1 Samuel 8:5).

Religion in the Saulide State

Saul's influence on the religion of Israel has been tremendous. As the founding father of the Israelite state, he also laid the foundations of the state

---

36 For a description of the extent of the Saulide state see Edelman 1992:996-998.

37 See Krecher 1980a. The Hebrew *nēzer* (crown, diadem) may be compared with the Babylonian *kulūlū*, or the Egyptian royal crown (see Strauss, C. 1980), the *ʾeṣʿādâ* (armlet) resembles the Babylonian *kippatu* (see *CAD* s.v.).

religion. In a society where religious concepts determined the general outlook on life, any major transformation of society was bound to reflect on its religion. Under Saul, a largely acephalous segmentary society was changed into a monarchic state—a development quickly consolidated in the years to follow. The religion of that society followed the pace of the change. Though the traditional pluralism of family and clan religion was not abolished—any more than the families and clans themselves were abolished—it was subordinated to the religion of the state. It is this state religion that came to symbolize the unity of the nation, transcending the divisions of families and clans.

The religion of the Saulide state was born in the army. Loftier birth-places could be thought of, but the national religion was first the religion of the nation's military. It should be remembered that warfare was never a purely secular matter in the ancient world. Victory depended on the gods—more so than on the valour of men. Saul never went on a military campaign without a priest. During one of Saul's earliest expeditions Ahijah the son of Ahitub, a descendant of Eli 'the priest of Yahweh in Shiloh' (1 Samuel 14:3), carried the ark as the symbol of God's presence and as the means of divination (1 Samuel 14:18).[38] The divine presence made it incumbent upon the soldiers to be ritually clean and to abstain from women. Even the weapons of the warriors had to be consecrated (1 Samuel 21:5-6; 2 Samuel 11:11). On account of their status as soldiers in Saul's army these men were 'the people of Yahweh' (*ʿam YHWH*, 2 Samuel 1:12).[39] They waged 'the wars of Yahweh' (*milḥămôt YHWH*, 1 Samuel 18:17; 25:28). When victorious, they had to devote their opponents to God by killing them (1 Samuel 15:3, 8, 33). Under Saul, the practice and ideology of warfare were permeated by religion.

The religion of the army was the prototype of the religion of the state. Though the expression 'people of Yahweh' was first applied to the military, it came to be used eventually as a designation of those who enjoyed the protection of the state. The citizens of the state and its territory were referred to conjointly as 'the inheritance of Yahweh' (*naḥălat YHWH*, 1 Samuel 16:19; 2 Samuel 21:3). The king, on his part, was 'the anointed one of Yahweh' (1 Samuel 24:7, 11; 26:9, 11, 16, 23); his adversaries were 'the enemies of Yahweh' (1 Samuel 30:26; cf. Judges 5:31). Such a national theology need not have reached its full-fledged form in the time of Saul, as the First Book of Samuel might lead one to believe. However, the strongly militant character of the Yahwistic ideology pervading the records of Saul's

---

[38] The reference to the ephod in *v.* 3 is due to a later editor. For the relationship between 'ark' and 'ephod' see van der Toorn & Houtman 1994.

[39] For a study of the expression *ʿam YHWH* see Lohfink 1971.

reign fits a time when Israel was in the process of asserting its identity. The formative period of the Israelite state was precisely such a time. In essence, therefore, the state religion adumbrated in the First Book of Samuel may well go back to the time of Saul.

It is remarkable how closely the religious ideology of the Saulide state religion corresponds with the notions of traditional family religion. Such terms as *ʿam* ('paternal uncle', 'clan', and by extension 'people') and *naḥălâ* ('inheritance') have their semantic background in the sociology of the family and the clan. It seems that the earliest theological validation of Israelite state religion consisted in the transfer of the terminology of family religion to the realities of the newly formed state. Whereas the expanded family or clan used to be referred to as the *ʿam* ('people') of a given deity, it was now the community of all the citizens that was defined as the *ʿam* of Yahweh. Likewise the notion of *naḥălâ*, originally used only in connection with the ancestral estate of the family, was now applied to the territory of the state. The convergence between the ideologies underlying family religion and early state religion betrays their common origin, and foreshadows their potential competition.

Religion cannot be reduced to a collection of concepts and values. It manifests itself also in institutions and practices—both easier to trace than spiritual realities and frames of mind. One of the institutions of the state religion was a national shrine. Under Saul, the central temple would seem to have been situated near the town of Nob. Nob, referred to as 'the town of the priests' in 1 Samuel 22:19, was inhabited by a community of over eighty-five priests (1 Samuel 22:18). Whether all of them were employed by the nearby temple is uncertain; some may have been itinerant priests who lived there. In either case, Nob must be considered the major religious centre of Saul's kingdom. The trophies of his wars, such as the weapons of Goliath, were kept in the temple of Nob (1 Samuel 21:9; cf. 31:10), as was the sacred shrine which Saul brought along on his military expeditions. It is called here the 'ephod', but the term refers to the same solid object that 1 Samuel 14:18 calls the ark.[40] Here, too, was the bread of display (*leḥem happānîm*) that was placed before the symbol or image of Yahweh (1 Samuel 21:7).[41] The chief priest of Saul, Ahimelech the son of Ahitub—identical with Ahijah the son of Ahitub mentioned in 1 Samuel 14:3[42]—, was in charge of the temple.

---

[40] Thus von Gall 1898:92-94.

[41] Blenkinsopp 1972:66 concludes from the reference to 'the bread of the Presence' that the ark must have been in the temple of Nob, too. Jewish tradition reflects a similar conclusion, see *bZeb* 118-119 (the ark and the tabernacle were at Nob for a brief period).

[42] See also Blenkinsopp 1972:66.

One of Saul's trusted officials, Doeg the Edomite 'the chief of Saul's herdsmen', may have acted as royal supervisor (1 Samuel 21:7; 22:9-10).

While the official status of the temple of Nob as Saul's national shrine can hardly be doubted, the fact that this temple is said to have been in Nob is problematic. The town of Nob was situated in the vicinity of Anathoth (Nehemiah 11:32), more precisely between Anathoth and Jerusalem (Isaiah 10:32). It is believed to have been located on Mount Scopus or at el-ᶜIsawiyeh, the hill north of Mount Scopus, which means that it lay at less than three kilometres from Jerusalem (ancient Jebus). Since Nob near Jerusalem was one of the satellite villages of the independent city-state of Jebus,[43] it is inconceivable that Saul had his official sanctuary here. Various scholars have therefore suggested that 'Nob' stands in fact for Gibeon, or more precisely, the temple of Gibeon at Nebi Samwil.[44] This would be in keeping with the role of Gibeon and its sanctuary in the early career of Saul. It would also explain why the massacre of the priests at Nob, during which the entire population of the city died (1 Samuel 22:19), could be referred to as Saul's killing of the Gibeonites in 2 Samuel 21:1-14—if the two events are indeed connected.[45] Solomon's visit of 'the great Bamah' of Gibeon would also make better sense if Gibeon had been the national sanctuary of the Saulide state; it was an act of diplomacy. Since Nob (written נב or נבה) means 'hill' or 'mountain', it is quite an appropriate name for the extramural sanctuary of Gibeon (also known as 'the Hill of God' or 'the Mountain of Yahweh').[46]

Though the Deuteronomist has tried to camouflage the role of the Gibeonite temple, its place as the central sanctuary of the Saulide state is hardly in doubt. It would be natural for Saul to make the sanctuary that his family used to visit the religious centre of his kingdom. Gibeon was both the political and the religious capital.[47] For a temple that could be described as 'the great high place' eighty-five priests were perhaps not too many. A central shrine is bound to draw pilgrims who would need the assistance of professional priests. Solomon, too, came as a pilgrim (1 Kings 3:4-15). The priests at Gibeon may also have had a role in the administration, e.g. in collecting the

[44] So, amongst others, Cheyne 1902; Bruno 1923:69-71; Hylander 1932:286 n. 1, 291-292; Hertzberg 1929:177-179; 1956:140-141; Blenkinsopp 1972:67-68; Edelman 1986:224-225.

[45] On the identity of the priests of Nob with the massacred Gibeonites see Cook 1907:28; Bruno 1923:75-87; Hertzberg 1956:310. Cf. Cornfeld 1961:264-265, who closely associates the priests of Nob and the priests of Gibeon.

[46] So, tentatively, Blenkinsopp 1972:67-68.

[47] Cf. Blenkinsopp 1974.

annual taxes (the 'tithes', 1 Samuel 8:15) of the populace. Absolute loyalty was demanded of these civil servants. As soon as the king suspected them of supporting the cause of a rival, he was bound to take severe punitive measures, as the massacre of Ahimelech and his family shows. Its very fierceness supports the conclusion that the temple of Gibeon ('Nob') was indeed 'a temple of the kingdom', to use the expression of Amos 7:13.

The National God of the Saulide State

Which god was worshipped in Saul's national shrine? The Bible says it was Yahweh, and the presumably ancient name 'Mountain of Yahweh' for the cult site near Gibeon seems to confirm the point. Yet the theological bias of the biblical records forbids us to accept their witness without further questioning. Whether or not Saul honoured Yahweh as the national deity of the Israelite state must be established on the basis of less controversial data, preferably from outside the Bible.

The oldest extra-biblical evidence for the worship of Yahweh as Israel's national god comes from the Moabite inscription of King Mesha. The Moabite ruler recalls his military successes against Israel in the time of Ahab:

> And Chemosh said to me, 'Go, take Nebo from Israel!' So I went by night and I engaged in fight against her from the break of dawn until noon. And I took her and I killed her entire population: seven thousand men, boys, women, girls, and maid servants, for I devoted her to destruction for Ashtar-Chemosh. And I took from there the *ʾ[rʾ]ly* of Yahweh and I dragged them before Chemosh.[48]

Nebo (נבה in the Mesha Stela, נבו in the Bible), situated in North-Western Moab,[49] was a border town and as such an object of frequent litigation. To mark its appurtenance to the Kingdom of Israel, Omri or one of his predecessors had placed here **ʾarʾallîm* of Yahweh (lines 17-18, cf. 12). The nature of these items must be guessed at. Both the etymology of the term (*ʾărî-ʾēl*, 'X of god', cf. *bêt-ʾēl*, 'baethyl') and its connection with Yahweh suggest that they were religious objects,[50] whose presence in a border town

[48] *KAI* 181: [14] *wyʾmr . ly . kmš . lk . ʾḥz . ʾt . nbh . ʿl . yšrʾl . wʾ* [15] *hlk . bllh . wʾlṯḥm . bh . mbqʿ . hšḥrt . ʿd . ḥṣhrm . wʾḥ* [16] *zh . wʾhrg . kl[h] . šbʿt . ʾlpn . g[b]rn . wgrn . wgbrt . w[gr]* [17] *t . wrḥmt . ky . lʿštr . kmš . hḥrmth . wʾqḥ . mšm . ʾ[rʾ]* [18] *ly . yhwh . wʾsḥb . hm . lpny . kmš*. For the interpretation of the text see Blau 1980; Lemaire 1987. An extensive bibliography can be found in Lemaire 1992:564-565. The principal title to be added is Dearman 1989:167-170.

[49] The site is to be identified with modern Khirbet el-Mekhayyat, see Saller & Bagatti 1949:207-209.

[50] Ahlström 1982:14 has suggested that the word referred to a symbol of a deity or a holy vessel, perhaps a lion base for an idol (see also Ahlström 1984:132). The word is more

was a signal to the visitor that he was now entering the territory of Yahweh.

Since Mesha took Nebo during the reign of Ahab (ca. 874-853), Yahweh must have been considered the national god of the Israelite state since at least the early ninth century BC. His position as the god of state is confirmed by other extra-biblical evidence. One of the inscriptions from Kuntillet ʿAjrud, about fifty kilometres south of Kadesh-barnea, refers to 'Yahweh of Samaria and his Asherah' (*brkt . ʾtkm . lyhwh . šmrn . wlʾšrth*, 'I have blessed you by Yahweh of Samaria and his Asherah').[51] On the evidence of the strong Israelite influence in the remains of Kuntillet ʿAjrud, the site was an outpost of the Northern Kingdom.[52] People greeted each other in the name of the official god of Israel, 'Yahweh of Samaria'. In this context, 'Samaria' is best taken as a designation of the Northern Kingdom as a whole—not just the city or the region of Samaria.[53] Yahweh was referred to as 'Yahweh of Samaria' to distinguish him from Yahweh of Judah; his consort in Israel was 'Asherah of Samaria', according to the slightly emended text of Amos 8:14 (read אשרת שמרון for אשמת שמרון). Around 800 BC, then, the tentative date of the inscription, there was a widespread sense that Yahweh was the national god of Israel.

The extra-biblical evidence shows that, by the early ninth century BC, Yahweh was firmly established as the national god of the State of Israel. It is hardly likely that the patronage of his cult was an innovation by the Omrides. There is, on the contrary, every reason to believe that the worship of Yahweh as the national god was already practised at the beginning of Israel as a separate state. According to 1 Kings 12:26-32, Jeroboam feared that his subjects might be tempted to visit Jerusalem 'to offer sacrifices in the temple

---

or less conventionally interpreted as a sacrificial fireplace (Ges[18] 98). See also Petzold 1970.

[51] The text was first mentioned by Meshel 1978. From the wealth of literature on the inscription the following studies may be mentioned: Emerton 1982; Lemaire 1984; Weinfeld 1984; McCarter 1987; Müller 1992. The first to have suggested in print that *yhwh šmrn* should be interpreted as 'Yahweh of Samaria', rather than as 'Yahweh our guardian' (so, e.g., Fritz 1979:49; Stolz 1980:170) was Gilula 1978.

[52] Cf. Meshel 1992:108.

[53] The name 'Samaria' can refer to the city (and the mountain) of Samaria (so in most biblical references), to the Northern Kingdom (1 Kings 21:1; 2 Kings 1:3, *melek Šōmrôn*; 1 Kings 13:32; 2 Kings 17:24; 23:19, *ʿarê Šōmrôn*), or to the Persian province of Samaria. The comparison of the expression 'Yahweh of Samaria' with the 'Calf of Samaria' (Hosea 8:6) suggests that here 'Samaria' is to be taken as a reference to the kingdom as a whole, since the 'Calf of Samaria' is the statue which tradition says to have been set up by Jeroboam I in Bethel (1 Kings 12:29). According to Hosea 10:5 the 'inhabitants of Samaria tremble for the Calf of Beth-aven (i.e., Bethel)'. For a discussion and references to further literature see *HAL*[3] 1466-1467. In the discussion of the Kuntillet ʿAjrud inscriptions, 'Yahweh of Samaria' is usually interpreted as the Yahweh who was worshipped in the city of Samaria, see, e.g., Emerton 1982:19; McCarter 1987:139; contrast Müller 1992:26-27 who correctly interprets Samaria here as a *nomen terrae*, not as a city name.

of Yahweh' (12:27). To persuade them against doing so, he created two national temples, one in Dan and one in Bethel. For each one a 'golden calf' was fashioned, a divine image in the shape of a young bull.[54] This tauromorph deity was hailed as

> your god, O Israel, who brought you up from the land of Egypt[55]

The phrase, to all appearances a long-established liturgical formula, implies the identification of the 'calf' with Yahweh, and says that this Yahweh is 'the god of Israel', i.e., the god of the Northern Kingdom. The 'Calf of Samaria', as the image of Bethel is called in the Book of Hosea (*ʿēgel Šōmrôn*, Hosea 8:5, 6; 10:5), represents 'Yahweh of Samaria', as the god is called in the Kuntillet ʿAjrud inscription.[56]

The account of Jeroboam's religious politics throws an interesting light on the motives of the king. He did not inaugurate a state cult of Yahweh because he himself was a devoted worshipper of the god, but for reasons of state—though the two need not be in contradiction. In the long run, the popular pilgrimages to Jerusalem would, he feared, erode the loyalty of his subjects (1 Kings 12:27). He did not offer them a new god to reinforce their allegiance to himself. The images he set up were images of Yahweh: Northern statues of the god the people used to worship in Jerusalem. The reconstruction of Jeroboam's motives by the author of 1 Kings 12 reflects the point of view of the Jerusalem clergy. Yet it is unlikely that Yahweh was new to the Israelites. It would have been unwise to introduce the cult of a new god with a population accustomed to the worship of Yahweh; the risk of alienating them would be too great. Jeroboam created a Northern variant of Yahwism.

If Jeroboam's state cult was an adapted form of the state cult of the United Monarchy, the date at which Yahweh was recognized as the national god can be pushed back to the time of David and Solomon. There is a strong line of biblical evidence to show that there had been an intimate link between

---

[54] For a more detailed analysis see the section on 'The Religious Politics of Jeroboam I' in Chapter Twelve.

[55] 1 Kings 12:28. The phrase is usually translated as a plural on account of the verbal form *heʿĕlûkā*. The grammar does not require this translation, as the *pluralis majestatis* or *pluralis divinitatis* of *ʾelōhîm* may well take a verb in the plural, even when there can be no doubt that a single deity is being referred to (Joüon/Muraoka §150f). For a careful discussion of the alternative translation see Donner 1973. Donner argues that grammatically both translations can be defended, but thinks a plural is preferable on the basis of a comparison with Nehemiah 9:18. For a defence of a translation in the singular see Soggin 1966:199-200 n. 49.

[56] The association between Yahweh and the Calf is reflected in the personal name *ʿglyh*, 'Yahweh-is-the-Calf' on the Samaria ostracon no. 41 (for a description of, and a bibliography on, the Samaria ostraca see Kaufman, I. T. 1992).

Yahweh and the Davidic dynasty. It is Yahweh who 'took' David 'from the pasture, from following the sheep', to use the words of Nathan's oracle (2 Samuel 7:8). The Davidic dynasty ruled by the promise of Yahweh; its members therefore honoured Yahweh as 'the god of [their] father David' (2 Kings 20:5; cf. 1 Chronicles 28:9; 2 Chronicles 17:4; 34:3). The religious centre which David established in Jerusalem, and which was to serve as a national shrine, gave pride of place to Yahweh. Yahweh was both the family god of the Davidic dynasty,[57] and the national god of the Israelite state under David and Solomon.

The reign of David brings us very close to the time of Saul. If Yahweh was 'the god of Israel' in the days of David, was he so, too, in the Saulide state? Several indications suggest that he was, indeed. The principal link between the state religion under David and the religion which Saul promoted in his kingdom is the ark. Kiriath-jearim, whence the ark was brought to Jerusalem, is part of the Gibeonite enclave (Joshua 9:17). The major religious symbol of the Davidic state, then, came from the heartland of the Saulide state—even more so if Kiriath-jearim should be a code-name for Gibeon.[58] Since the interpretation of the ark as a premonarchic symbol of religious unity reflects an idea of later times, David's transfer of it must be understood as a claim to the religious heritage of the Saulide state.[59] The complicity between Saul's clergy and David (1 Samuel 21:1-9; 22:6-19), as well as Abiathar's entering into his service (1 Samuel 22:20-23), also suggests that there was religious continuity between the Saulide and the Davidic states. Another expression of that continuity is Solomon's visit to 'the great Bamah at Gibeon' (1 Kings 3:4). Falling at the beginning of his reign, this visit marks Solomon's desire to legitimize his rule by having it recognized and endorsed by the priesthood of what was once the central sanctuary of the Saulide state.

The obvious connections between the state religion under Saul and the state religion under David and Solomon make good sense if Yahweh had already been the national god of the Saulide state. It is the most likely assumption; other identifications raise more questions than they answer. It could furthermore be argued that Saul's 'choice of national god would almost certainly have been his own deity, who would have been perceived to have been instrumental in the victories and negotiations that had led to his rise to kingship.'[60] To judge by the name Jonathan ('Yahweh-has-given'),

---

60 Edelman 1986:226-227.

borne by his first-born son, Saul worshipped Yahweh as his family god.[61] It would follow that Yahweh was Saul's national god as well.

The Origins of Yahweh

Saul's choice of Yahweh as his national god is intriguing. Why Yahweh and not one of the traditional deities of the West Semitic pantheon, such as Baal? The question is all the more pressing given Saul's links to the Gibeonites—a foreign element in the Israelite population. There has been a suggestion that Saul was a 'recent convert to Yahwism', coming from a people that served other gods.[62] The hypothesis is not very solid. It is based on the tacit assumption that the Israelites as an ethnic group honoured Yahweh as their common god well before the Monarchic Era. This assumption errs on two counts: there is no proof of the ethnic unity of the inhabitants of the hill country in the Early Iron Age, nor is there evidence of religious unity among them. On the contrary, they were mixed in ethnicity and diverse in religion. The archaeological research of the last years suggests that the greater part of the population had come from a Canaanite background.[63] If this was so, one would expect them to bring their sacrifices to such gods as Baal and El, rather than to a—in terms of Canaanite concepts—obscure deity from the desert.

We must pause for a moment to reflect on the origins of Yahweh in order to fully grasp the issue at stake here. The first thing that needs to be stressed is that outside Israel Yahweh was not worshipped in the West Semitic world.[64] The stir caused by claims to the effect that a shortened form of the name Yahweh ('Ya') had been discovered as a theophoric element in names from Ebla (ca. 2400-2250 BC) has proved to be unfounded.[65] As the final element of personal names, *-ya* is often a hypocoristic ending, not a theonym.[66] In several cases the sign NI, read *yà* by the first epigraphers, is conventionally short for NI-NI = *ì-lí*, 'my (personal) god', or for *ì-lum/lu*, 'god'.[67] This solution also explains the occurrence of the speculated element **ya* at the beginning of personal names; thus ^{d}*yà-ra-mu* should be read either

---

61 So Edelman 1986:227. She adduces furthermore the LXX reading of the name Ishvi (ישׁוי, 1 Samuel 14:49) as Ιεσσιου = *ישׁיו, 'Yahweh is present'.

67 Müller 1980a:83; 1981:306-307

as DINGIR-*lí-ra-mu* or as $^{d}ili_{x}$-*ra-mu*, both readings yielding the name Ilīramu, 'My god is exalted'. In no list of gods or offerings is the mysterious god *Ya ever mentioned; his cult at Ebla is a chimera.

Yahweh was not known at Ugarit either; the singular name *Yw* (vocalisation unknown) in a damaged passage of the Baal Cycle (*KTU* 1.1 iv 14) cannot convincingly be interpreted as an abbreviation for 'Yahweh'.[68] There is no more truth either in the proposition that 'Yahweh was worshipped as a major god' in North Syria in the eighth century BC.[69] The only North-West Semitic evidence that can plausibly be linked to the name 'Yahweh' are the Amorite theophoric anthroponyms containing the element *Yaḫwi-* or *Yawi-*. In view of their semantic equivalent in Akkadian *Ibašši-*, we are dealing with a finite form of the verb 'to be'. Ya(ḫ)wi-ila thus means 'God (or 'My god') is present'.[70] Such names do not, of course, attest to a cult of Yahweh among certain Amorites; they merely elucidate the etymology of his name.[71]

The absence of the name 'Yahweh' in West Semitic epigraphy (except for the Mesha Stela) agrees well with the biblical evidence on Yahweh's origins. A number of poetic—and presumably archaic—texts have preserved the memory of a topographical link between Yahweh and the mountain area south of Edom. In these theophany texts Yahweh is said to come from Seir, from 'the field(s) of Edom' (Judges 5:4; note the correction in Psalm 68:8[7]). According to the Blessing of Moses Yahweh comes from Sinai, 'dawns from' Seir, and 'shines forth' from Mount Paran (Deuteronomy 33:2).[72] Elsewhere he is said to come from Teman and Mount Paran (Habakkuk 3:3). The reference to 'Yahweh of Teman' in one of the Kuntillet ʿAjrud inscriptions is an extra-biblical confirmation of the topographical connection.[73] All of these places—Seir, Mt Paran, Teman, and Sinai—are in or near Edom. 'Seir' is the biblical name for part of the country of Edom, and developed into a synonym for Edom.[74] Mount Sinai, often located in the Sinai peninsula, was actually in southern Edom or northern Midian.[75]

[70] See von Soden 1966; Weippert, M. 1980:251-252.

[71] The point needs to be made as André Finet has argued, in two publications (Finet 1964; 1978), that such names as Yahwi-ilum are to be translated as 'Ilum is Yahwi', thus obtaining Yahwi as a proper name. For a critique see von Soden 1966:178-179.

[72] For a more detailed discussion of the Blessing of Moses and other ancient theophany hymns see the section on 'Yahweh and El' in Chapter Thirteen.

[73] The text speaks of *[y]hwh[.]tmn.wl²šrt[h]*, 'Yahweh of Teman and (to) his Asherah'. For the interpretation see Emerton 1982:13.

[74] See Knauf 1992a.

[75] Cross 1988:59. For Paran see *HAL*³:860; Hamilton 1992; for Teman see Knauf

The biblical evidence on the topographical background of Yahweh is supported by two references to Yahweh in Egyptian texts. In these texts from the 14th and 13th centuries BC, Yahweh is neither connected with the Israelites, nor is his cult located in Palestine. The texts speak about 'Yahu in the land of the Šosū-Bedouins' (*t3 š3św jhw3*).[76] The one text is from the reign of Amenophis III (first part of the 14th century)[77] and the other from the reign of Ramses II (13th century).[78] In the Ramses II list, the name occurs in a context which also mentions Seir (*sʿrr*). It may tentatively be concluded that this 'Yahu in the land of the Shosu-beduins' is to be situated in the area of Edom and Midian.[79] Though in the Egyptian texts *Yhw* is used as a toponym,[80] a relationship with the deity by the same name is a reasonable assumption.[81] Whether the god took his name from the region or vice versa remains uncertain.[82] By the 14th century BC, before the cult of Yahweh had reached Israel, groups of Edomite and Midianites worshipped Yahweh as their god.

If the cult of Yahweh had its roots in the south, then, why and how did it make its way to the north? According to a widely accepted theory, the Kenites were the mediators of the Yahwistic cult. One of the first to advance the Kenite hypothesis was the Dutch historian of religion C. P. Tiele. In 1872 Tiele characterized Yahweh historically as 'the god of the desert, worshipped by the Kenites and their close relatives before the Israelites.'[83] The idea was adopted and elaborated by B. Stade,[84] and it has gained considerable support ever since, also among modern scholars.[85] In its classical

[82] Note that Giveon 1964 suggests that the name is short for *Beth-Yahweh, which would compare with the variance between Baal-meon and Beth-Baal-meon.

[83] Tiele 1872:559. Tiele's idea found its way to other scholars through the French translation of his work, *Histoire comparée des anciennes religions de l'Egypte et des peuples sémitiques* (Paris: G. Fischbacher, 1882; tr. G. Collins):350-351. Tiele does not refer to F. W. Ghillany who in 1862, writing under the pseudonym 'Richard von der Alm', published his *Theologische Briefe an die Gebildeten der Deutschen Nation*, in which he defended the view that Yahweh was a Kenite sun-god, worshipped under the form of a metal image (1:216.480). Cheyne 1901 observes that Ghillany may have been the author of the Kenite hypothesis, but that Tiele has at least earned the honour of being the first to present the hypothesis (which he developed independently from Ghillany, apparently) in an acceptable form.

[84] Stade 1887:130-131.

[85] See, e.g., Wensinck 1941; Eerdmans 1947:15-19; Rowley 1950:149-160; Gunneweg

form the hypothesis assumes that the Israelites became acquainted with the cult of Yahweh through Moses. Moses' father-in-law—whose name was Hobab, according to an old tradition (Judges 1:16; 4:11; cf. Numbers 10:29)—was a Midianite priest (Exodus 2:16; 3:1; 18:1) of Yahweh (see e.g. Exodus 18:10-12). He belonged to the Kenites (Judges 1:16; 4:11), a branch of the Midianites.[86] By way of Hobab and Moses, then, the Kenites were the mediators of the cult of Yahweh.

The strength of the Kenite hypothesis lies in the link it establishes between different but converging sets of data, viz. the absence of Yahweh from West Semitic epigraphy, Yahweh's topographical link with the area of Edom (which may be taken to include the territory of the Midianites), the 'Kenite' affiliation of Moses, and the positive evaluation of the Kenites in the Bible. A major flaw in the classical Kenite hypothesis, however, is its disregard for the 'Canaanite' origins of Israel. The view that the Israelites became Yahwists during their journey through the desert, and then brought their newly acquired religion to Palestine, neglects the fact that the majority of the Israelites were firmly rooted in Palestine. The historical role of Moses, moreover, is highly problematic. It is only in later tradition that he came to be regarded as the legendary ancestor of the Levitical priests and as a symbol of the 'Yahweh alone' movement; his real importance remains uncertain.

If the Kenite hypothesis is to be maintained, then, it can only be in a modified form. Though it is highly plausible that the Kenites (and the Midianites may be mentioned in the same breath) introduced Israel to the worship of Yahweh, it is unlikely that they did so outside the borders of Palestine. Kenites are mentioned as dwelling in the Northern Kingdom at an early stage; so are the Gibeonites, who were ethnically related to the Edomites.[87] Some of these groups were not permanent residents of Israel; they came there as traders. Already in Genesis 37:28 Midianite traders are mentioned as being active between Palestine and Egypt.[88] If Yahwism did indeed originate with the Midianites or the Kenites—and the evidence points in that direction—it may have been brought to Transjordan and Central Palestine by traders along the caravan routes from the south to the east.[89]

There is reason to believe that the 'Edomite connection' was established in North Israel. It is not mere coincidence that the references to Yahweh's origins from the South occur predominantly in texts from the Northern

Kingdom. Instructive in this respect is the comparison between the Song of Deborah and Psalm 68. The Psalm is a partial rewriting of the Song (or pieces of the Song) from a Judahite perspective, as the reference to the temple in Jerusalem shows (Psalm 68:30[29]). In *v.* 8[7] of the Psalm, the mention of Seir and Edom (so in Judges 5:4) has been suppressed and replaced by inoffensive phrases. 'When thou didst go forth from Seir' was altered to read 'When thou didst go forth before thy people', and 'When thou didst march from the Field of Edom' was changed into 'When thou didst march through the wilderness'.[90] The 'tribe' of Judah is conspicuously missing in the Song of Deborah—which gives fuel to the assumption that the text has an Ephraimite origin. Similar observations might be made about Deuteronomy 33:2-5[91] and Habakuk 3:2-15. Kuntillet ʿAjrud, where an inscription mentioning 'Yahweh of Teman' has turned up, was an outpost of the Northern Kingdom, too. Paradoxically, the belief that Yahweh came from the South was at home in the North.[92]

If Yahweh was an Edomite-Midianite deity whose cult was established in Israel by Edomite elements, and if Saul promoted the cult of Yahweh as his state religion, it is reasonable to ask whether Israel's first king had any links with these Edomites. On the basis of an analysis of the origins of Saul, the answer must be affirmative. Saul is related to the Gibeonites; the Gibeonites, for their part, belonged to an ethnic strain represented also among the early Edomites. Key evidence, in this respect, is the correspondence between the personal names given in the Gibeonite and the Edomite genealogies (1 Chronicles 2:50-55 and Genesis 36, respectively). The Edomite background of the Gibeonite enclave is indirectly confirmed by the presence of a Mount Seir just west of Kiriath-jearim, at the border of the enclave (Joshua 15:9-10). Also in antiquity, immigrants frequently named their new surroundings after places and features of their homeland.[93] It is quite possible, therefore, that Mount Seir in Central Palestine took its name from Mount Seir in Edom.[94] Perhaps Baalah (i.e., Kiriath-jearim, Joshua 15:9) is another Edomite namesake, since there was also a place called Baalah 'toward the boundary of Edom' (Joshua 15:21, 29).

The hypothesis concerning the Edomite origins of the Gibeonites assumes that groups of Edomites—Bedouins *avant la lettre* perhaps, if they are to be

94 Edelman 1986:229 adduces the homonymy of the two mountains in order to demonstrate the Edomite connection of the Gibeonites. A similar suggestion was made by Blenkinsopp 1972:27.

related to the Šosū mentioned in the Egyptian toponymic lists—had left their home country and had moved to the north. Around 1200 BC, some of them entered Palestine and constituted there what came to be known as the Gibeonite enclave. Other groups may have pushed further northward and have settled in Gilead. The Gibeonites remained conscious of their ethnic identity. The position of Doeg the Edomite at the court of Saul can be taken as an illustration of the enduring relations with the homeland. Some of Saul's acts can only be understood properly when his ethnic affiliations are taken into account. In the campaign against Amalek, Saul spared the Kenites (1 Samuel 15:6) because of their links with the Edomites.[95] The liberation of Jabesh-gilead had a similar backgound: there were connubial ties between the Gibeonites (referred to as 'Benjaminites' from Gibeah in Judges 19-21) and the population of Jabesh-gilead (Judges 21:8-14); the connubium might well have been based on ethnic affinity.

Though circumstantial, the converging pieces of evidence suggest that Saul's choice of Yahweh as the patron god of his state was based on his Edomite background. Once Yahweh was the national god, his worship was spread over the territory of the Saulide state. The reign of Saul, then, must be regarded as a turning-point in both the political and the religious history of Israel. The Israelite worship of Yahweh—a 'foreign' deity, after all—was a concomitant effect of the formation of the Israelite state; because Israel's first king was a devotee of Yahweh—and not unnaturally so, in view of his Edomite background—Yahweh became the official god of Israel. Henceforth, the Israelites would be the 'people of Yahweh'—even if many of them remained long attached to gods other than Yahweh.

CHAPTER TWELVE

INVENTING A NATIONAL IDENTITY: THE EXODUS AS CHARTER MYTH

The emergence of a state religion under King Saul inaugurated a new phase in the cultural history of early Israel. Until then, religion had been diverse: each family or clan had its own religion, honoured its own god, and celebrated its own rites. Kin and inheritance, epitomized in the cult of the ancestors and the worship of a local god, were the primary foci of identity. The promotion of Yahweh as national god offered the Israelites a new possibility of identification. Grown out of the family religion of King Saul, the Israelite state religion was designed to become the religion of the entire nation. It was to serve as a force of national cohesion fostering a spirit of community and loyalty to the house of the king.

The transformation of the time-honoured forms of religious life did not happen overnight. For a long time, state religion and local forms of family religion competed for the favour of the population. In their efforts to redirect the devotion of their subjects, the authorities were active on two fronts. While they endowed the state religion with temples, a clergy, and a national charter myth, they endeavoured to curb the spirit of local independence by the integration of some and the repression of other aspects of family religion. Their involvement in the state religion was aimed to turn it into a truly national religion; the interference in the domain of family religion was aimed to divest the latter of its independent status.

The integration and repression of family religion will be dealt with in the next chapter. This chapter is devoted to an assessment of the organization and ideological development of the Ephraimite state religion during the time of the divided monarchy (*ca.* 920-720). Based on the description of the religious politics of Jeroboam in 1 Kings 12, we will pay special attention to the use of the exodus narrative as national charter myth, and to the religious personnel responsible for its dissemination.

The Religious Politics of Jeroboam I

Nearly all our data on the organization of the state religion in the Northern Kingdom come from the comparatively late and definitely biased Books of the Kings. The First and Second Book of the Kings are part of the

Deuteronomistic History, a national history written in the spirit of the Deuteronomic movement.[1] The Deuteronomistic writers have incorporated older materials and traditions in their work, but major sections were authored directly by themselves. The historical reliability of these passages is questionable.

The description of Jeroboam's interventions in the state religion (1 Kings 12:26-32) may be based on older documents from the Northern Kingdom,[2] but in its present form it reflects the point of view of the clergy at Jerusalem.[3] In the vision of the Deuteronomists, Jeroboam was motivated by political self-interest when he took measures to reinforce the position of the state religion. Seeing an intimate link between religious devotion and political loyalty, he feared the disaffection of his subjects should they continue to go up to offer sacrifices in the temple of Yahweh in Jerusalem:

> And Jeroboam said to himself: Now the kingdom will return to the House of David. If this people go up to offer sacrifices in the temple of Yahweh at Jerusalem, then the heart of this people will turn back to their lord, to Rehoboam king of Judah, and they will kill me and return to Rehoboam king of Judah.
>
> 1 Kings 12:26-27

While political motives will certainly have contributed to Jeroboam's decision to have his own national temples and his own national festival, his concern about his subjects' visiting the temple in Jerusalem is at odds with the historical situation. The people had just claimed that they had neither portion nor share with the House of David (1 Kings 12:16). They were hardly tempted to call Rehoboam their 'lord'.

In establishing a full-fledged state cult in his own kingdom, Jeroboam was fulfilling his religious duties as a monarch. He did what his people expected from their ruler.

> And the king took counsel and made two golden calves and he said to the people:[4] 'You have been going up to Jerusalem long enough. This is your god, o Israel, who brought you up from the land of Egypt.' And he set up one in Bethel, and the other he placed in Dan. And this act proved to be a source of guilt, for the people went to worship the one [in Bethel and the other] as far as Dan. He also made cult places (*ʾet-bêt bāmôt*) and appointed priests from the ranks of the people who were not of Levite descent. Jeroboam also established a festival on the fifteenth day of the eighth month, in

---

[1] On the Deuteronomistic History see the various introductions to the Old Testament, such as Kaiser 1984[5]:172-178; Schmidt, W. H. 1989[4]:136-160. On the Deuteronomic movement see Chapter Fourteen.

[4] Correct אלהם into אל־העם, cf. LXX πρὸς τὸν λάον.

> analogy with the festival in Judah. And he ascended the altar (this he did in Bethel) to sacrifice to the calves he had made. And he stationed at Bethel the priests of the shrines that he had made.
>
> 1 Kings 12:28-32

In spite of the critical tone of the passage, it gives a fairly accurate description of the main ingredients of the state religion as promoted by the Israelite kings. Though not all elements need go back to the time of Jeroboam, they do constitute what seems to be the natural core of the Israelite state religion.[5]

The Israelite state cult as presented in 1 Kings 12 is devoted to Yahweh in his capacity as 'the god who brought you up from the land of Egypt.' The formula with which Jeroboam is said to have introduced the calf images to the people can hardly be the invention of the Deuteronomists. It is presumably a citation of a traditional doxology spoken at the annual festival in Bethel when the image of Yahweh left the temple to be carried around in procession. Two conclusions follow: first, that the state religion of the Northern Kingdom was not polytheistic in the sense that it put Yahweh on a par with Baal and other Canaanite deities, since only Yahweh was proclaimed to be the national god of Israel; and second, that it used the exodus motif as its central doctrine. The latter element represents an innovation by comparison with the earliest phase of Israelite state religion. Under Saul, the theology of the state religion consisted of little else than the application of the traditional notions of family religion (such as the 'people of Yahweh' and his 'inheritance') to the nation as a whole. Under the divided monarchy, however, the exodus was used as national charter myth designed to give the Israelites the sense of a common past.

The authorities in charge of the state cult combined this theological innovation with the creation of official temples, the appointment of religious executives, and the introduction of a cultic calendar. According to the Deuteronomists, Jeroboam turned the existing temples of Bethel and Dan into state temples by the consecration of the golden calves.[6] Since the bull imagery belongs to the traditional iconography of Canaanite temples, it is doubtful whether Jeroboam made two new images. Though the possibility cannot be excluded, it is more likely that the monarch reinterpreted existing images in accordance with the new religious doctrine. The king is said to have established an unspecified number of cult places throughout the country in addition to Bethel and Dan. The text gives no clue about the location of these sanctuaries, nor does it reveal whether they were new establishments or older places of worship that were placed under the control of state officials.

---

5 Debus 1967:39; Noth 1968:270.281.

6 Cf. Würthwein 1977:163.

The nationalization of the temples at Bethel and Dan could not have been realized if it had not been accompanied by the consecration of a body of priests in the service of the state. Indeed, King Jeroboam is reported to have appointed priests from among all the people, whether they be Levite or not. In the eyes of the Deuteronomists, the appointment of non-Levite temple personnel amounted to a sin because the Levites were the only ones whom Yahweh had chosen to do service in his temple. Since the notion of the priesthood as a Levite prerogative is a construct of a later period, however, the condemnation of Jeroboam's choice of priests is an anachronism at best.

The description in 1 Kings 13:33 suggests that there was such a shortage of personnel at the state sanctuaries, that the authorities appointed as priest any one who aspired to that position.

> Jeroboam ... kept on appointing priests for the shrines (*bāmôt*) from the ranks of the people; any who so desired, he consecrated as priests of the shrines.

The verse indicates that the authorities sought to seize and maintain control of the religion of their subjects by the installation of a large body of state priests. Loyalty to the king was a more important criterion of their selection than training, expertise, or descent.

In addition to the promotion of the exodus as charter myth, the nationalization of temples and shrines, and the creation of a body of state priests, the narrative of 1 Kings 12 credits Jeroboam with the introduction of a cultic calendar. In analogy with the new year festival in Jerusalem (which was celebrated in the seventh month), Jeroboam would have instituted a festival in Israel in the middle of the eight month. Apart from this new year festival, no other dates of the cultic calendar are given. One reason to mention only the new year festival concerns the role of the king on that occasion. According to our text it was one of the times at which the monarch ascended the altar in person. The prominence of the king during the festivities was not simply a sign of royal devotion. The festival celebrated the kingship of Yahweh as the god in whose name the human king exercised his power. The annual rite of renewal amounted to a public endorsement of the monarch by the national god in the presence of the gathered population.[7]

The organization and development of the Ephraimite state cult under the divided monarchy is presented by the Deuteronomists as a conscious attempt on behalf of the palace to gain control over the religious life of the population. The measures described were meant to legitimize and reinforce the position of the king. The monarch was the final author and authority in matters of

---

[7] See van der Toorn 1991b:341-342.

the state religion; as the head of state he was also head of the state cult and its priests. On such occasions as the new year festival, the king demonstrated his authority over the cult personnel by his leading role in the ceremonies. Under ordinary circumstances, he delegated his responsibilities to the priests. Unlike the cultic servants at the local family chapels, these priests were civil servants. They had been appointed by the crown, and it was to the crown that they were ultimately responsible.

The Exodus as National Charter Myth

The description of Jeroboam's religious politics implies that the exodus was used as a national charter myth in the state religion. This much can be deduced from the liturgical formula hailing the golden calf:

> This is your god, o Israel, who brought you up from the land of Egypt!

Since the source of our information is not above suspicion of historical falsification, however, we have to verify the place of the exodus motif in the Northern Kingdom on the basis of data free from a Deuteronomistic prejudice. The two books that may be used for such a verification are those of Amos and Hosea.

We shall first look at the Book of Amos.[8] Amos was a farmer from Judah[9] most of whose activities as a prophet took place in the Northern Kingdom around 750 BC.[10] His presence in Israel is proved by the narrative of his dismissal from the royal temple at Bethel (Amos 7:10-17).[11] Both the structure and the content of his prophecies show that Amos was addressing a primarily Israelite audience.[12] It may therefore be assumed that many of the practices and ideas he refers to were characteristic of the Northern King-

---

[8] Literature on Amos includes Mays 1969b; Hammershaimb 1970; Wolff 1975[2]:105-410; Coote 1980; Barstad 1984; Zobel 1985; Auld 1986; Soggin 1987; Andersen & Freedman 1989; Paul, S. M. 1991. For an extensive bibliography see van der Wal 1986[3].

[9] The prophet is described as a 'shepherd' (*nōqēd*, Amos 1:1), a 'cattleman' (*bôqēr*) and 'tender (of figs)' (*bôlēs*, Amos 7:14) from Tekoa (Amos 1:1), a small fortress about 15 kilometres south of Jerusalem. The prophet was reasonably well-to-do, since he did not depend on his activities as a prophet for his living (cf. Amos 7:12-14).

[10] Amos' activity as a prophet is dated to the reigns of Jeroboam II (787-747) and Uzziah of Judah (783-742), 'two years before the earthquake' (Amos 1:1), which event can be dated, with the help of archaeology, to the mid-8th century BC.

[11] For a discussion of the passage and references to relevant literature see Wolff 1975[2]:352-365.

[12] Note for instance the structure of Amos 1-2, which goes form topographical periphery (Damascus, Gaza, Tyre, Edom, Ammon, Moab) to centre (Judah, Israel): the prophecy against Israel closes the section. At various places the Israelites are explicitly addressed (3:1; 4:1; 5:1, 4, 25; 9:7).

dom.[13] The Book of Amos bears out the popularity of the national festivals. On religious feast days people made the pilgrimage to renowned sanctuaries such as Bethel, Gilgal, Dan or Beersheba (Amos 4:4; 5:5-6; 8:14), where they stayed for a number of days (Amos 4:4). The festivities included a religious procession in which an image of the deity was carried through town (Amos 5:26), sacrificial banquets on the occasion of the payment of tithes and vows (Amos 4:4-5), bouts of drinking (2:8, 12), and sexual licence (2:7).

The religious criticism of Amos is directed in the first place against the state religion. Not only are the temples which he mentions (such as Bethel and Dan) national shrines, but his activities as a prophet also bring him into conflict with the state clergy. His dispute with Amaziah, the chief priest of Bethel, shows that the prophet was regarded as someone who attacked the state cult and undermined the political stability in Ephraim. That is why Amaziah reports Amos' activities to the king, and orders the prophet to leave the temple of Bethel.

> And Amaziah said to Amos: 'Seer, take yourself off to the land of Judah! Earn your living there and do your prophesying there. But don't ever prophesy again at Bethel, for it is a royal shrine and a temple of the state!'
>
> Amos 7:12-13

In his reaction Amos dissociates himself from the prophets working under the auspices of the state cult, to whom he refers as 'sons of the prophets' (Amos 7:14).

> Amos answered Amaziah: 'I am not a prophet nor a prophet's son. I am a cattle man and a tender of figs. But Yahweh took me away from following the flock and Yahweh said to me: Go, prophesy to my people Israel.'
>
> Amos 7:14-15

Amos intimates that, as a layman, he is not accountable to the authorities in the same way as professional prophets. Having his own source of income, he is independent and can speak the word of Yahweh with complete candour. His sneer at the Ephraimite cult prophets whom he implicitly accuses of piping the tune of the king who pays them will not have gone unnoticed.

Amos' familiarity with the religious traditions of the Northern Kingdom is clear from his scattered references to the exodus from Egypt (Amos 2:10-11; 3:1; 9:7; cf. also 5:25-26). The authenticity of the relevant texts has been contested on the hypothesis that they should be ascribed to the hand of a Deuteronomistic editor.[14] The tacit assumption underlying this judgment is

---

[13] Note Amos' repeated references to the exodus tradition (Amos 2:10; 3:1, 2; 9:7).

[14] So Wolff 1975[2] at the relevant passages; see also Lemche 1985:309-312.

that Amos could not have known the exodus motif or, if he did, did not attach any particular significance to it. This prejudice is not justified by the facts. The exodus terminology in Amos (עלה hip^{c}il) differs from the one used by Deuteronomy and the Deuteronomists (יצא, hip^{c}il).[15] It is characteristic of the Ephraimite tradition transmitted in the sanctuaries of the Northern Kingdom.[16] The fact that Amos uses precisely this idiom bears out his intimate knowledge of the cult in Israel.[17]

It is instructive to study the way in which Amos refers to the exodus tradition. A characteristic passage is found at Amos 9:7

> To Me, O Israelites, you are just like the Ethiopians—oracle of Yahweh,
> True, I brought Israel up from the land of Egypt,
> But also the Philistines from Caphtor
> and the Aramaeans from Kir.

Amos does not deny the reality of the exodus, but insists that it does not entail a licence for moral or cultic misconduct. On the contrary, the experience of the exodus should be a motivation to steer clear from all iniquity. In the one case where Amos refers to the exodus as proof of Israel's election ('You alone I have singled out of all the families of the earth,' Amos 3:2 NJPS) it is to remind the people of their accountability to Yahweh. Amos uses the exodus motif to disturb and criticize his audience. In his opinion, the Israelites abused the exodus tradition by interpreting it as an unconditional promise of God's special protection.[18] Amos calls upon a central tenet of the state religion, then, precisely in critique of certain practices and attitudes of the followers of that religion.

The place of the exodus motif in the Book of Hosea must be studied in connection with the target of his criticism, which is not the state cult but the local forms of family religion.[19] Hosea spoke his prophecies 'in the days of Jeroboam the son of Joash, king of Israel' (Hosea 1:1)[20] who reigned from 787-747 BC. Since the prophecies of Hosea also allude to the disarray that

---

15 Wolff 1975^{2}:206.

16 Wijngaards 1965.

17 On the authenticity of the relevant verses see Mays 1969b:51; Hoffman 1989:178; Paul, S. M. 1991:90.100.282.

18 Hoffman 1989:181.

19 For literature on the Book of Hosea see Wolff 1965^{2} (1976^{3}); Rudolph 1966; Mays 1969a; Kinet 1977; Andersen & Freedman 1980; Utzschneider 1980; Jeremias, Jörg 1983; Emerson 1984; Neef 1987; Yee 1987; Naumann 1991; Nissinen 1991.

20 Since most of the Judahite kings mentioned in the first verse of the book did not reign synchronously with Jeroboam II, it is generally assumed that they have been added in imitation of Isaiah 1:1, see Eissfeldt 1976^{4}:518-519. The precedence of the Judahite kings indicates that the superscription of the book was composed in Judahite circles (Wolff 1965^{2}:1; Jeremias, Jörg 1983:23).

ensued upon the death of Jeroboam, as well as to the Israelite-Aramaean coalition against Judah (Hosea 5:8-6:6), the prophet must have been active until about 730 BC. Unlike Amos, whose prophecies were spoken in Israel but who came from Judah, Hosea was a native Ephraimite.[21] His prophecies offer a view of the religious situation in Israel from within, some 250 years after the introduction of Yahweh as national god. How did Hosea perceive the religious culture of his day?

If the book that bears his name is representative of his views,[22] Hosea regarded the religion of his contemporaries as a collective form of apostasy. He likened Israel to a frivolous wife, fickle and unreliable, going after other gods as a prostitute would follow other men. Though her loyalty should be to Yahweh alone, Israel engaged in the cult of the Baals. This central message of the book is dramatically expounded in its first section by the description of Hosea's marriage with Gomer (chapters 1-3).[23] The woman is characterized as an *ʾēšet zĕnûnîm*, a woman of adulterous behaviour,[24] and the children she bears are *yaldê zĕnûnîm*, children of adultery. Gomer's conduct toward Hosea is compared to Israel's conduct toward Yahweh. Likewise, the divorce procedure which Hosea may have contemplated or actually initiated serves as a symbol of the imminent dissolution of the relationship between Yahweh and Israel—though the prophet does not exclude the possibility of a sudden conversion of his people, expressed in terms of the metaphor as a rejuvenation of love.

Once the message is divested of its metaphorical flourish, the religious situation depicted by Hosea is one in which the worship of Yahweh is practised alongside the cult of the Baals. It should be noted that the

---

21 The Book of Hosea does not mention the town where the prophet was born. It is generally assumed, however, that it was in Israel, since Hosea worked in Israel only, and is distinctly Ephraimite in his outlook.

22 For a survey of the various views on the genesis of the Book of Hosea see Yee 1987:1-25; Nissinen 1991:17-43. The history of interpretation has witnessed a shift from a focus on the truly Hoseanic and 'authentic' parts of the book to an emphasis of the role of the final redactor(s). Since the identification of the *ipsissima verba* of the prophet will always be tentative and uncertain, the principal question to be asked by those using the book as a source of information about the time of Hosea concerns the measure in which the book reflects the message of the prophet and the issues which mattered in his days. Nearly all modern commentators observe correctly that the Judahite prophecies reflect concerns of a non-Hoseanic milieu and a later date. Specifically Ephraimite polemics, on the other hand, must be assumed to reflect the concerns of Hosea and his circle of disciples.

23 The three chapters were not originally conceived as a unity, witness the separate promises for Judah at the end of each (Jeremias, Jörg 1983:19). In view of the identification of the wife and her father, there is no reason to put the historicity of the marriage with Gomer into question. On the marriage of Hosea see Rowley 1963a:66-97; Schreiner 1977.

24 The expression cannot be taken as evidence of a sexual rite of initiation to which each Israelite woman was submitted once in her life, *pace* Wolff 1965^2:14-15. See Rudolph 1963.

combination—which the prophet construes as an opposition—concerns one Yahweh and many Baals. The frequent use of the plural in connection with the cult of gods other than Yahweh is striking: the Israelites worship 'the Baals' (2:15[13], 19[17]; 11:2) and turn to 'other gods' (3:1). Ephraim is devoted to a multitude of 'idols' (*ʿăṣabbîm*, 4:17; 8:4; 13:2), i.e., wooden statues of gods (*pĕsîlîm*, 11:2) coated with precious metal (8:4; 13:2). Corresponding to this plurality of gods is a plurality of cult places. The Israelites are accused of performing a sacrificial cult in 'sanctuaries' (*bāmôt*, 10:8) located 'on the tops of the mountains' and 'upon the hills' (4:13) where they have placed their 'altars' (*mizbĕḥôt*, 4:19; 8:11; 10:1, 2, 8) and stone stelae (*maṣṣēbôt*, 10:1, 2).

The cult which the Baals received consisted of invocation (2:19[17]), the burning of incense (2:15[13]; 11:2), and the offering of sacrifice (13:2). On occasion, the rites involved the consumption of food by the human worshippers. The fact that the Israelites are accused of being partial to cakes of raisins (*ʾăšîšê ʿănābîm*, 3:1) and to meat (*bāśār*, 8:13) is linked to the sacrificial context in which these delicacies were enjoyed. Religious activity was at a pitch on seasonal fête-days; some of those are connected with the lunar cycle (such as the *ḥodeš*, the new moon or the interlunium, and *šabbāt*, either the seventh day or the plenilunium, 2:13[11]; 5:7),[25] and some with the agricultural cycle (harvest festivals performed on the threshing floors, 9:1). Considering the ebullient mood in which 'the days of the Baals' (2:15[13]) were passed, the frequent occurrence of licentious behaviour is hardly surprising (4:13-14). Also elsewhere in the Near East, local festivals were known to be occasions for flirting and courting.[26] In many civilizations, the distinction between religion and entertainment becomes blurred on feast days.[27]

Since the cult of the Baals was locally diversified, many of the rites that have just been listed did not take place in the context of national celebrations. The cult of the Baals was a predominantly local religion with participants who often belonged to the same family or clan (cf. 4:13-14). Concomitant with its local character, the cult was concerned primarily, it seems, with the yield of the crops and the multiplication of the flocks. The Baals were assumed to give 'bread and water, flax and wool, oil and drink' (2:7[5]). The list may have been inspired by the matrimonial metaphor, since it was a

[26] See van der Toorn 1994a:55-58. The romance between Boaz and Ruth toward the end of the barley and wheat harvests (Ruth 2:23) may be regarded a biblical illustration of the social side of harvests festivities.

[27] See, e.g., Benedict 1954:89-90; Brettell 1990:60-64.

husband's responsibility to provide his wife with food, clothing and oil.[28] Yet the fact that the prophet insists that 'the grain, the wine, and the oil' were in reality gifts of Yahweh (2:10[8]) suggests that the Baals were literally credited with the power to bestow these benefits. Such modest material blessings are consonant with the localist orientation of the cult of the Baals; it was not concerned with politics or weighty matters of national importance, but with the daily needs of ordinary people.

Though Hosea condemns the worship of the Baals as a reprehensible innovation, referring to Yahweh as the first love of the Israelites, the picture he gives of the local cults is essentially a picture of traditional family religion. Since the prophet polemizes by allusions rather than descriptions, the contours of the local cults remain diffuse. For all we can see there has been little change over three centuries (though very little is said about the cult of the ancestors).[29] At a local level, many communities seem to have continued to worship their own Baals. Meat consumption was still linked with sacrifice, and hence limited to occasions of religious significance. Celebrations continued to take place in local *bāmôt*, which were open-air sanctuaries located on mountains and hilltops, presumably just outside the confines of the towns. All these elements are well-known from the descriptions in Judges, Samuel, and the Elohistic parts of Genesis—with this difference, however, that Hosea presents them as the aberrations of a degenerate people.

The ideological basis of Hosea's rejection of family religion in its various local manifestations is found in his references to the time of Israel's liberation from Egypt.[30] A prime witness to Hosea's view of Israel's religious history is found toward the end of his book:

> I am Yahweh your God since the land of Egypt: you know no God but me, and besides me there is no saviour.
>
> Hosea 13:4

According to this verse, whose formulation announces the opening lines of the Decalogue ('I am Yahweh your god, who brought you up from the land of Egypt: you shall have no other gods beside me'), the religion of Israel

---

[28] An Old Babylonian report on a court case against one Ennam-Sîn contains the accusation that the man had not provided his wife Tabni-Ištar with 'rations of grain, wool, and oil' (VAS 8, 9:12-14), cf. the translation in Westbrook 1988:134. Note also CT 48, 51 and 61:12'-13' with references to the husband's duty to clothe and feed his wife, and to provide her with jugs of oil. Exodus 21:10 mentions 'food, clothing, and sexual intercourse' (*šĕʾēr, kĕsût, ʿōnâ*) as the essential commodities to which a wife is entitled.

[29] But note the reference to the teraphim in Hosea 3:4 and the condemnation of the new moon festivities (Hosea 2:13[11]; 5:7).

[30] On the presence of the exodus motif in the Book of Hosea see Utzschneider 1980:172-177.

was born at the time of the exodus from Egypt.[31] It was then that Yahweh first made himself known to the Israelites. Since he was then the only one, he had to be the only one now as well.

Like many religious reformers, Hosea presented his programme as a return to origins. According to the message of the prophet, the various local cults were adulterations of a religion which initially had been one of pure devotion to Yahweh. Hosea presented the time of the exodus as the time of the beginning of this religion. During the wanderings in the wilderness, when the people had come out of Egypt, Israel had still been young and innocent (Hosea 2:17[15]). To Hosea, the liberation from Egypt and the journey through the desert were like articles of faith which had to be impressed upon his audience to make them mend their ways. Symbols of God's election and Israel's youthful devotion, they stood in sharp contrast with a present that Hosea regarded as a condition of religious decadence. He wanted Israel to return to the undivided loyalty which it owed to Yahweh as the god of the exodus.

One reason why, in the vision of Hosea, the years of the exodus and of the wanderings were a particularly privileged time, is that they were the golden age of prophecy. God 'called' his son Israel out of Egypt (Hosea 11:1) through the prophets:

> I am Yahweh your God since the land of Egypt.
> I will again make you dwell in tents, as in the days of the meeting.
> Then I spoke to the prophets, and I multiplied visions;
> I will again speak in parables through the prophets.
>
> Hosea 12:10-11[9-10]

The emphasis on the role of the prophets in the formative years of Israel is slightly at odds with the account of the exodus as given in the Book of Exodus. Hosea gives a particular version of the exodus, highlighting aspects which later tradition may have deemed less important.[32] To Hosea the nearness of God in the days of the desert manifested itself in a florescence of prophecy; in that respect the period was to serve as a model for all time.[33] A similar association between the exodus and the phenomenon of prophecy is made by Amos (Amos 2:10-11), which suggests that it reflects a typically Ephraimite tradition.[34]

---

31 The Hoseanic connection between the exodus tradition and the demand for cultic exclusivism should not be explained as a late-exilic or post-exilic addition to the book based on Deuteronomy and Deutero-Isaiah, *pace* Nissinen 1991:157-166. Hosea's statement is not monotheistic; like the decalogue, it preaches monolatry of Yahweh.

32 So for instance the notion of God having 'found' Israel, cf. Bach 1952.

33 Rendtorff 1962:149.

34 The ascription of Amos 2:10-11 to a Deuteronomistic interpolator (so Wolff

The prophet most intimately connected with the exodus is, of course, Moses. His figure looms large in Hosea 12:14[13],[35] a verse that may be considered one of the earliest biblical allusions to Moses.[36]

> By a prophet Yahweh brought Israel up from Egypt,
> and by a prophet he was preserved (*nišmar*).

There is no room for doubt: for Hosea Moses is a prophet, and one of such stature that his name need not even be mentioned; he is the prophet *tout court*.[37] By omitting Moses' name, Hosea also emphasized the role of prophetic office over the person of Moses; which is consonant with the use of the plural in Hosea 12:11[10].[38] The prophet's statement indicates that he saw himself as rooted in the Mosaic tradition; he was a prophet in the line of Moses (cf. Deuteronomy 18:9-22). The legitimacy of his prophethood lay in the prophethood of Israel's national hero whose name was firmly associated with the exodus as the founding event of the nation.

To fully grasp the ideological implications of the exodus tradition it is necessary to register the polemical context in which Hosea uses it. The ideological complex with which Hosea contrasts the exodus motif (with Moses as its principal human protagonist) is the Jacob tradition.[39] Themes of this tradition are reflected in Hosea 12:4-5[3-4]:

> In the womb he took his brother by the heel (עקב),
> and in his manhood he strove (ישׂרה) with God;
> El strove (וישׂראל) and prevailed.[40]
> He wept and sought his favour.
> He found him at Bethel,
> and there he spoke to him.

The first verse (*v.* 4[3]) contains a word-play on the names Jacob (יעקב) and

---

1975[2]:205-207) is based on the premise that Amos does not mention the exodus and the wilderness tradition at all. On the authenticity of the verse see n. 17.

35 On the identification of the anonymous prophet with Moses see Wolff 1965[2]:281.

36 So, e.g., Widengren 1970:23; *pace*, e.g., Lemche 1985:314, who regards the verse as a later gloss. Nissinen 1991:341 regards the entire passage (Hosea 12:4-13:2) as secondary, without further discussion. The Hoseanic paternity of the verse is accepted by Wilson 1980:228. Wolff concludes that 'Hosea und die ihn tragende Gemeinschaft haben offenbar zuerst Mose, als das geistliche Haupt der prophetisch-levitischen Oppositionsgemeinschaft, einen "Propheten" genannt' (1965[2]:281).

37 See on Hosea's reference to Moses as 'the' prophet also Rudolph 1966:231; Perlitt 1971:603-605; Utzschneider 1980:208.

38 See Utzschneider 1980:208.

Israel (ישראל), the latter one being repeated in *v.* 5[4] (וישראל). For Hosea, 'Jacob' and 'Israel' refer to the same person, viz. the patriarch Jacob whom tradition connected with Bethel. Hosea's appreciation of Jacob is entirely negative, it seems; a critical tone is present throughout the passage: Jacob deceived his brother, and fought against God.

Hosea 12:13[12] is the second reference to Jacob. Here too there is no trace of veneration for a man whom the audience of Hosea must have regarded as a hero.

> Jacob fled to the land of Aram,
> there Israel did service for a wife,
> and for a wife he guarded sheep.

Jacob-Israel is here presented as someone who ignominiously fled from God and his commands.[41] The patriarch preferred the land of Aram to the soil of Palestine; his appetite for a woman degraded him into shepherding.

The critical tone of the summary biography of Jacob contrasts with the positive note Hosea strikes when referring to the exodus tradition.[42] In one or two places, the traditions are deliberately brought into opposition. It is not sure whether the rather enigmatic saying in 12:5[4] ('He found [מצא] him at Bethel') was meant to contrast with 9:10 ('Like grapes in the desert I found [מצא] Israel'). In 12:13-14[12-13], at any rate, the contrast between Jacob and Moses is definitely intentional: Whereas Jacob fled abroad, it was through Moses that God brought up Israel from Egypt. The exodus out of Egypt was a liberation from the house of servitude (*bêt ʿăbādîm*), according to the Decalogue (Deuteronomy 5:6). Jacob/Israel, however, willingly submitted to servitude in Aram (*wayyaʿăbōd-Yiśrāʾēl*, Hosea 12:13).[43] Whereas Jacob guarded (שמר) sheep for the sake of a woman (*bĕʾiššâ*), the Israelites were preserved (שמר, nipʿal) by the offices of a prophet (*bĕnābîʾ*).[44]

Hosea's negative appraisal of Jacob has received different interpretations. Some authors suggest Hosea's criticism is less harsh than it appears to be or, if criticism there is, not levelled at Jacob;[45] some duly register it and confess they find it 'hard to explain';[46] others take it as a veiled condemnation of sacred prostitution which they suspect was a current practice in the Northern Kingdom;[47] others yet interpret it as a rejection of a non-Yahwistic Bethel

cult[48] devoted to guardian angels.[49] The diversity of scholarly opinion underscores the difficulty of interpreting biblical texts divorced from their historical context. The opposition which Hosea posits between the Jacob tradition and the exodus tradition makes it clear, at any rate, that the Deuteronomistic marriage of the two in terms of a chronological sequence, the patriarchal history serving as a prologue to the exodus, is secondary. The two traditions have from their beginnings been independent and competing ideologies.[50] In the days of Hosea, apparently, the Jacob tradition had not yet reached its canonical form.[51] The formulation in 1 Samuel 12:8 ('When Jacob came to Egypt, your fathers cried out to Yahweh and Yahweh sent Moses and Aaron and they delivered your fathers from Egypt') may be regarded as an early—Ephraimite and proto-Deuteronomic—attempt to combine the traditions of Jacob, Moses and Aaron.

A comparative study of the Jacob tradition, on the one hand, and the exodus tradition, on the other, evinces a series of oppositions. Jacob is an ancestor, whereas Moses is a prophet and a military leader; the identity which the Jacob tradition reinforces is genealogical, whereas the identity which the exodus tradition bolsters up is national; land possession is by inheritance in the Jacob tradition, and by conquest in the exodus tradition; Jacob is associated with Elohim or El, the exodus with Yahweh. These oppositions betray contrasting affinities. The Jacob tradition suits the concerns and interests of family religion; the exodus tradition is consonant with the concerns and interests of the state religion. It may therefore be suggested that, whereas the Jacob tradition was a paradigm of local religion, the exodus tradition served as national charter myth.

The hypothesis which regards the exodus narrative as an initially Ephraimite charter myth meant to provide the young nation with a national identity, formulated on the basis of the Deuteronomistic account of Jeroboam's religious politics, is supported by the references to the exodus in the Books of Amos and Hosea. It may be safely assumed, therefore, that by the end of the ninth century at the latest the exodus tradition was an official doctrine of the Israelite state cult.[52] The story of the deliverance from Egypt had

---

48 Good 1966:151. It should indeed be noted that any association of Jacob and Yahweh is lacking; the god of the Jacob tradition is referred to as Elohim or El.

49 Ginsberg 1961:343-344.

50 See de Pury 1991:88-93.

51 Cf. Utzschneider 1980:207.

52 The specifics of the early version of the exodus narrative are unknown to us. To judge by Hosea's references to the exodus, they may have departed from the canonical versions of the exodus as we now know them.

indeed all the potential of a national charter myth; it takes little imagination to see why it came to be used as such.

We must be careful to distinguish, however, between use and origin. It is one thing to say that the exodus tradition was promoted, along with Yahweh as the national god, as a national charter myth; is something else to imply that the tradition grew out of the political need for it. The available evidence warrants the conclusion that the exodus motif was appropriated by the state religion as the national myth; there is also sufficient evidence to say that the motif was originally Ephraimite. It is harder to determine, however, in which particular segment of the early Israelite society the tradition originated and developed. Both the Egyptian background of the name of Moses,[53] and the data concerning the presence of Western Asiatic people in 13th century Egypt,[54] argue in favour of the historicity of an exodus of some kind. The most satisfactory solution is to assume that the sojourn in and the flight from Egypt were historical realities for a limited group of immigrants to Israel. Their particular history was gradually transformed into a national past of sheerly mythical proportions.

If the exodus tradition (with Moses as its main protagonist) had its *Sitz im Leben* in the state religion, the Jacob tradition must be located in the milieu of those Israelites who wished to perpetuate the religious traditions from before the monarchy. Until the emergence of the state, Israelite society had been segmentary, and Israelite religion had been locally diversified. Family religion protected and reinforced the identity of the lineages and their title to their inheritance. It was primarily in the interests of the landed gentry to maintain this tradition over the national religion which claimed all the land to be 'Yahweh's heritage' (cf. David's complaint about his being driven away from Yahweh's heritage, i.e., Israel, 1 Samuel 26:19), which amounted to saying that it was national property. The landed gentry consisted of the old Israelite families who owned much of the land and formed a kind of nobility.[55] Much of the opposition against the monarchy in Israel came from them. They referred to the Jacob tradition with its emphasis on descent and inheritance to legitimize their views.

---

[53] See Auerbach 1953:24-25; Griffiths 1953; Smend 1963:89-90; Schmid, H. 1968: 106-107. In fact, the Egyptian background of the name is used as a prime argument in favour of the historicity of Moses. 'The one point that seems to argue for regarding Moses as historical is his Egyptian name' (Van Seters 1987:115). Also Widengren 1970:28 speaks about 'the real Egyptian name of Moses'.

[54] See Knauf 1988:97-98; Kitchen 1992:704.

[55] I am inclined to assume that Ephraim's landed gentry was the Northern equivalent of the *ʿam hāʾāreṣ* in Judah. For a discussion of the latter notion see Gillischewski 1922; Würthwein 1936; Soggin 1963; de Vaux 1964; Nicholson 1965; Schäfer-Lichtenberger 1983:391-395.

Once the social and religious significance of the two bodies of tradition is established, they can be correlated to the two types of religion which Hosea addressed in his prophecies. Whereas the Jacob tradition has affinities with the local cult of the Baals (notwithstanding the fact that the Elohist identifies the god of the patriarch as El), the exodus tradition should be associated with the national religion. It might be objected that Hosea seems to have taken as dim a view of the national cult as he did of family religion. Hosea's criticism of the national religion, however, did not attack its right to exist. What the prophet combated is what he saw as a corrupted form of national religion. It is only due to this corruption that the exodus tradition had turned into an ideological critique rather than a support of the national religion.

The Levites

Propagated as a charter myth, the exodus tradition was a powerful instrument to weld the Israelite clans and families together into one nation, fostering allegiance to the head of state in the process. Without a body of cultic personnel, however, the ideology of the state religion would remain without effect. A study of the growing impact of the Israelite state religion must therefore also seek to identify those who may be called the bearers and partisans of the exodus tradition. Who were the priests and prophets of the new religion?

The Levites are the first group that should be mentioned in this connection.[56] In the religion of Israel, the Levites had a privileged position as servants of Yahweh. They had earned their privilege, according to Exodus 32:26-29, for their zeal for Yahweh and their battle against the worshippers of the golden calf.[57]

> Moses stood in the gate of the camp, and said, 'Who is on the side of Yahweh? Let him come to me!' And all the sons of Levi gathered around him. He said to them: 'Thus says Yahweh, the God of Israel: Put your sword to your side, each of you! Go back and forth from gate to gate throughout the camp, and each of you kill your brother, your friend, and your neighbour.' The Levites did as Moses commanded, and about three thousand of the people fell on that day. Moses said, 'Today you have consecrated yourselves for the service of Yahweh, each one at the cost of a son or a brother, and so have brought a blessing on yourselves this day.'

This aetiology of the Levites seems interpolated in the chapter, as the punish-

---

[56] For extensive bibliographies on the Levites see Kellermann 1984:499-502; Rehm 1992:309-310.

[57] See for the significance of the passage Gunneweg 1965:29-37; Cross 1973:199-200; Schmitt, G. 1982:580-583.

ment of the people has already been described in the preceding verses; the original context may have been different.[58] The text is meant to explain, and thereby justify, the 'blessing' (*bĕrākâ*) of the Levites: owing to their uncompromising devotion to Yahweh, which surpassed their feelings of loyalty to family and friends, the Levites had become the consecrated clergy of Yahweh. They were on the side of Moses, whom later tradition presented as a Levite himself (Exodus 2:1-10).[59] Moses was, according to the Levite ideology, the founder and patron of the Levitical order.[60]

The verses in the Book of Exodus which serve to explain and legitimize the position of the Levites may be compared with the Rule of the Levites in Deuteronomy 33:8-10.[61] The rule is now part of the 'Blessing of Moses', which is essentially a collection of formerly independent sayings.[62] To fit the Levite rule into the scheme of the blessing, it is framed as a benediction of Levi, the fictive ancestor of the Levites. The Levites, here presented as if they were a tribe instead of a spiritual order, are the heirs to Moses' office.

> Your Thummim and your Ummim belong to the man of your loyal one,
> whom you tested at Massah, with whom you contended at the waters of Meribah;
> who said about his father 'I have not seen him,'
> and who ignored his brothers, and did not know his sons.
> For they observe your word, and keep your covenant.
> They teach Jacob your ordinances, and Israel your law;
> they place incense before you, and whole burnt offerings on your altar.[63]

The ancestor of the Levites is referred to in these verses as 'the man of your loyal one'. The 'loyal one' (*ḥāsîd*) in question is Moses,[64] as the reference to the historically obscure incident at Massah and Meribah shows.[65] Levi

stands for all the Levites.[66] His contempt of family ties ('who ignored his brothers, and did not know his sons') agrees with the description in Exodus 32, where the Levites are said to have earned a blessing 'each one at the cost of a son and of a brother' (*v.* 29). Such statements support the conclusion that the Levites were a corporate group not through common descent but by religious commitment.[67]

Attempts to define the historical role of the Levites are hampered by the fact that later biblical tradition sees the Levites as a tribe of professional priests. This *a posteriori* systematization does not do justice to the historical reality, however. Levi is not a personal name to begin with. A majority of scholars link the designation *lēwî* to the expressions *lwʾ* and *lwʾt* in Minaic inscriptions from Dedan. It can be shown that the persons designated as *lwʾ* and *lwʾt* in these texts are men and women that have dedicated themselves to the sanctuary out of poverty or debts.[68] They are consecrated persons. The meaning 'consecrated person' also fits the Israelite Levite. This does not mean, of course, that the biblical Levites are from South Arabia, nor that the institution originated there. There is merely an etymological connection, which leads to a translation of *lēwî* as 'adherent, client, devotee (of a god)'.[69] The fact that most Levites did not possess an inheritance ('for Yahweh is his inheritance', Deuteronomy 18:1) suggests that they were originally disinherited kin. The story about the Levite who wandered around looking for a place to live (Judges 17:7-8) is characteristic. Like the *ḫabirū*, the Levites were uprooted from their family; they were *gērîm* (cf. Judges 17:7; 19:1), i.e., resident aliens with neither portion nor inheritance.[70]

According to the biblical evidence, the Levites had more in common than their status of *gērîm* and their connection with local sanctuaries. They formed a kind of guild or movement that claimed Moses as its patron saint. The link with Moses is indeed one of the most ancient and firm elements in the tradition of the Levites. The invocation of Moses as their figure-head qualifies the Levites as an Israelite—as opposed to Judahite—movement, since 'the Moses tradition was at home primarily in the north, a competitor for the Davidic tradition in the south.'[71] According to their Rule in Deutero-

nomy 33:8-11, the Levites were dispensing their religious instruction to Jacob and Israel (*v.* 10). Though Levites were also found in Judah, the Levitical movement originated in the Northern Kingdom.

In view of their invocation of Moses as their founder, and considering their position as cult personnel, there is reason to suspect that the Levites were goverment officials employed at state sanctuaries.[72] The association of Moses and the exodus belongs to the earliest layers of the tradition;[73] since the exodus myth was the official creed of Israel's state religion, the Levites would seem to be the priests of this religion. Yet the Deuteronomistic account of Jeroboam's interventions in the state religion explicitly affirms that the king 'appointed priests from the ranks of the people who were not of Levite descent' (1 Kings 12:31). The role of the Levites in Moses' battle against the golden calf does not favour the assumption that the Levites were state priests, either. The passage from Exodus 32 is a veiled but unmistakable critique of the cult at Bethel, where Yahweh was worshipped under the form of a young bull.[74] The iconoclastic convictions of the Levites are reflected in Hosea's contempt for the cult of the *ʿēgel Šōmrôn*, the Calf of Samaria (Hosea 8:5-6). There would seem to be such antagonism between the Levites and the cult of Bethel, then, that it is hardly conceivable that they could ever have been state-supported priests.

A closer look at the biblical evidence, however, leads to a more balanced assessment of the position of the Levites. Their affinity with Moses and the exodus tradition is not the only reason to associate them with the state cult. The tale of the divine image of Micah (Judges 17-18) shows that the priesthood at Dan claimed Moses as its ancestor (Judges 18:30). The Levite priest who had served at Micah's chapel wound up at Dan, as did Micah's precious icon. The polemical narrative has its roots in the Northern Kingdom; its authors are most likely to be found among the priesthood of Bethel. Though both Bethel and Dan could boast the presence of a state temple, there was enmity and competition between the respective priesthoods. The priests at Bethel looked to Aaron as their patron and ancestor; those at Dan to Moses. The only conclusion that fits the seemingly contradictory evidence is that the Levites constituted a faction of the religious personnel of the Israelite state cult. Indeed, the Deuteronomistic criticism of Jeroboam's choice of priests does not imply that he appointed no Levites at all, but that he

---

72 As argued by Ahlström 1982:44-74.

73 Gunneweg 1964; Knauf 1988:125-141; pace Coats 1988:168. In Hosea 12:14[13] the connection between the exodus and Moses is already attested.

appointed many who were not of Levite descent. In view of the inherent anachronism, the Deuteronomistic vision (which informs the accounts of both 1 Kings 12:31 and Exodus 32:26-29) can be regarded a projection of a later division in the Israelite priesthood back upon the time of the incipient state religion.

The Early Ephraimite Prophets

The second group with a possible connection to the Israelite state cult consists of those known as the 'prophets' or the 'sons of the prophets'. The members of this group bore a clear resemblance to the Levites, if only by the fact that both groups regarded Moses as their patron saint.

To grasp the similarities between the Levites and the prophets it is necessary to rid oneself of certain tenacious misconceptions about the Israelite prophets. The modern image of the biblical prophet presupposes a contrast between prophet and priest: whereas the latter stands for an institutionalized office, the former represents a charismatic office; the priest belongs to the temple, the prophet has no human boss; the priest defends the interests of the establishment, the prophet is the voice of the opposition. It need hardly be said that such clichés tend to obscure the historical reality of the Israelite prophets. We cannot be sure, moreover, that the biblical use of the term 'prophet' has invariably the same semantic value. Between the prophets of Israel and those of Judah, there may have been greater differences than usually suspected; shifts in meaning may also have occurred from one period to the other.

To obtain a sharper view of the relations between the Israelite prophets and the established religion, we must turn to the records about the Ephraimite prophets Elijah and Elisha.[75] The basic source of information on these men is the so-called Elijah Cycle, to be found in 1 Kings 17-19; 21 and 2 Kings 1. Single narrative units are at the basis of the whole. According to Hans Odil Steck, the collection and combination of the central stories such as those about the great drought and the contest at Mount Carmel took place under the Omrides (*ca.* 850 BC).[76] At the beginning of the reign of Jehu (*ca.* 840 BC) a new redaction was carried out, emphasizing the negative role of Jezebel.[77] The impetus to lay down the Elijah legends in writing, Steck argues, stems from the Aramaean wars, as may be deduced from the emphatically hostile

[77] Steck 1968:133.

traits in the portraiture of Aram. By the end of the ninth century BC the formation of the Elijah tradition had virtually come to a close.[78]

Though widely accepted, this relatively early dating of the Elijah legends has also been contested.[79] Basing his views on a comparison of the role of Jezebel in 1 Kings 21 and 1 Kings 17-19 respectively, Hans-Christoph Schmitt argues that the Elijah narratives are largely exilic or post-exilic. The designation of Ahab as 'king of Samaria' (1 Kings 21:1; 2 Kings 1:3) did not gain currency until after the fall of Samaria; the narratives in which it is used cannot have been written before that event.[80] Though Queen Jezebel is depicted as wicked in the story of Naboth's vineyard, she is not yet cast in the role of persecutor of the Yahweh prophets; which means that her portraiture in 1 Kings 17-19 represents a later elaboration. Other elements in these chapters (notably the opposition prophet versus king) suggest that the stories could not have been written before the end of the Davidic dynasty.[81]

The arguments advanced by Schmitt miss the force to compel a complete revision of the more conventional dating of the Elijah legends. Even if it be accepted that *melek Šōmrôn* is a seventh century expression (which is far from certain in view of the expression 'Yahweh of Samaria' and Hosea's designation of the Calf of Bethel as the *ʿēgel Šōmrôn*),[82] it must in all likelihood be considered a gloss in 1 Kings 21:1.[83] Nor can it be sustained that the image of Jezebel in the Naboth narrative precedes that of 1 Kings 17-19, since the reasoning is based on an argument from silence. The other reasons which lead Schmitt to a late dating of 1 Kings 17-19 are not decisive, either.[84] For instance, the presumed contradiction between magical rites belonging to a primitive stage of the tradition and 'a personal conception of the deity' (*personale Gottesvorstellung*) reflecting a later stage was probably not a contradiction from the perspective of the author of the story.[85] Also Elijah's critical stance toward the Omride religious politics is far more likely to go back to a historical reality than to a later editor. The hyper-critical reading of the Elijah Cycle fails to take into account the fact that Elijah was

85 Contra Schmitt, H.-C. 1972:185.

deemed important enough to make Elisha's disciples wish to establish a link between the two prophets.[86] Following the prevailing opinion, then, the Elijah legends will be studied here as documents illuminating a period that preceded the Book of Hosea by half a century.

The Elijah Cycle is quite sophisticated. Its high degree of theological reflection shows that it was not designed as popular entertainment.[87] The origins of the stories are to be sought in the prophetic circles in the Northern Kingdom which were active under the reigns of Ahab and Ahazia.[88] Indeed, 'the northern origin of the Elijah-Elisha traditions is seldom questioned, not only because of the northern setting of the stories themselves but also because of their distinctive vocabulary.'[89] It may be assumed that the formation and transmission of the material was primarily the doing of the disciples of Elisha, since they understood Elisha as the successor of Elijah.[90] The prophetic schools are a natural setting for these stories; the narratives are likely to have been composed by the spiritual leaders as source material for the instruction of the 'sons of the prophets' (*bĕnê hannĕbî'îm*).[91] By means of the Elijah narratives, then, we are given an insight into the organization and the ideology of the prophetic orders around 800 BC.

In some respects, the prophetic orders compare to monastic orders. Though membership of the order did not prevent the prophets from being married and following a profession,[92] the 'sons of the prophets' lived and ate communally (2 Kings 6:1; 4:38-41). Their leader, referred as their 'father' (*'āb*), could be regarded as the equivalent of the abbot (e.g., 2 Kings 2:12; 6:21; incidentally, the English term abbot derives from Aramaic *'abbā'*, 'father').[93] Samuel, too, is said to have stood at the head of such a prophetic community (1 Samuel 19:20). These prophets were recognizable by their tonsure (2 Kings 2:23-24; cf. 1 Kings 20:41) and their mantle (2 Kings 1:8; cf. 1 Samuel 28:14; Isaiah 20:2; Zechariah 13:4).[94] Since the hairy mantle is best interpreted as a symbol of soberness (note the contrast between John the Baptist who wore a garment of camel's hair, Matthew 3:4,

94 The expression *ba'al śē'ār*, applied to Elijah in 2 Kings 1:8, does not imply that the prophet was characterized by his long hair (*pace* Jepsen 1934:168 n. 3; Smend 1975:178), but that he possessed a hairy mantle.

and those in kings' houses wearing soft raiment, Matthew 11:8), we may assume that prophets had taken a vow of poverty. It was not right for them 'to accept money and garments, olive orchards and vineyards, sheep and oxen, male and female slaves' (2 Kings 5:26). Such words are similar in spirit to Samuel's confession of innocence (1 Samuel 12:3 'Whose ox have I taken? Or whom have I defrauded? Whom have I oppressed? Or from whose hands have I taken a bribe to blind my eyes with it?') and to Moses' claim that he did not take one ass from his people (Numbers 16:15).

The prophetic orders fulfilled several functions traditionally associated with the kin group. The designation of their members as the 'sons of the prophets' and of the leader as their 'father', shows that the relationships within the order were modelled on family relations. By entering the prophetic order, disciples severed their family ties to find their social identity in a new community. Commitment to the religious order was to pass before the loyalty to one's own kin, as the calling of Elisha demonstrates.[95]

> So he (i.e., Elijah) went from there and found Elisha the son of Shaphat, who was plowing, with twelve yoke of oxen before him, and he was with the twelfth. And Elijah passed by him and cast his mantle upon him. And he left the oxen, and ran after Elijah, and said: I want to kiss my father and my mother, and then I will follow you. And he said to him: Go back again, for what have I done to you? And he came back, and took the yoke of oxen, and killed them, and boiled their flesh with the yokes of the oxen, and gave it to the people, and they ate. Then he arose and went after Elijah, and served him.
>
> 1 Kings 19:19-21

The passage of Elisha from his family to the order of the prophets is presented as a radical break with the past. Elijah's gesture of casting his mantle is heavy with symbolism; it is patterned after the marriage gesture of the husband covering his wife with his garment, thereby signifying his willingness to welcome her as a member of his 'house'.[96] The act of Elijah

---

[95] The passage belongs to the Elisha tradition and is relatively late as such, see Schmitt, H.-C. 1972:109-110.

[96] According to the Hebrew Bible ▪ man could manifest his intention to marry a woman by covering her with the hem of his garment. One of the few Hebrew texts informing us on Israelite wedding ceremonies is Ezekiel 16. It speaks of a young maiden having reached marriageable age: her breasts are formed and her (pubic) hair has grown (Ezekiel 16:7). At that stage in her life the male protagonist of the allegory passes by: 'And as I passed by you and looked at you, behold, you were at the age of courting. I spread my hem over you (*wā'eprōś kĕnāpî 'ālayk*) and covered your nakedness. I made a solemn promise to you and entered into ▪ covenant with you—thus Yahweh Elohim—and you became mine' (Ezekiel 16:8). The verse uses the language and symbols of wedding: the 'solemn promise' (lit. 'I swore to you', *wā'eššāba' lāk*) is the vow of fidelity which was part of the marriage agreement, here referred to as a 'covenant' (*bĕrît*, cf. Malachi 2:14; Proverbs 2:17). In view of the immediate context, the act of 'spreading the hem' was ▪ symbolical gesture belonging to the wedding rites.

was a tacit invitation to Elisha to join the 'house of the prophets'. The order was to take the place of his family; Elisha had to kiss his father and mother good-bye. Who wished to join the house of the prophets had to become a Levite in the sense that any ties with his family and its inheritance had to be severed. The sacrifice of the twenty-four oxen underscores the implications of the rupture with the past. Elisha sacrificed his means of living and took leave of his inheritance in order to assume a new identity as a member of Elijah's prophetic group. The story is told for pedagogical purposes: the calling of Elisha was a paradigm of the prophetic calling for the prophets of the Elisha circle.[97]

Owing to their departure from the predominant patterns of social organization and identity construction, the prophetic orders were marginal. Such marginality was enhanced by the ecstatic behaviour within the orders; these have been compared with dervish associations[98] and peripheral possession cults.[99] The impression that the prophets were zealots at the fringes of society needs to be counterbalanced, however, by an appreciation of their social impact. The marginality of the prophets is the marginality of holy men. It is true that these men of God were at times the object of scorn and disparaging comments. Once, in the vicinity of Bethel, young boys threw pebbles at Elisha, and taunted him by calling him 'baldhead' (2 Kings 2:23). Military men referred to him as a 'madman' (*měšuggāᶜ*, 2 Kings 9:11; cf. Hosea 9:7 'the prophet is a fool, the man of the spirit a madman'). Yet the prophets inspired most of their contemporaries with fear. These men were not to be trifled with: the jeering boys from Bethel were torn to pieces by two she-bears (2 Kings 2:24), and in spite of their apparent contempt, soldiers took the word of a prophet quite seriously (2 Kings 9:12-13).

According to the Elijah Cycle, the ninth century prophets were not unattached saints. The opposition between the prophets of Yahweh and the prophets of Baal implies that the two groups had a similar place in society.

Comparison with another biblical passage shows that the act of spreading the hem had symbolical value indeed. In the idyll of Ruth and Boaz, the heroine invites her future husband to 'spread' his 'hem' over her, for he is *gōʾēl* (*ûpāraśtā kĕnāpekā ᶜal-ʾămātkā kî gōʾēl ʾattā*, Ruth 3:9). By calling him a *gōʾēl*, Ruth suggests that Boaz, being next of kin, is to take her as his wife. As a matter of fact, the widow quite candidly asks him to do so, since by spreading his hem over her, Boaz would enter into a conjugal relationship. The sequence of the scene shows that Boaz has perfectly understood Ruth's meaning. Without further delay he settles the matter with a relative and, with the approbation of the elders in the gate, he takes Ruth as his wife.

99 Wilson 1980:202.

Since the Baal prophets were supported by the state to serve as religious functionaries at Baal temples (1 Kings 18:19), the Yahweh prophets presumably served in a civil capacity as well. The 'prophets' and the 'sons of the prophets' were not only dispensing oracles and predictions: in the Northern Kingdom, they were the leading branch of the cultic personnel of the various sanctuaries.[100] Elijah was permanently attached to the sanctuary at Mount Carmel (1 Kings 18); Elisha, too, had connections with this sanctuary (2 Kings 4:25).[101] There were Yahweh prophets at (or near) Gilgal (2 Kings 4:38), Bethel (2 Kings 2:3; cf. 1 Kings 13:11), Jericho (2 Kings 2:5.15), and Shiloh (1 Kings 11:29)—all places that presumably had a temple. Among the tasks incumbent upon these prophets was the religious service on such holy days as New Moon and Sabbath (2 Kings 4:23), and the collecting of taxes (2 Kings 4:42).

The public role of the prophets is underscored by the close relations which someone like Elisha entertained with the court. Elisha was based in the capital, the city of Samaria, even though his ministry was largely itinerant (2 Kings 2:24; 5:3; 6:19). As an advisor to the king (2 Kings 6:9.31), he had privileged access to the highest political and military leadership (2 Kings 4:13; 8:4). In times of crisis, the local leadership, known as the 'elders', also consulted with Elisha (2 Kings 6:32). In his capacity as a royal supervisor, Elisha himself was not attached to any one sanctuary in particular. He made a regular circuit of the various sanctuaries; when visiting, he was asked for advice by the local prophets (2 Kings 2:21; 5:22). In this respect the description of Elisha resembles that of Samuel, who is reported to have made an annual circuit to Bethel, Gilgal, and Mizpah (1 Samuel 7:16). Elijah and Elisha had considerable influence at the palace. Though prophet and palace might be in disagreement (cf. 2 Kings 6:13), Elijah and Elisha (or rather, the circles in which their narrative cycles took shape) accepted and respected the institution of kingship, just as the administration recognized the role of the prophets.

The impact of the prophets on the political life of Israel is illustrated by the visit which King Joash paid to the dying Elisha (2 Kings 13:14). On this occasion the king referred to the prophet as the 'chariotry of Israel and its swift horses' (*rekeb Yiśrāʾēl ûpārāšāyw*, 2 Kings 13:14), a title also used in connection with Elijah (2 Kings 2).[102] The expression has been connected with the legend about the heavenly army of horses and chariots which some believed had brought Israel victory over the Aramaeans (2 Kings 6:15-17).

100 Johnson, A. R. 1962²:25-29.

101 Cf. Johnson, A. R. 1962²:26.

102 For the translation of פרשיו as 'its swift horses', see Galling 1956:135.

The prophet would be the incarnation of this heavenly heir.[103] It is quite uncertain, however, whether the expression was fraught with these mythological associations.[104] Such prophets as Elijah and Elisha might be honorifically referred to as the military forces of Israel because many a victory was obtained thanks to their gift of second sight. They knew the plans of the opponent in advance (cf. 2 Kings 6:8-12). The king was well-advised to acknowledge such a gift and pay heed to the prophet.

The relationship between the prophetic associations and the royal administration was close. The prophets served as the religious personnel at major sanctuaries in the land, such as Bethel, and in that capacity they occupied a position of central importance to the authorities. Royal taxes (described as 'the tenth of grain and vineyards' in 1 Samuel 8:15) were collected through the channel of the local temples, where people brought their 'firstlings' to the prophet (cf. 2 Kings 4:42). The role of the prophets as tax-collectors, as well as their involvement in military campaigns, is illustrative of the ties between the prophets and the court. Organized in orders, the 'sons of the prophets' were an essential element in the Israelite state cult. On the basis of the parallel with the Baal prophets who 'ate at Jezebel's table' (1 Kings 18:19), it may be supposed that the Yahweh prophets, too, were supported from the royal treasury. Truly 'free' and independent prophets (such as Amos, who disclaimed any link with the prophetic orders, Amos 7:14) were probably rare.

The connection between the Ephraimite prophets and the state religion is supported by the affinity of these men with the exodus tradition. Many authors have noted the parallels between the life of Elijah and the life of Moses.[105] Elijah's visit of Mount Horeb (1 Kings 19:1-18) does indeed seem to be an allusion to the exodus tradition.[106] It has therefore been concluded that the prophetic writers sought 'to present Elijah as a Moses *redivivus*'.[107] Yet precisely the episode of Elijah at the Mountain of God[108] throws doubt on the alleged patterning of Elijah upon the figure of Moses. Can we be sure that the connection between Moses and the Mountain had already been established by 800 BC?[109] It seems unlikely, at any rate, that

[108] The name Horeb is Deuteronomistic and must be considered an addition (Würthwein 1984:227 n. 12 with references to further literature; see also Thiel 1991:165-166).

[109] Cf. Noth 1948:178; Nicholson 1973:82. In the canonical version, the exodus motif

the narrators of 1 Kings 19 depended on one of the Pentateuchal sources or documents.[110] The undeniable relationship between Exodus 32-34 (especially 33:18-23), on the one hand, and 1 Kings 19,[111] on the other, should not be explained as a case of literary dependence.[112] The two narratives reflect a common prophetic tradition; it is this tradition which generated both accounts and incorporated them into the Moses and Elijah narratives.[113]

The analogy with Moses is not confined to the description of Elijah. The ministry of Elisha, too, exhibits traits that are reminiscent of Hosea. According to 2 Kings 2:13-15 Elisha split the waters of the Jordan by striking it with Elijah's mantle; the waters were split in like manner by Moses as he lifted his rod and held out his arm over the sea (Exodus 14:15-29). Elisha healed the water of Jericho (2 Kings 2:19-22), which parallels Moses' healing of the water of Marah (Exodus 15:22-25).[114] Naaman was healed from leprosy on the word of Elisha (2 Kings 5); Miriam recovered from the same disease at the intercession of Moses (Numbers 12:10-16). Such correspondences are hardly fortuitous. They suggest that the prophetic circles in which the Elijah and Elisha narratives originated and were transmitted sought to present their leaders after the model of Moses, because they claimed him as their inspiration and mainstay.[115]

The fact that the Ephraimite prophets belonged to the partisans of the Mosaic exodus tradition is demonstrated with great clarity by the Book of Hosea. Its use of the motif of the exodus need not be described anew, as it has been dealt with earlier in this chapter. Here it is important to note that Hosea is truly a heir to the prophetic movement from the days of Elijah and Elisha. Hosea's concern for a proper cult, his insistence on the need of instruction (*daᶜat* and *tôrâ*, Hosea 4:6), and his knowledge of Israel's narrative traditions suggests that he was at home in prophetic circles affiliated with the temples; their members were prophets by profession.[116] Hosea's

---

has been linked with the Sinai by means of the Midian tradition (Gunneweg 1964:3). Since the connection between Moses and the exodus is early, the connection of Moses with the Sinai (or the Mount of God) seems secondary.

115 Cf. Carroll 1969:413 'The legends arose in the northern kingdom already shaped by a myth of prophetic succession of a Mosaic order.'

116 Note the reference to the experience of opposition to the prophet in the temple where he served, Hosea 9:8. On the so-called cultic prophets see Johnson, A. R. 1962[2]. For Hosea as a temple prophet see Gunneweg 1959:101-102. The view according to which temple prophets were a Judahite phenomenon unknown in Israel is not supported by the texts, *pace* Wolff 1965[2]:95.

criticism of the priests (Hosea 4:4-10) contrasts with his mildness toward the prophets (Hosea 6:5).[117] In what may be a reflection upon his personal experience, Hosea observes that the prophet is faced with hatred in the temple where he serves (Hosea 9:8).[118] Being a prophet himself, Hosea was as much part of the religious establishment as Elijah and Elisha had been.

The prophetic orders in the days of Elijah and Elisha evince similarities with the guilds of the Levites. Like the Levites, these prophets had to sever their ties with their family, as the narrative of Elisha's calling illustrates. Though modelled on the usual family structures, the prophetic orders departed from the family model in the sense that the basis of their corporate identity was not descent and inheritance, but commitment to a way and view of life. Unlike families, the orders were voluntary associations. Members entered as they felt prompted to do so, like Elisha, or as oblates, like Samuel. They were, in the etymological sense of the term, 'Levites' and 'Nazirites', i.e., devotees to Yahweh, set apart from their fellow-men because of their commitment to a religious cause.

The veneration of Moses and the allegiance to the exodus tradition is common to the Levites and the Ephraimite prophets. The affinity between the two groups is evident, too, from the Book of Hosea, which has been described as the product of a coalition of Levites and prophets.[119] Hosea's sympathy with the Levites shines through in his allusion to the crime committed 'in the days of Gibeah' (Hosea 9:9; cf. 10:9). The reference is to the story of the Levite whose wife was raped and brutally killed by the Benjaminites of Gibeah (Judges 19).[120] Characteristically Levite, too, is Hosea's criticism of Bethel with its cult of the golden calf (Hosea 8:5; 10:5; 13:2), since the story of the golden calf which Aaron made for the Israelites is a disguised disqualification of the Bethel cult.[121]

Caution forbids us to draw the conclusion that the affinity between the Levites and the Ephraimite prophets is such that two groups cannot be distinguished. The preceding survey of the evidence shows that the biblical tradition does make a distinction. Yet we must beware not to turn the distinction into an opposition. The later biblical use of the term Levite as a synonym

---

117 Wolff 1956:83-84. The negative appraisal of the prophet in Hosea 4:5 is a Judahite gloss, see Wolff 1956:89; 1965[2]:88.

118 Since *bêt ʾelōhîm* is the fixed expression for temple, the personal suffix concerns the expression as a whole, not just the second term. In consequence, *bêt ʾelōhāyw* must be rendered 'his temple' (i.e., the temple with which he is affiliated), rather than 'the house of his god'.

119 Wolff 1956.

120 Cf. Wolff 1956:92; 1965[2]:204.238-239; Jeremias, Jörg 1983:133-134.

121 Noth 1948:200; Winnett 1949:49; Gunneweg 1965:157; Aberbach & Smolar 1967; Schmid, H. 1968:84.

for priest should not lead us to believe that the functions of the Levites were strictly sacerdotal. The Levites combined cultic expertise with religious instruction ('They teach Jacob your ordinances, and Israel your law'). On occasion, their instruction assumed prophetic traits. Such men as Samuel, Ahijah from Shiloh (1 Kings 11:29), and Jeremiah are examples of prophets from a Levite milieu. All three are either associated with or issued from the house of Eli, which is known to be Levite in origin.[122] Such men illustrate the difficulty inherent in any sharp distinction between priest and prophet in early Israelite religion. Both the Levites and the Ephraimite prophets were 'men of God', rather than priests or prophets in the narrow sense these terms gradually acquired.

Conclusion

The principal instrument by which the state religion became a truly national religion was the exodus in its capacity as a charter myth. A study of the traditions concerning the Levites and the early prophetic movement points to their crucial role in the propagation of that myth. The origins of the exodus motif are still an unsolved riddle. Considering the role of the Levites there is room to speculate that the earliest bearers of the tradition were to be found in their midst.[123] Whatever their historical connections with the exodus, at any rate, the Levites developed a deep attachment to the tradition as a focus of their identity. To them, as to the prophets, the exodus myth stood for more than a politically useful means of manipulation; had it been mere manipulation, their propaganda would probably have failed. They wholeheartedly endorsed and defended the exodus tradition, and may even have done so before it became a doctrine of the state cult. Their commitment (or the commitment of some of them) was primarily religious. Its disruptive potential would become manifest in the prophetic response to the Omride politics.

---

122 On the Shilonite background of Samuel see Cohen, M. A. 1965:66. The prophet Ahijah from Shiloh was supported by descendants of the house of Eli (Wilson 1980:184-187) and may have been an Elid himself (Caquot 1961; Cohen, M. A. 1965:93; 1971). Jeremiah is from the priests of Anathoth, who may be traced back to the Elides. The Levitic background of the Elides can be inferred from the fact that Moses is alluded to as the ancestor of the Shilonite priesthood (1 Samuel 2:27). On the possible Levitical background of Jeremiah see also Weippert, H. 1973:13-19 (in a refutation of the views of G. Rietzschel).

123 Some authors have argued that the spiritual ministry of the Levites developed out of their role as militia. Originally they would have been the armed guardians of the Mosaic tabernacle (Schmitt, G. 1982:258). The terminology used in connection with the Levites in the Priestly sections of the Pentateuch has indeed a military ring to it (note such terms as *mišmeret*, 'watch', *ṣābāʾ*, 'army', and *śar*, 'commander'). Yet the Levites bear a closer resemblance to the Salvation Army than to the foreign legion.

CHAPTER THIRTEEN

INTEGRATION AND OPPOSITION: RELIGION UNDER THE OMRIDES

The adroit use of religion can be a powerful means of social engineering. Though Jeroboam I and his successors would not have formulated it this way, the Israelite kings were well aware of the political potential of state religion. It is for this reason that they created national sanctuaries and appointed a clergy supported from the royal treasury. The use of the exodus tradition as a national charter myth was part of the same design: it was intended to weld together a young nation by offering it a focus of national identity. The exodus myth, disseminated by the Levites and the prophets was expected to strengthen the national devotion to Yahweh, which the authorities hoped would supplant the traditional loyalties to other gods.

The politics of religious unification entailed an effort to bring the many local cults in line with the state religion. The interference of the government in the affairs of local family religion took on various forms. Some practices were simply proscribed because they were perceived as a danger to the security of the state; this, however, was a rather brutal and mostly unsuccessful way of coping with the phenomenon of local religion. The appointment of a state-supported clergy to do service at the local shrines (1 Kings 13:33) was more effective. At a theological level, the authorities sought to domesticate the practices of family religion by means of the integration of the family gods in the religion of state. To this end, Yahweh was identified with El, and made to share official recognition with Baal, El and Baal being the two principal family gods besides Yahweh.

The initiative to treat Yahweh and Baal as peers in the state cult was taken under the reign of the Omrides (*ca.* 880-840). Their politics of religious parity failed. The Yahwistic clergy did not accept its loss of prestige and power. Turning against the authorities whose civil servants they had once been, a part of the prophetic orders developed into a Yahweh-alone movement. The emergence of this new party was eventually to have a decisive influence on the outcome of the competition between state religion and family religion.

The Interaction between State Religion and Family Religion

The cohabitation of state religion and family religion in one nation was a source of conflicts. Many of these were intimately connected with the

opposition against the monarchy. The transformation of a segmentary society into a state had not abolished the sentiments of local independence, of which the cult of the clan god was the ritual expression. With its emphasis on genealogical and local identity, materializing in the ancestral inheritance (*naḥălâ*), family religion fostered anti-royalist feelings among the Israelite population.

The opposition against the monarchy was deep-seated. Samuel's warning about the ways of a king can be seen as its literary reflection.

> These will be the ways of the king who will reign over you: he will take your sons and appoint them to his chariots and to be his horsemen, and to run before his chariots; and he will appoint for himself commanders of thousands and commanders of fifties, and some to plow his ground and to reap his harvest, and to make his implements of war and the equipment of his chariots. He will take your daughters to be perfumers and cooks and bakers. He will take the best of your fields and vineyards and olive orchards and give them to his servants. He will take the tenth of your grain and of your vineyards and give it to his officers and to his servants. He will take your menservants and maidservants, and the best of your cattle and your asses, and put them to his work. He will take the tenth of your flocks, and you shall be his slaves.
>
> 1 Samuel 8:11-17

The passage belongs to the so-called anti-monarchic texts of the Bible.[1] Its emphasis on the loss of self-determination which the subjects of the king are bound to suffer gives voice to the resentment of the local population over the royal politics of dispossession and reallotment of land.

The conflict between reasons of state (which more often than not is a euphemism for the whims of the king) and local interests runs through the entire history of Israel in the monarchical period. The narrative about Naboth's vineyard is illustrative of the contrast between the logic of royal politics and the values of family religion (1 Kings 21:1-16).[2] The conflict is situated in the time of Ahab (*ca.* 860 BC). Naboth possessed a vineyard which bordered on the palace of Ahab. The king wished to buy it and then turn it into a private vegetable garden. Naboth's reply to the king's proposal reflects a basic tenet of family religion:

> I'll be damned by Yahweh if I give you the inheritance of my fathers![3]

The conditional curse is not just a manner a speaking; the family inheritance is sacred; it lies under the protection of the family god, here identified

---

[1] For a thorough analysis of the text see Crüsemann 1978:66-73.

[2] See Welten 1973; Seebass 1974; Bohlen 1978; Würthwein 1978; Oeming 1986; Rofé 1988.

[3] 1 Kings 21:3 *ḥālîlâ llî mēYHWH mittittî ʾet-naḥălat ʾăbōtay lāk*.

(whether correctly or not is a different matter) with Yahweh. Family religion made the possession of the land with which the family identified a sacred right; as such it proved to be a force that ran counter to the interests of the palace.

Ironically, Queen Jezebel eventually succeeded in accomplishing Ahab's designs by using her influence on the local religion of Jezreel. On her instruction, the heads of the principal families (referred to as **hazzĕqēnîm wĕhaḥōrîm*) organized a ritual fast during which Naboth was falsely accused (1 Kings 21:8-14). The narrative should be read against the backdrop of the reports on the great drought during the reign of Ahab (1 Kings 17-18);[4] Naboth was framed as the irreverent citizen whose blasphemous conduct had caused the famine.[5] The action of Jezebel, who wrote letters in Ahab's name to the local leadership of Jezreel, shows that the palace might successfully intervene in the affairs of local religion; the nobility in charge of the sanctuary at Jezreel heeded the orders of the palace. The accusation according to which Naboth would have cursed God and the king (1 Kings 21:10, 13) attests to the fact, moreover, that local religion could also be used in support of the monarchy. Seditious comments about the king were apparently thought of as behaviour deserving excommunication. The story of Naboth's vineyard demonstrates the success of the Omrides in controlling the local cults.

Efforts to curb the potentially dangerous influence of family religion have been made ever since the Israelite monarchy came into being. Saul is reported to have prohibited the practice of necromancy in his kingdom (1 Samuel 28:3.9.12).[6] There is no need to interpret this piece of information as a Deuteronomistic anachronism.[7] Necromancy being intimately related with the cult of the dead (it is conceived of as a consultation of the *ʾōbôt*, the departed fathers, in 1 Samuel 28:3), it could be seen as a form of divination legitimized by the ideology of family religion. In that capacity, necromancy was a potential threat to the stability of the royal rule. The ancestors might inspire resistance to the leadership of the national administration, or even foment revolution. The suppression of necromancy was not an act of

---

[4] Cf. Würthwein 1984:247 who argues that chapter 21 originally followed immediately after chapters 17-19. Note that the LXX has reversed (or corrected) the order of chapters 20 and 21.

[5] As suggested to me by Bob Becking (Utrecht).

[6] The text of 1 Samuel 28:3 literally says that Saul had 'removed' (*hēsîr*) the ancestor spirits (*ʾōbôt*) and the soothsaying spirits (*yiddĕʿōnîm*) out of the land, which is a strange way of putting it, since it seems difficult to remove ghosts. It is generally assumed that those who put the questions to (שאל ב) the ghosts are meant.

[7] On the reliability of the information see Stoebe 1973:489.

disinterested piety on the part of Saul,[8] but an attempt to secure the state monopoly on divination.

Saul's suspicion against necromancy may be compared with the fear of unauthorized prophecies on the part of Neo-Assyrian monarchs. Esarhaddon's succession treaty contains a stipulation under whose terms the vassals of Assyria were to report 'any evil, improper, or ugly word' spoken against the crown prince designate. Such incitements to treason might very well come 'from the mouth of a prophet, an ecstatic, or an inquirer of oracles'.[9] The potential danger of prophets was not imaginary. The conspiracy of an individual called Sāsî in 670 BC had been supported by a prophet who had proclaimed, in the name of the god Nusku, that Sāsî would destroy the name and offspring of Sennacherib and become king himself.[10] Necromancers and prophets were a source of anxiety to the authorities because they might become the spokesmen of an otherwise silent political opposition. In states with virtually no democratic tradition, popular discontent is apt to use religious means as a vehicle of expression; under the trappings of the *vox dei*, it is really the *vox populi* that speaks.[11]

One of the ways to exercise control over the religious practices in the local sanctuaries was the appointment of priests and supervisors. Saul had appointed the Edomite Doeg as supervisor at Nob; the man acted as a royal informant, keeping the king apprised of any irregular event in the sanctuary (1 Samuel 21:8; 22:9-10).[12] Jeroboam I was later remembered as the king who had appointed priests from among all the people to serve at the various local sanctuaries (*bāmôt*, 1 Kings 12:31; 13:33). The control of the palace was strongest, of course, over the state sanctuaries. The attitude of Amaziah in the encounter with Amos is telling. By his own admission, Amos did not belong to an official prophetic order (Amos 7:14). He belonged to the stratum of unorganized religion, and his message was jeopardizing the undisturbed functioning of the state temple. That is why Amaziah promptly informed the king about the situation (Amos 7:10) and ordered the prophet to leave Bethel (Amos 7:12-13).

These incidental reports on clashes between civil and private religion offer

[9] SAA 2:33 [116] *lū ina pî* [lú]*rāgime* [117] [lú]*maḫḫê mār* (d u m u) *šā'ili amat ili* (d i n g i r). Note that the *šā'ili amat ili* could refer to a necromancer.

[10] *ABL* 1217 r. 4'-5', cf. *LAS* 2:238-240.

[11] Cf. Bottéro 1973:137.

[12] The idiomatic expression *ne'ṣār lipnê YHWH* (1 Samuel 21:8) is still obscure (see *HAL*[3] 824). It is here understood as 'one dispensed from normal duties to serve in the presence of Yahweh'.

a glimpse into the troubled relationship which obtained between the two. Their interaction was usually one of confrontation. It is evident from the few encounters which have been recorded that there was no question of a peaceful coexistence of the two compartments of religion. State religion and family religion were actually involved in a form of competition, owing to which local religion tended to develop into unauthorized religion. Yet the interference of the state in the realm of family religion might also lead to a kind of incorporation of family religion into the religion of the state. Through the priests they had appointed, the authorities were able to have some influence on the local practices—as the case of Naboth shows. To draw family religion further into the orbit of the official cult, the state theologians proceeded with an integration of the main family gods in the official ideology. The identification of Yahweh and El was the first stage in this process.

Yahweh and El

The task the Israelite kings saw themselves faced with in their religious politics was the necessity to somehow subordinate family religion to the religion of the state. Such a subordination had been feasible in Babylonia and Syria by virtue of a sophisticated theological system in which the pantheon was presented as a complex hierarchy. The society of the gods was pictured as an administration in which internal relations were determined by rank and position, the hierarchy of the gods reflecting the hierarchy of the social realities (cities, neighbourhoods, villages) with which these gods were associated.[13] The fact that Babylonian family gods (that is, local gods connected with the neighbourhood or the village) could be asked to intercede with the higher gods (that is, national gods connected with the city, the capital, or the land), reflects the subordinate position of family religion in respect to state religion; intercession is normally performed by an inferior with a superior.

The integration of family religion and state religion in Israel was not achieved by analogy with the Mesopotamian model. The main instrument which the authorities initially used to reach their aim was that of assimilation and identification. As demonstrated by the theophoric place names and personal names, the devotion to El and Baal was quite common in early Israelite family religion.[14] El and Baal were venerated in their local manifestations, and as such the El of one place was to be distinguished from the El of

---

[13] Cf. Handy 1994 for an interpretation of the Syro-Palestinian pantheon as a hierarchical bureaucracy.

[14] See 'Unedited Evidence' in Chapter Ten.

another. Yet the mythological heritage from Ugarit shows that El and Baal, notwithstanding a variety of local manifestations, were seen each as one distinct divine person. In this respect, the situation in ancient Palestine did not fundamentally differ from the one obtaining in modern Europe where a multitude of local manifestations of the Madonna does not impede her conceptualization as one person. The Israelite authorities (or rather the theologians at their service) did not construe a pantheon in which Yahweh was high god, and El and Baal lower ranking deities. The method they pursued was that of identification: by identifying El with Yahweh they endeavoured to nationalize the local religion. If El could be seen as a local form of Yahweh, then the local shrines could be regarded as branches of the state temples.

The first major effort to bring family religion within the orbit of the state religion was made under Jeroboam I (ca. 925-905). According to the biblical historians, Jeroboam made two golden calves, identified them as images of Yahweh ('Your god, o Israel, who has brought you up from the land of Egypt'), and put the one in Bethel and the other in Dan (1 Kings 12:28-29).[15] To understand the significance of this act, it must be taken into account that 'bull' (and the term 'calf', *ʿēgel*, refers to a young bull) is the traditional epithet of the god El in Ugaritic texts (*tr ỉl*).[16] To judge by its name, moreover, Bethel ('temple of El') was originally a centre of El worship. The intimate link between the god and the city is confirmed by the role of El in the Jacob tradition.[17] Such data throw doubt on the biblical statement that Jeroboam actually made the bull image of Bethel.[18] But whether or not Jeroboam be credited with the introduction of the tauromorph image is of secondary importance by comparison with the theological implications of his action. He interpreted the traditional El iconography in Yahwistic terms, and

---

[15] Cf. the section on 'The Religious Politics of Jeroboam I' in Chapter Eleven.

[16] See Pope 1955:35-41; Smith, M. S. 1994:128 (with further references). Nowhere in the Ugaritic texts is the term *tr* used for Baal, *pace*, e.g., Soggin 1966:201 (*KTU* 1.12 ii 54 likens Baal to a bull, *km tr*). The title *šôr ʾēl* ('Bull El') has also been discerned in Hosea 8:6, where the impossible **kî miyyiśrāʾēl* ('for from Israel') has to be read as *kî mi šôr ʾēl* ('for who is Bull El?'), which fits well in the context, see Tur-Sinai 1950. It may be possible to compare the designation of Jacob as **bĕkôr šôr*, 'the first-born of the Bull' (Deuteronomy 33:17), which corresponds to the designation of the god El as Jacob's 'father' in Genesis 49:25.

[17] See the section 'The Religion of the Patriarchs according to the Elohist' in Chapter Ten.

[18] This doubt is reinforced by the existence of a cult myth in which Aaron was hailed as the man behind the calf (Exodus 32). 'It is difficult to resist the conviction that in its original form the story of the golden calf, so far from being a blot on the memory of Aaron, rather redounded to his credit,' according to Kennett 1905:165; so too Cross 1973:74; Klein, H. 1977:252. Note the fact that Judges 17-18 provides a rival etiology for the divine image in the sanctuary of Dan.

thereby identified El with Yahweh.[19] The traditional cult at Bethel was not discontinued but reinterpreted.

The use of the bull image and the traditional position of El in the cult of Bethel are not the only reasons to suspect that the authorities proceeded with the official equation of El and Yahweh. Another indication to the same effect is the veneration of the Asherah of Yahweh in the Northern Kingdom and its trading posts. A by now famous fragment of a storage-jar from Kuntillet ʿAjrūd, an Israelite caravanserai 50 kilometres south of Kadesh-barnea, contains a blessing by 'Yahweh of Samaria and his Asherah'.[20] Alongside 'Yahweh of Samaria', then, there was the 'Asherah of Samaria'. The goddess is also mentioned under that name in Amos 8:14, where the reading אשמת שמרון, 'the guilt of Samaria', is a polemical distortion of אשרת שמרון, the 'Asherah of Samaria'. In the Ugaritic mythology, Asherah is the consort of El.[21] There is no reason to assume that the situation was originally any different in Palestinian religion.[22] When the goddess is coupled with Yahweh, then, it must be assumed that Yahweh has taken over the position of El. It is here suggested that the take-over was realized by means of a merger in which El was interpreted as an allomorph of Yahweh.[23]

Some of the oldest evidence of the identification of Yahweh and El is found in the so-called theophany texts from the Northern Kingdom. Examples of literary theophanies are found in Deuteronomy 33:2-3, Judges 5:4-5, and Psalms 18:8-16; 77:17-20; 97.[24] Not all of these texts have a Northern provenance, but the ones that describe Yahweh as coming from the South do.[25] Prime examples of this Ephraimite tradition are found in the theophany hymn that frames the Blessing of Moses (Deuteronomy 33:2-5, 26-29) and in the Song of Deborah (Judges 5). Though the Northern theophany texts are traditionally adduced to substantiate the thesis that Yahweh is at core a storm god like Hadad or Baal,[26] they in fact incorporate El

---

19 On the early identification of Yahweh and El see also Eissfeldt 1956; Smith, M. S. 1990:7-12.

20 Davies, G. I. 1991:80-81; Renz 1995:61.

21 Wiggins 1993:71-72.

22 See Olyan 1988:38-61, who correctly observes that the association with Baal in the Hebrew Bible is due to a Deuteronomistic polemic.

23 It need hardly be said that the same identification underlies the Elohist pieces in the Book of Genesis.

24 The principal study of the genre is still Jeremias, Jörg 1965 (1977²).

25 Nielsen 1978:81-82; Axelsson 1987; 1988.

26 See Kingsbury 1967:206-209, who notes the common occurrences of the storm figure in the theophany passages of Psalms 18:9-14; 68:7-8; 77:16-19 [*w*. 17-20 in the Masoretic text]; Judges 5:4-5; Deuteronomy 33:2-3; Habakkuk 3:3-4 and observes that 'all these passages save Psalm 18 and Zechariah 9:14 have an interest or origin in the north.'

mythology in a poetical reflection on the Yahwistic exodus tradition. El is presented in these texts, not as an aged and slightly senile deity, but as a warrior god.[27] By implication, he is the one who led the Israelites out of Egypt.[28]

The fact that some of the Israelite theophany texts have incorporated El mythology is evident from a study of the opening lines of the so-called Blessing of Moses in Deuteronomy 33. Since the commentaries of Bertholet[29] and Steuernagel[30], it is widely recognized that the Blessing of Moses is in fact a collection of tribal sayings (*vv.* 6-25) set within the framework of an ancient hymn (*vv.* 2-5 & 26-29).[31] In the present text the hymn has been cut in two: after the mention of 'the tribes of Israel' (*v.* 5c), there follows a series of twelve 'blessings'—or rather popular sayings about the tribes.[32] This interlude—in fact the greatest part of the chapter—is followed by the last section of the hymn.[33] Several scholars have found stray phrases of the hymn among the tribal sayings,[34] but none of their proposals has commanded general assent.

The hymn opens with the description of a theophany that is presented as a historical meeting of Yahweh with his people, on which occasion Yahweh became king in Israel ('Jeshurun', *v.* 5). This is one of the earliest—if not the earliest—instances where the title 'king' (*melek*) is applied to Yahweh. A close parallel is found in the vision of Micaiah the son of Imlah. This Ephraimite prophet saw Yahweh 'sitting on his throne, and all the host of heaven standing beside him, on his right hand and on his left' (1 Kings 22:19). Though the title 'king' is not used here, the image is evidently that of Yahweh as heavenly king surrounded by his court. It is part of the Ephraimite heritage. The theocratic ideal has a strong tradition in the Northern Kingdom. It went hand in hand with a critical stance toward the institution of the

---

[27] On El as a warrior see especially Miller, P. D. 1967. The notion according to which El was a *deus otiosus* with little influence is based on the Baal cycle from Ugarit. Yet the Ugaritic Baal mythology can hardly be called an impartial witness to the traditional theology about El, since the texts are aimed to promote Baal at the cost of El. The warrior traits of El can also be reconstructed on the basis of the identification of Amurru as the Amorite El (^{d}m a r - t u = ^{d}a n m a r - t u, Amurrum = El-Amurrum).

[28] Cf. Wyatt 1992. Wyatt's suggestion to emend אלה to אל in Exodus 32:4 and 8, which yields the expression 'El is your god, O Israel, who brought you up out of the land of Egypt' (Wyatt 1992:79) is intriguing but not compelling. The identification of El with Yahweh would be supported by, but does not depend on, the emendation.

[29] Bertholet 1899:102-112.

[30] Steuernagel 1923^{2}:173.

[31] See also Budde 1922:1-4.

[33] Gaster 1947; Seeligman 1964; Axelsson 1987:48-50; Jeremias, Jörg 1987:82-92.

[34] E.g. Weisman 1978.

monarchy which was felt by some to be a rejection of Yahweh's rule (1 Samuel 8:7).[35]

The ancient theophany that frames the tribal sayings has suffered serious damage in the process of textual transmission. The difficulties of translation are in part the result of the text's poetic and archaic language; in part they follow from the theological censorship to which the text has been submitted. The original opening lines (*v.* 2) can only tentatively be reconstructed:

> Yahweh came from Sinai,
> and from Seir he shone;[36]
> He lighted up from Mount Paran,
> and came from Meribath-Kadesh.[37]
> At his right was Asherah ....[38]

The first lines of the poem mention various places with which Yahweh was associated in the earliest traditions; they are in complete consonance with the classical Ephraimite mythography. Through a textual correction we discover that Yahweh came accompanied by Asherah.[39] Their association is based on Yahweh's identification with El—an identification which becomes explicit in *v.* 26: 'There is none like El, o Jeshurun'.[40] The presence of Asherah in this

---

35 Cf. Crüsemann 1978.

36 The difficult למו has not been translated. Dahood 1966:173 argues that *lāmô* means 'to us' or 'for us', following the translation of the versions (LXX *hemin, humin*). For that translation, however, one would have to emend the text into *lānû*—which many commentators do (so, e.g., Dillmann 1886[2]:417). Another option is to correct into לעמו, 'for his people', see von Gall 1898:11; Budde 1922:6; Seeligman 1964:76. The solution suggested by Nyberg 1938:324-334 ('from those who have Seir as their god') has found no followers. Perhaps the name El hides behind למו. מו (*-mô*) could stand for enclitic *-ma* (cf. the archaic or pseudo-archaic preposition במו, *bĕmô*, which has developed out of original **bima*, cf. Ges[18] 156 s.v.). Since למו stands twice at the end of a strophe, it can hardly be a preposition. It might have to be read as אלמו, 'El' (< **ilima*). This solution yields a fine chiastic parallelism of the first two cola, and identifies the Asherah of *v.* 2e as the 'Asherah of El'—which is in perfect agreement with the mythological lore from the Ugaritic texts.

37 The reading מרבבת קדש is apparently corrupt for ממרבת קדש (see, e.g., Wellhausen 1905[6]:342-343). Though some wish to maintain the Masoretic text (Nyberg 1938:335; Jeremias, Jörg 1965:63-64; Weinfeld 1984:124), the LXX reading *kadēs* and the comparison with Exodus 32:51 ('at the waters of Meribath-kadesh, in the wilderness of Zin') suggest the emendation. The name Meribath-kadesh underlies Numbers 20:13 'These are the waters of Meribah, because the Israelites contended (ריב) with Yahweh, and he proved himself holy (קדש) among them.' The adduced parallels in Numbers 10:36 and Psalm 68:18[17] are insufficient evidence to warrant a translation 'the ten thousands of Kadesh' (*pace* de Moor 1990:162 and n. 280). For a discussion and references to further literature see Axelsson 1987:49.

38 See note 36.

39 The reading אשרת for אשדת goes back to Nyberg 1938:335. Its plausibility has increased considerably after the discovery of the collocation 'Yahweh and his Asherah' in the inscriptions of Kuntillet ʿAjrūd (cf. Weinfeld 1984:124).

40 Read *kĕʾēl* for *kāʾēl* (cf. Budde 1922:15). The article had been added by the Masoretes in an attempt to turn the name of El into an appellative.

theophany text from the Northern Kingdom (cf. the names 'Jacob' and 'Israel' in *vv.* 28-29) is early evidence of the official confiscation of the El mythology.[41]

Another ancient hymnic fragment with allusions to the El mythology found its way into the Psalm of Habakkuk. The designation of the hymn as the 'Psalm of Habakkuk' is conventional, and based on the fact that the text is found as the last chapter of the Book of Habakkuk. Yet it is widely agreed that Habakkuk 3 is only superficially connected with the other materials contained in the book. In view of its content, the psalm has an Ephraimite provenance. It consists of two parts, of which the first (*vv.* 3-7) depicts Yahweh under the traits of a solar deity.[42]

Eloah came from Teman,
Holy One from Mount Paran;
His splendour covered the heavens,
his radiance[43] filled the earth.
He shone like a destroying fire[44],
and rays flashed from his side.[45]
Before Him marched Pestilence,
and Plague went forth in his footsteps.
He stopped and measured the earth,
he looked and shook the nations:
Immemorial mountains were split,

---

41 It should be noted that the text in its present form also ascribes several traits and epithets to Yahweh that are reminiscent of Baal (e.g. 'Rider of Heavens', '(Rider of) the clouds', *v.* 26).

42 While the first part of the Psalm of Habakkuk is mainly at home in the Ephraimite theophany tradition, the second part plays a different register. From *v.* 8 onward, there is a perceptible change of tone. Yahweh assumes the traits of a warrior riding a horse-drawn chariot set out to do battle against the waters (*v.* 8). The bow is his weapon; with seven heavy arrows ('shafts') he attacks the enemy. It is evident from *v.* 11 that the battle here depicted is a mythopoeic vision of the storm: the glare (*ʾôr*) of Yahweh's arrows characterizes them as flashes of lightning; his flashing spear is a thunderbolt (*bārāq*). Though other elements are involved in the conflict (Sun and Moon, Mountains and Deep), the real adversary is Sea with its mighty waters (*v.* 15). It is important to note the distinctive character of the two parts of the hymn; though artfully interwoven, they reflect different mythological themes. The second part abounds with well-known themes from the mythology of Baal, especially his battle against Sea and its monsters. In the first part of the hymn, however, it is a different type of deity which holds the stage.

43 The translation is based on the assumption that תהלתו should be related to הלל, 'to shine, to be brilliant' (cf. *HAL*[3] 1560 *s.v.* II תהלה). Although the meaning 'praise' for *tĕhillâ* is far more customary, the solar context favours the more specific rendering 'radiance'.

44 So with Hiebert 1986:4, 17. Alternatively, one could translate 'brightness like daylight is under him', cf. Exodus 24:10 'and they saw the God of Israel; and there was under his feet as it were a pavement of sapphire stone, like the very heaven for clearness' (RSV).

45 The words ושם חביון עזה are presumably a gloss (so BHS), the emendation into *yśmḥ bywm ᶜzh*, 'He rejoiced in the day of his strength' (Hiebert 1986:18-19), being more ingenious than convincing.

everlasting hills collapsed.[46]
Cushan's tents were seized with panic,
the curtains of Midian trembled.[47]

The divine hero whose appearance this hymn celebrates is referred to as Eloah and 'Holy One'. Though both terms are evidently understood here as titles of Yahweh, they originally refer back to the Semitic deity El. A comparison between Psalm 18:32 ('Who is Eloah but Yahweh?') and its parallel in 2 Samuel 22:32 ('Who is El but Yahweh?') shows how closely the names El and Eloah are associated in the biblical tradition. Also 'Holy One' (*qādôš*, note the absence of the article) is a title that applies first of all to El: he is the uppermost holy one, and his sons ('the sons of El', i.e., the gods) constitute the council of the 'holy ones'.[48]

The god is associated with Teman and Paran. 'Teman' seems to have designated the northern part of Edom and also, in biblical usage, Edom as a whole.[49] 'Mount Paran' cannot be localized with certainty. If it was somewhere in the 'wilderness of Paran', it must be located west of Edom and south of Judah; the name survives as Jebel Fārān, a mountain area 80 kilometres west of Petra.[50] The name is an indirect confirmation of the fact that the god whose manifestation is described here should be identified with El. In Genesis 14:6 there is a reference to אילפארן, which is apparently a theological correction for אלפארן, 'El of Paran'.[51] This 'El of Paran' is reminiscent of 'Yahweh of Teman' mentioned in the Hebrew texts from Kuntillet ʿAjrūd as a manifestation of Yahweh.[52]

The solar language used in Habakkuk 3:3-7 and Deuteronomy 33:2 has its closest extra-biblical parallel in a heavily damaged theophany text from Kuntillet ʿAjrūd. It is quoted here after a provisional edition.[53] The first three remaining lines read:

---

[46] The text adds 'His are eternal tracks' (הליכות עולם לו), presumably a textual corruption (BHS).

[47] For a discussion of the textual problems see Jeremias 1965:38-40.

[48] It is debated whether the divine title *qdš* in Ugaritic refers to Asherah (so Cross 1973:33-35) or El (so Xella 1982:13-15). The collocation *ỉlm // bn qdš*, 'the gods' // 'the sons of Qdš' (*KTU* 1.2 i 20-21) allows both interpretations.

[...]ובזרח.אל.בר	And when El shone forth [...]
[... .]וימסן הרם	the mountains melted [...]
[...]וידכן.גבנם	and the peaks[54] were crushed [...]

Though severely damaged, this text is of great interest as it shows that in the Ephraimite tradition the god El (presumably identified with Yahweh, as in Deuteronomy 33) could be cast in the role of a warrior god with solar traits.[55] It represents an interesting addition to the material collected by Patrick D. Miller in his article on 'El the Warrior'.[56] Whereas Miller's data emphasized El's combatant role in the cosmogony (or theogony), the Kuntillet ʿAjrūd text links El the warrior with an undetermined 'day of combat'.[57] This 'day of combat' may have been an Ephraimite concept associated with the 'day of Yahweh' (cf. Hosea 10:14; Amos 1:14).

The available evidence suffices to substantiate the claim that at an early stage of Israelite state religion, presumably toward the end of the tenth century BC, El was reinterpreted as an allomorph of Yahweh and thereby integrated into the theology of the state religion. The significance of the identification should not be underrated. It has been argued that, by the beginning of the first millennium BC, El played no longer a role of any consequence. To prove their point authors note the absence of any reference to El in the Amarna letters. Literary occurrences of El in first millennium inscriptions confirm his subordination to the storm god (Hadad or Baal).[58] It must indeed be conceded that in most local pantheons of the Near East El had lost his preeminence in the Iron Age. Yet in southern Palestine and Transjordania, El continued to be regarded as a god of importance.[59] Especially in the realm of family religion, which tends to be conservative, El remained an object of devotion.[60] The assertion that *ʾēl* in the Israelite anthroponyms and toponyms is simply an appellative cannot be substantiated.[61] The early Israelites were aware of El as an identifiable deity, even though the personality of the god had become rather bleak. As long as El and Yahweh were recognized as distinct theonyms, the application of the name El to Yahweh amounted to an identification.[62]

61 *Pace* Rendtorff 1994.

62 There is no good reason to abandon the term 'identification' in favour of

By means of the identification of Yahweh and El, the state theologians attempted to bridge the gap between the cult of Yahweh and the family devotion to El. The evidence of the premonarchic Israelite onomasticon shows that the religion of the early Israelites was focused in large measure on El.[63] The Jacob tradition that is preserved in the Elohistic passages of Genesis confirms the role of El as family god among the early inhabitants of Ephraim. The contrast which citizens felt between their private devotion to El and their public recognition of Yahweh was overcome by the identification of the two. Fragments of the El mythology (notably his association with Asherah, the tauromorph iconography, and El's solar aspects) were transferred to Yahweh;[64] Yahweh mythology, on the other hand, was associated with El.[65] The local avatars of El could henceforth be regarded as refractions of the one national god Yahweh-El. As is so often the case in the history of religions, the proclamation of a new dogma (in the present case the equation of El with Yahweh) served political interests.

The Religious Politics of the Omrides

Though the official identification of El with Yahweh had done much to bring about an integration of family religion and state religion, it eventually divided the population in two factions. Whereas many Israelites venerated El as the god of their family or clan, many others were devoted to Baal as their god. In the course of time, the two groups tended to become rivals. The worshippers of Yahweh-El, whose religion had been granted official status, claimed to be true Israelites; was their god Yahweh-El not the official god of Israel? They began to refer to the worshippers of Baal as Canaanites. Ethnicity had nothing to do with these terms. 'Israelite' was merely a honorific self-designation, whereas 'Canaanite' was a derogatory adjective applied to others. Ethnically speaking, nearly all Israelites had their roots in Canaan.

A reflection of the disputes to which the antagonism between devotees of Yahweh and worshippers Baal could lead may be found in the narrative

---

'assimilation', the difference being the deliberate equation of two distinct deities as opposed to a gradual process of convergence facilitated by the dwindling importance of El as a separate deity. It could be argued that the undeniable assimilation occurred in the wake of the deliberate identification.

63 See de Moor 1990:13-34.

64 It should be kept in mind that the El mythology that the early Israelites knew did not correspond in every respect with the El mythology of the Ugaritic texts. The solar imagery and the warrior traits of the 'Israelite' El have no obvious parallel in the Ugaritic texts. It is not certain, on the other hand, that Yahweh owed his role as creator and highest god to a transfer of El mythology, cf. Rendtorff 1966.

65 Notably the exodus tradition, see Wyatt 1992.

about the destruction of the altar for Baal by Jerubbaal the son of Joash (Judges 6:25-32).[66] The story is about the young man Jerubbaal who, under cover of night, broke down the altar for Baal and cut down the wooden pole beside it.[67] As the men of the town discovered the damage, they started a search for the culprit. When it turned out to be Jerubbaal, they went to see his father.

> Then the men of the town said to Joash, 'Bring out your son, that he may die, for he has pulled down the altar of Baal and cut down the wooden pole beside it.' But Joash said to all who were arrayed against him, 'Will you contend for Baal? Or will you defend his cause? Whoever contends for him shall be put to death by morning. If he is a god let him contend for himself, because his altar has been pulled down.
>
> Judges 6:30-31

Though the story in its present form is one of conversion (according to *v.* 25 the altar belonged to Jerubbaal's father, which means that Baal was also Jerubbaal's god), the pious legend feeds on the reality of local skirmishes between Baal devotees and worshippers of Yahweh.[68] There is no reason to distrust the historicity of such conflicts. Once Yahweh-El had been given official status, the worshippers of Baal felt treated as second rate citizens. The inevitable tensions caused by the situation will have manifested themselves in a variety of local rivalries.

The religious politics of the Omride kings marked a turning-point in this development. Omri and Ahab took measures to overcome the internal division that followed from the different treatment of the two main segments of the population. To understand the objectives of the Omride interventions in the state religion, their religious politics must be seen in the context of their overall political programme. The rule of the Omrides marked a golden age in the political history of Israel.[69] In the span of a few years, the State of Israel changed from a minor political entity into a major power. Omri (*ca.* 885-874) and Ahab (ca. 874-853) first curbed and then repelled the Aramaean influence in Palestine. Transjordanian territories were incorporated into the kingdom (2 Kings 3:4-5). By a clever use of diplomacy, the Omrides

developed good relations with Phoenicia and Judah. The peace with Phoenicia was consolidated by the marriage of Ahab with Jezebel, the daughter of Ittobaal ('Ethbaal') the king of Sidon (1 Kings 16:31),[70] and the entente with Judah was sealed by the marriage of Ahab's daughter (or sister) Athaliah to Jehoram, then the Judahite crown prince (2 Kings 8:18; 2 Chronicles 21:6).

The Omrides combined a successful foreign policy with a domestic politics designed to modernize their kingdom. As enlightened monarchs they had little sympathy for the notion of theocracy. Omri broke with the tradition of a charismatic kingship and tried to institutionalize the principle of dynastic succession.[71] To facilitate the administration of the kingdom, the Omrides reorganized the division of the territory and placed the districts under the supervision of governors (*śar*), each one being assisted by a staff of 'servants' (1 Kings 20:14-15.19). Putting the seal on the new political climate, Omri built Samaria as the capital of the kingdom. Until then, various places had served as centre of the administration. Samaria, however, was a city with no past. Omri constructed it around 880 on land he had bought from the Shemer family (1 Kings 16:24). Though the royal family also maintained a palace at Jezreeel (1 Kings 18:46; 21:1; 2 Kings 9:17), Samaria functioned as the national capital (1 Kings 16:29). Omri was buried in Samaria (1 Kings 16:28), and so were Ahab (1 Kings 22:37) and Ahaziah (2 Kings 1:17). The political importance of Samaria is confirmed by the fact that 'Samaria' later came to be the name of the Israelite state as a whole (e.g., 1 Kings 13:32; 2 Kings 17:24; 23:19).

In an influential essay on the city of Samaria, Albrecht Alt has argued that the Omrides maintained two capitals (viz., Samaria and Jezreel) to satisfy both the Canaanite and the Israelite elements of the population.[72] Jezreel, according to Alt, was a genuinely Israelite town, whereas Samaria was a Canaanite enclave until after the demise of the Omrides. Though Alt's suggestion is attractive, it cannot be accepted without certain strictures. Its main weakness consists in the unwarranted supposition that there was an ethnic opposition between Israelites and Canaanites. Since the archaeological research of recent years suggests that the majority of the Israelite settlers came from a Canaanite background, the opposition of Israelites versus Canaanites is historically false. The competition was not ethnic but religious. Alongside the official cult of Yahweh-El propagated by the state, many

[71] Alt 1951.

[72] Alt 1954. The hypothesis has been adopted and defended by quite a number of other authors. See, e.g., Donner 1977:400-404.

Israelite citizens continued to worship Baal in their family religion. Witness the high percentage of Baal names in the Samaria ostraca (seven theophoric names are constructed with Baal, as opposed to eleven with Yahweh), Baal continued the be a major god in the realm of Israelite family religion.[73]

The partial truth of the view propounded by Alt concerns the Omride attempt to reach a kind of reconciliation between the national cult of Yahweh, on the one hand, and the local religions focused on Baal, on the other. Alt's error lies in the identification of the former with the Israelites and of the latter with the Canaanites. Though the family religion of many Israelites consisted of the worship of a local Baal, it was not for that reason Canaanite. The cult of El and Baal, under a variety of local avatars, was indigenous among the early Israelites in the central hill country; it was the worship of Yahweh, rather, that could be seen as an innovation, having reached the Israelites through the influx of settlers from southern Transjordania. The Omrides were not trying to reconcile two ethnic groups. As enlightened monarchs, they merely wished to grant worshippers of Baal the same kind of recognition as the worshippers of Yahweh-El. Their religious politics were in a sense liberal: in their view the state had to observe neutrality in religious matters. Since a separation between religion and politics was inconceivable at the time, they sought to give equal rights to the cults of Yahweh and Baal.

The Omride kings tried to carry out their programme of equal rights by the admission of Baal into the national pantheon. Though it has been argued that the Omrides meant to officially identify Baal and Yahweh in a manner comparable to the earlier identification of El and Yahweh,[74] there are no firm indications that this is what they attempted. It is true that the Bible contains traces of the incorporation of the Baal mythology in the mythology of Yahweh, such as the motif of Yahweh's combat against Sea and its monsters[75] or—in Judah—the identification of Mount Zion with Mount Zaphon (Psalm 48:3).[76] The synthesis of the gods was bound to fail, however, as long as Baal was recognized as a distinct deity. Both Yahweh and Baal were strong personalities, so to speak. Each had his own mythology, neither of which lent itself to a smooth integration with the other. Moreover, the Baal cult

---

[73] On the Samaria ostraca see Mazar, B. 1986:173-188.

[74] Those who defend this view refer to the religious politics of the Omrides as 'syncretism', see, e.g., Hentschel 1985:84-85. It is quite unlikely, however, that the Israelites were unaware of the difference between Yahweh and Baal. The theophoric anthroponyms with Baal can hardly be explained as evidence of devotion to Yahweh under the traits of Baal (*pace* Hentschel 1985:84).

[75] See Day 1985.

[76] For other instances of 'syncretism' between the mythologies of Baal and Yahweh see Loretz 1990:73-78; Smith, M. S. 1990:41-79.

which the Omrides sought to promote had political overtones that did not allow the demotion of Baal to the level of a mere epithet for Yahweh; the Phoenician connections of the Omrides did not leave room for that possibility.

As a theological fusion of Baal and Yahweh was neither feasible nor desirable, the Omrides followed a politics of religious parity. In name Yahweh remained the national god, witness the inscription by the Moabite king Mesha.[77] Yet contrary to the situation at Jezreel (1 Kings 21:1-16), the temple which Omri built in Samaria was devoted to the cult of Baal (1 Kings 16:32; 2 Kings 10:18-29). Omri and his successors endeavoured to create a situation in which Baal had his place alongside Yahweh-El.[78] In addition to the cult of Baal at the national temple in Samaria, the Omrides supported a large body of cult personnel of Baal (referred to as the 'prophets' of Baal) stationed throughout the land (1 Kings 18:19; 2 Kings 10:19). Henceforth, the prophets of Yahweh had to share their privileges with the prophets of Baal. The political benefit of the official recognition and support of the Baal cult consisted in the extension of control over the various local cults (cf. 2 Kings 10:18-21).

The motives behind the Omride religious politics have been obscured by the biblical authors. In their view the Omride politics towards the Baal cult were inspired by the particular zeal of Jezebel. In the later biblical tradition Jezebel has been depicted under the traits of a prototypical 'foreign woman'.[79] Her devotion to Baal was deemed demonic, and her efforts on behalf of the propagation of his cult were qualified as 'harlotries and sorceries' (2 Kings 9:22). In fact, the incrimination of Jezebel, as though she single-handedly introduced the Israelites to the cult of Baal, is merely meant to portray Baal as foreign god. Devotion to Baal was thereby retroactively turned into anti-patriotic behaviour. Although presented in the biblical writings as the doings of the develish Jezebel, however, the institutionalization of a national Baal cult must be seen as the well-considered religious politics of the Israelite kings.

The promotion of the Baal cult cannot be construed as an act of diplomacy, similar to Ahab's marriage with Jezebel, to please the Phoenician leadership and to bring Israel in line with its northern neighbour states.[80] Should that have been the case, the mere presence of an image of Baal in the

---

77 *KAI* 181:14-18.

78 Cf. Smend 1975:174 '... die Religionspolitik der Omriden ... scheint ... darauf angelegt gewesen zu sein, dem Baal zu geben, was des Baal war, und Jahwe zu geben, was Jahwes war.'

80 Contrast, e.g., Albertz 1992.1:231.

official temples would have sufficed. There is no indication that the Baal of the Omrides was the Baal of either Sidon or Tyre.[81] The reports on the appointment of a body of religious personnel affiliated with the Baal cult shows that the Omrides wished to do more than to signal their recognition of Baal as an official Phoenician deity. Neither the diplomatic explanation nor the biblical interpretation does justice to the Omride politics. The Omrides regarded themselves as enlightened monarchs who stood above the religious rivalries in their kingdom. They set out to create a modern state which combined an efficient administration and a strong military presence with equal rights for the main religious groups.

The introduction of Baal into the official religion of the state was fraught with theological consequences. The Baal whom the Omrides worshipped was not just the divine patron of one of the Phoenician cities; he was the Baal as we know him from the Ugaritic mythology, the annually disappearing and returning god of storms and rain. The character of the Omride cult of Baal can still be gauged from the account of the contest between Elijah and the Baal prophets on Mount Carmel (1 Kings 18).[82] The story is set in the time of the great drought. The cultic personnel of Baal interprets the prolonged absence of rain mythologically as the effect of Baal's descent to the nether world. That is why they cut themselves with swords and lances, and make a great deal of noise (1 Kings 18:28). Their behaviour is typical of mourners; they give ritual expression to their grief over the death of their god. Elijah's sneering comments about Baal's being on a journey or asleep (1 Kings 18:29) play upon the mythological theme of Baal's death: the god's sleep is a sleep of death.[83] A later biblical source speaks about the mourning rites over Hadad-Rimmon, the Aramaean avatar of the storm god,[84] near Megiddo (Zechariah 12:11). Apparently, the rituals of the Baal cult, with all their mythological trappings, had a long life.

The Omride admission of Baal into the state cult was not intended to promote him as the new god of Israel. Extra-biblical evidence for Baal as an important Israelite god under the reign of the Omrides is lacking. The suspicion that the biblical historians have exaggerated the magnitude of Baal's place in the Omride state religion seems justified. Though it would be hypercritical to deny the fact that Baal entered the Israelite state pantheon due to the Omride politics of parity, there is no reason to assume that the god

ever gained greater prominence than Yahweh. The real situation is aptly described by Elijah's diagnosis of the Israelites as a people 'limping on both sides' (*pōsĕḥîm ʿal-šĕtê hasṣĕʿippîm*, 1 Kings 18:21), an expression implying that religious dualism saps the strength of a nation.[85] All the Omrides had hoped to obtain, however, was a situation of religious parity. To satisfy all their subjects they gave Baal and Yahweh-El a comparable place in the state cult—though Yahweh remained the national god.

The Rise of the Yahweh-Alone Movement

Although many Israelites may have welcomed the Omride politics as a change for the better, there were also very hostile reactions. The opposition came primarily from two groups, to wit, the prophets of Yahweh and a pro-Assyrian faction among the landed gentry.[86] Though united in their rejection of the Omrides, their motives ran parallel only in part.

Many prophets of Yahweh reproved the Omride innovations because they perceived them as an assault on their position as servants of the national religion. Even if the reports about the execution of the 'prophets of Yahweh' are grossly exaggerated (1 Kings 18:4, 13),[87] the Yahwistic cult personnel is bound to have suffered from the Omride patronage of a rival priesthood.[88] The resentment of the Yahweh prophets was exacerbated by their personal commitment to the ideology of the national religion. In combination with such notions as the land of Israel as the 'heritage of Yahweh' and the Israelites as the 'people of Yahweh', the exodus tradition served as the major focus of their identity. The 'New Deal' politics of the Omrides, granting official status to the Baal mythology as well, threatened to jeopardize that identity. Their response was to cling to it all the more tenaciously.[89]

The motives of the old nobility were quite different. Though some of them may have been in sympathy with the prophets' criticism of the religious politics of parity, their main objection against the Omrides concerned the new political and economic order. Based on their inherited wealth, the

---

[85] See Timm 1982:74 n. 87. Würthwein understands the expression in a different way: Israel is likened to a bird constantly hopping from the one branch to the other (1984:217).

[86] On the involvement of the pro-Assyrian party in the coup of Jehu see Astour 1971, cited with approval by Soggin 1984:216.

[87] Cf. Schmitt, H.-C. 1972:124-125.

[88] Johnson, A. R. 1962[2]:28 analyzes the competition between Baal prophets and Yahweh prophets as 'a rivalry between two different cults and their respective specialists'.

[89] It must be emphasized that there is no evidence for the view according to which Elijah and the prophetic orders which he represented were acquainted with the first commandment ('You shall have no other gods beside me'), *pace* Hentschel 1985:89. On the contrary, the demand for monolatry by the Yahweh-alone movement was elicited by the Omride politics, cf. Golka 1978.

Israelite aristocracy (known under such terms as *nĕdîbîm*, *ḥōrîm*, and *gĕdōlîm* in the Bible) traditionally enjoyed a position of affluence and influence. Owing to the growth of the royal bureaucracy, on the one hand, and the intensification of commerce by the creation of a monetary economy and the development of trade relations with Phoenicia, on the other, the landed gentry was faced with the emergence of a new ethics of property. The conflict between Naboth and Ahab is illustrative: Naboth belonged to the local nobility of Jezreel, yet he was simply overruled and removed at the king's wish.[90] Favoured by the economic climate, there arose a class of nouveaux riches who owed their wealth to trade. Though the Israelite economy was thriving, the established nobility saw its position endangered. Their identity as a class was undermined by the royal no-nonsense politics and the commercial success of upstarts.

The discontent of the landed gentry also fed on the success of the dynastic tradition which the Omrides had established. In spite of anti-royalist currents in Israel, kingship was an accepted phenomenon; the principal proviso was that it should not be hereditary. Both the aristocracy and the prophets held fast to the theocratic ideal: human rulers were to be chosen by God, as with the religious leadership.[91] The same idea is echoed in the message of Hosea (Hosea 8:4-6). To these men, the far more 'secular' principles on which the Omrides had founded their rule were a lapse from the divine order. Once again, the motives for maintaining the theocratic ideal may have been quite dissimilar—at least on the face of it. To the prophetic orders it was a religious concern; the landed gentry may have seen the theocratic model as a means of exerting some influence on the choice of the political leadership. The divine election of a king was not a lottery; endorsement by the social élite was a prerequisite.

The opposition elicited by the Omride politics spelled the end of the Omride dynasty. Joined in an anti-Omride coalition, the 'sons of the prophets' and the pro-Assyrian nobility eventually succeeded in bringing their own man to power. His name was Jehu. In 841 BC Jehu seized the throne, killing Joram and all who remained of the house of the Omrides (2 Kings 9-10). A military governor of the king, Jehu had been encouraged to disloyalty by 'one of the sons of the prophets'. Sent by Elisha, this anonymous prophet had secretly anointed Jehu king in the name of Yahweh 'the god of Israel' (2 Kings 9:1-10). The ceremony was entirely in keeping with the Ephraimite tradition of charismatic leadership; in like manner Saul had been appointed

---

[90] The social status of Naboth may be inferred from the fact that he was seated 'at the head of the people' (*bĕrō²š hā ᶜām*, 1 Kings 21:9), cf. Würthwein 1984:249.

[91] Rendtorff 1962:154.

king by Samuel (1 Samuel 10:1). The rebellion of Jehu was presumably inspired by personal ambition; were it not for a significant popular support, however, his *coup* would probably have been aborted.

Considered in hindsight, the time in which the Omrides reigned was one of the crucial periods in the history of Israelite religion. The religious politics of parity triggered an opposition that would assume the character of a fundamentalist protest movement, to use an anachronistic misnomer. Modern scholars have dubbed it the 'Yahweh-alone movement'.[92] Its basic creed held that no one can serve two masters; the factual existence of other gods was not denied, but only Yahweh was deemed worthy of the worship of the Israelites.[93] The leaders of the movement, to be located among the prophetic orders, made Elijah their literary spokesman.[94] His pressure on the people to make a choice reflects their principal message: 'If Yahweh is god, follow him; but if it is Baal, then follow him' (1 Kings 18:21).[95] Though phrased as an alternative, there could naturally be no doubt about which god truly deserved to be worshipped. According to the theology of the Yahweh-alone movement, Yahweh had been Israel's god from the land of Egypt; there was no other saviour besides him (Hosea 13:4).

Under the influence of the Omride religious politics, certain segments of the prophetic orders developed into groups of intransigent zealots averse to any compromise. They remained so also after the revolt of Jehu. The restoration under Jehu proved ephemeral: it was not long before it became clear that many of the developments that had occurred under the Omrides were irreversible.[96] The members of the orders were still known as prophets, and their connections with the court were never entirely severed, but their religious ideology took a turn. They radicalized the demand for loyalty to

---

92 The expression was brought into currency by Smith, M. 1971, and has been widely used since, see notably Lang 1981.

93 The Yahweh-alone movement which arose in the aftermath of the Omrides did not preach monotheism in the strict sense of the term. Its message was one of monolatry (cf. Hentschel 1985:88). True monotheism, as a metaphysical statement, probably did not gain ground in Israel until the Hellenistic Period, see Tromp 1995:105-108.

94 Though it cannot be excluded that Elijah gave the impetus to the emergence of the Yahweh-alone movement, his role as their spokesman has been magnified by the tradition. Since the Elijah stories were at home in the circles of Elisha's disciples (see the discussion in Chapter Twelve), they presumably reflect trends and circumstances of about 800 BC rather than 850 BC. With Smend 1975:173 it must be maintained that the Mount Carmel story was conceived after the revolution of Jehu.

95 Instead of describing the terminology as Deuteronomistic (so Würthwein 1984:217), I would prefer to call it proto-Deuteronomic. The Deuteronomic movement (for which see Chapter Fourteen) is rooted in the opposition party which manifested itself by the end of the ninth century BC.

96 Cf. Ahlström 1977b. Ahlström argues that Jehu's revolt was purely political in motivation, lacked popular support, and did not lead to the 'purification' of Israelite religion.

Yahweh and for commitment to his cult. 'Zeal for Yahweh' (*qin'â laYHWH*, 2 Kings 10:16) became a central value: Elijah was pictured as a man who had been 'very zealous for Yahweh' (*qannō' qinnē'tî laYHWH*, 1 Kings 19:14). The reverse of the coin was a fierce opposition against the worship of all other gods. In the view of these fundamentalists, Yahweh was 'a jealous god' (*'ēl qannā'*, Deuteronomy 5:9) who did not tolerate idols in his vicinity. In practice, the iconoclasm of the movement was directed against all forms of Baal worship, whether in the state cult or in family religion.

The Book of Hosea can be used to illustrate the almost complete disenfranchisement of the prophetic orders from the political establishment by the mid-eighth century. In the judgment of Hosea, the Israelite kings had disqualified themselves.[97] There was no longer any real leadership for 'all their kings have fallen, and none of them calls upon Me' (Hosea 7:7). The fundamental flaw lay in Israel's rejection of the theocracy: kings had been appointed without prior consultation of God (Hosea 8:4). In the turmoil of his time over the Assyrian threat, Hosea refused to side with either the pro-Egyptian or the pro-Assyrian party.[98]

> Ephraim is like a dove, silly and without sense,
> calling to Egypt, going to Assyria (...)
> Woe to them, for they have strayed from Me!
> destruction to them, for they have rebelled against Me.
>
> Hosea 7:11, 13

Hosea's position on the issue was not one of neutrality. He actively opposed both the diplomatic overtures to Egypt and the politics of submission to Assyria. Carrying oil to Egypt—a reference to the oil used in ceremonial treaty oaths[99]—was just as wrong as striking a bargain with Assyria (Hosea 12:2[1]; cf. 11:5).[100] The alternative the prophet advocated was a politics of conversion to Yahweh—which strikes the modern reader of his book as a rather impractical form of theocracy. It was, politically speaking, a non-solution.

The message of Hosea may be regarded as the fruit, ultimately, of the religious liberalism of the Omrides. Supported by an important segment of the population, many prophets refused to comply with a politics which gave Yahweh and Baal equal rights. Their discontent over the losses they suffered —losses in means or in prestige and influence—materialized in a religious

counter-movement that was fundamentally opposed to the political order of the day. By its condemnation of both the national cult patronized by the state and the local cults based on kinship and co-residence, it prepared the spirits for a religion based on personal commitment. This new religion, prefigured to some extent in the orders of the prophets and the Levites themselves, was not to come into existence until after the Fall of Samaria and the disappearance of Israel as a separate kingdom.

CHAPTER FOURTEEN

IN SEARCH OF NEW IDENTITIES: THE EPHRAIMITE DIASPORA

After Hosea it did not take long before Israel disappeared from the political map. Under the attacks of Tiglath-pileser (745-727), Shalmaneser V (726-722) and Sargon II (721-705), Israel was first made a vassal, then reduced in size, and finally turned into an Assyrian province. Many inhabitants of the country fled to Judah for political, economic or religious reasons. Though they may not have intended to stay there, most refugees remained in the South for generations. They had children and grandchildren, and as the one generation succeeded the other, they mingled with the Judahite population, eventually lost their Ephraimite identity and became Judahites or Jews. To the second and third generations of the Ephraimite migrants, however, identity was still something to be constructed rather than inherited. Living in Judah they had preserved the traditions of their parents and grandparents. Drawing on two separate religious cultures, they set out to search for new identities.

The Fall of Samaria and the Exile to Judah

The developments which led to the Ephraimite diaspora in Judah are not known in their details, but a general outline can be confidently reconstructed on the basis of biblical, cuneiform, and archaeological sources.[1] It is a story of rapid decline of political power. Whereas the reign of Jeroboam II (787-747) was still a time of political expansion and economic prosperity, his successors saw Israel's glory quickly vanish. When Tiglath-pileser invaded Syria and defeated Hamath in 738, King Menahem had to pay a tribute of a thousand talents of silver in token of submission.[2] Israel had become an Assyrian vassal, even if it might internally cultivate the illusion of political independence.

The death of Menahem in 738 inaugurated a period of political chaos. Menahem's son held the throne for just a few months, after which he was

[2] See 2 Kings 15:19-20; Levine, L. D. 1972; Weippert, M. 1973:29-34.

deposed by a military leader from Gilead called Pekah (737-732, see 2 Kings 15:27-31). Pekah tried to free Israel from the Assyrian yoke by joining the anti-Assyrian coalition led by the king of Damascus. As they tried to force Judah to join them, Tiglath-Pileser laid siege to Damascus and captured the city in 732. Pekah met his death at the hands of a pro-Assyrian faction that made Hosea (732-724) king in his place.[3] As Shalmaneser succeeded Tiglath-pileser in 726, Hosea interrupted the annual payment to Assur and solicited Egyptian support for an anti-Assyrian revolt. The Israelite king had miscalculated his chances. Shalmaneser took Hosea captive, and reduced the state of Israel to the single city of Samaria. Two years later Samaria fell at the hands of Shalmaneser (2 Kings 18:9-11), thus putting the seal on the defeat of Israel.[4]

In the wake of the defeat of the Northern Kingdom, important segments of the population were deported to Assyria.[5] In 732 Tiglath-pileser carried the people of Gilead, Galilee, and the land of Naphtali to Assyria (2 Kings 15:29). After the fall of Samaria, the king of Assur made Israelite captives dwell 'in Halah and on the Habor, the river of Gozan, and in the cities of the Medes' (2 Kings 17:6; cf. *v.* 23). The biblical reports about the deportations are indirectly supported by the evidence from Assyrian sources. A legal document connects the area of Ḫalaḫḫu (Halah) with three persons bearing West-Semitic names,[6] and various documents attest to the presence of Israelites in the province of Guzana (Gozan).[7] Other data point to a substantial Israelite presence in the Assyrian military.[8]

The forced Assyrian migration involved only a minority of the Israelites, however. It has been estimated that out of every hundred Israelites, not more than five were actually deported.[9] It may be regarded as certain that a large part of the population remained in the country.[10] They had to share the land with people from Babylon, Kuthah, Avva, Hamath and Sepharvaim (2 Kings 17:24). Some of the immigrants came as refugees; others were brought by the Assyrians in an attempt to keep a smouldering Israelite nationalism from flaring up. The immigrants had come with their own gods.[11]

---

3 Weippert, M. 1982:398.

4 Though the successor of Shalmaneser, Sargon II, claimed to be the author of Samaria's defeat, the actual fall of the city is generally believed to have occurred in the last year of Shalmaneser's reign.

10 Cf. Oded 1979:22.

11 Cf. the section 'Religious Identity in Situations of Diaspora' in Chapter Six.

The report about the Assyrian appointment of an Israelite priest in Bethel who had orders to teach the Mesopotamian settlers of Samaria 'the law of the god of the land' (*mišpaṭ ʾelōhê hāʾāreṣ*, 2 Kings 17:27) suggests that Yahweh continued to receive official worship in Israel; was he not the god of Samaria? His cult was combined with the veneration of a diversity of other deities at a local level. The situation was in many ways a continuation of the earlier practice in which worship of Yahweh at the national level had coexisted with the worship of a variety of Baals at a local level.

Many Ephraimites did not go to Mesopotamia nor stay in the land, but fled to the South to settle in Judah or, having progressed further south, in Egypt.[12] The bulk of the evidence of this demographic move of Ephraimites to Judah is indirect. It is generally accepted that in the period following the fall of Samaria, various texts and traditions which originated in Israel were transferred to Judah and incorporated in what was to become the Hebrew Bible. An obvious case is the Book of Hosea; some or all of Amos' written prophecies may have followed the same route to the Southern Kingdom. The incorporation of the Elohist as one of the narrative strands in Genesis was not possible before the literary tradition had gained ground in Judah.[13] There are also several Ephraimite psalms that ended up in the Jerusalem psalter.[14] Some sections in the Book of Judges and the Books of Samuel, and perhaps some in the Books of the Kings as well, stem from the North.[15] Since the redaction of said books took place in the South, the earlier material must at some point have been transferred to Judah.

Aside from the transmission of literary material from Israel to Judah, there is evidence of the transfer of certain religious tenets and motifs.[16] A case in point is the exodus motif. The exodus tradition has an Ephraimite origin; it was celebrated in such royal temples as Bethel, whereas the official cult at Jerusalem gave pride of place to the Zion theology and the dynastic promise to David.[17] The fact that the Judahite clergy eventually incorporated the exodus motif in their official theology is presumably due to the influence of exiled priests from the former Northern Kingdom. Since transmission of texts and traditions does not occur without transmitters, it must be assumed

16 Otzen 1978:107 speaks about the transfer of 'many of the deuteronomistic traditions ... brought from the defeated North State to Judah and preserved there.'

17 See, e.g., Hoffman 1989; Cooper & Goldstein 1992.

that certain Israelites to whom the relevant texts and traditions were familiar have moved to the South. They brought their beliefs and traditions with them, and once they were fully integrated in the Judahite society, their traditions became part of the Jewish heritage.

The migration of inhabitants of Israel to Judah may be inferred from the incorporation of Ephraimite texts in the Judahite collection of sacred books. The inference is supported by historical and archaeological considerations. Assyrian pressure gave many Israelites good reason to leave their native country. Judah was a likely place of refuge; it was close, still independent, and after all a sister state. Judahites, too, venerated Yahweh as their national god; though locally diversified, the various forms of Yahweh could nevertheless be recognized as manifestations of one god.[18] The fact that a Judahite prophet like Amos could preach in Bethel implies some common basis of religion in Judah and Israel. Apparently, the temple of Jerusalem was considered by early Israelite kings to be in competition with their own sanctuaries (cf. 1 Kings 12:26-27). Ties of kinship, moreover, transcended the political border between the two states. Some of the Israelites who fled to the South will have found a place to stay with their family.

The archaeological evidence for an influx of Israelites in Judah after 720 BC is indirect. It consists primarily of indications of settlement of the Western Hill of Jerusalem, owing to which the built-up area of Jerusalem expanded to three or four times its former size around 700.[19] The new suburb was known as the Mishneh ('Second Quarter') and was later incorporated into the city.[20] It is difficult to explain the sudden growth of the city by a natural population increase or by exceptional economic prosperity. The expansion was not a gradual process; archaeological soundings suggest a spectacular growth overnight, so to speak. A mass immigration from the former Northern Kingdom presents itself as an attractive—though hypothetical—explanation.[21] Some of the Israelite towns had been reduced and

---

[18] Extra-biblical evidence from Kuntillet ʿAjrud mentions a 'Yahweh of Samaria' and a 'Yahweh of Teman'; it is possible that the two names designate one god, viz. the official god of the Northern Kingdom ('Samaria', after its capital). Yet the recognition of a Northern Yahweh is mirrored by the worship of a Yahweh of Hebron and a Yahweh of Zion. Though the constructions *bĕḤebrôn* and *bĕṢiyyôn* are normally translated 'in Hebron' and 'in Zion', a comparison of the name Milkaštart ('Milku of Aštart') with the expression *mlk bʿṯtrt* ('Milku in Aštart') suggests that such expressions as *YHWH bĕṢiyyôn* (Psalm 99:2) and *YHWH bĕḤebrôn* (2 Samuel 15:7) should be understood as references to local forms of Yahweh (Barré 1983:186 n. 473; cf. 1 Samuel 5:5 *Dāgôn bĕʾAšdôd*, 'Dagan of Ashdod'). The religious situation in Israel and Judah, therefore, was not merely one of polytheism, but also of poly-Yahwism.

[19] See Broshi 1974; Meier, W. 1981.

[20] See Avigad 1984:54-55; 2 Kings 22:14 and Zechariah 1:10.

[21] Broshi 1974; Meier, W. 1981; Avigad 1984:54-55.

impoverished, and some had been destroyed and abandoned; their inhabitants must have sought refuge in the South. Though there is also archaeological evidence of intensified colonization in the Judaean hill country,[22] the majority of the Israelite exiles seem to have settled in Jerusalem and its vicinity. To people trying to make a new life for themselves, cities usually offer more opportunities than the country.

The influx of Ephraimites after 720 is reflected in some of the prophecies of Isaiah (*ca.* 700 BC). The prophet had a son whom he had named Shear-jashub, meaning 'A remnant shall return' (Isaiah 7:3). Another passage in the Book of Isaiah plays upon the significance of this name by saying that 'the remnant of Jacob' will return to *ʾēl gibbôr*, 'the mighty god', ■ cult name of Yahweh in Jerusalem (Isaiah 10:20-21). The verses interpret the personal name Shear-jashub as a reference to the Ephraimite migration to Judah; though experienced as a diaspora by the Israelites, the influx from the North could be qualified as a 'return' from the perspective of a Judahite prophet. Was Judah not the mother nation, the Davidic kingdom, from which the Israelites had separated themselves?[23] Other Isaianic prophecies, too, comment upon the cohabitation of Judahites and Ephraimites which the prophet witnessed in his days. 'Ephraim's jealousy shall vanish and Judah's enmity shall end; Ephraim shall not envy Judah and Judah shall not harass Ephraim' (Isaiah 11:13). Such peace among the rival nations was possible only because the one had ceased to exist; the presence of the Ephraimite refugees in Judah was celebrated by the prophet as a symbol of the new brotherhood.[24]

In the absence of any direct testimony from the Israelite exiles, the motives and expectations of the first generation of Ephraimite migrants in the South are a matter of conjecture. The exiles did not know that Samaria would never recover its independence and may well have looked upon their stay in Judah as temporary. Most of them, however, never returned to their native soil. Nor did their children or their grandchildren go back to the land of their ancestors. To the second and third generations of the exiles, identity was a matter of concern. They had developed roots in two cultures: born and raised on Judahite soil, they were Israelite by tradition. Unlike their fathers and grandfathers, they knew their stay in Judah was permanent. Yet they did not want to simply abandon their Ephraimite identity. Their search was for a new

identity which would allow them to integrate in their Judahite surroundings without denying their Israelite past.[25]

The biblical records have preserved data about several Ephraimite groups and individuals in diaspora in Judah. The Rechabites are one example of an Ephraimite community on Judahite soil; they will be discussed first. They sought their identity through a seclusion from the contemporary culture; living in the way of nomads, they wanted to revive the devotion of an illusory yet to them very real past. The Deuteronomists are the second group that will be dealt with. Descending from the Levitical orders, they propagated the idea of the nation as a religious community taking the place of the local sacral societies. Under the leadership of Yahweh, Ephraimites and Judahites would be brothers living in a humane and orderly state. The prophet Jeremiah, on whom the discussion of the Ephraimite diaspora will close, had Ephraimite roots, too. He was a contemporary and witness of both the Rechabites and the Deuteronomists. Though he sympathized with both groups, he belonged to neither. Owing to his personal experiences, Jeremiah entertained no hopes for the Israelites as a nation. Identity, to him, was first and foremost personal. Faced with the crisis of the exile, each man—whether from Ephraim or from Judah—stood alone before Yahweh.

The Rechabite Community

One group of Israelites that found refuge in Judah is the community of the Rechabites. The principal source of information about them is Jeremiah 35. This chapter contains the description of a meeting of the prophet with representatives of the Rechabites in the temple at Jerusalem, sometime around 600 BC. Jeremiah brought the clan of the Rechabites ('Jaazaniah the son of Jeremiah, son of Habazziniah, and his brothers, and all his sons, and the whole house of the Rechabites') to the temple, gave them cups and pitchers full of wine, and invited them to drink. The Rechabites refused, saying:

> We drink no wine, for Jehonadab ben Rechab our father gave us a rule: 'You shall drink no wine, neither you nor your sons, for ever. Nor shall you build houses, or sow seeds. Vineyards you shall neither plant nor possess. But you shall dwell in tents all your days, that your days may be many in the land in which you dwell as foreigners.' And we honour the wish of our father Jehonadab ben Rechab, in everything he commanded us: we never drink wine, neither we nor our wives, nor our sons and daughters. Nor do we build houses as our dwelling place. And we possess neither vineyards, nor fields,

---

[25] Cf. Sanders' observation in connection with the fall of Samaria: 'Israel's identity—that is, her memory or story—lay in the hands of those refugees who fled to the south and with their hosts in the south' (Sanders 1972:28).

> nor sowing-land. But we live in tents, and observe and do everything Jehonadab our father commanded us.
>
> Jeremiah 35:6-10

The Rechabites would normally not have been dwelling within a city. They found themselves in Jerusalem because of the military pressure from the Babylonian king Nebuchadnezzar and his army (Jeremiah 35:11).

The Rechabites who had withdrawn to Jerusalem in the days of Jeremiah considered themselves the physical and the spiritual descendants of Jehonadab ben Rechab ('Jehonadab ben Rechab our father', Jeremiah 35:6). Jehonadab was a contemporary of Jehu (*ca.* 840 BC); he lived in the hill country of Manasseh between Jezreel and Samaria (2 Kings 10:12-17); for all we know, he was a native Israelite. From the personal name of Jehonadab and those borne by his descendants (Jaazaniah, Jeremiah, and Habazziniah) it may be deduced that they worshipped Yahweh (whose name occurs as 'Jeho-' or '-iah' in theophoric names) as their god. The impression is confirmed by the narrative about Jehonadab and Jehu. When Jehu came upon Jehonadab he invited him to come with him to see his 'zeal for Yahweh' (*qin'ātî laYHWH*, 2 Kings 10:16). Jehonadab consented and became an accomplice in the demolition of Baal's temple in Samaria and in the massacre of the god's worshippers (2 Kings 10:18-27). He can be viewed as an exponent of the incipient Yahweh-alone movement in the Northern Kingdom in the days of Elijah and Elisha.

Two-hundred years separate Jehonadab's participation in Jehu's crusade from the moment the Rechabites declined the wine which Jeremiah offered them. Nothing is known about the history of the Rechabites in that period. We can only conclude that at some point during these two centuries the Rechabite community must have moved from Israel to Judah. The Ephraimite origins of the Rechabites are not in doubt. The fact that the First Book of Chronicles associates the Rechabites with the Calebites and the Kenites from South-East Palestine[26] (1 Chronicles 2:55;[27] 4:11.12 [read 'Caleb' for 'Celub', and Rechab for Rechah]) has no historical value. The post-exilic Chronicler knew the Rechabites only as a Judahite group; in his perception they were related to the Calebites and the Kenites on account of their nomadism. The genealogies of the First Book of Chronicles interpret such similarities in terms of descent and kinship.[28] As will be demonstrated

---

[26] For the Kenites see Joshua 15:22.57; Judges 1:16; 4:11; 1 Samuel 15:5-6. The Calebites are located around Hebron and Debir (Joshua 14:6-15; 15:13.14-19; Judges 1:11-15) and in the Negeb (1 Samuel 30:14). On the Calebites see also Noth 1932:110-111; Beltz 1974:64-70.

[27] See Talmon 1958.

[28] For this phenomenon in genealogies see Wilson 1977, with extensive bibliography.

below, the nomadism of the Rechabites was in fact specifically Ephraimite in origin. No precise moment for the Rechabite migration can be fixed; it should in all likelihood be related, however, with the fall of Samaria.

The descendants of Jehonadab had a reputation for their particular lifestyle: they did not use alcohol, live in houses, or practise agriculture. Pursuant to the rule which they believed could be traced back to their ancestor, they led a life that condemned them to social marginality. The motives which led the Rechabites to adhere to a code of conduct that was liable to alienate them from their surroundings have long been a matter of debate among biblical scholars. Very different suggestions have been made. They can be divided over two categories: the one consists of solutions that are based on the conviction that the Rechabites were a religious group or sect, which means that the reasons for their behaviour had a religious inspiration; the other category consists of mundane explanations to the lifestyle of the Rechabites. A survey of some of the proposed interpretations illustrates the range of possibilities.

The interpretation of the Rechabites as a religious sect has been championed by Karl Budde. In an English article in the *New World*, published in 1895, Budde expressed the view that there were several groups in ancient Israel that cherished and propagated the 'nomadic ideal', the Rechabites being one of them. Were the customs of the Rechabites not typically those of the desert? It was during the journey through the wilderness that the people of Israel had dwelt in tents. According to Deuteronomy 29:6, the wandering Israelites had not eaten bread (which would imply the cultivation of grain), nor drunk wine or strong drink. By returning to this nomadic lifestyle, the Rechabites would have hoped to revive the religious purity of the desert. To them, Yahweh was something of a nomad himself: he was a tent-dweller who spurned the settled life of the Canaanite farmers. Even in the days of Jeremiah, the Rechabites continued to be the 'missionaries' (the term is Budde's) of a Yahwistic desert religion.[29]

The interpretation of the Rechabites as a religious group also occurs in different guises. In a study published in 1979 it was argued that the Rechabites were a prophetic school rivalling the one headed by Elisha. Both the Rechabites and the Elisha prophets would have claimed succession to Elijah; the principal difference between the two groups would be the fact that, in the eyes of the Rechabites, the Elisha group had lapsed from the prophetic ideal

---

[29] Budde 1895. The views of Budde have found their way into a wealth of scholarly literature. See especially Meyer 1906:136; Humbert 1921; Flight 1923:167; Humbert 1925; Gautier, L. 1927; Causse 1937:69-70; Dietrich, W. 1979:72-73.

of poverty since they had begun to live in houses. Only the Rechabites would have remained steadfast in their obedience to the standards set by Elijah.[30]

Another interpretation of the Rechabites as a religious group sees them as post-exilic priests on the basis of the affinity between the priestly promise at Jeremiah 33:18 ('and the Levitical priests shall never lack a man in my presence') and the promise to the Rechabites in Jeremiah 35:19 ('Jonadab ben Rechab shall never lack a man to stand in my presence').[31] A further element advanced in support of the parallel between the Rechabites and the Levitical priests is their status as *gērîm*, 'resident aliens': both the Levites (Deuteronomy 18:6) and the Rechabites (Jeremiah 35:7) lived as sojourners (the Hebrew root is גור).

Advocates of a mundane explanation of the behaviour of the Rechabites have come up with a variety of possibilities, too. A view that has won considerable support suggests that the Rechabite mode of life was an occupational pattern, not a religious vocation. Frank S. Frick argues that the Rechabites belonged to 'a guild of metal-workers involved in the making of chariots and other weaponry',[32] a suggestion based on the etymology of their name (compare the words *rōkēb*, 'charioteer', *rakkāb*, 'driver', and *markābâ*, 'chariot')[33] and their genealogical connections.[34] Metallurgists in antiquity were organized in guilds, and a guild functioned more or less like a clan. Owing to the itinerant nature of their work, smiths and metallurgists did not establish a permanent domicile. Their teetotalism, finally, might be explained as a precaution against the inadvertent disclosure of the secret lore of their profession. Though the suggestion that the Rechabites were chariot makers has elicited sceptical comments,[35] the plea for a sociological interpretation of their lifestyle has found favour with a number of authors—though they do not necessarily deny the religious aspects of the Rechabite dissent.[36]

To allow a critical assessment of the suggested solutions, the actual Rule of the Rechabites must be submitted to a closer analysis. It has often been noticed that it displays a striking similarity to the customs that Diodorus Siculus ascribes to the Nabataeans (XIX 94.2-3):

30 Cummings 1979.
31 Levenson 1976:510-511.
32 Frick 1971:285.
33 Frick 1971:282-283.
34 Frick 1971:286-287.
35 See, e.g., Dietrich, W. 1979:72 note 6; Keukens 1983. It should be noted that Frick, in his dissertation about the Israelite city (written in 1970, but published in 1977), argues for a link between the Rechabites and the ideology of the 'holy war', rather than to present them as metallurgists.
36 See, e.g., Carroll 1977.

> They lead a life under the open skies, calling the uninhabited desert their homeland (. . .). It is their custom (νόμος) not to sow grain or to plant fruit-bearing trees; nor do they use wine or settle in houses. And whosoever among them is found doing such things is subject to the penalty of death.

The nomadic background of the taboo on wine is confirmed by he votive inscription of a Nabataean horseman at Palmyra. This man dedicated his gift to Šayᶜ al-Qaum, 'the good and bountiful god, who does not drink wine' (*ʾlh ṭbʾ wškrʾ dy lʾ štʾ ḥmr*).[37] It may be assumed that the characteristics of this Arab god reflect those, ideally, of his worshippers.[38]

Viewed against this background, there can be little doubt about the prima facie significance of the Rechabite Rule. The combination of abstinence, a life in tents, and a rejection of agriculture singled out the Rechabites as nomads. This is the way they apparently wished to present themselves to their contemporaries. Does it follow that they were nomads indeed? No—the Rechabites were nomads in the sense that they acted as nomads, but they did so for reasons most nomads would not recognize. The very fact that the lifestyle of the Rechabites was a rule and not a custom demonstrates its artificial character. There was no objective need for the Rechabites to behave in the way they did; it was a lifestyle designed to cope with a life in the desert. Transposed to a different context, it was like an anachronism. Yet the Rechabite code of behaviour was not meaningless. What for real nomads is an economic strategy became a social strategy for the Rechabites. The observance of their Rule demonstrated and protected their identity as a religious minority group.

Indeed, the Rule of the Rechabites had a religious inspiration. The only reason to think that the Rechabites had nomadic origins is furnished by the genealogical notices in the First Book of Chronicles. These are devoid of historical value. The Rechabites themselves observed their lifestyle on the authority of their ancestor Jehonadab. It is quite uncertain, however, whether Jehonadab was the author of the rule. The tradition may have been a later invention that was projected back upon the past in order to endow it with a lustre of antiquity. Yet whether or not Jehonadab had laid down the Rechabite code of conduct, his role in Jehu's reform does shed a light on its

---

[37] *CIS* II/3, 3973:4-5, cf. Teixidor 1979:85-86.

[38] It is true, of course, that the description of classical authors needs to be used with circumspection. Note, for instance, the rather different picture of the Nabataeans given by Strabo, *Geographica* XVI.i.21. Yet the votive inscription from Palmyra seems to confirm the observations of Diodorus Siculus. Compare also the reports about Amorite nomads in Mesopotamian texts: they dwell in tents, not in houses, eat uncooked food, and do not enjoy the blessings of city life, see Kramer 1990:20, lines 129-139, cf. p. 27 commentary to line 133 (by Jacob Klein).

significance. In the literary tradition, Jehonadab was presented as a zealot for Yahweh; as such, he was associated with the early prophetic orders in the Northern Kingdom. We know the importance which these orders attached to the exodus theology; they were the partisans and transmitters of the Mosaic tradition. Since the Rechabites were one of the groups to have inherited this tradition, their behaviour is best explained as an attempt to preserve and preach the memory of the exodus and the journey through the desert.[39]

The solution here proposed is very similar to the one defended by Budde a century ago. It is therefore open to the same criticisms, the principal one being that there was no 'nomadic ideal' in early Israel.[40] Two major arguments are usually advanced to substantiate the objection. The first consists of a rebuttal of the assumption that Israel had once been a nomadic society. It is argued that modern archaeological and socio-historical research have rendered that idea untenable.[41] The second argument concerns the alleged glorification of the desert by the prophets. It is clear, as various scholars insist, that the biblical evaluation of the forty years in the wilderness is not exactly positive (what was to be a brief transition turned into forty years of wandering owing to the unbelief and ingratitude of the Israelites).[42] Nor can it be maintained that the eschatological ideal of the prophets is nomadic; they rather picture the Messianic future as one in which every peasant sits peacefully under his vine and his fig tree (Micah 4:4, cf. 1 Kings 5:5[4:25]).

The opponents of Budde's interpretation of the Rechabites are right only in part, though. Very few scholars would still maintain that the exodus and the journey through the desert were pan-Israelite experiences, in the sense that all Ephraimites and Judahites had forebears who were part of the group that escaped from Egypt under Moses. Nor will the fact that the early Israelite culture was semi-nomadic at most, and more probably sedentary, be questioned. Yet the issue at stake does not concern the historical reality of Israel's desert experience, but the reality of the identification with the tradition. Since the exodus tradition functioned as the national charter myth in Israel, it must be assumed that major segments of the population gave it credit. To them the tradition was real enough, whatever the historian might find against it.

The flat denial of the presence of a nomadic or desert ideal in the prophetic writings cannot be substantiated. It is true that there was no such thing as a 'nomadic ideal' in Judah. In Israel, however, there was a spiritual

current since the days of the early prophets which idealized the period of the wilderness as one of undiluted devotion to Yahweh. To prove the point, it suffices to cite a few texts from the books of Hosea, Amos and Jeremiah—all prophets with Ephraimite connections.[43]

> Therefore, behold, I will convince her to go to the desert (*midbār*) and I will speak to her heart. (...) And there she shall answer as in the days of her youth, as at the time when she came out of the land of Egypt.
>
> Hosea 2:16-17[14-15]

> I am Yahweh your god ever since the land of Egypt: I will again make you dwell in tents, as in the days of the assembly (in the desert).
>
> Hosea 12:10[9]

> I remember the devotion of your youth, your love as a bride, how you followed me in the wilderness, in a land not sown.
>
> Jeremiah 2:2[44]

> Did you bring to me sacrifices and offerings the forty years in the wilderness, O house of Israel?
>
> Amos 5:25

> For in the day that I brought them out of the land of Egypt, I did not speak to your fathers or command them concerning burnt offerings and sacrifices.
>
> Jeremiah 7:22

The characterization of the desert as 'a land of drought and deep darkness, where none passes through and where no man dwells' (Jeremiah 2:6) shows that the desert is not blindly idealized in these prophetic utterances. Yet there can be no doubt about their reading of Israel's past: the time of the desert was the time of Israel's youth. Israel's love of Yahweh was still strong and did not need sumptuous offerings to make up for the lack of true devotion.

---

[43] On Hosea and Amos see 'The Exodus as National Charter Myth' in Chapter Twelve. The Ephraimite connection of Jeremiah will be discussed below.

[44] Fox tries to show that the traditional interpretation of the verse is based on a misunderstanding: the *ḥesed* of which the text speaks is the favour shown to Israel by Yahweh (Fox 1973:443-446). It should be translated 'I have maintained for you the kindness of the time of your youth' (Fox 1973:445). Yet even in Fox's interpretation, the time of the Exodus remains the period of the courtship between Yahweh and Israel. Also Talmon concedes that this verse seems to support the theory of the desert ideal (Talmon 1966:53). To say, as Fox does, that the phrase according to which Israel went after Yahweh in the desert 'is simply another way of saying that Yahweh went before Israel, i.e. led her in the desert' (Fox 1973:446) is definitely wrong. The emphasis does lie on the willingness with which Israel followed her divine husband.

Such a reading of the journey through the desert can only be understood from the perspective of the exodus tradition as it was known in the Northern Kingdom.[45] The Rechabites stood in this—specifically Ephraimite—tradition; as migrants from the former Northern Kingdom they used it as a focus of their identity in the South.

Subcultures such as certain youth groups furnish us with a parallel to the Rechabites. Sociological research among such groups shows that they too often practise rites of style that are meant to mark their distance from the dominant culture; they signal their separate identity. Their behaviour, consisting of a code of dress, speech, and social manners, is a form of non-political—in fact, ritual—resistance.[46] What links such youth cultures to the Rechabites is their minority position. They act the way they do because they are not in a position of power. That is why the need for self-assertion is strong, and the chances to exercise political influence are small. In the case of such youth subcultures, the dissent is often social as well as ideological. The resemblance with the Rechabites is striking. There is no way of telling whether or not the forebears of Jehonadab ben Rechab had participated in the historical exodus experience. Centuries later, at any rate, the Rechabites cultivated the exodus myth in pursuit of an identity that would hold them together as a group in a society that was otherwise liable to assimilate them.

In the transmission of Jehonadab's rule, religion and lifestyle combined to create and maintain the group identity. Group beliefs and group behaviour were closely interwoven. It was nearly impossible to abolish one element without damaging the other. The austere code of conduct was not without consequences for the nature of the Rechabites as a group. Its identity was no longer founded on common descent, but on the collective observation of a specific ritualized behaviour. Considering the small number of Rechabites in Jeremiah's days (assuming the indications in Jeremiah 35 may be relied upon), there must have been people of Rechabite descent who no longer belonged to the Rechabite community. When Rechabite lifestyle came to determine Rechabite identity, those who rejected the lifestyle lost the identity. There may have been others, however, though not being from a Rechabite lineage, who joined the group by submitting to its discipline. The relations between members of the community were still described in terms of kinship: the Rechabites were a 'house' with a 'father' (Jeremiah 35:1-11). Yet the terminology cannot obscure the fact that the society of the Rechabites had

---

[45] It may be noted in passing that the positive evaluation of the wilderness is also found in Deuteronomy 8, which pleads in favour of the thesis which says that Deuteronomy has Northern roots, cf. McCurley 1974:302 and see below.

[46] See Hall & Jefferson 1976:47; Hebdige 1979:17-19, 133.

taken on the characteristics of a religious community—or a religious sect, to use a much-abused term.[47]

The Deuteronomists

The impact on Judahite—and later Jewish—religion of the second group of Ephraimite refugees to be discussed here was far greater than that of the Rechabites. This group, known as the Deuteronomic movement,[48] owes its name to the Book of Deuteronomy which is presumed to have originated in its midst. Yet the Deuteronomists not only bequeathed the Book of Deuteronomy to later generations; they were also responsible for the edition of the Deuteronomistic History, which runs from Deuteronomy to the Second Book of Kings. The movement was active for a considerable length of time, from 700 to 550 and probably after that as well. In the context of the present study, the focus of the investigation will lie on the Deuteronomists as they manifested themselves in the Book of Deuteronomy—which itself reflects various phases in the development of the Deuteronomic movement. By nearly common consent, the core of the Book of Deuteronomy is late pre-exilic. It must have existed in a somewhat different form than the one it has today by the end of the seventh century BC.[49]

The idea of the Ephraimite origin of the Book of Deuteronomy was not seriously considered in biblical scholarship until the 1920s. The ruling opinion of the 19th and the beginning of the 20th centuries saw the book as

---

[47] Thus, e.g., Montgomery & Gehman 1951:411. It is as a religious group, it seems, that the Rechabites surface again in sources dealing with the Period of the Second Temple. The prime witness for this development is, once again, to be found in Jeremiah 35. The promise to the Rechabites in Jeremiah 35:18-19 is most likely post-exilic (Cornill 1905:386-387; Abramsky 1967; 1971; McKane 1988). It refers to the religious prerogatives of the Rechabites in the post-exilic priestly state. The specific capacity in which they were active is in doubt: Abramsky regards them as sect similar to the later Essenes (Abramsky 1967); Kittel believes they were scribes (Kittel 1905:482); and McKane thinks they were a group of priests (McKane 1988). *Targum Jonathan* interprets the promise as a reference to sacerdotal service (Sperber 1992[2]:220 *l' ypswq gbr lywndb br rykb mšmyš qdmy kl ywmy'*), and Jewish tradition has it that the Rechabites came to be connected with the temple by connubial ties with priestly families. The specific reference to the Rechabites in the Greek version of Psalm 70 (LXX Psalm 71) probably means that post-exilic tradition situated the Rechabites in circles of the Levite temple singers. Rechabite cult personnel are also referred to in Eusebius' *Ecclesiastical History* (II.23.17). Though the scattered data are not unanimous, they do suggest that the Rechabites survived as a religious community. For a survey of late and post-biblical references see Pope 1962:16; Abramsky 1967.

[48] So, e.g., Moshe Weinfeld in a study about 'the emergence of the Deuteronomic movement' (Weinfeld 1985). The term 'movement' is to be preferred over 'school' and 'current', the one being associated with intellectualism, the other implying the absence of any organization.

[49] On the date of Deuteronomy and its original form see Loersch 1967; McCurley 1974:295-297; Preuss 1982:26-45.

the product of priests from Jerusalem; they were the brains behind the Reform of Josiah in 622 BC. Following a hypothesis first formulated by De Wette,[50] and adopted and elaborated by Graf[51] and Wellhausen,[52] most scholars believed that the Deuteronomic law (Deuteronomy 5-26, 28) was identical with 'the book of the law' allegedly 'found', but actually written, under the reign of King Josiah (2 Kings 22:1-20). The principal reason for the identification is the cult centralization which Deuteronomy propagated and Josiah carried out. Since Josiah's reform can be dated in 622, the Book of Deuteronomy (or rather its core) must have been composed shortly before. Its authors were sought among the clergy of the Jerusalem temple on the principle of *cui bono*: they seemed to be the principal ones who stood to gain from the reform. In its own days, this classical tenet of critical scholarship was quite revolutionary, since it assumed that the Mosaic paternity of the book was a fraud—however pious the intentions of its authors.

Since the 1920s, however, an increasing number of authors have argued, on the basis of the content of Deuteronomy, that the book has Northern roots.[53] The arguments which the proponents of the Ephraimite interpretation offer in support of their thesis are quite diverse. They point to the religious importance attached to Mount Ebal and Mount Gerizim (Deuteronomy 11:26-32; 27; cf. Joshua 8:30-35),[54] and identify the underlying tradition as stemming from the Northern Kingdom.[55] They observe that the ideas and terminology of Deuteronomy betray affinity with those of the Ephraimite Book of Hosea.[56] They draw attention to the homiletic tone of Deuteronomy, which they interpret as the written reflection of the preaching of groups of Levites.[57] These, as various scholars have argued, were Levites from the North.[58] Several authors detect congeniality between the Deuteronomic ideal of kingship (Deuteronomy 17:14-20) and the Northern theocratic ideology.[59]

And in the train of these arguments, scholars have adduced a multitude of minor considerations all pointing to the North as the place of origin of the Deuteronomic ideology.[60]

Not all of these arguments are equally convincing; some of them, however, bear considerable weight. The special mention of Mount Ebal and Mount Gerizim does not fit a Judahite origin; nor can the resemblance of ideas and terminology between Deuteronomy and Hosea be easily brushed aside. When the one observation is added to the other, the sum-total of arguments in favour of a Northern origin of Deuteronomy amounts to compelling evidence.[61] It is supported by the absence of some typically Judahite tenets, such as the role of the Davidic dynasty and the dogma of Zion's inviolability.[62] In fact, the entire design of the book bears the mark of an Ephraimite ideology. The book is in large measure a pseudepigraph, since it presents itself as a valedictory address by Moses spoken on the eve of the entry into the Promised Land. The ideological framework of the book, then, depends on the Ephraimite Moses tradition. The presence of the exodus motif, coupled with the notion of Israel's election (familiar from the Book of Hosea), is another indication to the effect that Deuteronomy had its roots in the Northern Kingdom.

The fact remains, however, that there is a close connection between Deuteronomy and Josiah's reform.[63] Though the thesis of a complete identity between Deuteronomy and Josiah's book of the law has lost the general plausibility it once seemed to have,[64] no one denies the Deuteronomic spirit of Josiah's reform or the Josianic spirit of the Deuteronomic programme: the book and the reform reflect a similar focus on Jerusalem as the place 'which Yahweh will choose' as the one centre of legitimate worship. The special role reserved for Jerusalem would seem to invalidate the claim that Deutero-

---

1959:33; Lindblom 1971:50-52.

[60] Thus, e.g., some of the historical perspectives and geographical horizons noted by Nielsen 1978; the demythologizing of the ark, for which see Lindblom 1971:52-53 (with relevant literature mentioned in n. 63). Weinfeld 1985:83-84 points to the condemnation of astral worship and the polemics against angel worship. Various authors observe similarities in outlook and phraseology between Deuteronomy and the Elohistic strata in the Pentateuch, e.g., Hempel 1930:139.

[61] *Pace* Bächli 1962:181-206, esp. 203-206, who makes a case for the ideological and topographical origin of Deuteronomy in Judah.

[62] See Lindblom 1971:52-53.

[63] On the relationship between the two see Robinson, D. W. B. 1951; Lohfink 1963; Rowley 1963a:161; Clements 1968:18-25; Lindblom 1971; Lundblom 1976; Dietrich, W. 1977; Preuss 1982:1-12.

[64] An obvious example concerns the position of the Levites in the Jerusalem cult. According to Deuteronomy 18:6-8 Levites were free to go to Jerusalem and serve in the temple; in the report of Josiah's reform, however, Levites were compelled to go to Jerusalem and had no right of priesthood (2 Kings 23:8-9).

nomy originated in the North. Why should Ephraimites preach a religious programme from which the Judahite clergy stood to benefit in the first place? To suggest that Deuteronomy 12:1-7 is an 'addition to the original code' because it seems to contradict the hypothesis of Deuteronomy's Northern origin merely proves that partiality to a hypothesis is a peril to the faculty of sound judgment.[65] In view of its emphasis on cult centralization, the Book of Deuteronomy was in all likelihood conceived and written in Jerusalem. Also judging by its language, 'the origin of Deuteronomy was more likely in Jerusalem than in the country.'[66]

It has become clear in the course of this chapter, however, that Deuteronomy's Northern roots are not incompatible with its being conceived and written in Jerusalem. The apparent conflict between the two postulated origins of Deuteronomy dissolves once the book's intellectual authors are identified as descendants of the refugees from the North.[67] They were migrants, of the second or third generation perhaps, but still aware of their Northern roots. Like the Rechabites, they had to find an identity amidst a religious culture that was both like and unlike their own. The Book of Deuteronomy can be viewed as their attempt to provide the later generations of Ephraimite exiles with a new identity. Rooted in the spiritual milieu of the Levites and the prophets,[68] the Deuteronomists sought to transform the traditional patterns of Israelite family religion into a personal devotion to Yahweh as the national god. They promoted the written law as the focus of a national identity. The new national identity which they preached was to take the place of the local and genealogical identities which many Israelites had held onto until then.

The milieu in which Deuteronomy was written and transmitted can be circumscribed and defined with greater precision on the basis of an analysis of some of the book's central sections and leading ideas. The composition and structure of the book are a first lead; they show that the authors saw themselves as standing in the Mosaic tradition. By presenting their work as a

---

65 *Pace* Welch 1924:194.

66 Lohfink 1976:229.

67 So Cazelles 1966:821; Nicholson 1967:94 ('... Deuteronomy originated among a northern circle who fled south to Judah after the destruction of the northern kingdom in 721 B.C. and there formulated their old traditions into a programme of reform and revival which they intended to be carried out by the Judaean authorities'); Clements 1968:22-23; Nebeling 1970 (for which see Preuss 1982:40); McCurley 1974:312.

68 So Weippert, H. 1981:92 n. 40, who stresses the involvement of prophets *and* Levites. Many other authors mention just one of these two groups, cf., e.g., Nicholson 1967:76, according to whom Deuteronomy derives ultimately from 'the teaching of the prophetic party in northern Israel'. The distinction between Ephraimite Levites and Ephraimite prophets was never very sharp, though. See on their connection Chapter Twelve.

farewell address of Moses they claimed Mosaic authority; he was their founding father. The link between the Deuteronomic movement and Moses is dealt with, somewhat covertly, in a crucial passage about the authority of prophets (Deuteronomy 18:15-22).[69] Having set out the dangers of fortune-telling and necromancy, the Deuteronomists give a characterization of the true prophet:

> Yahweh your god will raise up a prophet from your midst,
> from among your brothers, one like me;
> To him you shall listen.
> Just as you asked of Yahweh your god,
> at Horeb on the day of the assembly:
> 'I cannot bear to listen to the voice of Yahweh my god,
> nor continue to see this great fire, lest I die.'
> And Yahweh said to me: 'They are right in what they say;
> I shall raise up for them a prophet from among their brothers, one like you.
> And I shall give my words in his mouth,
> and he shall speak to them all that I command him.'
>
> Deuteronomy 18:15-18

Though later traditions have understood these verses as a Messianic prophecy, their original meaning is iterative. They have Moses predict that God will periodically raise up a prophet 'like him', that is, a prophet whose behaviour and functions are like those of Moses.[70] This is not one Messianic figure, but a series of prophets, holding the Mosaic authority, who will continue and complement Moses' work.[71]

Formulated as a *vaticinium*, the text about the Mosaic prophets is in fact a self-reference of the authors of Deuteronomy designed to legitimize their work: because they were prophets 'like Moses', they were entitled to speak and write in Moses' name. This is a case of a literary work producing its own credentials. A similar phenomenon is found in the Gospel of John, whose author has Jesus announce the coming of the Holy Spirit who will bring to remembrance all that Jesus once said (John 14:26). The implicit claim is that every word the author put into Jesus' mouth was brought to his

---

[69] See Seitz 1971:306. Seitz ascribes Deuteronomy 18:9-16 to the hand of the Deuteronomic compiler of the earliest collections of laws who was active around 700 BC, and had his roots in the prophetic orders of the Northern Kingdom (Seitz 1971:306-308). Others have qualified Deuteronomy 18:15-22 as secondary, see, e.g., Eissfeldt 1976[4]:300; McCurley 1974:305; Fohrer 1979[12]:189. It should not be overlooked, however, that Deuteronomy 18:9-22 closes a larger unit running from 16:18 to 18:22; it is arbitrary to single out one portion as secondary on account of the special value attached to Moses. In fact, the role of Moses as father of the prophets is well attested in the Ephraimite tradition. For a fuller discussion see Wilson 1980:157-166.

[70] Wilson 1980:162.

[71] Nicholson 1967:77; Perlitt 1971:597.

memory by the Spirit. In both cases, the problem concerns the authority of human words; having no such authority in themselves, they must win the acceptance of the community of believers by a reference to an undisputed authority as their ultimate author. In the vision of the Deuteronomic movement, Moses was invested with such undisputed authority. By their appeal to him as spiritual ancestor, they pretended a connection that might be illusory from a historical point of view, but which they certainly perceived as real.

The Deuteronomic movement produced a law code as a focus of identity. By tracing its origins back to Moses, they continued and transformed a tradition of centuries. One of the first defenders of the Northern origin of Deuteronomy wrote that 'the Deuteronomic code is the outcome and one expression of that religious and national movement which rose in Benjamin and Ephraim, and which in its beginning is associated with the personality of Samuel.'[72] The religious traditions in the North were more diversified than this quotation suggests. By their appeal to the Mosaic tradition, including their use of the exodus motif, the Deuteronomists betrayed their affinity with the Levitical orders. This affinity explains, too, why they displayed such special interest in the right of the Levites to serve as priests at the central shrine (Deuteronomy 18:6-8). On the other hand, the qualification of Moses as a prophet is evidence of their connection with the prophetic orders led by such men as Elisha. In a previous chapter the close links between these prophetic orders and the Levitical orders has been pointed out.[73] The Deuteronomists were indeed the heirs of these Israelite orders. The Cycle of Elijah narratives, written and transmitted in these very circles, shows that literary activity was part of their tradition. It is this aspect in particular which the Deuteronomists continued to cultivate.

The promotion of the law of Moses as a focus of identity is coupled in Deuteronomy with a strong and systematic opposition against the traditional forms of Israelite family religion. The cult of the ancestors is combated by the prohibition to offer sacrifices to the dead (Deuteronomy 26:14) or to participate in funerary rites of mourning (Deuteronomy 14:1; 26:14). Indirectly, the ban on necromancy (Deuteronomy 18:10-11) is also directed against the veneration of the dead. In a situation where the inheritance of the fathers has become inaccessible, Deuteronomy attempts to eradicate the cult of the ancestors altogether. In the Deuteronomic version of the law concerning the

---

[72] Welch 1924:206.

[73] See Chapter Twelve. It is hardly correct to say that Deuteronomy cannot stem from Levitical circles because it goes back, in the final analysis, to the prophetic party (*pace* Nicholson 1967:73-76). In the Israelite tradition, the distinction between Levites and prophets was never very sharp: such figures as Samuel and Elijah were both priests ('Levites') and prophets.

manumitted slave who wishes to stay with his master, the statues of the ancestors ('the gods', Exodus 21:6) have disappeared from the homes of the Israelites (Deuteronomy 15:17). The place of the 'memorial' (*zikkārôn*) for the dead 'behind the door and the doorpost' (Isaiah 57:8) has been taken by portions of the law written on the doorposts of the house (Deuteronomy 11:20).

The second aspect of Israelite family religion, viz. the devotion to a local patron god, is combated by the implicit designation of Jerusalem as the single legitimate place of worship (Deuteronomy 12) and by the absolute prohibition of divine images (e.g., Deuteronomy 4:16-18. 23. 25; 7:25-26). The promotion of one sanctuary at the expense of all others stigmatized all expressions of family religion at cult centres of the clan. It is based on a mono-Yahwism of which Moses is presented as the prophet. In due course it led to the imposition of a national religion as the only admitted form of religious involvement. The ban on divine statues led to a situation in which the ancient rites and symbols of family religion, once openly tolerated, were increasingly condemned to secrecy (cf. Deuteronomy 27:15).

In more than one regard, the message of Deuteronomy is one of demythologization and secularization.[74] By enlarging the realm of the profane, the Deuteronomists sought to rob family religion of its rationale. A case in point is the consumption of meat. The Succession Narrative intimates that the early Israelites were wont to celebrate an annual sacrificial meal for the lineage group in its town of origin (1 Samuel 20:6, 28-29). Deuteronomy displays familiarity with such locally celebrated family feasts. Yet it rules that the occasion does not require one to be ritually clean ('the unclean and the clean alike may eat of it', Deuteronomy 12:15.22). Animal meat is declared profane; it can be enjoyed without having been dedicated to God. Another example of secularization is the abolition of sacral courts, counterbalanced by the appointment of state judges in every city (Deuteronomy 16:18-20).[75] As Weinfeld observes, 'guilt and innocence were no longer established through sacral media but by human magistrates.'[76] In the wake of these measures the local sanctuaries, so the Deuteronomists hoped, would lose their function and eventually become obsolete.

The Deuteronomic crusade against family religion was not limited to the condemnation of the ancestor cult and the worship of 'alien gods'. In order to eradicate family religion and its attendant polytheism, a new social climate had to be created. One way in which the Deuteronomic movement sought to

---

75 Weinfeld 1972:233-236.
76 Weinfeld 1972:234.

attain this objective was by emphasizing the principle of individual responsibility. Over and against the widespread view that the *mišpāḥâ* had a joint responsibility in matters moral and religious (cf. Leviticus 20:5; Joshua 7:14. 24), Deuteronomy stresses that every man is accountable for his own sin (Deuteronomy 24:16) and that the demand for loyalty to Yahweh outweighs the call for solidarity with one's kin group and associates (Deuteronomy 13:6). This break with the traditional values of the expanded family eroded the very foundations of family religion. The Deuteronomic type of religiosity was geared to the needs of the nuclear family.

The social ideals of the Deuteronomists had important consequences for the religious position of women. Whereas the participation in religious celebrations had been limited to men (1 Samuel 9:22; cf. Exodus 23:17), Deuteronomy pictures the visit to the temple as an event involving the women of the family as well as the men ('Together with your households, you shall feast before Yahweh', 'And you shall rejoice before Yahweh your god with your sons and daughters and with your male and female slaves ...', Deuteronomy 12:7.12). The Deuteronomistic description of Elkanah's annual visit to Shiloh reflects the ideal of its authors: Elkanah makes the pilgrimage to the sanctuary in the company of his wives and children; Hannah and Peninnah receive portions of meat on the occasion (1 Samuel 1:4-5).[77] Owing to the new religious climate women had greater opportunities for personal devotion than before. Whereas formerly the man would visit the sanctuary to intercede on behalf of his childless wife (Genesis 25:21), women were now free to pray for offspring themselves (1 Samuel 1:9-18).

Later in the history of the Deuteronomic movement, issues of authority and legitimacy became an increasing concern; hence the vigorous emphasis on the authority of the written law in the sections that were secondarily added to Deuteronomy. The fact that a later Deuteronomic editor refers to Moses as a prophet whose like has never since arisen (Deuteronomy 34:10) is immediately related to his activity as a law-giver: Moses is celebrated as the greatest prophet because he was 'the lawgiver par excellence'.[78] Owing to the law there was no longer any room for scepticism about God's commandment. Playing upon a proverbial expression about human ignorance and divine caprice, the later Deuteronomists insisted that God's command was neither in heaven nor beyond the sea. Due to its codification, it was

---

[77] The notion of Shiloh as the forerunner to Jerusalem is a classic in the Deuteronomistic ideology, see Chapter 10, n. 39.

[78] Weinfeld 1972:151. In the terminology of the Deuteronomists, the 'prophet' was no longer a dispenser of oracles but a teacher and interpreter of the law, see Perlitt 1971:598. Nicholson 1967:79 fails to take the semantic shift of the term into account.

within the reach of every Israelite (Deuteronomy 30:11-14).[79] The written law has divine authority; in this respect, the Deuteronomic narrative of the revelation of the Decalogue is a paradigm of the canonical status of the entire Book of Deuteronomy, which in a sense was the first canonical book of the Bible.[80]

The canonical value which the Deuteronomic movement attached to the written law must be understood against the background of the experience of the exile—of the Ephraimites first and the Judahites later. The Israelite refugees were a people which had lost its traditional foci of identity. The earlier symbols of identification—the homestead, the local Bamah, ancestral graves, local shrines, and national sanctuaries—were inaccessible; the refugees looked for new symbols. The Rechabites found such a symbol of identity in their code of behaviour; the Deuteronomists found it in a code of law. This was a symbol which could easily be multiplied; in the form of Tephillim, it was literally portable and transportable. Whatever the circumstances, the faithful would not be without God's words. These words could be committed to memory, to be pondered and savoured at all times and in all places. The canon could serve as a symbol of religious identity for a people in diaspora.[81]

The Deuteronomic conception of the law was not a complete innovation; the Northern Kingdom had a tradition of written laws that were attributed to Yahweh (Hosea 8:12).[82] The genius of the later Deuteronomists consisted in the combination of this tradition with the theme of the divine presence. In their vision, God himself had become accessible, not by means of an image or a holy place, but under the form of written words. Nourished by the Levitical anti-iconic tradition, the Deuteronomists made the law take the place of the icon. According to Deuteronomy 10:1-5, Moses had to put the tablets of God's law in the ark. Weinfeld interprets this passage as a reduction of the religious significance of the ark, saying that 'the holiest vessel of the Israelite cult performs, in the Deuteronomic view, nothing more than an educational function: it houses the tablets upon which the words of God are engraved ...'.[83] It is tempting to reverse Weinfeld's line of reasoning. The

[79] See Greenspahn 1994, esp. p. 35.

[80] See Clements 1968:23-25, 89-105.

[81] The role of the canon in providing an identity to the community of its readers has been particularly emphasized in the work of James A. Sanders, see Sanders 1972; 1984; 1987.

[82] One should note, in this connection, the correspondences between Deuteronomy and the Covenant Code, see Holzinger 1893:302-303; von Rad 1964:8-9; McCurley 1974:303. Lindblom 1971:54 interprets the connection between Deuteronomy and the Covenant Code as evidence of Deuteronomy's Northern roots.

[83] Weinfeld 1991:39 (which reproduces Weinfeld 1972:208).

ark owed its holiness to the fact that it fulfilled the same function for the Israelites as the divine image for the nations.[84] When it became a shrine for the revealed Word of God, its new function did not diminish its holiness; the written law had in effect taken the place of the image.[85]

The promulgation of a book as an identity symbol also had implications for the identity of the Deuteronomists themselves. If the image of the Israelites painted in Deuteronomy bears any resemblance to its authors, the latter must have liked to think of themselves as scholars ('wise men' and 'scribes' in the jargon of those days).[86] Scholarship being a form of devotion, it could be seen as the proper form of worship when God becomes accessible in a book. And when that book is a book of law, the ideal scholar is a lawyer. The Deuteronomic portrait of the ideal king is significant in this connection. Though the text echoes some of the traditional Northern tenets about kingship,[87] the portrait of the king as a legal scholar is new:[88]

> And when he sits on the throne of his kingdom, he shall write for himself in a book a copy of this law (...); and it shall be with him, and he shall read in it all the days of his life, that he may learn to fear Yahweh his god, by keeping all the words of this law and these statutes, and by doing them.
>
> Deuteronomy 18:18-19

Scholarly activities have been ascribed to kings before: Solomon was famous for his knowledge and wisdom, and Assyrian kings boasted that they had academical training and were as wise as Adapa. Yet the ideal of kingship that is presented here is unprecedented. The ideal king is a law student who does not seem to rule. The Deuteronomists apparently wanted a king who was like themselves, just as Plato wanted a philosopher for king.

The scholarly orientation of Deuteronomy is evident, too, in its emphasis on wisdom and the role of the 'wise men'.[89] A key text, in this connection, is found in the introductory section that was later added to the book. Observance of the law is presented as the highest form of wisdom:

---

[84] See van der Toorn & Houtman 1994:216-217 (with further bibliography).

[85] There is an unmistakable similarity between the devotion to the Torah in a modern synagogue service (the opening of the shrine, the display of the Torah to the congregation, and the kisses which the faithful bestow on the book) and the devotion to the divine image in both ancient and modern times.

[86] Cf. Jeremiah 8:8. There is no fundamental difference between *ḥăkāmîm* and *sōpĕrîm*, see Weinfeld 1972:158 n. 4, *pace* Brekelmans 1990[2]:36-37.

[87] Cf. Galling 1951. Clements 1968:40-42 notes an anti-Judahite edge in the Deuteronomic law of the king, since it deliberately ignores the royal Davidic ideology.

[88] Note that García López 1985:287, 296 attributes *vv.* 18-19 to an exilic or post-exilic redaction of Deuteronomy.

[89] See Weinfeld 1972:158-162, 244-319; Frymer-Kensky 1990:280-285.

> For that will be your wisdom and your intelligence in the sight of the peoples, who on hearing all these rules will say: Surely, that is a great nation, and a wise and intelligent people!
>
> Deuteronomy 4:6

The verse reflects the scribal milieu of the Deuteronomic movement, on the one hand; it presents an ideal for the Israelites as a nation, on the other. In the vision of the later Deuteronomists all Israelites are potentially students of the law. The rules and cases are meant for instruction: they are to be copied and studied, and transmitted by the fathers to their children (Deuteronomy 4:9; 6:7, 20; 11:19; 31:12-13). The piety which Deuteronomy promotes is a piety of learning, which means that the school has taken the place of the sanctuary as the true setting of devotion.

Neither the emergence of the Deuteronomic movement nor its development can be properly understood without taking into account the diaspora experience of both Ephraimites and Judahites. Though the religious orders in which the earliest Deuteronomists were rooted had developed a scholarly tradition well before the fall of Samaria (witness, e.g., the Elijah Cycle), the migration to Judah dramatically reinforced their literary orientation. In the period of Hezekiah the proto-Deuteronomists presented themselves as a new class, distinguished from its predecessors by the emphasis they put on writing.[90] The Deuteronomic identity was a scribal identity because the written word was one of the few religious symbols that survived the fall of Samaria. The exiles who wished to remain in touch with their own religious tradition had little else but the verbal reflection of that tradition to hold on to. The Deuteronomic movement made a virtue of necessity by producing a codified tradition which was presented as a Mosaic exegesis of a divine revelation.

The movement owed much of its success, also among the Judahite population, to the fact that it was congenitally adapted to the situation of a religious community in exile. Owing to the physical separation from their inheritance (where their god had his shrine and their ancestors their graves), many Israelites proved receptive to the new paradigm of religious identity that the Deuteronomists proposed. The Ephraimite migration to the South was a precedent for the Judahite exile in Babylonia; the orientation on the codified law as a symbol of identity had been feasible for the Samarian exiles; it would prove to be so for the Judahite exiles too. In fact, the core of the biblical canon was born out of the experience of the exile and the existential need for identity.[91]

Jeremiah

The Rule of the Rechabites and the Law of Deuteronomy were both attempts to create a new focus of identity in a situation where the traditional foci of identity had been lost. Jeremiah was witness to both attempts; he was in sympathy with the former, and had affinity with the latter. Yet the prophet himself was neither a Rechabite nor a member of the Deuteronomic movement. Under the influence of his personal experience, he formulated his own answer to the problem of the Israelite identity.

According to the description of Jeremiah's meeting with representatives of the Rechabites in the temple at Jerusalem, sometime around 600 BC, the prophet admired their stubborn allegiance to ancestral custom. He set the Rechabites as an example for the Judahites and the inhabitants of Jerusalem:

> Will you not accept a correction, and listen to my words?—oracle of Yahweh. The command which Jehonadab ben Rechab gave to his sons, to drink no wine, has been kept; to this very day they do not drink, because they listened to the command of their father. Now I have spoken to you without pause, but you did not listen to me. (...) Really, the sons of Jehonadab ben Rechab have kept the command of their father, which he gave them—but this people has not listened to me.
>
> Jeremiah 35:13-16

Jeremiah's admiration should not be interpreted as an endorsement of the Rechabite identity. He used the observance of the Rechabites as an example: if the Rechabites kept the command of their human father (i.e., ancestor), why could not the Judahites and the inhabitants of Jerusalem keep the commands of Yahweh whose word was far superior to that of any human father? Nothing is implied about the intrinsic value of Jehonadab's rule. Jeremiah was not a Rechabite himself: he owned a field at Anathoth (Jeremiah 32:9), and was opposed to neither house-building nor agriculture (Jeremiah 29:5).

Jeremiah's affinity with the Deuteronomic answer to the problem of the identity of the Ephraimite exiles may be inferred from a series of parallel expressions and ideas in Deuteronomy and the Book of Jeremiah.[92] Note, for instance, their common condemnation of the cult of 'foreign gods' (*ʾelōhîm ʾaḥērîm*, 18 occurrences in Deuteronomy, 19 occurrences in Jeremiah)[93] and their recognition of the need for a 'circumcision of the heart' (Deuteronomy 10:16; 30:6; Jeremiah 4:4; 9:25). Notwithstanding the

---

[92] On the relationship between the Book of Jeremiah and Deuteronomy see Cazelles 1951.

[93] The expression is also found at Hosea 3:1 and was apparently part of the vocabulary of Ephraimite prophetic-Levitical circles.

correspondences between the Deuteronomic programme and Jeremiah's message, however, the prophet cannot be reckoned a member of the Deuteronomic movement. In fact, he does not hide his disapproval of the Deuteronomic scholars.

> How can you say 'We are wise men, and the Law of Yahweh is with us'?
> —behold, the deceitful pen of the scribes has turned it into a lie.
>
> Jeremiah 8:8

Since the end of the 19th century many commentators have understood this verse as a reference to the book of Deuteronomy.[94] Though it is possible that another law code is referred to, the accusation is certainly addressed to circles that were congenial to, if not identical with, the one that produced the Book of Deuteronomy.[95] Jeremiah was at one with the Deuteronomic movement in emphasizing the importance of obedience to Yahweh's *tôrâ* (Jeremiah 6:19; 9:13; 16:11), but he loathed the self-confidence derived from the mere possession of a *tôrâ* written by human hand and attributed to Yahweh.[96]

Jeremiah's sympathy for the Rechabites and his affinity with the Deuteronomists are rooted in the Northern descent which he had in common with both groups. The superscription of the Book of Jeremiah identifies the prophet as the son of Hilkiah and as a member of one of the priestly families from the town of Anathoth in the territory of Benjamin, on the border between Judah and Israel. Though there had been Israelite priestly families at Anathoth since the days of King Solomon (1 Kings 2:26-27),[97] their number will have increased after the fall of Samaria. The career of Amos, a Judahite prophet who worked for some time at the temple of Bethel, is evidence of the possibility for religious men from Judah to exercise a ministry in the sister nation of Israel. Around the time Israel was defeated, the movement took the inverse direction. Important groups of priests from such Ephraimite sanctuaries as Bethel sought employment in Judahite temples, most notably the one in Jerusalem.

---

[94] See, e.g., Duhm 1901:88-89, who acknowledges Karl Marti as the author of this view, laid down in *Der Prophet Jeremia von Anatot*, published in 1889 (inaccessible to me).

[95] Cf. Kennett 1905:183-184.

[96] Gilbert 1981:110-112 emphasizes that the verse is directed against the people of Judah who glorified in their wisdom because they possessed the written law; the attack would not be against the Deuteronomists, but against a certain reception of their work. The same understanding of the verse underlies the NJPS translation 'Assuredly, for naught has the pen labored, for naught the scribes!' The interpretation is far from certain in view of the reference to the 'deceitful pen of the scribes' (*ʿēṭ šeqer sōpĕrîm*). If accepted, it would nevertheless imply that the prophet dissociates himself of the effects of the work of the Deuteronomists. On the interpretation of Jeremiah 8:8 see also Weinfeld 1972:158-161.

[97] Cf. Jepsen 1981:321.

An important indication of the historical impact of the priestly refugees from the North on the Judahite clergy is the fact that the post-exilic texts of Ezra (7:1-5) and the First Book of Chronicles (5:30-34; 6:35-38; 24:3.6.31) trace the ancestry of Zadok through the Aaronites. Zadok is the eponymous ancestor of the Jerusalem priesthood. Historically, there was no connection between the Zadokites and Aaron. The Zadokite priesthood had its roots in the Jebusite clergy which served in Jerusalem before the city was turned into the capital of the Kingdom of Judah.[98] Aaron, on the other hand, was the official ancestor (whether real or fictitious) of the Bethel priesthood.[99] The secondary transformation of the Zadokites into Aaronites was necessitated by the transfer of the clergy from Bethel and its affiliated sanctuaries to Jerusalem after the Assyrian invasion. Jeremiah was a descendant of these migrated priests from the former Northern Kingdom; his prophecies display knowledge of the Ephraimite traditions and a special interest for the fate of the Northern exiles (notably in the Book of Consolation, Jeremiah 30-31).[100]

The history of ancient Near Eastern religions offers various instances of migrated groups of priests. Such examples can serve as a paradigm in the light of which the migration of the Ephraimite priesthood gains a certain historical relief. Take the case of the priests from Uruk.[101] Around 1700 BC they fled to Kiš, where they continued their own traditions. They served such gods from Uruk as Ištar, Nanaya and Kanisurra. In spite of their religious orientation, they were welcomed as colleagues by the native priests from Kiš; the two groups of priests lived in the same city quarter.[102] If the Ephraimite priests met with a comparable reception in Judah, Anathoth must have been a likely place for them to settle; situated in the immediate vicinity of Jerusalem, it was a traditional place of residence for priests who worked in the Yahweh temple.[103] It may be surmised that Jeremiah and his family were descendants, not of Abiathar, but of Ephraimite priests who had come to Judah after 720 BC.[104] In later tradition, Anathoth is known as a Levitical

---

98 Cf. Rowley 1939:123 'we should recognize in Zadok the pre-Davidic priest of the Jebusite shrine in Jerusalem.' See also Mowinckel 1916:109; Bentzen 1933; Gunneweg 1965:104.

99 See Cross 1973:198-200.

100 The salvation the prophets announces concerns the Ephraimites that have repented after the fall of Samaria (see Scharbert 1981:52, with extensive bibliographical references). The oracles of the Book of Consolation were introduced and concluded by an editor who applied them to Judah (Lust 1981:131). Note also Cazelles 1981:29 '... il paraît certain qu'après sa vocation Jérémie s'adresse en priorité à l'Israël du Nord ...'

101 See 'Religious Identity in Situations of Diaspora' in Chapter Six.

102 Charpin 1986:403-415.

103 Contrast Cazelles 1981:27 'Jérémie naît dans une famille sacerdotale desservant le sanctuaire local d'une ville de Benjamin ...'

104 Though the Ephraimite connections of Jeremiah are widely acknowledged, they are

city. Its inhabitants are thereby qualified as Levites, i.e., religious personnel standing in the Mosaic tradition, the spirit of which is exemplified in the message of Elijah and Elisha.

Though Jeremiah has affinities with the Rechabites and the Deuteronomists, then, his message distinguishes him from both groups. To assess his position on the issue of religious identity we must turn to the written record of his prophecies. The book that bears his name is not a literary unit. According to the widely accepted theory of Mowinckel, the Book of Jeremiah can be divided over three sources.[105] Source A, containing the actual words of the prophet, is roughly identical with chapters 1 through 25; source B contains narratives about the prophet, perhaps written by his secretary Baruch;[106] source C consists of prose reflecting speeches of Jeremiah.[107] Though a case has been made for Jeremiah as the redactor of C[108] (in contrast to the prevailing opinion which regards C as essentially Deuteronomistic), a reconstruction of the message of prophet is best based primarily on the A sections in Jeremiah 1-25.[109] As a rule, the Septuagint of these chapters reflects an earlier stage of the book than the Masoretic text.[110]

The perusal of Jeremiah's prophecies confirms the hypothesis concerning his Ephraimite origins. Scattered through source A there are repeated references to such specifically Israelite themes and topics as the exodus and the wanderings in the wilderness. The prophet addresses his audience in the name of Yahweh who 'brought his people up (LXX ὁ ἀναγαγὼν, MT עלה hip^{c}il) from the land of Egypt' (Jeremiah 2:6; 11:7 [missing in the LXX]; 16:14; 23:7, 8).[111] As in Hosea, the period of the journey through the desert is presented as the time of Israel's innocence and devotion (Jeremiah 2:2).

---

usually explained by the fact that the territory of Benjamin (in which Anathoth was situated) was spiritually orientated toward the North, or by Jeremiah's links with the descendants of Abiathar (see, e.g., Cazelles 1981:27). Jeremiah's affinities with the Rechabites and the Deuteronomists strongly suggest that the prophet came from a family that had migrated to Judah shortly after the fall of Samaria.

105 See Mowinckel 1914.

106 Source B is found mostly in Jeremiah 26-29, 36-44. Though often ascribed to Baruch the scribe, the authorship of B is uncertain (Mowinckel 1914:30; but cf. 1946:61-62). For the seal of 'Baruch the scribe' see Avigad 1978. For a different view on the authorship of chapters 37-44 see Wanke 1971:91-133.

107 The passages ascribed to C by Mowinckel 1914:31-45 are Jeremiah 3:6-13; 7:1-8:3; 11:1-5, 9-14; 18:1-12; 21:1-10; 22:1-5; 25:1-11; 27; 29:1-23; 32:1-2, 6-16, 24-44; 34:1-22; 35:1-19; 39:15-18; 44:1-14; 45.

108 Notably by Weippert, H. 1973. See also Jepsen 1981:322.

109 The C sections in these chapters were most likely composed by Jeremiah's followers; they contain the message of Jeremiah as perceived and elaborated by his disciples (cf. Wilson 1980:233).

110 See Janzen 1973; Tov 1976; 1981.

111 On the northern background of the formula see Wijngaards 1965.

Also in consonance with Hosea, Jeremiah opposes all political solutions to the crisis of his days, whether the pact be with Assyria or with Egypt (Jeremiah 2:18). The most telling indication of Jeremiah's Northern background is his reference to Moses and Samuel as intercessors (Jeremiah 15:1). Since intercession was one of his prophetic duties, too (cf. Jeremiah 7:16; 11:14; 14:11; 37:3; 42:2, 4, 20), Jeremiah apparently thought of himself as standing in the tradition of which Moses and Samuel were the main figure-heads. There is good reason, therefore, to classify him as a prophet from the 'Ephraimite tradition'.[112]

Jeremiah's attitude toward the traditional symbols of identity offered by the various forms of family religion as they were still known by his audience is one of complete rejection. He observes that the number of gods, i.e. images of gods, matches the number of Judah's towns (Jeremiah 2:28; 11:13), and that Jerusalem has as many altars as it has streets (Jeremiah 2:28 LXX; 11:13). The idols, made of wood and stone (Jeremiah 2:27; 3:9), were addressed by Jeremiah's contemporaries as 'father' and 'mother' (Jeremiah 2:27). They apparently represented local gods believed to be the creators and protectors of their worshippers, in accordance with the time-honoured tenets of family religion. The cult of these local gods was inherited by the one generation from the other; fathers taught their sons to 'go after the Baals' (LXX 'idols', Jeremiah 9:13[14]). Devotion to such gods demanded the participation of the entire household: for the performance of the cult of the Queen-of-Heaven 'the children gathered wood, the fathers kindled fire, and the women kneaded dough' (Jeremiah 7:18[113]; cf. 44:18-25).[114]

Jeremiah combined his critique of traditional family religion with a confiscation of its terminology and concepts, to apply them exclusively to the worship of Yahweh. Yahweh is celebrated as the creator of the individual, having formed the human person in the womb (Jeremiah 1:5); under his protection, there is no cause for fear (Jeremiah 1:17, 19). Yahweh rules as *baʿal* over the Israelites (Jeremiah 3:14), giving them the rain in its season and keeping for them the weeks appointed for the harvest (Jeremiah 5:24; cf. Hosea 2:10[8]). All the blessings traditionally ascribed to the Baals are in reality from Yahweh. He is a 'strong warrior' (*gibbôr ʿārîṣ*, LXX μαχητὴς

---

112 Wilson 1980.

113 Note that Mowinckel 1914 attributes Jeremiah 7:18 to source C. It should ne noted, however, that the indictment of the Zion theology as a source of false comfort (Jeremiah 7:1-15; 26:1-15) is in entire agreement with Jeremiah's message (cf. Jeremiah 4:10; 5:1; 6:6-8, 19; 11:15). The relevant chapters probably echo the authentic voice of Jeremiah.

114 The Queen-of-Heaven, probably an epithet of Anat (see van der Toorn 1992:97), was presumably worshipped as the consort of Baal. Note that the cult of Baal could be performed on rooftops, too (Jeremiah 32:29).

ἰσχύων, Jeremiah 20:11) more powerful than any human enemy. It is particularly Jeremiah's personal laments (also referred to by scholars as his *Confessiones*) which show that the intimate relationship between the individual and his family god could also obtain between the individual and Yahweh. The prophet implied that devotion to Yahweh was to take the place of the religious pluralism which had always been a consequence of the practice of family religion.

Both the criticism of traditional family religion and the confiscation of its theology for the worship of Yahweh are familiar from the Book of Deuteronomy. A point of contrast between Jeremiah and Deuteronomy, however, concerns their respective position towards Jerusalem. In the vision of the Deuteronomic movement, Jerusalem is the unspoken place which Yahweh has chosen to make his name dwell there; there is no trace of criticism against the city. Jeremiah, on the other hand, takes a strong stance against the idle hopes that focused on the city. The so-called Zion theology, which preached the inviolability of the temple mountain and the lasting dynasty of David, had received unexpected support from the Deuteronomic doctrine of Jerusalem's election. Jeremiah never speaks of this election. On the contrary, he insists on the fact that Jerusalem's safety depends on her conversion. The temple sermon, faithfully recorded by Jeremiah's disciples (Jeremiah 7:1-15; 26:1-15),[115] at once captures and combats the deceptive sense of security of the inhabitants of the capital. According to Jeremiah, the Zion theology had inspired the population with unfounded confidence; death and desolation would not pass Jerusalem by (Jeremiah 4:10).

A comparison between Deuteronomy and Jeremiah reveals a distinct difference in tenor. The Book of Deuteronomy is animated by a spirit of patriotism. Israel is promised exaltation above all nations of the earth (Deuteronomy 26:19), and to be always at the top and never at the bottom (Deuteronomy 28:13); it will rule many nations but never be ruled by them (Deuteronomy 15:6). The fictional frame of the book supports this optimistic message: Israel is soon going to enter the Promised Land where it will live as one nation under one God. The tone which pervades the message of Jeremiah presents a stark contrast to such a mood. The prophet has been instructed 'to eradicate and to demolish, to destroy and to overthrow, to build and to plant' (Jeremiah 1:10).[116] Reconstruction (i.e., 'building' and 'planting') will

---

[115] The fact that the temple sermon is found in source C presumably means that it was spoken during a later phase of Jeremiah's career as a prophet. It may reflect Jeremiah's increasing pessimism under the reign of Jehoiakim (cf. Wilson 1980:245).

[116] The LXX has only three verbs of deconstruction (ἐκριζοῦν, κατασκάπτειν, ἀπολλύειν).

only come after collapse and deconstruction; a thorough crisis will precede the renaissance—if there will be one. Jeremiah does not foresee happy prospects: the country will be laid waste by the enemy 'from the north' (i.e., Babylonia), and the population will suffer dispersion.

Jeremiah's vision allows no salvation for Israel or Judah (or the two combined) as a nation. In so far as there is a salvation to be seen on the horizon, it will be for individual members of the nation.

> Return, O faithless children—oracle of Yahweh—
> for I myself am your lord (*bāʿaltî bākem*);
> and I will take you, one from every town and two from every family,
> and I will bring you to Zion.
>
> Jeremiah 3:14

Though the verb 'to take' (לקח) has affinity with the vocabulary of election,[117] its use here presupposes a situation of diaspora. It is Jeremiah's conviction that Judah will experience the same fate as Israel. the Fall of Samaria and the dispersion of the Israelites foreshadow the divine judgment that will be inflicted on Judah. After the crisis that Judah will have to go through, Zion will re-emerge as a place of peace, yet only for those whom Yahweh has taken and brought there.

Jeremiah's estimate that the spiritual élite will consist of 'one from every town and two from every family' is, in more than one way, significant. The parallelism between 'town' (*ʿîr*) and 'family' or 'clan' (*mišpāḥâ*) shows the virtual identity of the two notions; family religion is localist as a matter of course. By his suggestion that only one or two individuals out of every community and local kin group will be brought to Zion (which name serves here as a cipher of salvation), Jeremiah intimates the failure of family religion. If there is hope for one or two individuals only, the solidarity of the local kin group has lost its sense. Elsewhere in source A, too, the perspective of the prophet is focused on the individual. Yahweh 'searches the heart' (חקרלב) and 'tries the kidneys' (בחן כליות) in order 'to give to every man according to his ways, according to the fruit of his doings' (Jeremiah 17:10; cf. 32:19). Individualism and subjectivity coalesce in this saying. Indeed, a circumcised heart (Jeremiah 4:4) and circumcised ears (Jeremiah 6:10), metaphors of a mental disposition, are primarily qualities of the individual.

Jeremiah's focus on the individual must be understood in the light of his personal experience. The warning that one should beware of one's neighbour and put no trust in any brother (note, once again, the combination of kinship and co-residence, Jeremiah 9:4) reflects the feelings of Jeremiah in

---

117 See Seebass 1984:593.

response to the opposition he was faced with from his own kin group. He complains that his brothers (*ʾaḥîm*) and his family (*bêt ʾāb*) have deceived him; their friendliness in his presence hides enmity in his absence (Jeremiah 12:6). He suspects all his friends (*kol ʾĕnôš šĕlômî*) to be intent on his ruin (Jeremiah 20:10). A self-imposed celibacy (Jeremiah 16:2) may have heightened his sense of solitude. Jeremiah's enemies are identified in Jeremiah 11:21-23 as 'the men of Anathoth', which is consonant with their designation as members of the prophet's kin group. The reason for their enmity concerns the prophetic activities of their 'brother': they warn him by threats of death to keep from prophesying. Jeremiah's mission has turned him into an outcast (Jeremiah 15:17).

Owing to the biographical data scattered through the Book of Jeremiah, it is possible to reconstruct the contours of the conflicts which the prophet experienced in his family circle.[118] In view of the names of his relatives, Jeremiah must have been closely connected with the men behind the reform of Josiah. It is probable that Hilkiah the father of Jeremiah is identical with Hilkiah the high priest who, according to 2 Kings 22:8, 'found' the book of the law (*sēper hattôrâ*) which was used to legitimize Josiah's religious politics. Jeremiah's uncle Shallum (Jeremiah 32:7) may have been the Shallum to whom the prophetess Huldah was married (2 Kings 22:14). This Huldah, who lived in the Second Quarter (the Mishneh, 2 Kings 22:14), was consulted by Josiah in connection with his reform. The fact that the Second Quarter was built to accommodate refugees from the North,[119] supports the thesis of the Ephraimite roots of Deuteronomy—and of Josiah's reform as a matter of consequence.[120] Jeremiah's nephew Maaseiah (the son of Shallum) had a high position at the court of Jehoiakim (Jeremiah 35:4). One of his sons (and Jeremiah's cousins) was the priest Zephaniah (Jeremiah 21:1; 29:25-26; 37:3), the other was the prophet Zedekiah (Jeremiah 29:21).

Jeremiah's relatives in the temple administration and at the court were in favour of, if not actively involved in, the reform of Josiah. They belonged to the Deuteronomic movement. There is no reason to be surprised, therefore, by the evident affinities of Jeremiah's message with the programme of Deuteronomy; it is quite possible, as many authors suggest, that Jeremiah was initially a supporter of Josiah's reform along the lines of the Deuteronomic

---

118 See Wilson 1980:233-235, who refers to an unpublished paper by S. Dean McBride (234 n. 151).

119 Cf. Cazelles 1981:30.

120 Hoffmann's contention that Huldah's oracle is a post-exilic construct since the Mishneh did not exist in the time of Josiah (Hoffmann 1980:190 n. 30) is adequately refuted by Lohfink 1985:28.

programme.[121] But just as the affinity between Jeremiah and Deuteronomy can be explained in the light of the prophet's family connections, so the opposition from his family should be explained in the light of Jeremiah's rejection of the optimism of the Deuteronomic programme. It was especially Jeremiah's announcement of impending disaster for Jerusalem and its temple (Jeremiah 7:1-15; 26; 38:2-3) which must have caused his relatives to dissociate themselves from him. Since some of these 'men of Anathoth' occupied high positions in the Jerusalem establishment, their dissociation from Jeremiah reduced the prophet to the margins of society; he was eventually imprisoned (Jeremiah 37:11-16). In spite of incidental support from adherents of the Deuteronomic programme (Jeremiah 26:24, cf. 2 Kings 22:3-14), Jeremiah's rupture with the movement (and, it may be added in the same breath, his family) was definitive.

The career of Jeremiah epitomizes his message: the test of loyalty to Yahweh involves the individual; family ties are of little avail. Nor can one rely on the support of the nation as a whole. The Deuteronomic ideal of a national devotion to Yahweh alone seemed a chimera to Jeremiah. His contemporaries were far from being one in their religious commitment. Faced with the failure of family religion and national religion alike, therefore, Jeremiah posited the demand for personal obedience and righteousness. The religion he preached separated the individual from his surroundings; it was addressed to a spiritual élite amidst a *massa perditionis*—one out of every town, two out of every family. At first sight, this religion solves the problem of identity by an expansion of the personal identity of its followers at the expense of their social identity. One is defined, ultimately, on the basis of an interior disposition. As the canonization of Jeremiah's message shows, however, the austere religion of the prophet was able to create its own community—its members being related, not by blood and co-residence, but by a common commitment.

From Inheritance to Commitment

The religious impact of the Samarian diaspora in Judah is clear from the three examples studied in this chapter: the face of Judaism would have been entirely different had there not been the influx of exiles from the North in the century that preceded the destruction of the temple of Solomon. The religious heritage of Israel was incorporated in the Judahite tradition that was to give birth to the Hebrew Bible. Major elements of the Jewish faith, such as the

---

121 So, e.g., Scharbert 1981.

notion of the exodus and the role of Moses as law-giver, are ultimately Ephraimite in origin.

Rechabites, Deuteronomists, and Jeremiah all grappled to formulate their own answer to the identity crisis which their compatriots (i.e., the descendants of the Northern refugees) were facing. Though they perceived sharp differences between one another, the modern observer is struck by the common presupposition of their answers. The different identities proposed by the Rechabites, the Deuteronomic movement, and Jeremiah, share the underlying conviction that, under the circumstances, religious identity can only be constructed on the basis of personal commitment. Identity was no longer to be acquired simply by inheritance. One could be born from Rechabite parents, but in order to be a member of the Rechabites one had to subscribe to their rule. The Deuteronomic movement insisted that God had not spoken to earlier generations only, but spoke to each generation anew: it was up to each man and his house to choose which god he would serve ('Not with our fathers did Yahweh make this covenant, but with us ...', Deuteronomy 5:3). Devotion was not automatically part of the family inheritance. Just how precarious an identity based on family ties could be, finally, is exemplified in the life of Jeremiah. The prophet discovered himself alone before God; his moral solitude might be seen as paradigmatic of the experience of those who identified with his message.

CHAPTER FIFTEEN

EPILOGUE

It would be unsatisfactory to close this study without an attempt to draw some general conclusions concerning family religion and its role in the ancient Near East. The following must be regarded as a succinct statement of the principal observations that emerge from the preceding chapters. Though they apply primarily to the civilizations that have been investigated, some of them have a wider validity.

Prior to any other conclusion, we have to acknowledge the prominent place of family religion in the day-to-day experience of the people of the ancient Near East. Our sketch of the Old Babylonian family religion was based on letters, cylinder seals, records of inheritance and the like, most of them being evidence of what would be called nowadays the private life of the Babylonians. They show that alongside the public cult sponsored by the state, there was a religious life in the circle of the family which the traditional religious literature would not lead us to suspect. The vitality of religious beliefs and customs in the context of the family belies Oppenheim's assessment that 'the influence of religion on the individual, as well as on the community as a whole, was unimportant in Mesopotamia.'[1] Though the state cult may not have elicited much enthusiasm from the general population, the cult of the ancestors and the worship of local patron deities were major concerns. The absence of these themes in such an influential monograph as Kraus's study of the Old Babylonian civilization promotes a myopic vision of the Old Babylonian reality.[2]

The failure to recognize family religion as a major facet of the experience of the Babylonians entails a neglect for the social effects of that religion as well. Yet it is impossible to attain a real understanding of the Babylonians without taking into account what their religion did to them. Its effects have been analyzed in this study in terms of the construction and sacralization of identity. Through the cult of the ancestors the Babylonians did in a sense create their historical identity, just as the worship of their local gods inspired them with a sense of belonging to a specific place. To say that solidarity with the ancestors and the neighbourhood preceded its ritual celebration is not

---

[1] Oppenheim 1977[2]:176.

[2] Against Kraus 1973:135, who dismisses the theme of religion in a few phrases.

quite true. The sentiment of such solidarity does not fully exist until it takes shape in certain symbols.[3] Family religion can be seen as the complex of symbols (a term that covers beliefs and values as well as certain practices) which give substance to the identity and mutual affinity of its followers.

The practices of Old Babylonian family religion, such as the participation in local festivals and the devotion to local patron gods, occur in the popular religion of many civilizations. Processions, pageants, and assorted acts of devotion—vows, votive gifts, and demonstrations of obeisance—cater to the need for a sense of personal involvement. Such celebrations reinforce local pride and identity.[4] Also in the modern world, it is precisely such local festivals—in honour of a patron saint or in memory of a miracle—whose celebration migrants tend to continue long after they have left their native soil.[5] In consonance with this tenacity of popular tradition, it may be observed that Babylonian migrants, too, tended to remain loyal to the gods of their place of origin. In view of the role of religion in processes of identity construction, it can be said that the attachment to the religion of one's ancestors manifests the wish to preserve one's cultural identity.

The identity which Babylonian family religion was to create and maintain was primarily collective. Whereas modern individuals tend to conceive of identity in terms of distinction (one has an identity in the measure in which one differs from others), the Babylonians (like the people from Ugarit and Israel) were concerned with their identity as members of a group, be it their family, their neighbourhood, or their class. The notion of a strictly individual identity had little significance for them. The rites they performed were an assertion of the fact that they rightfully belonged to a kin group rooted in the past and extending its protection to all its members; their devotion to their god defined them as members of their local community; and their endorsement of the beliefs and values of family religion was a way of validating the beliefs and values of the social class to which they belonged. There was, in a sense, no identity outside the group, just as there was no religion outside the community. Left to himself man would be a non-entity, and his religion a private delusion.

The delicate interaction between social realities and the forms of religious life—the ones nourishing the others and vice versa—implies that transformations in society will inevitably lead to changes in religion. If religion

---

[3] Cf. Jay 1992:6-7 '... participation in alimentary sacrifice both signifies and causes membership in the group with rights to participate.' On kinship ties as a consequence of sacrificing together see also Jay 1992:41-60.

[4] Cf. Christian, W. A. 1972:61-78.

[5] See, e.g. Kenna 1977.

endorses, sacralizes and preserves the social reality, it must be attuned to that reality. Should the reality change, for whatever reason, religion will have to follow or suffer extinction—no matter how lofty or true it be. Since the reverse may equally occur (a conversion can lead to a different lifestyle), the prudent way to define the correlation is to say that there is always a correspondence between the forms of religious life and the social reality. The ultimate direction of the dependence can be decided only on philosophical grounds; a historical study such as the one here undertaken can never provide an answer to that question.

The case of early Israel is an instance in which we can follow the historical development of family religion in response to changing circumstances. In the beginning of the process, Israelite family religion was still like family religion in Babylonia and Ugarit: consisting of the cult of the ancestors and the devotion to a patron deity, it had a strongly localist orientation. The continuity between Syro-Mesopotamian and early Israelite family religion is such that one may speak of the prolongation of a Bronze Age phenomenon into the Iron Age. It is important to recognize this continuity, because it allows us to appreciate the subsequent changes of Israelite family religion. The historical development between 1200-500 BC may be summarily characterized with the phrase 'from family religion to personal devotion'. At the end of the development family religion had lost the independent status it once possessed, as it had been integrated in what might be called a national religion.

The event that initiated the process of change was the formation of the state. With the emergence of the Israelite state, the inhabitants of the Palestinian hill country were faced with a phenomenon that would have a far-reaching impact on their lives. Until the time of Saul, the religion of the local kin group had been the only religion they knew. They had no identity beyond their identity as members of the kin group. The promotion of a state religion under Saul introduced the possibility of an identification with the supra-local collectivity of the nation. As long as the nation was a dim reality, family religion continued to reign supreme. Yet as the state gradually strengthened its hold on the citizens, there arose a kind of competition between state religion and family religion, the former validating a national identity, the latter a local identity.

Most of the changes in the balance of power between state religion and family religion were prompted by the authorities. Two major moves on the part of the state may be distinguished. The first consisted of the creation of a charter myth that might mobilize a sense of national identity among the population. To this end, the priesthood of the state religion, later known under the

names of prophets and Levites, used the exodus narrative and turned it into a story of national liberation. In so doing, they transformed what may have been their private past into a national past, since some of the clergy may well have consisted of the descendants of the small group of Western Asiatics that had participated in the exodus under the leadership of Moses. Groups among the state clergy regarded themselves as Moses' successors, drawing their sense of identity and self-esteem from a historical experience that developed a growing number of mythical traits. Through the transformation of the exodus into a national myth, annually celebrated in the royal temples, the state religion offered the population a new focus of identity. The zealous propaganda of this charter myth by the Levites and the prophets proved quite effective.

The second move on the part of the state religion was an attempt at integrating family religion in the religion of state. To reach this goal the clergy followed a politics of theological identification and, under the Omrides, of cultic incorporation. By means of the identification of El with Yahweh, at an iconographical as well as a mythological level, the religion of those who worshipped El as their family god was drawn into the orbit of the state religion. Half a century later, those who had Baal as their family deity were granted a comparable recognition, not through the identification of Yahweh-El with Baal, but through the admission of Baal into the state cult. Under the Omrides, Yahweh and Baal both received a state-sponsored cult in the national temples (though Yahweh remained the patron god of the nation). The situation of religious parity was condemned by some groups among the Yahwistic clergy, but never wholly abolished in the course of the existence of Israel as an independent state.

Unlike the situation in Mesopotamia and Syria, the coexistence of family religion and state religion in Israel was never harmonious. The two were in constant competition, and it seemed only one of them would eventually survive. The difference with the Mesopotamian model is related to the presence of a climate of sophisticated polytheism in Babylonia and the absence of such a climate in Israel. The Babylonians had a tradition of integrating different gods into one pantheon in which each had his or her proper place and station reflecting the relative importance of his or her city. It must be remembered, too, that kingship was a long-standing and familiar phenomenon in the Mesopotamian civilization. In Israel, the state was a novelty, and the anti-royalist pieces of the Bible show that it took people considerable time to adjust to the new realities. In fact, the opposition against the central government never wholly subsided. Feelings of local independence could not be

eradicated; nor could family religion, which was in many ways the symbolic expression of local pride and independence.

In the end, neither state religion nor family religion could claim complete victory, because both gave way, in the aftermath of the Fall of Samaria, to a national religion that might be seen as a synthesis of the two. The genesis of this new religion was elicited by the Omride politics. The official recognition then granted to the worship of Baal provoked a strongly negative reaction from certain factions of the state clergy whose allegiance to the god of the state and to the exodus tradition was more than mere politics. Drawn from the ranks of the Levites and the prophets, the members of the incipient Yahweh-alone movement became the zealots of a strict monolatry of Yahweh, whom they worshipped as the liberator of the Israelites from the Egyptian oppression. These people became as critical of the state religion as of the various forms of local religion. The only form of family religion they wished to tolerate was family devotion in the spirit of the Mosaic tradition that they propagated.

Both the success of the Yahweh-alone movement and the triumph of national religion would have been inconceivable without the historical reality of the Ephraimite diaspora. For those who had left the former Northern Kingdom to find refuge in Judah, state religion had become a hollow phrase since the Samarian state was no longer in existence, just as family religion had become problematic since the ties with the ancestral estate (where the ancestors lay buried and the family god was worshipped) had been severed. As larger kin groups had been dispersed, the notion of family was increasingly interpreted in the sense of the nuclear family. Having lost the network of their clan or kin group, many Ephraimite expatriates began to orientate themselves to the interpretation of Israelite religion as offered by the Yahweh-alone movement. Their new identity was an identity by commitment, constructed from the debris of both the state religion and their family religion. Such men as Jeremiah, and such groups as the Rechabites, illustrate the tendencies toward sectarianism and personal choice that were alive among the Ephraimites in diaspora.

The presentation of this evidence in the form of a historical sequence could create the impression of a uniform development in the religion of Israel. The mere fact that the Rechabites, the Deuteronomists, and Jeremiah represent three different ways of dealing with the problem of religious identity is one indication to the contrary. It must be added that they do not represent all the Ephraimites in diaspora. There were also those who continued to worship their traditional family gods while in exile in Judah or Egypt; they celebrated the cult of the Queen of Heaven on the rooftops of

their private homes, or directed their devotion to such gods as Baal, Bethel and Anat-Bethel.[6] Nor can we be certain that the cult of the ancestors was collectively abandoned. The decision not to highlight those who preserved their local traditions from Ephraim on Judahite soil follows from the nature of the biblical evidence and—in immediate connection with this—the tremendous impact of the answer to the problem of identity given by the Deuteronomists. One may regret the oblivion to which much Ephraimite family religion abroad has been reduced, but one should rejoice over the understanding of the Deuteronomists which a study of the competition between family religion and state religion produces.

Did the experience of the diaspora lead to the gradual disappearance of family religion among the Israelites? If by family religion we mean the cult of the ancestors in combination with the veneration of a local deity, the answer must be affirmative. If our concept of family religion is broader than that, we should speak of a metamorphosis of that religion rather than of its disappearance. Oswald Loretz has argued that the commandment to 'honour thy father and thy mother' is an offshoot and an echo of the ancestor cult, since it links the care of the elderly with the promise of the possession of the land.[7] Approached from a comparable angle, the service at the local synagogue could be seen as a substitute for the devotion to the family god at the local 'high place', as Weinfeld suggests.[8] The substitution of the annual 'sacrificial meal for the entire clan' by the Passover dinner illustrates the fact that the family continued to be regarded as a ritual community. In the perspective of the Deuteronomists, however, the family rituals were no longer independent or locally diverse.

The transformation of the traditional family religion was profound. For those who stayed within the boundaries set by the Deuteronomists, family religion became family devotion as an expression of personal involvement in the national religion. Offerings to the dead and the worship of local gods—formerly the central elements of family religion—were classified as superstition. Owing to the new religious climate, the terms and concepts of family religion received a new interpretation. In the Second Temple Period the 'daughter of a foreign god' (*bat ʾēl nēkār*, Malachi 2:11) was no longer a girl from a different clan, but a non-Israelite. The process by which the concepts of family religion were reinterpreted and transposed to the realm of the national religion was as old as the notion of a national religion itself, but

---

[6] On the Ephraimite background of the cult of the Queen of Heaven, Bethel and Anat-Bethel see van der Toorn 1992.

[7] Loretz 1990:137.

[8] Weinfeld 1991:80.

it did not reach its conclusion until the traditional forms of family religion had disappeared.

The age between the Fall of Samaria and the Fall of Jerusalem was, in more than one respect, axial. Closing three centuries of competition between two types of religion (family religion and state religion), it is the period in which a new religion emerged. Though the crucial role in this development was played by the Deuteronomists, it must be recognized that they were the exponents of a much wider trend. To characterize the new religious climate, we may say that it emphasized the importance of a personal appropriation of the national Yahwistic tradition. The religion preached by the Deuteronomists presented this tradition as the written revelation of Yahweh, thus offering a verbal icon to a community without cult images. The Israelite identity—or the Jewish identity, for that matter—came to be canonized as the people of the book. This religion of the book was designed to take the place of both family religion and state religion, since the father in the family was to read the Torah to his son, just as the king in his palace would read the Torah to himself. From now on there would be an official religion, and all forms of religious life departing from its doctrine would be unofficial—and be referred to in later times as popular religion.

PREFACE

The present work offers translations with commentary of fifty tablets[1] from Ugarit. I had hoped that before it was complete I would have access to the new texts currently (1997) in press, in particular wishing to include the new Ilimilku text (RS 1992.2016) and other recent discoveries. Unfortunately, though Pierre Bordreuil kindly arranged for me to see the proofs of the publication they have not arrived in time to be included here. I hope that I shall be able to offer a second volume at a later date.

A work of this kind is essentially a cooperative venture. Any translator of ancient texts apart from the first will rely heavily on his colleagues, and build on their earlier efforts. I hope that my voluminous footnotes leave no conscious debts unacknowledged. My brief from Sheffield Academic Press was to justify my translations where they differ from others, and to present a short commentary, in the notes accompanying the text. At times it seems as though these have run away with the enterprise, when they exceed the amount of translated text on the page. The need for brevity has however controlled the enterprise from the beginning. Thus the reader will not find exhaustive treatment of every issue, but representative examples of the main points of disagreement among scholars, both philological and text-critical on the one hand, and hermeneutical and exegetical on the other. I hope that on the scale from dull pedantry to readability, both in translation and annotation, I have approximated to the latter end of the range, and that this has not been too much at the expense of accuracy and faithfulness to the original.

Ugaritologists will lament the appearance of yet a further edition of the Ugaritic texts, in parallel with the continued comparative neglect of the Akkadian and Hurrian texts from Ras Shamra, which are equally deserving of a wider dissemination than the specialist periodicals. My

1. KTU 1.2 iii is treated separately, and one Akkadian text (RS 20.24) is included among the pantheon lists.

own professional concern with Religious Studies teaching has made my involvement with the present repertoire a labour of love. But I know my limitations. It is also the case that in terms of the academic effort devoted to Ugaritic studies, the overwhelming proportion has been on the part of biblical scholars, theologians and religious studies specialists. What may with some justice be considered a disproportionate emphasis is therefore simply a fact of life. It is the primarily religious texts from Ugarit which are bound to stimulate the greatest interest and attention.

A few people deserve special thanks. First among these is Wilfred Watson, who not only read the text at various stages of its composition, but pointed me to numerous further references, and enabled me to provide more substantial justification for my own position in a number of cases. At times he corrected my wilder speculations, while at others he encouraged me in the presentation of a new point of view. Peter Hayman has also been immensely encouraging, offering a number of useful criticisms and observations. Graeme Auld, Annie Caubet, Pierre Bordreuil, John Gibson, Jean-Marie Husser, Ted Lewis, Jeffery Lloyd, Dennis Pardee, Hédwige Rouillard-Bonraisin, Steve Wiggins, and Marguerite Yon should also be mentioned with gratitude for their continuing encouragement, supply of unsolicited offprints and hospitality. It goes without saying that my wife Betty is owed an incalculable debt for her patience and encouragement, for my academic colleagues will appreciate only too well the burdens I am likely to have placed on her through the shortcomings of the twenty-five hour day. She feels that she has lived with my beloved Canaanites for years, and all she wants to do now is get away to the Pyrenees!

For the second edition I have made a number of minor corrections, included four translation changes of substance, and incorporated some recent bibliography. I have kept additional annotation to the minimum.

INTRODUCTION

For a couple of centuries archaeologists have been painstakingly digging away among the many ancient mounds of the Near East, and startling the world with their discovery of spectacular treasures, such as the royal graves at Ur, the alleged (but spurious) walls of Jericho from Joshua's time, the Dead Sea Scrolls from Qumran and the tomb of Tutankhamun.

Discoveries such as these have stimulated the lay imagination to a remarkable extent. Less spectacular is an equally painstaking and detailed endeavour carried on seasonally at important sites, and throughout the year in universities and museums, analysing the more down-to-earth but more representative survivals from the past: ancient pots, broken walls, twisted scraps of metal, and above all, from the drier parts of the region, papyri and clay tablets.

Clay was a universal medium for writing throughout Mesopotamia, and for a shorter period in the second millennium in parts of Anatolia, Syria and Egypt (as witness the Amarna letters, and archives from Ebla, Hattusas, Alalakh and Ugarit). A sharpened reed could easily impress early forms of writing, known as cuneiform from its wedge-shaped impressions (Latin *cuneus*, a wedge) upon a damp lump, which when fired in the kiln gave a permanent (and unfalsifiable) record. Writing developed initially from pictographs, which illustrated the commodities, livestock or persons with which the earliest records were concerned. Pictographic writing is found in Egypt and Mesopotamia from a very early period. But it could be developed in interesting ways, for instance by the use of the phonetic values of the things portrayed to denote the same phonetic value in other contexts. Writing developed quite differently in Egypt and Mesopotamia. In the former land, the pictographic system developed in fits and starts, always maintaining its 'hieroglyphic' character, since its use in monumental contexts such as tomb inscriptions became as much a work of art as of recording sacred texts. The development of flattened papyrus stalks into a kind of paper

led to the use of reed and quill pens and ink, and this different medium allowed three media for writing in Egypt: the fully-developed hieroglyphic script continued in use for important documents, a cursive, called hieratic, developed for more routine use, and a late development, demotic, continued down into the common era.

In Mesopotamia, the earliest writing was developed, using clay and stylus as the means, to record the ancient language Sumerian. As in Egypt, it was pictographic in origin, but the character of the medium led to an increasing stylisation and abstraction, as pictures were developed into conventional arrangements of wedges whose similarity to the original pictures grew ever more tenuous. The outcome was a complex system of ideograms and syllabic signs, which grew more remote from its origins in being adapted to record an unrelated language, Akkadian (the umbrella term for the Semitic languages Babylonian and Assyrian). In being written syllabically, Akkadian was cumbersome. It meant that a student scribe had to learn hundreds of signs denoting all possible permutations of consonants and vowels, together with considerable numbers of surviving ideograms, determinatives and other scribal aids. But as a medium it was of great use to us, because it has now, through the work of archaeologists, left us with a rich treasure of literature, in addition to the more mundane but very useful documents illustrating features of everyday life. Writing opens the door to history, in its sense of a record of the past, and our knowledge of the history of the region grows apace.

The region of western Syria and Palestine never formed a cultural or political unity, as happened with the surrounding areas. Egypt to the south, Anatolia to the north, and Mesopotamia to the east, for all their vicissitudes, formed coherent blocks which periodically interfered with, dominated and ravaged Syria, the dispensible periphery, the buffer zone, to the great powers. Because they never formed a great empire, the peoples of Syria do not at first glance have the same prestige for the modern surveyor of the scene. And yet they bequeathed perhaps the most important of all cultural forms to subsequent history, alphabetic writing.

The history of the alphabet is complex, both inherently, in that different experiments were being tried at various times and places, and because of the scantiness of the surviving record. The Egyptians developed an alphabet by the time of unification (*ca* 3100 BCE), but it remained embedded in a welter of ideographic, polyconsonantal and

determinative forms. Proto-Sinaitic, a script found in Egyptian industrial workings of the second millennium in the Sinai, adapted these forms in a primitive way to inscriptions in a Semitic language, and is often credited as the primary source of the later Phoenician script which, by way of Greek and Roman adoption and adaptation, formed our modern western alphabet. But to the north an intriguing experiment was being tried in the middle of the second millennium on the Syrian coast. The technique of cuneiform writing was adapted to an early cross between a much simplified syllabary and an alphabet.[1] It made do with only thirty signs, each generally used to represent a consonant with a following vowel. Except for the guttural aleph, which had three forms distinguishing three following vowels, none of the vowels was specified, but was to be understood from the context, as in modern Hebrew or Arabic. In effect it was an alphabet. This 'alphabetic cuneiform' is not itself a direct ancestor of later alphabets, being an adaptation to cuneiform technology of the so-called 'Proto-Canaanite' scripts, themselves related to the Proto-Sinaitic script, but its development was certainly part of the intellectual process. While short inscriptions in alphabetic cuneiform have been found from scattered sites in the Levant as far south as Beth Shemesh, the overwhelming bulk of the tablets so far discovered come from Tell Ras Shamra, the site of the ancient city of Ugarit.

Ugarit was one of many cities from the ancient world which lived on as a remote memory in other ancient texts discovered by archaeologists, but which no one expected to rediscover. A farmer ploughing his field near the tell at Ras Shamra, on the Syrian coast, in 1928, dislodged with his ploughshare the top of a stone-built tomb which turned out upon inspection to be of Mycenaean type. That is, it pointed to the cultural pattern known to us from the Mycenaean Greeks. A French archaeological team under the initial direction of Claude Schaeffer began excavations, which apart from the war years have continued ever since. Tablets were discovered in the first season and deciphered by two scholars independently—Hans Bauer and Charles Virolleaud—with great rapidity. What has emerged over the following decades is a perfect microcosm of ancient Mediterranean culture. The origins of human settlement on the site date back as far as the sixth millennium, but its heyday was in the Late Bronze Age (*ca* 1550–1200 BCE), from which

1. On the debate between 'alphabet' and 'syllabary' in the early simplified writing systems see Swiggers (1984).

period all the writings so far discovered are to be dated. These are in no less than seven languages[2]—Akkadian, Cypro-Minoan, Egyptian, Hittite (both hieroglyphic and cuneiform), Hurrian, Sumerian, and Ugaritic, the last language hitherto unknown, but turning out to be indirectly related to early Hebrew. Here we are evidently in contact with one of the great international cities of the day, with diplomatic and commercial contacts stretching vast distances, and through the discovery of texts, the corpus of surviving Canaanite (later Phoenician) writings has more than doubled.

Many of the tablets from Ugarit are unromantic trade lists, lists of personnel, for tax or levy purposes, diplomatic and personal letters, and these contribute to our understanding of the management of daily life, the social and economic structure, political events and so forth. One curious flurry of letters in Akkadian reveals a court scandal, in which a queen has apparently been caught *in flagranti delicto* and is sent packing, which may have ended up with the queen being thrown into the sea.

The religious texts from Ugarit are of particular importance. Many of them are humdrum enough: they merely list how many sheep or oxen are to be sacrificed on which days of the month to which deities. But others reveal the inner life of the people. In Akkadian are a number of compositions belonging to the 'wisdom' genre, familiar to readers of the Hebrew Bible in Job or Proverbs. In Ugaritic there is a group of mythological texts relating the fortunes of Baal, the storm-god, two stories (folktales may be the least controversial designation) relating to King Keret and Aqhat son of Danel, and a number of shorter compositions of a mythological, ritual, hymnodic or composite character. While these do not immediately betray the personal foibles or cares of their authors, they are invaluable in our attempts to probe into the real concerns of the people of Ugarit. What kind of religious experience did they have? What did they understand their myths to be saying? Were the folktales ever more than just good stories? These questions have provoked lively discussion among scholars, and many of these issues are nowhere near resolution.

Apart from continuing discussion on the genre of the various texts, there are the problems of translation. Some while ago (November 1992) I heard a speaker on BBC Radio 4's 'Farming Today' state that 'an art is a science with more than seven variables'. When we turn to Ugaritic

2. 'Nine languages and/or writing systems': Pardee (1997b: 264).

poetry perhaps we may suggest that translation is an art with more than seven variables. The variables which are in operation in the present undertaking are the following:

1. What is written on the tablet? That is, what do *I*, the individual trying to make sense of it, think is written on the tablet?
2. What do other scholars say is written on the tablet?
3. Is what is written on the tablet a correct text, or has the scribe made any of the usual errors (simply misspelling,[3] such as by mishearing a guttural, dental or sibilant, miswriting his letter by adding too many strokes or writing too few, omitting a consonant or whole word, misremembering the fixed sequence of a formula, or practising homoioarchton, homoioteleuton, haplography or dittography)?
4. Once we have established a consonantal text, sometimes having to make a choice between two or more reasonable possibilities, are there too many word-dividers, too few, or are any displaced or misread (e.g. has a large one been confused with *g* or *ʿ*)?
5. What are we to do with gaps in the text? Determination of how many letters are missing in a given lacuna will obviously have a bearing on the mutual relation of those words which survive on either side of a gap. Are we, moreover, to adopt a minimalist, a maximalist or a middle-of-the-road strategy with regard to reconstruction?
6. Once we have established an agreed text, perhaps with a little cautious reconstruction according to minimalist criteria, and with isolation of each word, what are we to make of the vocalization problem, given that we do not know how Ugaritic was pronounced, despite the apparent confidence of some of our peers, and that for any group of say, three consonants the arrangement can involve variables on two levels, firstly the sequence (cvcvc, cvcvcv, cvccv, and rarely ccvcvc where the first consonant may carry *šᵉwa*, e.g. Heb. *krētîm* or *kᵉrētîm*), and secondly all the possible range of vowels that can fit into this pattern?

3. Richardson (1973: 3) estimates that in KTU 1.6 between 3 and 4% of the words are spelt wrongly, 'a disturbingly large percentage'.

7. At a third level how are we to identify the part of speech on the basis of decisions at level 6, which will determine the syntax of the sentence?
8. Again, once individual words have been isolated, how are we to translate them? Do we presuppose a northwest Semitic basis (which will involve Aramaic, Phoenician and Hebrew cognates)? When do we turn instead to Akkadian, and even, for purposes of comparison, to Egyptian, Ethiopic, Epigraphic South Arabian, or Arabic, Mycenaean Greek, Hittite, or even Sanskrit?
9. The bulk of the material treated in this anthology is in poetry. What weight then are we to give to prosodic factors, which have a bearing on syntax, the grouping of words, the sense of words and so on, and in what degree is this process to be carried on in reverse?
10. Though all scholars fight for their integrity and independence, there is nevertheless a convention that previous scholarship is taken into account. Thus a dialectic is established between all previous work and each new contribution, and the proponent of a new view is obliged by academic etiquette to justify departure from agreed principles or results that have achieved a consensus. The range of views entertained by one's colleagues, past and present, can be quite startling, as perusal of some of the footnotes will show. How is one to sift the claims and counter-claims? Should one be bold (even bloody, bold and resolute!) or always err on the side of caution?
11. New discoveries continually turn up new evidence which has to be taken into account, on the linguistic, literary and archaeological levels, and the discipline of Ugaritic studies itself is in a dialectical relationship with Assyriology, Hittitology, Egyptology, Aegean and biblical studies. Some publications appearing during the preparation of this study have involved modifying my comments, changing my position and at times altering the translation.

Without wishing to labour the point, I think I have shown that we have gone beyond art, with at least eleven variables! To all the disciplinary skills required, we have to add the new translator's own intuition, and in any work that pretends to serious scholarship, a balance between the minutiae of all the philological and other technical issues outlined

above, and a concern for readable English. (That makes thirteen variables!) And no doubt the list could be extended. Too many translations are the work of specialists who in straining to be faithful to the ancient original, torture the language of translation most painfully. This is not a charge I would lay against any of the main contributions to Ugaritic translation work which are cited extensively in the following pages, though some curious infelicities have occasionally arisen. But the idiomatic and stylistic demands of two languages from different families can frequently be hard to reconcile.

At any level of operation each of these factors is having a direct influence on all the other factors, and at times it is a matter of juggling with so many balls in the air at once that it is a daunting task indeed to dare to pronounce anything new, and yet one hesitates to follow the consensus. Intuition remains the final arbiter.

These compositions, apart from the sacrificial lists, are written in verse. Many of the technicalities of Ugaritic prosody still elude scholars, but the most striking feature is also the one most familiar to readers of the Hebrew Bible: the use of 'parallelism', in which the content of one line (or colon) is repeated or developed in slightly different words in a second or more lines, forming double, triple or larger units (bicola, tricola and so on). In translation it is impossible to recapture the subtleties of style which use the possibilities of traditional forms such as these. Alliteration is used to great effect, word-order is very fluid (not quite as confusing as Horace) and is deliberately used to achieve chiastic patterns, or to reserve a key word for use as a climax. While scholars frequently have great difficulty deciding which of several cognate words is being used in a given context, it is often evident that the poets are deliberately punning, or playing on phonetic or semantic associations.

One of the features of the northwest Semitic language group, to which Ugaritic belongs (along with Hebrew, Aramaic, Phoenician, etc.), is the way in which the language builds on basic lexemes, commonly of a triconsonantal form, and then attaches various prefixes or suffixes (or both) to build up the particular word in context. The lack of vowels in Ugaritic, apart from those attached to the guttural aleph, constitutes a problem for the translator. Thus, taking the lexical element *mlk* as an example (meaning as a noun 'king' and as a verb 'rule'), the simple form *mlk* may be translated, according to context, as 'to rule' (infinitive), 'rule!' (imperative, masculine or feminine singular or

plural), 'he rules' (indicative 'qatala' form) or 'king' or 'kingship' (nouns). The form *mlkt* allows even greater variety: as a noun it means 'queen'. As a verb it means 'I rule', 'you rule', 'she rules' (all singular), 'they both rule' (feminine dual), all indicative 'qatala' form. So these two forms may be translated in thirteen different ways. Another example is the form *l*, which is generally prefixed to nouns and verbs, and may be translated as 'to' or 'from' (opposites), 'for' or 'concerning' (all attached to a noun), 'indeed' or 'not' (opposites, attached to a verb), or 'O' (vocative), that is seven meanings for one form, some mutually antonymous. I speak of 'form' rather than 'word', because while at times one word may have various meanings (polysemy), at others we undoubtedly have different words which look the same (homonymy), and which may or may not have sounded the same (homophony). These are just some of the reasons why scholars have frequently come up with radically different meanings for the same Ugaritic text. This is by no means a problem peculiar to Ugaritic, but it is compounded in this case by the quantity of unknowns surrounding the whole enterprise of interpreting Ugaritic culture. The incautious reader may be forgiven for thinking that when ten scholars have ten different views on a passage, none of them really knows what they are talking about. The reality is that it is often a wonder that any sense at all, however provisional, may be gleaned from so unpromising a starting-point. But scholarship is a cooperative and cumulative enterprise, and little by little, over the decades, a measure of consensus develops at least with regard to the less controversial passages.

Readers who consult other translations of the Ugaritic texts may be surprised and perhaps disturbed to find wide variations in interpretation of important passages, resulting in significantly different bases for overall interpretation. There are usually good reasons for this, because of the sheer obscurity of the material. We can enunciate a few basic rules which are all the more important because of the intractability of the material. A translation which simply makes nonsense in general or nonsense within the context cannot be right. A translation which ignores the demands of the literary genre cannot be right. If we are dealing with poetry, then a translation which fits the appropriate prosodic canons is more likely to be right than one which, however elegant, ignores them. Our problem in the case of Ugaritic poetry is that while we can to a considerable extent determine its canons and methods of construction, many features continue to evade us. As with the closely

related forms of biblical Hebrew poetry, we still cannot be certain whether metre determines form, and if so how it is measured. Some count syllables, others stresses, yet others words. Sense units (cola) may occur in isolation (monocola), but are more commonly set together, as we have noted, in pairs (bicola), triads (tricola), quatrains (tetracola) or even pentads (pentacola).[4] At times there is room for legitimate differences of opinion about how a given text should be analysed. There is an element of subjective judgment in this. If a translator takes a particular line, it is not that he insists that other views are wrong, but rather that of many possibilities, one strikes him as the most compelling. Sometimes it is just an intuition which is only afterwards justified in technical terms. In many cases, a choice must be made between competing and equally compelling possibilities.

Apart from all the linguistic difficulties facing translators, there is the question of the condition of the tablets. As can be seen below, there are often huge lumps missing, so that fifty or so lines of verse may be missing between two surviving sections. Even if a tablet looks superficially quite promising, a damaged surface may often leave considerable portions of text tantalisingly irrecoverable, or leave the way open for reconstruction and restoration, but at the same time offer obvious pitfalls to the unwary. Tablet 5 of the Baal series (KTU 1.5), for example, with about half completely missing, is extremely frustrating. Some of it reads with great clarity, but a portion of the surface is crazed so that some ghosts of letters peek out just below the threshold of legibility. It is tempting to propose readings in such circumstances, and often hard to acknowledge that discretion is the better part of scholarship. We face a similar problem with KTU 1.16, the third tablet of the Keret story. While much of col. i, for instance, may be read with relative ease, the surface of col. iii is pitted, cracked and crazed, making it a decipherer's nightmare. There is therefore not even unanimity of view on the text to be read, before we even begin the difficult task of making sense of it. In such a pass, it is to be wondered that scholars can even obtain sense, not that different opinions are held. With tablet KTU 1.19 i in the Aqhat story, it does not really matter whether the text is damaged or not, because scholars can still not agree what to make of it. There are as many interpretations as there are studies. This should not result in

4. A rare instance of a heptacolon is found in KTU 1.6 ii 31-35 and v 12-19 (each instance being used to restore damage in the other). The sevenfold structure draws on the symbolic value of the number seven, which represents totality.

counsels of despair, however. It simply warns us that on occasion there are limits to our tentative reconstructions of the past.

The reader may note the apparent confidence with which large sections of missing text can be restored, particularly in the longer narrative poems. This is not merely the subjective whim of translators, though some are prone to be more eager than cautious in their desire to fill in the gaps. It is evident that the poetry relies heavily on stereotyped formulae, so that some restoration is to be undertaken with some confidence. But a contentious issue is the value in offering translations of texts of which an entire half-column is missing, which do not betray evidence of such repeated formulae. Some scholars have attempted reconstructions of such passages, while others have with less justification tried to build theories of interpretation upon such conjectural enterprises. But except in a few cases where we can recognize a well-known sequence because it occurs elsewhere, the attempt at wholesale reconstruction is in my view a misleading policy, and we should learn to be content with what we have, however frustrating it is. This is not to rule conjecture out of court, but any tentative proposal must be acknowledged as such, and not paraded as entirely obvious. Many conjectures in the past have been vindicated by subsequent discoveries.

The repeated use of stock expressions is everywhere evident. Thus a character never opens his mouth in the Baal myths, but he 'lifts up his voice and cries'. Dialogue seems always to be shouted *à pleine gorge*, as though we are to envisage a dramatized version of events, in which, like the victims of a Racine tragedy, all declaim their lines so that the very gods may hear. Perhaps the gods are deaf! Whenever the gods meet together, they sit down to a feast, and the menu is generally described according to a set of stock phrases. It can be seen that this highly repetitious language does not merely copy previous accounts *verbatim* every time; there is scope for the poet to extend or curtail conventional phrases, to reverse the order of lines, to juxtapose stock phrases which elsewhere occur separately.[5] And while it is difficult to appreciate this in translation, we may imagine the poet's audience reacting with pleasure to his skill in ringing the changes of a traditional form. For this poetry is essentially oral, and bears all the hallmarks of oral literature (though some of the scribal errors that occur are of such a

5. At times the lack of conformity to a normative formula leads to no evident poetic variation, but results instead in a *non-sequitur*, and the translator is obliged to make appropriate corrections.

kind as to suggest that the surviving tablets were copied from previous manuscripts). The poet would have the bare bones of a plot, and a considerable store of fixed phrases, above all of fixed word-pairs (it is surprizing how much of this repertoire is shared with biblical poetry), and his particular virtuosity lay in unexpected combinations, in the clever use of alliteration, in the choice of the metre appropriate to the immediate context, and probably too in the skill with which he drew new meanings out of the old themes.

For we should not view the ancient poets as merely reciting old lays without variation, faithful to the last jot to a fixed, unchanging lore. If we consider the three long compositions, the cycle of Baal myths (KTU 1.1–1.6), Keret (KTU 1.14–1.16) and Aqhat (KTU 1.17–1.19), all attest the role of Ilimilku the scribe (colophons at the end of KTU 1.4 viii, 6 vi, 16 vi and 17 vi). It is probable that tablets 1–3, 5, 14, 15, 18 and 19 also had such notes of authorship. A further fragment bearing Ilimilku's name has recently been discovered (RS 1992.2016). Such a departure from the conventional anonymity of ancient literature is quite remarkable, though by no means unparalleled. No biblical book before Ecclesiasticus, written in the early second century BCE by Jesus ben Sira, is credited with an author, except by later editorial tradition. The most interesting of the notes concerning Ilimilku occurs at KTU 1.6 vi 54-58. The titles in the last line belong to King Niqmad (II). It is not clear whether the other titles are those of Ilimilku or Attanu, though probably of the latter.[6] It is also not clear whether Ilimilku is merely the amanuensis of Attanu, who among his other accomplishments and offices is also a poet of some repute, or whether Ilimilku himself is the poet, authorised or indeed commissioned by Attanu. Perhaps as the latter's student, Ilimilku is here stretching his own wings in composition, and with all the diffidence of the budding artist, acknowledges his debt to his master. This is speculation. It has even been suggested that far from merely passing on conventional ideas, Ilimilku (or Attanu through him)

6. Thus Pardee (1997c: 273 n. 283). Hallo (1997) arrived after the present study was complete. I have been through the relevant texts (Fleming 1997; Levine, de Tarragon and Robertson 1997a, 1997b; Pardee 1997c; Younger 1997) to incorporate observations where they complement or differ from my own. Pardee (1997d: 376 n. 2) notes that 'it is becoming increasingly clear that most Ugaritic texts are from the late thirteenth century', referring to forthcoming work by A.S. Dalix. Pierre Bordreuil has said the same (SBL paper, San Francisco, November 1997). Unfortunately, we need to see the evidence before we can offer an evaluation. (See now p. 146 n. 132.)

is challenging them and reflecting an age of considerable political, religious and intellectual turmoil.

We are probably justified in supposing that in the exercise of the skills of a poet, the ancient composer had a position of enormous authority in ancient Ugarit, as did the prophets, really poets, in ancient Israel and Judah, or Homer in Greece. Such men, driven by muses, who were implicitly supernatural voices 'giving' the words which the poets declaimed, and occasionally wrote down, were in effect the theologians of their age. With whatever freedom the poet spoke or sang, his words were words of authority. Indeed, the only way in which the gods could talk was through the intermediary and interpretative mouths of their skilled agents. Individual poets may have contributed not a little to the shaping of the cosmology of their day, and also to changing it. Like O'Shaughnessy's poets, they were indeed the movers and shakers of the world.

For the general reader, the texts from Ugarit have three main claims to attention. Firstly, they open up one further vista in the slowly unfolding world of the ancient Near East, gradually and tentatively rolling back the frontier of prehistory as the archaeological skeleton is fleshed out with the echoes of the song and laughter of real people, no longer merely cultural ciphers (or worse still MB IIA or LB III), but individuals like Ilimilku the scribe, or the childless King Arhalbu. While Keret and Danel are, for all we know, merely literary figures, the descriptions of their emotions are not foreign to us, and reveal constants in the moral life of humanity. Secondly, we have in Ugaritic culture a direct link with Greek origins of the Mycenaean era. Indeed all the evidence suggests that before the time of Alexander contact between the Semitic and Greek worlds was very largely in a westward direction, certainly as far as areas outside the Ionian coastline were concerned. Many deities and heroes familiar to us from Greek mythology have transparent Semitic antecedents, and we meet in these the prototypes of Apollo, Andromeda, Bellerophon, Dionysus, Actaeon and Perseus, and a host of lesser figures. Thirdly, although Ugarit was destroyed *ca* 1200–1190 BCE, and the states of Israel and Judah probably arose nearly two centuries later according to current chronological convention, the linguistic and literary connections between the two areas is considerable. Indeed it is precisely the connections between the two which have inspired much of the scholarly effort devoted to Ugaritic studies. The language is generally learnt by postgraduate students with degrees in Theology

and a primary research interest in the Hebrew Bible. A knowledge of classical Hebrew is the usual course prerequisite. And in spite of the efforts of some of the ancient editors of the biblical tradition, faithfully echoed in the efforts of some of their modern counterparts, we discern the old Canaanite gods at every turn, either as rivals to Yahweh, or as contributors to the mythology used to articulate the Hebrew experience of the transcendent. Ugaritic culture, more than any other single force in the ancient world, is now generally recognized as a vital component in the cultural matrix in which Jewish, and after it Christian, thought first took shape. It therefore plays an integral part in the broad framework of European culture, which has been so profoundly influenced by these traditions.

The texts here translated are in the order in which they appear in *KTU*[2], except for the rearrangement of those pieces attributed to KTU 1.2, the reversal of the column-order in KTU 1.22 and the inclusion of KTU 1.87 immediately after KTU 1.41, with estimated gaps allowed for. The commentary element in this edition is kept to a minimum. A bald translation is of limited use to the student seeking to make sense of texts that are at times very strange to the modern reader. On the other hand, the amount of debate generated is already voluminous, and certain of the larger works are already the subject of large commentary volumes on the biblical pattern (Margalit 1989a, 1995; M.S. Smith 1994). The comments are intended to provide a basic orientation, with references to further reading. As for philological notes, my brief from the publisher has been essentially to justify my translation when it differed from others. But as anyone will discover on following up the footnotes, where there is disagreement it is often universal. To cite every authority would be tedious. My coverage has been most complete with the lesser known texts, and I have generally favoured recent discussion over older work when forced to make a choice on grounds of space.

This edition of the texts has already expanded considerably beyond my original brief from Sheffield Academic Press, nearly tripling in size. I have therefore kept bibliographical references to a minimum. Many more authorities could have been cited, and readers will find many further references in the sources to which I refer. To my critics I concede that some of my sins of omission are deliberate. My debt to all my colleagues in Ugaritic studies will be evident at every turn, for translation is essentially a collective enterprise. I am happy to acknowledge the

debt, and hope that I have offended none by misrepresentation. It goes without saying that any errors of judgment are my own. Offer a fat ram to Baal on my behalf!

A note on translation conventions: I have attempted to give a fluent English version, which at times means translating the Ugaritic idiom into an English one. Where this threatens to misrepresent the Ugaritic I have explained it in a footnote. The following signs are used: words in English which correspond to no Ugaritic word but which are necessary for good English are given in parenthesis: (...). Words which parallel instances of formulaic usage lead us to expect in the Ugaritic, but which for no obvious good reason are missing, so that it can be laid at the door of scribal error, are shown thus: <...>, and other small-scale omissions, such as the odd letter from a word, are similarly treated. Missing text, which can with reasonable confidence be restored on the basis of parallel usage in other texts, is bracketed thus: [...]. I have avoided too great a freedom with regard to reconstruction of missing text. A small exclamation mark in Ugaritic words indicates instances where individual letters may be read as scribal errors, for example, *lbd*ˡ*m* for *lbum*. When it is tempting to restore a given word, but certainty is simply impossible, the word is followed by a small question mark, for example, Saphonʔ. The same sign is used in instances of hesitant translation. The brackets {...} are used to identify text which I believe should be omitted, as in instances of dittography.

All references to line numbers are to the KTU numbering system. Since I have given numbers only for every fifth line, where the marginal number identifies the line of the translation in the course of which the Ugaritic text-line begins, it may at times appear imprecise. But I take it that those following up discussion of translational nuances will be working with, hopefully, *KTU*^{2} to hand, so that identifying text should be relatively easy. Footnotes appear on both sides of punctuation marks. The principle I have observed is to put notes to individual words immediately following them. Those following punctuation marks deal with the entire preceding colon or bi- (tri-)colon.

Smith 1986a, 1994* (KTU 1.1–1.2 only at time of writing); Pardee 1988b, 1997c*: 241-74; Bordreuil and Pardee 1993a; Lloyd 1994; Herr 1995; Wyatt 1996b: 134-58, 1997, 1998a, 2001b; M.S. Smith in Parker 1997, 81-176*. (* indicates comprehensive translation.)

Frequently treated as a single composition (but see van Selms 1970, del Olmo 1983a, Meier 1986; cf. Pardee 1997c: 245 n. 34), the narrative of texts KTU 1.1–1.6 falls into three natural parts, reflected in the division in the present volume, treating respectively the antecedents of Baal's combat with Yam and culminating in the fight (1.1–1.2), the problem of the acquisition of a palace temple for Baal (1.3–1.4) and the confrontation between Baal and Mot (1.5–1.6). Other episodes appear to be interwoven with this (notably Anat's activities in 1.3), and texts outside the 'cycle' (KTU 1.7–1.13, 1.83, 1.92, 1.93, 1.117 and 1.133) have a loose connection, some being evidently scribal exercises. De Moor (1987: 1-2) also considers KTU 1.101 to be a fragmentary prologue to

the entire cycle, which is quite possible in principle, though its orthography immediately distinguishes it from tablets which can certainly or possibly be attributed to Ilimilku, and the present tablet, whatever its provenance, is probably a scribal exercise. But the modern reader should be cautious in view of the natural tendency to link traditions in order to provide them with some coherence. Scholars are not immune to this tendency.

This mythological material, and in particular the conflict of Baal with Yam, has important affinities with Hittite, Greek, Mesopotamian and Israelite–Judahite material, and is evidently one recension of a widespread and important tradition (see in particular Fontenrose 1959 and Forsyth 1987 for the comparative material), now traceable back to third millennium traditions concerning Tishpak, god of Eshnunna (Durand 1993; Bordreuil and Pardee 1993a; Lewis 1996c; Wyatt 1998a) and their putative Amorite antecedents. Early Sumerian traditions also provide a tantalizing, though probably indirect, background. Attempts to demonstrate a seasonal allegory as the basis of interpretation (all the early interpreters, but most comprehensively Gaster [1950, 1961] and de Moor [1971a, 1987]) have proved groundless. See Grabbe (1976) and M.S. Smith (1986a). This is not to deny a seasonal dimension to the Ugaritic cult, to which allusion may be found in KTU 1.6 iv 13-14, for instance, and in the various ritual calendars. It is however to reject the interpretation of the Baal myths as a literary construction outlining or even directly reflecting a ritual programme. The roots of the material appear to lie rather in royal ideology (Wyatt 1996b, 1998a, with regard to KTU 1.1–1.2). But as the biblical parallels show, mythic material of such ubiquity and power must have communicated complex meanings regarding cosmic management and the warding off of chaotic powers. Following the lead of Klengel (1969: II, 340, 343; 1992: 130) and Dietrich (1996: 38) I have suggested (1998a) that the entire composition of KTU 1.1–1.6 in its present extended form owes something to the need of King Niqmad II[1] (whose claim to the throne may have been in doubt)[2] for legitimization. Ilimilku may have woven a number of

1. On the problems of identifying the various Niqmads, and the problem of how many there were, see nn. 5 and 7 at KTU 1.113 and nn. 2 and 23 at 1.161.

2. Not too much should be built on circumstantial evidence. Klengel notes that Niqmad II uses Yaqaru's dynastic seal. This certainly points to his desire to build on the prestige associated with Yaqaru, and implicitly points to his own different genealogical antecedents. Whether this constituted a usurpation as such, or merely

loosely connected elements together to produce an epic poem on the king's behalf. This in turn would explain the stylistic differences and discontinuities which scholars have noted, if his overall contribution was essentially editorial, and even in his own composition indebted to the *Vorlage* of previously diverse materials. The analysis of Petersen and Woodward (1977), demonstrating the way in which the Baal-Mot conflict mirrors the Baal-Yam conflict, and is therefore arguably structured according to its template, is also of great interest, although since it is based on the surviving material only, its results remain provisional, like so much else concerning the meaning of the tradition. It should be noted that at least fifty per cent of the estimated content of KTU 1.1–1.6 is missing. This must have a significant bearing on matters of interpretation, varying from strophic analysis to larger-scale hermeneutics. The existence of scribal exercises citing fragments of the material (KTU 1.7, 1.8, 1.117, 1.133?) suggests a larger canon of tradition that was in use in the schools. I have a sneaking suspicion that KTU 1.10, dealing with the sexual relationship between Baal and Anat, may have belonged logically within the broad narrative at some point between KTU 1.3 and 4 (cf. Wyatt 1988a). But I would not wish to press the point. Its present form, on a tablet written on one side only, precludes its direct involvement within a longer series, at least in so far as a sequence is involved. It is also possible that it is to be related rather to events in KTU 1.5 v. But see now Wyatt (2001b).

Synopsis of the Narrative

KTU 1.1–1.2: Baal and Yam

1.1	i	———
	ii	Embassy from El to Anat...
	iii	Embassy from El to Kothar, who comes from Crete... (summoning deities to Yam's coronation?).
	iv	Declaration by El of Yam's royal status, and his coronation.
	v	Baal arrives, complains (?).
	vi	———
1.2	iii	Kothar is instructed by El to build a palace for Yam. Athtar's claim that he has no palace (temple) is dismissed ('KTU 1.2 iii b').

some other intricate manoeuvring such as has often accompanied royal successions down the ages, it is impossible to say with precision. We could speculate for ever!

iii a* (Three possible missing
iii c* columns—at least one
iii d* preceding surviving section.)[3]

1.2 i Yam sends messengers to the divine assembly to demand Baal's surrender. Baal reacts violently and is restrained.
ii ———
iii* ——— (unaccounted for in usual computations)[4]
iv Kothar supplies Baal with maces, with which he kills Yam.

KTU 1.3–1.4: Baal's Temple

1.3 i Feast in honour of Baal.
ii Anat at war. She fights in the valley between two towns and wades through gore, before going to a temple to perform bloody rites. She then washes.
iii When messengers come from Baal, Anat is perturbed, fearing danger to him, and insists that she had already killed Yam and his associates.
iv Anat goes to meet Baal, and says she will demand a palace (temple) for him from El, with threats.
v She comes before El, threatens him and pleads for Baal.
vi Athirat's assistant is sent to fetch Kothar.

1.4 i Kothar receives instructions and sets to work in his forge making gifts for Athirat.
ii Anat and Baal come to Athirat with them. She is perturbed until she sees the gifts.
iii Anat and Baal ask her to intercede with El.
iv Athirat goes to El, with Anat attending, and complains that Baal is a king without a palace (that is, a god without a temple).

3. Following Meier's analysis (1986), KTU 1.2 iii should perhaps be regarded as independent of the main narrative line of the rest of the material here translated. It is a parallel version, like other fragments. The surviving section, being a right-hand edge of a larger piece, must have been the second or third column of a four-column tablet. For convenience I have listed KTU 1.2 iii a*, c*, d* together. The section known as 'KTU 1.2 iii' is either iii b or iii c. For convenience let us call it iii b. The amount of missing material precludes any facile assumption of a more or less continuous narrative throughout the material now labelled KTU 1.2.

4. The text usually identified as KTU 1.2 iii in this enumeration cannot be identified with this missing column, because it is presupposed by the action of KTU 1.2 i, the first column of this four-columned tablet. See previous note.

v El accedes to her request. Anat takes Baal the news. Kothar sets to work.
vi Baal's palace (temple) is completed and an inaugural banquet is held.
vii Baal tours his kingdom.
viii Baal sends a message to Mot...

KTU 1.5–1.6. Baal and Mot

1.5 i ...who replies that since he has not been invited to the banquet, he will feast on Baal!
ii Baal behaves abjectly, and sends an obsequious reply.
iii ———
iv ———
v Baal is told to enter the underworld. En route, he copulates with a heifer which bears him a son.
vi Baal's body is found. El and Anat mourn him.

1.6 i Shapsh helps Anat recover Baal's corpse. Athtar is enthroned on Baal's throne, but comes down from it to rule.
ii Anat encounters Mot and ritually destroys him.
iii El has a vision of Baal's restoration.
iv Obscure conversation between Anat and Shapsh.
v A restored Baal fights a restored Mot.
vi The struggle unresolved, Shapsh intervenes and restrains Mot. The tablet ends with a hymn to Shapsh, and an extended colophon.

KTU 1.1–1.2: Baal and Yam

1.1 i (entirely missing: about 60 lines)

1.1 ii (fragmentary: about 60 lines: the following lines may come at any point in the column)

'...[1]

1.1 ii 1 [Grasp your spear (and) your mace,]
[ ] let your feet [hasten to] me,
[let] your legs [hur]ry [to me][2],
[ ] your message
and place [ ]
[ ] on top of your...

1.1 ii 5 [la]pis lazuli [ ]
[rai]se up in the midst of [ ]
[ ] bind
[he[3] will surely] die;
[his life-breath will go out like the wind,]
like spittle [his vitality,][4]

1.1 ii 10 [ ],
prepare [ ] to the earth[5],
[ ] for the end (of the world)[6] prepare.'

1. For the text that may have stood here cf. KTU 1.1 ii 17-23 etc. See nn. 2, 11-17 below for discussion of points raised in the formulaic passage.

2. This is part of a longer message formula appearing in a number of passages, the full list being KTU 1.1 ii 1-2, 17-23, iii 10-16; 1.3 iii 13-31, iv 7-20, 21-31. Cf. also n. 85 at KTU 1.3 vi end. There are sufficient differences between the various passages for it to remain impossible to reconstruct the present passage in full. Some editions go beyond, and others against, the evidence. On the analysis of the passage see Wyatt (1995b: 573-79).

3. I take it that the subject in this and the following line is Baal, who will have to die as rival to Yam when the latter is confirmed as king (in KTU 1.1 iv). This remains uncertain, however, in view of the poor state of the text.

4. The bicolon may be tentatively reconstructed on the basis of KTU 1.18 iv 24-25, 36-37 and 1.19 ii 38-39, 43-44. While both compositions are attributed to Ilimilku, this may well be a traditional formula describing a death.

5. Ug. *arṣ*. The term frequently has underworld connotations in mythological usage.

6. Ug. *špm*. I take it as 'end' (Heb. *sôp*). Cf. KTU 1.23.4, where it is used in a

[ ]
[ ]

Then[7]
[they set their faces towards] Inbub[8],
across a thousand courts,
1.1 ii 15 [ten thousand spaces[?]][9].

[at the f]eet of Anat [they bowed and fell down],
[they p]aid her homage[10] and [honoured her].
[They lifted up their voice and c]ried:

spatial rather than a temporal sense. May there be an inchoate eschatological sense present here?

7. Text *ilk*. Read *id ʾk*.

8. Inbub(u) is the dwelling of Anat, located somewhere on the massif of Saphon. See also KTU 1.13.9 and n. 10. According to KTU 1.100.20 she and Athtart live there. See Wyatt (1996b: 47). On Saphon, its etymologies, location (Jebel el Aqra on the Syro-Turkish frontier) and cosmological significance see Wyatt (1995a) and extensive bibliography *ad loc*. Anat is also associated with Aruru at KTU. 1.10 iii 29-30, which also appears to be part of the Saphon massif, and is probably to be linked with Anti-Casius, 'Mount Throne' of KTU 1.1 iii 12 (and n. 29). See also *nny* at KTU 1.16 i 8 and n. 200. Pardee (1997c: 243) reads this as part of the instructions to the messengers.

9. The usual formula is *alp šd...rbt kmn*, 'a thousand miles...ten thousand leagues' (as at KTU 1.1 iii 2 etc.). The term *ḫẓr* is unusual. The second colon is conjectural. I translate the latter term as 'courts' here. Elsewhere I have rendered it 'dwelling', as at KTU 1.2 iii 19 (see n. 18 *ad loc*.) and parallels. It is worth asking whether this is not a simple scribal error, so that we should instead read the usual formula as at KTU 1.1 iii 2 etc. (linear) or 1.2 iii [10]-11 etc. (area).

10. The form [*yšt*]*ḫwyn* (du.) is the only clue in this passage that there are two messengers, though confusingly it can also be read as 3 m. sg. energic. See also at KTU 1.1 iii 4. Messengers usually appear in pairs in the Baal cycle. Thus del Olmo (1981a: 163) and M.S. Smith (1994: 196-201). Caquot and Sznycer (1974: 301-303) take it to be one. De Moor (1987: 21) identifies the servant as Qadesh-and-Amurr, who appear(s) in KTU 1.4 iv, and takes the binomial name to denote one messenger. On the different nuances of the term in Ug. and Heb., according to context, see Gruber (1980: II, 90-123, 151-53, 187-200). Pardee (1997c: 243) introduces the formula 'Say to Girl 'Anatu | repeat to the sister-in-law of Li'mu' (= KTU 1.3 iii 11-12, see *CPU*, I, 525-26 for full list of occurrences of this and related formulae involving *btlt*), which does not occur in the present text, and is not to be restored. Cf. text at *CTA*, *KTU*[1 and 2]. If it is to be read, it requires to be bracketed <...>.

'Message of [Bull El your father],
[word of the W]ise One, your progenitor:
"[Bury w]ar [in the earth][11];
1.1 ii 20 set [strife[12] in the] dust[13]:
[pour a libation[14]] into the midst of the earth,
[honey from a jar[15] into the midst of the st]eppe.

11. In Wyatt (1995b: 574; 1996b: 256) I translated Ug. *qryy.barṣ.mlḫmt* as 'hollow out the damp earth', following Watson (1980: 9). Ug. *mlḫmt* derived from Akk. *luḫamum*, *luḫummu*, *luḫmu*, 'slime, mud', after Jacobsen (1976: 256 n. 332). His explanation for this term was however rejected by Lambert (1985: 189), and for a better explanation see now Ellis (1995: [esp.] 161). This throws us back on alternatives. Other main approaches are: 'Oppose war on earth': de Moor (1987: 21). Similarly Jirku (1962: 29), Ginsberg (1969: 136), Coogan (1978: 94) and del Olmo (1981a: 164). 'War upon the earth is opposed to my will': Driver (1956: 75). 'Come to me from the battlefield': Aistleitner (1964: 33). 'Place in the earth war': M.S. Smith (1994: 196). 'Put bread in the earth': Gordon (1949: 18; 1977: 78). Similarly Caquot and Sznycer (1974: 303), Gibson (1978: 51), Xella (1982: 100) and Pardee (1997c: 243, in his restored early part of col. ii). I am inclined to follow Smith in view of the fact that a specific ritual complex appears to be involved, which is probably royal in origin, and may be part of enthronement procedures. The war that is 'buried' may represent the victory of the *Chaoskampf*, appropriated by a king on his assumption of office. See Wyatt (1998a) for the context.

12. Ug. *ddym*. Parallelism requires either a synonym or an antonym for *mlḫmt*, 'war'. 'Strife': Ginsberg (1969: 136), followed here, as I think synonymous parallelism the likelier of the two. This is presumably based on the use of words (here 'love') to mean their opposites. 'Mandrakes' (cf. Heb. *dûday*, pl. *dûdā'îm*): Gordon (1949: 19) and Driver (1956: 75). 'Love': M.S. Smith (1994: 196, 203-205). 'Love-fruit': de Moor (1971a: 102; 1987: 21). 'Concord (loves)': *DLU*, I, 130 (an abstract pl.). 'Love-offerings': Pardee (1997c: 243).

13. 'Earth...dust' carry overtones of death. This supports the synonymous parallelism above: if war is given the last rites on the occasion of a royal accession (the *Sitz im Leben* of the present formula), strife should follow it into the grave.

14. Ug. *šlm*. The technical term 'communion sacrifice' is always pl. (*šlmm*). The present term appears to denote a libation. Cf. de Moor (1971a: 104). But see also Schwemer (1995).

15. Dividing *arbdd* into two words: *ar*, 'honey' + *bdd*, 'from a jar'. Similarly Gibson (1978: 51). 'Honey-like dew from a pot': de Moor (1971a: 103-104). De Moor's suggestion may be modified in the light of his 1975 note to mean, more generally, 'dew'. On the use of honey in the cult see n. 50 to KTU 1.14 ii 19. 'Rest': del Olmo (1981a: 164, 517, cf. Heb. *rābad*, Ar. *rabada*). With an evident change of mind: 'tranquillity': de Moor (1987: 21) and M.S. Smith (1994: 196, 206). So also del Olmo (1984: 153-55) and Pardee (1997c: 243). 'Multitudes of

Grasp [your spear (and) your mace][16]:

Let your [fe]et hasten [to me],
[let] your [legs hurry to me],

in the midst of the mountain,
[my divine rock,]
[Mount Saphon.]"'[17]

(some lines missing—see above)

1.1 iii (fragmentary—about 60 lines: the following lines may come at any point in the column, as in col. ii)

delightful things': Caquot and Sznycer (1974: 303). My revised view of the preceding bicolon ('Bury war... dust') suggests a possible alternative approach here in accordance with the views just noted:

[pour peace] into the midst of the earth,
[tranquillity into the midst of the st]eppe.

We would then have an allusion to a ritual which firstly buries symbolic representations of the baleful realities of war and strife, and follows it with a similar ritual burial of positive symbols. But while the burial of the first would signify their disposal, the burial of the second would signify the planting of seed for new life. Do we perhaps have here a reference to actual rituals performed at the conclusion of a war? On the other hand, I think the case is stronger for the translation above, which having disposed of symbols of discord (possibly ritual burial of weapons? Cf. discussion of ritual hoards in Wyatt 1998a), now inters concrete symbols of well-being. The ritual use of both wine and honey has a wide pedigree. M.S. Smith's (1994: 202-208) allusion to the Eg. myth of the destruction of mankind, during which Hathor's excessive zeal for slaughter is deflected by the pouring out of *ddyt*, is evocative, but is perhaps rightly viewed with some caution, as by Pardee (1997c: 243 n. 14).

16. Ug. *ḫšk 'ṣk 'bṣk*, restored here from KTU 1.1 iii 10 and parallels. Construed thus by del Olmo (1981a: 161): *ḫšk* (Heb. *ḥāśak*) 'hold, retain', *'ṣk* 'your spear' (*'ṣ*, 'tree[-trunk]' as shaft of spear: cf. the 'Baal au Foudre' stela, RS 4.427); *'bṣk* 'mace' (Eth. *'ābēṣ*, Ar. *'aḍbu* [metath.]): del Olmo (1981a: 597). 'Make haste! be resolute! hurry on!': Gibson (1978: 51). Similarly Caquot and Sznycer (1974: 303), de Moor (1987: 20-22), M.S. Smith (1994: 196) and Pardee (1997c: 244). De Moor (1971: 106, with refs. to Ginsberg and Grelot) explains as three inf. (abs.) forms with suff. This seems entirely implausible on prosodic grounds. The allusion to weapons in this royal message formula evokes the ideology of the soteriological and cosmicizing function of 'divine' weapons, discussed in Wyatt (1998a).

17. Tentative restoration from KTU 1.3 iii 29. Alternatively, 'Mount Throne', as in KTU 1.1 iii 12.

...
[Then]
[they indeed set their face(s) [18]]
<towards Kothar-and-Hasis,>[19]
[towards Egypt[20], of all of which he is god[21]]
1.1 iii 1 [Cre]te the throne of [his dwelling[22]],
[Egypt the land of his inheritance],
over a thousand miles,
ten [thousand leagues].

[At the feet of Kothar] they bowed and fell down,
they p[aid him homage and honoured him].

And they said to Koth[ar-and-Hasis],
1.1 iii 5 [they declared to Hayin,] who is the [ambidextrous[23]]
craftsman:

18. Thus the number of messengers remains uncertain. They usually travel in pairs, though, like Scottish policemen, perhaps respecting a legal convention. Cf. n. 10 at KTU 1.1 ii 16. M.S. Smith (1992: 159) and Pardee (1997c: 244) translate all this as narrative describing the messengers' journey, while de Moor (1987: 22) treats it as instructions given to the messengers in the 2 p. du. The clue to the overall sense seems to be l. 17, in which Kothar replies to the message. This would be difficult for him to do unless the message had already been delivered. And in the normal style of the text we should expect an account of the delivery. The instruction would have been in the gap preceding iii 1.

19. Conjectural restoration. Cf. similar restoration at KTU 1.4 i 13-14. See Driver (1956: 74-75).

20. Or: 'Memphis'. Ug. *ḥkpt*. This transcribes Eg. *ḥwt kȝpṯḥ*, 'House of the Ka of Ptah', denoting the Ptah temple in Memphis, an identification originally proposed by Albright (1938). See M.S. Smith (1994: 165-67, with extensive refs.) Kothar is evidently an Ugaritic form of Ptah. The form *qsr* (loan-word from WS *kṯr*) is found in Egypt as an epithet of Ptah. This latter feature partially meets the hesitation voiced by Watson (1996a). Even if Aggoula's (1990: 7) alternative etymology for *ḥkpt*, *ḥqkpt* as 'hill' (Ar. *ḥiqfa*) be accepted, this can fit Memphis as a site of the rising of the primaeval *ben*-stone (at Memphis in the form of Ptah Ta-Tenen: *tȝ-ṯnn*, 'the Rising Earth'). See also nn. 77 (at KTU 1.3 vi 6) and 83 (at KTU 1.3 vi 15-16).

21. Ug. *il klh*. For an alternative explanation see Caquot (1987: 12-13). He proposes '(*Ḥkpt*) which *il* (sc. El) measured out'. Cf. Pardee (1997c: 244 n. 19).

22. Ug. *ṯbt*. Or: 'sitting'.

23. The significance of this epithet (restored after KTU 1.3 vi 23 and occurring at KTU 1.17 v 24-25) is evident if we remember the complex symbolism of left and right in ancient thought, on which see Wyatt (1996a). Normally people would

'[Message of Bull El your father],
word of the Wise One, [your progenitor[24]]:
"[ ], Kothar,
build[25] [ ]
place in the foundry[26] [ ]
prepare in the mountain[27] a dw[elling].
1.1 iii 10 Grasp your spear (and) [your] m[ace][28];
[let your feet hasten to me,]
let [your legs] hurry to me,
[towards the mountain,]
[towards] Mount Throne[29].
For [I have] a wor[d that I would say to you],
a message that I would repeat to you:

distinguish sharply between tasks carried out with the left hand and those with the right—notwithstanding those requiring two—and the symbolic differentiation maintained, together with the cultural tendency for right-handedness to predominate, and even be rigorously enforced. The two hands here form a merism, indicating that Kothar can accomplish all tasks. His skills are comprehensive, and beyond those of mere mortals. See Wyatt 2001a: 175 (§6[20]).

24. M.S. Smith (1994: 159) renders 'scion'!

25. Text *bn*[ ] (*KTU*[2]). I take it as imper. sg. 'Builder': thus de Moor (1987, p. 22). M.S. Smith (1994: 159) omits, despite pl. 8.

26. Ug. *skt*. Tentative translation, following the suggestion of Caquot and Sznycer (1974: 304 and n. c). Cf. M.S. Smith (1994: 159).

27. Ug. *ǵrt*. Tentative translation (cf. M.S. Smith 1994: 159). We would expect pl. *ǵrm*, but this is rather the sg. use here; perhaps it is a collective for the peaks of Saphon.

28. The text picks up the messenger formula of KTU 1.1 ii 17-22 etc., but omits the opening sequence.

29. Ug. *ǵr ks*. Or: 'of my throne'. For my interpretation of this see Wyatt (1995a: [esp.] 222-24). To *ks* cf. *ksu* (Heb. *kissē'*) and also Heb. *kēs* (Exod. 17.16). See also at KTU 1.161.13, 20. This is the basis of the Gk form '*Kasion*', which also appears translated as '(Mt) *Thronos*', though the latter probably represents more specifically Ug. *nny*, Mt Nan(u), Anti-Casius, appearing at KTU 1.16 i 8. For the thematic significance of the throne in the ensuing series of myths see Wyatt (1996b: 34-44; 1996c). It is El's throne, upon which Yam, Baal and Athtar will in turn sit. While on Mt Saphon, it was no doubt identified with the throne in the city on which the kings of Ugarit were consecrated. Cf. the divine throne and royal rites in Judah: Ps. 110; 1 Chron. 28.5, 29.23. (Note that the bluff overlooking Damascus from the north is called 'Mt Qasioun'.)

[a word of tree and whisper of stone,]

the sighing[30] of the heavens to [the earth[31]],
[of the deep to the stars].

1.1 iii 15 A word unknown to me[n],
[and which the multitudes of the earth do not understand].

Come, and I shall reveal it
[in the midst of my divine mountain, Saphon[32]]."'

And Kothar-and-Hasis replied:

'[Go, go! attendants of the god(s) !]

You may delay[33],
but I shall [hurry]

[from[34] Crete] of the remotest of the gods,
Egy[pt of the remotest of the chthonian gods[35]],

30. Ug. *tunt*. In KTU 1.3 iii 24 (the same formula) it is written *tant*. *WUS* 27, §304, 'lament' (Heb. √*'ānâ* I), *DLU*, 42. Similarly de Moor (1971a: 107), Gibson (1978: 159), del Olmo (1981a: 161, 634): 'whispering'; Pardee (1997c: 244): 'conversings'. *UT* 496, §19.2507, 'rain' (cit. Eth. *tawʿan*) is unconvincing. Another possibility might be √*'ānâ* III, 'be opportune'. Cf. *taʿᵘnâ*, Jer. 2.24: 'time of copulation'. Here perhaps 'coupling of the heavens with the earth'?

31. Ug. *arṣ*. Here it carries the nuance 'underworld'. Note the chiasmus: 'heavens... earth... deep... stars' (a:b::b1:a1). 'Deep' (*thmt*, cf. Akk. *ti'amat*) represents the world-circling sea, also a symbol of the underworld. For the cosmology, broadly shared with biblical thought, see Wyatt (1996b: 19-115). M.S. Smith (1994: 160): 'Heaven... Hell... '. This is perhaps too modern.

32. Or: 'Mount Throne'? Cf. KTU 1.1 [ii 24], iii 12 and 1.3 iii 29. The latter passage suggests the restoration of *spn* here and at 1.1 ii 24. On the argument for locating the dwellings of all the gods, El included, on Mt Saphon, in spite of appearances to the contrary, see Wyatt (1996b: 36-48; 1996c).

33. Ug. *bštm*. 'Delay' (del Olmo, [1981a: 530]: Ar. *bassa*, Heb. *bôšēš*, √*bûš*, as in Exod. 32.1). 'You should depart': de Moor (1987: 23).

34. *From* Crete ('Kaphtor'), according to de Moor (1987: 23), rather than 'to'. This is required by the immediate sequel. The identification with Crete is disputed. For a further suggestion see n. 36. For M.S. Smith (1994: 160), this bicolon is not syntactically linked to the preceding.

35. 'Of the gods... chthonian gods'. M.S. Smith (1994: 160) has both as vocative in form ('Kaphtor is indeed far, O gods'), which is attractive. Ptah of Memphis, mummiform and identified with Ta-Tenen (*tꜣ ṯnn*), 'the Rising Earth', is a chthonian god.

1.1 iii 20 two layers beneath [the springs of the earth],
[three expanses of] the depths'.[36]

Then
he set [his face]
[towards the Wise One], the perceptive god,

towards his mount[ain],
[Mount Throne.]

He rolled back the tent[37] of El,
[and he entered the pavilion[38] of the King], the Father of the Bright One[39].
[At the feet of El he bowed and fell down,]

36. To the imagery of ll. 18-20 cf. that of KTU 1.3 vi 4-16. Kothar's later analogues Hephaistos and Vulcan had their workshops under volcanoes. Is *kptr* perhaps to be identified as incorporating Thera-Santorini, whose volcanic activity was only too familiar to inhabitants of the eastern Mediterranean from the MBA? Ptah too (nn. 20, 35 above) was a chthonian god, though without volcanic attributes.

37. Ug. *ḏd* (Akk. *šadādu*, *šadādu*, 'to camp': Kutscher 1986). See also Clifford (1972: 51-53). On the problems of explanation see Renfroe (1992: 97-100). See also del Olmo (1984: 156-58) and Watson (1995a: 221-22).

38. Ug. *qrš*: cf. Akk. *karāsu*, *karāšu*, 'encampment'. See previous note.

39. Ug. *šnm*. Discussion in Pope (1955: 32-33). He dismisses the possibility of *šnm* being a proper name, because the deities *ṯkmn w šnm* (the likely source) 'have a very minor, nondescript and problematic role...' On the contrary, *šnm* ('Shanimu') is to be construed as a dawn-goddess, perhaps Athirat-Shapsh as El's daughter, and possibly of Vedic origin, the pair also appearing as Kassite deities. See Wyatt (1990a: 446-48; 1996b: 45 n. 54, 227-29). For etymology see Oldenburg (1969: 32-35): Ar. *snw*, *sny*, 'shine, be exalted, ancient, old'. I have taken the first of these options (cf. Heb. *šānâ* II, BDB, 1040), as fitting in with the etymology of Shumaliya. On the phenomenon of Indic gods in the west see O'Callaghan (1948). Shanim is a dawn-goddess in origin (Vedic Uṣas), and so an appropriate daughter for El, an *alter ego* of Athirat, herself both solar and a daughter (see KTU 1.23 and notes). Far from being 'very minor, (and) nondescript' (Pope), the goddess features prominently in ritual texts, evidently with royal associations (KTU 1.40.8, 17, 25, 34, 42; 1.41.12, 15, 31; 1.65.4 [with precedence over El and Athirat!]). Various other interpretations have been offered. Bauer (1933: 82), Gibson (1978: 53), del Olmo (1981a: 165), de Moor (1987: 16 n. 83, 113): 'father of years' etc., but 'years' is usually *šnt* in Ug. Or 'Shunem' (Pope: 'whatever that may mean'). My interpretation answers Pope's question. 'Luminaries' (Ar. *sanaya*, 'gleam, shine', cf. Jas. 1.17!): Oldenburg (1969: 17-18). I find this last suggestion an attractive alternative, though were this the sense we might expect the more common *kbkbm*. See also n. 35 to KTU 1.114.19.

1.1 iii 25 he paid him homage [and honoured him].
[And] Bull El [his] father [said:]
'[ ]
...'

(4 fragmentary lines)
(some lines missing: see above)

1.1 iv (fragmentary about 60 lines: the following lines may come at any point in the column)

1.1 iv 1 '[ ]
Aloud cry[40] to those who are n[ear]
[ ] to the distant ones,
[ ] cry that
"El is seated in [[41]]
1.1 iv 5 Shame ...[42] [ ]
[ ], gods, the house of your master[43],
[ ]
who indeed goes[44] quickly into the e[arth];
[ ] into the dust.

40. Ug. *ṣḥ*. I have taken this as imper. M.S. Smith (1994: 131) takes it as 3 pl. indic. qatal. For an alternative approach to this line see next note.

41. Text *m*[ ]. It is as likely that it should be restored *m*[*ṯbh*], 'his dwelling' (though *yṯb bmṯb* might be regarded as stylistically infelicitous), as the common restoration *m*[*rzḥh*]: 'his feasting-house' (*marziḥu*), (e.g. *CTA*, *KTU*[2], Gibson [1978: 39], M.S. Smith [1996: 131]). (KTU 1.114 narrates El's feasting activities: see l. 15.) On the other hand, to l. 2 above (text: *gm.ṣḥ.lq*[ ]) cf. KTU 1.114.2: [*gm*] *ṣḥ lqṣ ilm*: 'he cried: "To the carving, gods!" '. But we cannot restore one conjecture on the basis of another. Besides, 'distant ones' invites the restoration 'near ones' (*q*[*rbm*]) in the previous colon. Thus Gibson (1978: 39). M.S. Smith (1994: 131) restores this as *lqb*[*ṣ ilm*]: 'the ass[embly of the gods(?)]'.

42. Ug. *'llmn*. 'The vizir(?)': del Olmo (1981a: 158). 'Usurper...lit. "child-of-whom?" ': de Moor (1971a: 116-17; 1987: 24 and n. 115). 'The Eternal One(?)': M.S. Smith (1994: 131). 'Eternal' (epithet of *rpum*): *DLU*, 77. Perhaps 'everlasting shame'?

43. The meaning of the words is clear, but the syntax cannot be made out. Is 'your master' (*b'lk*) Yam or Baal? If the former, perhaps these words are addressed with some irony, because of the 'misuse' of the title, to Baal.

44. If this stichometry is right, then *arṣ* is parallel to *'pr* ('earth...dust'), which would lead us to expect the verb *yrd* (*yrd arṣ*, 'die'). The following colon may be prosodically independent of this.

Muddy corruption [he gives to eat],
he gives to drink a surfeit of slime!"[45]'

He[46] took [a cup in his hand]
1.1 iv 10 a goblet in both his hands.

[ ] like grains of wheat[47],
like gravel[48] he gathered [ ]
El appointed his son regent[49],
Bull [ ]

Then the Wise One, the perceptive god, spoke[50]:
'[Yam] is the name of my son,

Lord[51] of the god[s[52] is Nahar!]'

45. This is perhaps what Yam offers his guests, almost a taste of death. Cf. Mot's diet in KTU 1.5 i 18-20. The dead eat clay in Mesopotamian tradition. Only Baal will provide real nourishment.

46. Sc. El? This is to understand the colon as narrating the beginning of the enthronement rites of Yam. On the other hand it may still be Yam (thus, for example, de Moor 1987: 25), which would answer the question posed in n. 48. See also discussion in M.S. Smith (1994: 146-47).

47. Ug. *kmll*. Thus Virolleaud (1938: 98) compared Heb. *mᵉlîlâ*, followed by Caquot and Sznycer (1974: 308 and n. j). 'Crumbs': de Moor (1971a: 116; 1987: 25). 'Scraps': del Olmo (1981a: 158). 'Pulp': M.S. Smith (1994: 132, 147).

48. Ug. *ḥṣ*. Cf. Akk. *ḫiṣṣu*, Ar. *ḥaṣātu*, Heb. *ḥāṣāṣ* (de Moor 1971a: 118; del Olmo 1981a: 548). The language is a simile. It is unclear what exactly El is gathering. But if Yam is the subject of *ytn* in l. 9, then it is presumably the mud he gives his guests.

49. Ug. *tgr*. I accept de Moor's proposal, and read <*y*>*tgr* (Dt of √*gr*: Ar. *ǧarrā*[*y*]) 'appoint a deputy'.

50. What follows requires that this be interpreted as a formal enthronement, so that Yam is to be understood as sitting on the throne, which is that of El. The incumbency by successive gods of this same throne may be seen as ideologically significant for the monarchy of Ugarit. Just as it is sons of El who are enthroned, so it is also those who are enthroned who are declared to be sons of El. Thus the ritual is in part a legitimization procedure, which would incorporate any new king, whatever his personal antecedents, into the royal dynasty, in effect concocting a royal genealogy.

51. Ug. *yw*. This is probably a Skt. loan-word (<*yau* <*dyaus*) occurring in various Near Eastern contexts, including, perhaps, the DN Yahweh. The apparent sense was 'lord', or even 'god', given the equation in BM 93035 *ilu* = *yau*. Discussion and refs. in Wyatt (1989a: 21-25). See also de Moor (1971a: 118-19) for further references to the debate, and cf. n. 217 at KTU 1.16 i 36.

52. Text *il* [ ]. The beginning of the third character is just visible, and is

1.1 iv 15 And he proclaimed the name 'Yam',
[and pronounced the name 'Nahar'?]

They responded to him:
'You shall indeed invest him[53],

[ ]
You shall proclaim him "Lord".'

[And El replied:]

'I am the Wise One, the [perceptive] god.
Over my hands I pronounce [ ]
1.1 iv 20 Your name is "Beloved of E[l"][54]
[I shall give you a] house of silver,
[a palace] out of [gold],

from the hands[55] of Valiant Ba[al]

commonly read *t*: (*il* [*t*]), *KTU*^{2} and M.S. Smith (1994: 132): *ilt* [ ]. I propose *il* [*m*].

53. Ug. *lzntn*. Construed as *l* emphatic, with *zntn* 2 sg. √*zny*, Ar. *zāna*, 'embellish, adorn', with 3 p. obj. suff. The regalia of kingship are handed over at this point. 'For our sustenance': Gibson (1978: 39; or, n. 7: 'for our adornment'), del Olmo (1981a: 159) and M.S. Smith (1994: 132, 149); similarly de Moor (1971a: 120: Akk. *zinnātu*, 'support, maintenance').

54. Through ll. 13-20 we can perhaps discern the giving of a fivefold titulary, modelled on the Eg. pattern. The new king of the gods is Yam, Nahar, 'Lord of the gods' (*yw il*[*m*]), 'Lord' (*adn*), and 'Beloved of El' (*mdd il*). On the last title and its implications see Wyatt (1985a: 120-25). Note that El himself, with a laying on of hands, transmits his royal authority to the new king (who sits on his [El's] throne). This is suggestive of the ideology behind the Ugaritic monarchy, which has close analogues in Judah. Cf. 1 Chron. 29.23; Ps. 110.1.

55. Ug. *bd*. Though Baal is Yam's successor on the divine throne, it appears from the present passage that he also had a prior claim to it, but was passed over by El in favour of Yam. There is no justification for reading any seasonal significance into this. It is rather part of the dramatic structure, and in addition indicates that a kingship of sorts is given to all four gods, Yam, Baal, Athtar and (implicitly) Mot. All are kings under the overall suzerainty of El: he is not deposed or rendered superfluous or otiose. If a case were tenable on the evidence of KTU 1.1 v (see n. 59), it would have to be balanced against the theological presuppositions of the Keret story (KTU 1.14–1.16), which presents El as the only effective divine power in support of the king (Athirat works against his interests, the other gods are conspicuous by their impotence in KTU 1.16 v, though in part this is to highlight El's own supreme power). This argument is all the stronger given the common scribal and even authorial role of Ilimilku. It is hard to credit that the same writer

Since he has scorned me [ ],
drive him from the thro[ne of his kingship],
[<from the back-rest,>][56]
1.1 iv 25 from the siege of] his dominion!

But if [you] do not [ ]
he will smite you like [ ]'

El gave a feast[57] [ ]
he proclaimed his son [ ]

1.1 iv 30 He slaughtered oxe[n and sheep]
[he felled] bulls
and [the fattest of rams]
[year-old calves]
[skipping] lambs,
[kids.][58]

would present two contradictory theologies. On the relationship of the gods' roles see Wyatt (1989b). Contrast de Moor (1971a: 116) with *idem.* (1987: 26). 'In the hands': M.S. Smith (1994: 132). To this colon del Olmo (1981a: 160) restores the pair ['from the hand of the Charioteer of the Clouds'], but there is insufficient room for this.

56. Some commentators (e.g. Gibson [1978: 39], cf. *KTU*[2] which cites KTU 1.3 iv 2-3 as parallel) also restore *lnḫt*, 'from the divan, seat', and the like: the term means '(place of) rest'; but I wonder if there is sufficient space. It should perhaps be treated as an unintentional omission (restored <...>). The three terms *ksu*, *nḫt* and *kḫṯ* commonly occur in this formula. The first and third terms are effectively synonymous (the latter Hur.); I have treated *nḫt* as a part of the throne, and *kḫṯ* as another part, the seat (here rendered 'siege'). I have according translated *nḫt* as 'back-rest'. (Note also the use of 'seat' [*ṯbt*] at KTU 1.1 iii 1 and 1.2 iii 17, where the word is ambiguous.) The basis for this distinction of parts is the construction of the throne at KTU 1.4 i 34-35, where *kḫṯ* is best understood as a part of the larger whole. If 'back-rest' should sound rather prosaic, it should be remembered that a throne with a high back would be a specifically royal or divine item of furniture, the back being a feature worthy of remark. Cf. KTU 1.6 i 60-61, where Athtar's head does not reach the top of the throne (*aps*). This must be the top of the back-rest. Cf. comment at KTU 1.4 i 33-34 n. 91. Whether the restoration is required here is a matter for debate. At KTU 1.2 iv 12-13, 19-20, the use of *nḫt* would be inappropriate, since the binomial *ym*... *nhr* controls the prosody. Cf. also at KTU 1.2 i 4. Baal is here to be driven from his throne; at KTU 1.3 iv 1-3 Anat avenges Baal against those who drove him from it; at KTU 1.6 v 5-6 he sits on it for the first time (so far as the extant text is concerned).

57. On this comprehensive use of *dbḥ*, cf. KTU 1.114.1.

58. The standard formula for a divine feast. See Lloyd (1990).

(some lines missing—see above)

1.1 v (fragmentary—about 60 lines)[59]

1.1 vi (about 60 lines entirely missing)

1.2 iii a* (putative first column of four: 1.2 iii following would have followed it, if second column of tablet)

1.2 iii[60] (ll. 1-3 illegible)[61]

59. Some scholars try extensive reconstruction of this column, a case of making bricks without straw. See, e.g., de Moor (1987: 27-28) and M.S. Smith (1994: 117-18). Others try to draw far-reaching conclusions from it, which is incautious. See, e.g., Pope (1955: 30) and Oldenburg (1969: 112-19), who use Gk and Hitt. 'parallels' to postulate El's castration and deposition. There are certainly intriguing problems and more intriguing possibilities here, but a tablet in this condition is simply unable to resolve any of them. The key parts of the text are firstly l. 9, which reads [ ]*ktasrn*, and l. 22, which reads [ ]*tasrn.ṯr il*. The two are commonly harmonized. Secondly, ll. 11 and 23 contain the term *abnm* (possibly 'stones'). Thirdly, *mtny* appears in ll. 12 and 25, and *mtnh* in l. 14. ('my/his loins'?). The first phrase Pope renders as 'they bind Bull El', which is certainly a possible, but not the only possible translation. Given the state of the column, we cannot know whether *ṯr il* is even syntactically in the same sentence as 'they (or "you", or "she") bind(s)'. The second and third may of course be understood to refer to a castration, but need not, and if they do it certainly need not be El's. Note that binding (*asr*) also appears to be mentioned at KTU 1.1 ii 7, and that Baal is placed, presumably bound, as a captive under Yam's (= El's) throne at KTU 1.2 iv 6-7. There is no question there of Baal's castration. The strongest general argument against the presence here of a myth of El's deposition is the authority he evidently continues to exercise throughout the Baal cycle of myths, where all decisions are deferred to him. He also remains the final arbiter of royal authority and destiny in the Keret and Aqhat stories. It seems that the feature of the Hitt. and Gk traditions is an Anatolian rather than a Semitic motif, though they may owe something, independently of the West Semitic material, to the primaeval traditions of Mesopotamia (such as the killing of Apsu in the *Enuma Elish*).

60. This column is independent of KTU 1.2 i, iv. Its present conventional numbering is unhelpful, to say the least. See discussion in Meier (1986). Pardee (1997c: 247-48) places it between KTU 1.2 i and iv, which is impossible as I read the text, since the events of 1.2 i presuppose those of 1.2 iii. He acknowledges (p. 241) the problem of the texts even coming from the same tablet, and offers an explanation of his procedure (p. 245 n. 34 and p. 247 n. 44). He considers the arguments of Meier (1986) inconclusive.

61. *KTU*^{2} reads [ ]r.*lrḥq*[ ] in l. 2 (cf. *CTA*, *KTU*^{1}, M.S. Smith [1994: 211], each of which is slightly different), and round it restores the formula of KTU 1.1 iii

[Then]
he[62] set his face indeed

towards [E]l at the source of the ri[vers[63]],
[amidst the springs of the two deeps[64].]

1.2 iii 5 [He rolled back] the tent of E[l]
and entered the [pav]ilion of the King, [the Father of the Bright One[65]].

[At the feet of El he bowed] and fell down,
[he] paid him homage and honour[ed him].

[Then Bull El his father spoke:]

'[Listen, O Ko]thar-and-Ha[sis]!

Depart:
build a house for <Prince> Yam,
[const]ruct a palace for Ruler Na[har]
...[66]
Depart, Kothar-and-[Hasis],
build a house for Prince Yam,

18-21 (*kptr...ġrym*): 'Crete...depths'. The *l* is the only complete letter in the first three lines! Note however that the restored formula is also followed by the journey to El's dwelling in both passages.

62. That is, Kothar.

63. The rivers will have been four in number, as in Gen. 1.10-14. This is the centre of the world.

64. Cf. Gen. 1.7 and Ps. 42.8 (Eng. 7), which allude to the same motif. Temple symbolism also placed the resident god at the centre of the universe. This is the omphalos, the place of true reality, the still centre of the turning world. El, the absolute deity, is immovable, and all the other deities revolve around him.

65. Ug. *šnm*. See n. 39 at KTU 1.1 iii 24.

66. Apparently something else is required here. Virolleaud (1944–45a: 5) read [*b*]*i*(?)*rtk*, partly followed by M.S. Smith (1994: 213, 218); *CTA* reads [ ](h/i)*r*n.w[ ], while *KTU*^{2} reads [n]h*r tk*.[ ]. But however read, it does not yield a sentence, nor obviously fit the context. Cf. the suggestion of *KTU*^{2} for l. 9 (following note). Does it belong here too? Are we to interpret the counterpoint of a temple for Yam against a temple for Baal as some echo of an earlier cult-rivalry in Ugarit? For a maritime nation a sea-god might seem as obvious a patron as a storm-god. Cf. the situation in Eshnunna, where the *mušḫuššu* dragon was at one point in the mythic narrative the patron of Eshnunna, later displaced by Tishpak. Texts in Wyatt (1998a). The Eshnunnan myth is generally agreed to be an import from Amurru. 'Palace': see n. 38 at KTU 1.12 ii 60.

[constr]uct a pala[ce for Ruler] Nahar,
[in the recesses of Saphon.][67]

1.2 iii 10 [Speedily let his ho]use be built,
[qui]ckly let [his palace be con]structed.

[A thousand square yards let the] house [take up],
[ten thousand] acres[68] the pala[ce].'

[ ]
[ ][69]

Whereupon[70]
Athtar [the royal one][71] lifted up his voice and cried:]

67. The end of l. 9 is lost. *KTU*^{2} reads u (Roman) before the lacuna (*CTA*: [ ]*ṣ*p[ ]; M.S. Smith [1994: 211]: k[ ]p°[ ]). (See Wyatt 1996b: 38 for discussion of the reading of l. 9.) The 'u' may be *ṣ*, which would fit *KTU*^{2}'s own suggestion that the expression *btk.ṣrrt.ṣpn* from KTU 1.4 v 55 should be read here. Cf. del Olmo (1981a: 166). My provisional translation reflects this suggestion. Ll. 7-9 seem to be dittographic.

68. The terms *šd*, *kmn*, are generally translated as area terms even when they are clearly used in a linear sense (e.g. KTU 1.1 iii 2). In such instances I have translated 'miles... leagues'. Here area terms are required, hence 'square yards... acres'. Metricization seems out of place! We noted above (n. 9) the anomalous KTU 1.1 ii 14[-15].

69. Ll. 11-12: very uncertain reading. Many leave untranslated. De Moor, substantially accepting the reading of *KTU* ^{1}, (so also *KTU* ^{2}), translates (1987: 36) as follows:

uṯbṯ [ym b]t bġlm	'For [Yammu] desires a house in the dark,
ḫšd nšr ymm	in the bitter field of the sea!
[b'l] bym ym ymt	Let [Ba'lu (?)] die in the deepest sea!'

This is a brilliant interpretation of this text, but whether the tablet supports this reading is another matter. For a minimalist assessment see M.S. Smith (1994: 211).

70 Text very damaged. Virolleaud (1944–45a: 2 [pl.] and 7) read *t*(?)*pk*. *CTA* (with same pl.) reads *apk*. *KTU*^{2} read pn (Rom.); M.S. Smith (1994: 211), illegible signs. The reading *apk*, if tenable, needs to be corrected to *ap*<*n*>*k*.

71. Uncertain. Cf. Gibson (1978: 37). Virolleaud (1944–45a: 2 [pl.], 6) read *dtm*(?).[ ]. *CTA* read *d*(t/m)[--], but at l. 18 read *d*(t)m[-]*k*, and suggested (p. 10 n. 6) that *dm*[*lk*] should perhaps be read, followed by Gibson (1978: 37-38: 'the possessor of kingship') and del Olmo (1981a: 166-67: 'the pretender') in both instances. *KTU*^{2}: *d* t[ ] and d[m].k×. M.S. Smith (1994: 211): d°°[ ], d[ ]k. Reading *dmlk* (lit. 'of kingship') of Athtar is a pointer to his royal ideological function, clearly emerging from KTU 1.6 i 44-67, where Athtar's enthronement is the paradigm of the human institution (Wyatt 1986a).

'[ ]
[ ] fire [ ]
[ ] carrying [ ]
[ ]
go down [ ] him'.[72]

1.2 iii 15 Then the luminary of the gods, Shapsh, [spoke] to him.

She lifted up her voice and [cried:]

'[Hear]ken, I pray, [Athtar],

Bull El your father [has sh]own favour[73] to[74] Prince Yam,
to[75] [Ru]ler Nahar.

[How will] Bull [E]l your father listen to you?

He will surely pull up the [sup]port of your seat[76];
he will surely [overturn the throne of] your kingship;
he will shatter the sceptre of your rule!'

And [Athtar], the r[oyal] one, replied:

'Bull El my father [has tak]en [it?] from me:

I have no house like [the] gods,
1.2 iii 20 no dwelling[77] like [the sons of the Holy] One[78].

72. Text very damaged. De Moor's (1987: 36) treatment is too confident. Athtar appears to intervene, presumably to complain at Yam's elevation, but details are irrecoverable.

73. Ug. [*yṯ*]*ir*. √*ṯar*, 'stand surety for', del Olmo (1981a: 167, 640; Ar. *ṯa'ara*). 'Grant his favour': de Moor (1987: 37). 'Cause table to be set', correcting *ṯar* to *ṯ'r*: *UT* 500, 505, §§19.2631, 2719; accepting *ṯar* as equivalent to *ṯ'r*: Gibson (1978: 38, 159). 'Take vengeance(?)': M.S. Smith (1994: 218) and Pardee (1997c: 247). Watson (1996a: 79-80) suggests 'be victorious' (Akk. *ša'āru*).

74. Ug. *l.pn*: lit. 'to the face of'.

75. As last. Virolleaud (1944–45a: 2 [pl.], 7) reads *ṣu*[ ]. *CTA* corrects to *l*pn. Thus *KTU*[2] and M.S. Smith (1994: 211).

76. Ug. *ṯbt*: either 'sitting' or 'dwelling'. 'Seat' carries both nuances, as well as referring to the concrete object. Cf. at KTU 1.1 iii 1 and n. 22.

77. Ug. *ḥẓr*. Preferable to 'court' (as, e.g., Gibson [1978: 38]) in this context. Cf. at KTU 1.1 ii 14 and n. 9. The previous word-pair *bt* || *hkl* now gives way to *bt* || *ḥẓr*.

78. Ug. *qdš*. This denotes El, and not Athirat. The goddess Qudshu is a modern invention. All the Eg. examples adduced in her reconstruction have the f. indicator (*qdšt*). For a list of these see Boreux (1939) and Leibovitch (1961). Del Olmo's translation (1981: 167), 'the holy ones' (so also M.S. Smith 1994: 219), highlights the translation that would be appropriate in a non-mythological context; cf. *bn*

Alone[79] I shall go down from my living condition[80].

The skilful gods[81] will wash me...[82] in the house of
[Prince] Yam,
in the palace of Ruler Naha[r]!

Bull El his father has shown favour t[o Pr]ince Ya[m],
[to Ruler Nahar.]

Shall I[83] rule, or shall I not rule?'

'Since you [have] no wife like [the gods]
[nor sacred bride[84] like the holy ones],

Prince Yam [ ]
Ruler Na[har] will be en[throned?[85]]'.

[ ]
[ ] he sent him.

1.2 iii 25 And Athtar [the royal one] replied:

'[ ]

il(*m*), mythologically 'sons of El', more generally 'gods' (and therefore equivalent to Heb. *qᵉdōšîm*, 'holy ones' = 'gods'). The term *qdš* may be abstract: 'holiness'. Cf. n. 203 at KTU 1.16 i 11.

79. Text *lbdᵘm*. (*CTA* /b-m...perhaps *lbdᵘm*, *KTU*^{2} /bdm; rather than *lbum* ('[like] a lion': M.S. Smith 1994: 219). 'Alone': Caquot and Sznycer (1974: 124 and n. o), Gibson (1978: 38) and del Olmo (1981a: 168). Reading *lbum*, Al Noori (1994: 170) proposes 'groaning' (Akk. *lābû*, 'howl'). See Pardee (1997c: 248 n. 52).

80. Ug. *bn*[*p*] *šny*. 'Into both our graves': Driver (1956: 79), also Gibson (1978: 38 and n. 5). 'In my throat' (differently construed, with succeeding words): Caquot and Sznycer (1974: 125). 'My "vomit"(?)': del Olmo (1981a: 168); 'with my desire': M.S. Smith (1994: 219).

81. The *ktrt* deal with affairs of conception and birth (KTU 1.17 ii 26-42; 1.24); it appears that male counterparts, *ktrm*, deal with death and its ritualization.

82. *KTU*^{2} reads [*yṯ*]*b* for the damaged text at this point: 'dwelling in'. *CTA*: [--]b.

83. Ug. *mlkt*. I take it to be Athtar speaking. So also Gibson (1978: 38) and M.S. Smith (1994: 220). 2 sg.: Driver (1956: 79), Caquot and Sznycer (1974: 125), del Olmo (1981a: 168) and de Moor (1987: 37), addressed to Athtar by Shapsh. 'But I am king [...] I am indeed king': Pardee (1997c: 248).

84. See n. 99 at KTU 1.2 i 13.

85. Reading *yṯ* [*ṯb*], with *KTU*^{2}. *CTA* *y*'[--]. Cf. Virolleaud's transcription (1944–45a: 11: *y*'(?)[..]. Pl.: 2 = *CTA* ii fig. 5). 'His Highness Yammu replied': de Moor (1987: 38).

...'

(perhaps 30 lines missing)

1.2 iii c* (Tablet KTU 1.2 iii is a small fragment of a larger tablet
1.2 iii d* of four columns. Column a* allowed for above)

1.2 i 1 '[ ]
[ ]
You rose up against [[86]]
[ ]'
Valiant Baal [replied[?]]:
'[I shall drive you from the throne of your kingship]
[from your back-rest,]
1.2 i 5 [from the siege of] your dominion!
[ ]
[ ]
[Expeller will strike] you on the head, [Yam[87]]
All-Driver[88] [will smite you on the skull,] Ruler Nahar!
May [Horon] smash, [O Yam],
[may Horon smash] your head,
Athtart-the-na[me-of-Baal your skull]![89]
[...[90]]

86. Del Olmo (1981a: 168) wonders whether the obj. was 'me': this would make this a dialogue between Yam, who is speaking, and Baal, who replies.

87. We might expect 'Prince Yam' (*ẓbl ym*) on the basis of the usual expression *ẓbl ym* || *ṯpṭ nhr*. But from here to KTU 1.2 iv 14, where the normal pattern is resumed, the element *ẓbl* is consistently absent. In one or two instances it would be tempting to restore <*ẓbl*>, but with ten instances in succession, it is clearly not an error, but an editorial feature, perhaps pointing to a unit with its own *Vorlage*.

88. Note that Baal (or the poet) anticipates the naming of the weapons in KTU 1.2 iv 11-23. De Moor (1987: 30 n. 126) puts this down to divine foresight.

89. This curse-formula may be restored on the basis of its use at KTU 1.16 vi 54-58, though it appears to have been an expanded form.

90. Text [ ]×*t* (*KTU*[2]; *CTA* [--]*t*, M.S. Smith [1994: 260]: °°t). The previous sign could be an *m* ([*m*]*t*). Thus de Moor (1986: 257), who also restores previous sign: [*m*]m*t*: 'place of death'. It probably belongs with missing text of l. 8, where about 9 signs are unaccounted for by restoration according to || KTU 1.16 vi 54-58.

may you fall down[91] in the pri[me of life[92],]
[(empty)-handed[93] and humiliated[94]!]'

2 i 10 The Father of the Bright One (has) two wives[95],
[ ]
Yam sent messengers,
[Ruler Nahar an embassy.]
With great rejoicing[96] they flew h[eavenwards[97]]
[ ]
their nostrils flaring[98].

91. Ug. *mṭ*. 'Down': Ginsberg (1969: 130) and de Moor (1986: 257). Cf. Rin (1968: 53) and Caquot and Sznycer (1974: 128 n. g). 'Staff' (cf. Heb. *maṭṭê*): Gibson (1978: 40) and M.S. Smith (1994: 265). Note that while the verb 'fall' here is *tpln*, in KTU 1.16 vi 57 it is *tqln*.

92. Ug. *bgb* [*l šnt*]. Lit. 'at the height of years'. The term *gbl* has two senses, probably differentiated from one √: cf. del Olmo (1981a: 531) √ I (cf. Heb. *gᵉbûl*), 'frontier', limit'; √ II (cf. Ar. *gabalu*), 'summit, mountain'. The second sense seems to be the basis of the idiom here. 'The height of your years': de Moor (1987: 30) and M.S. Smith (1994: 265). 'At the frontier of your years' (= at the end of your life? less likely): Gibson (1978: 102: KTU 1.16 vi 57-58) and del Olmo (1981a: 169). Al Noori (1994: 101) proposes explaining *šnt* by reference to Syr. *šenā*, 'great honour, authority'. Thus 'from the height of your authority'.

93. Ug. *bḥpnk*. Cf. Heb. *ḥōpen*, 'hollow of hand'. So Gibson (1978: 102), 'with your hands empty'. 'For your greed': del Olmo (1981a: 322). 'In the prime of your strength': de Moor (1987: 30). 'For thine impiety': Driver (1956: 47, 139) treating it as metath. for *ḥnp*: Ar. *ḥanafa*, 'leaned on one side'. The whole colon is restored on the basis of KTU 1.16 vi 58.

94. Ug. *ṯn*. √*'ny*, cf. Heb. √*'nh* III, 'humble, afflict' (BDB, 776). Thus Gibson (1978: 102), del Olmo (1981a: 323) and de Moor (1987: 30). 'And one will say': Jirku (1962: 21), Caquot and Sznycer (1974: 574 and n. f).

95. El's two wives, Athirat and Rahmay, hypostases of Shapsh, are the subjects of the theogony of KTU 1.23. For analysis of this see Wyatt (1996b: 224-29).

96. Ug. *b'lṣ 'lṣm*. Cs. phrase, with superlative sense. To √*'lṣ* cf. Heb. *'lṣ*.

97. Tentatively reading *šm*[*mh*]. Cf. de Moor (1987: 31). Part of the first *m* only is visible. It is strange that they should fly before receiving their instructions. Perhaps, eager to be off, they are flying up and down before their instructions are given.

98. Text *uṭ ṯbr aphm*. 'Flaring', conjectural. Cf. del Olmo (1981a: 524): 'rupture'. For *uṭ* see Rin (1968: 54) and van Selms (1970: 258-59, 'snorting'), followed by Caquot and Sznycer (1974: 128 n. j) citing Ar. *'aṭṭa*, 'groan'. De Moor (1987: 31): 'the bills of their beaks (open) to a span'. This is to see the messengers in avian form (cf. Korpel 1996, though not explicitly of this passage), while at ll. 41-42 below it seems that they are anthropomorphic. Of course a combination of

'Depart, divine assistants[99]—do not stay!
[Indeed],
set your [faces]
towards the convocation of the Council[100],
tow[ards the divine[101] mountain.]

1.2 i 15 [At the feet of El] you shall fall[102];

both forms is possible. A stela from Ras Shamra (RS 2.[038], Yon 1991: 329 fig. 9c) shows a female figure holding a spear and an obscure device, and clad in a long dress in the form of a falcon's wing. Is this a representation of a winged Anat, such as appears in KTU 1.18 iv 21 and 1.108.8-9?

99. Ug. *ǵlmm*. For general treatment of Ug. *ǵlm* and its f. counterpart *ǵlmt* see Vawter (1952). Its use in Ug. appears to be restricted to deities and royal persons, with one exception, noted below. While it undoubtedly has a basic sense of 'young person', its actual use in every instance requires that we acknowledge an ideological or theological dimension to it in such contexts. I have accordingly given a variety of translations. With minor deities, as here, who serve as messengers of the chief characters in the myth (the very prototype of angels), I translate 'divine assistants'. Gupan and Ugar appear in KTU 1.8 ii 7 to be *bn ǵlmt*, 'sons of the sacred bride', whom I earlier took to be Athirat (1985: 52 n. 29). However, this passage is to be construed quite differently, *ǵlmt* (Heb. *ṣalmāwet*) meaning 'darkness'. See n. 171 at KTU 1.4 vii 54. With Keret, who has a close relationship with El (mythologically speaking, he is his 'son': that is, as a *bn il* Keret participates in divinity), I have translated *ǵlm* as 'heir', at KTU 1.14 i 40. Cf. KTU 1.14 iii 49, of Yasib, as Keret's heir. With Hurriy, who will be Keret's queen, I have translated *ǵlmt* as 'sacred bride' at KTU 1.14 iv 41, as also of Athtar's hypothetical, but non-existent wife at KTU 1.2 iii 23 (if restored, as by Whitaker 1972: 515). The exception is at KTU 1.19 ii 28, where two anonymous characters arrive with the news of Aqhat's death. I have here translated *ǵlmm* (du.) as 'two young men', to avoid prejudging the issue of their identity. I suspect that they are probably divine messengers, however, put into the narrative as a catalytic means of informing Danel of his son's death. But there is nothing to prove this. On the significance of *ǵlmt* and its Heb. counterpart *'almâ* (used in Isa. 7.14), where, if the tradition is to be traced back to Isaiah of Jerusalem, it perhaps denotes Ahaz's pregnant queen Hepzibah, who is carrying Hezekiah, see Wyatt (1985b: 45, 52 n. 29). The phraseology of the Heb. has the same *Sitz im Leben* as KTU 1.24.7. Particularly difficult to interpret with certainty are the uses of *ǵlm*, *ǵlmtm* (m. sg., f. du.) at KTU 1.119.7 and 8, where deities so designated are the recipients of sacrificial offerings. See also KTU 1.41.25.

100. Ug. *pḫr mʿd*. Pardee (1997c: 246 and n. 37): 'the Great Assembly'.

101. In the restored text (on the basis of l. 20) reading *ǵr i*[*l* rather than *ǵr ll*. Cf. del Olmo (1981a: 572), M.S. Smith (1986b) and Wyatt (1996b: 44; 1996c: 135-36).

102. The expression *al tpl al tštḥwy* can be construed in two opposed senses:

you shall honour the convocation of the [Council]!

[Standing upright[103], you shall then spe]ak,
declaring your message.

And you shall say to Bull [your] father [El],
[declare to the convocation of] the Council:

"Message of Yam, your master,
of your lord, R[uler Nahar]:

Give up the god whom you obey[104],
the one whom you obey, Tempest[105]!
Give up Baal [and his retinue],
the Son of Dagan[106], whose gold I shall seize!"'[107]

either as negative, 'do not...' or as asseverative, 'do indeed...'. For the former see Aistleitner (1964: 48), Ginsberg (1969: 130), Caquot and Sznycer (1974: 129 n. m: 'the envoys... are invited to show insolence'), de Moor (1987: 31), M.S. Smith (1994: 265, 288) and Pardee (1997c: 246); for the latter see Driver (1956: 79), Jirku (1962: 22), de Moor (1971a: 124), Gibson (1978: 40) and del Olmo (1981a: 169). I have taken it in the latter sense, since we expect them to be truculent, yet it is Baal's behaviour in ll. 38-42 that is precipitate and outrageous, contrasting with the messengers' proper decorum. This can be viewed from two angles: either Baal is a king-in-waiting, and therefore creates law rather than obeys it, or those who are in the wrong (that is, from the narrator's perspective, the messengers of Yam) always keep on the right side of the law! Cf. following note.

103. Ug. *qmm*: adv.? The basic sense is 'rising up', thus confirming the positive interpretation of the preceding expression.

104. As king among the gods, Yam's legal right to their obedience is beyond question. It is not clear why Baal is the god whom the others obey, unless they are plotting rebellion, perpetuating an older loyalty (see n. 56 to KTU 1.1 iv 24) or already anticipating future developments. The poet and his hearers know, of course, and the tetracolon is perhaps hymnic in origin.

105. Ug. *hmlt*: Wyatt (1992a: 412-15 [§13]). Cf. Heb. *h^{a}mullâ*, 'storm', Akk. *ummilu*, 'disturber'. Other understandings: 'multitude(s)', Driver (1956: 79), Gibson (1978: 41), del Olmo (1981a: 170) and M.S. Smith (1994: 265); 'crowd', de Moor (1971a: 124; 1987: 31); 'living things', Aistleitner (1964: 49). Watson (1996a: 73) now cites Ar. *hamala* VII, 'pour down (rain)'. The form *hmlt* appearing in KTU 1.1 iii [15] and parallels is still appropriately translated 'multitudes', though the etymology may still be the same, alluding to the noise of a vast crowd of people.

106. For discussion of the title *bn dgn* see Wyatt (1980; 1992a: 408 [§6]; 1996b: 42 n. 44). I have adopted the more usual understanding in this edition. But cf. KTU 1.3 v 35!

107. For this analysis of the tetracolon, which employs four titles of Baal,

The divine assistants depart;
they do not delay.

T[hen]
1.2 i 20 they set their [faces] towards the divine mountain,
towards the convocation of the Council.

Now the gods were sitting to ea[t],
the sons of the Holy One to dine.

Baal stood by El.

Lo,
the gods saw them,
they saw the messengers of Yam,
the embassy of Ruler [Nahar].

The gods lowered their heads onto their knees,
and onto the thrones of their princeships.

Baal rebuked them:

1.2 i 25 'Why, O gods, have you lowered your heads onto your knees,
and onto the thrones of your princeships?

I see, gods,
that the tablets[108] of Yam's messengers,
of the embassy of Ruler Naha<r>, are humiliating (you)[109].

see Wyatt (1992a: 414-15 [§13]).

108. The message would be written on a cuneiform tablet, which the messengers would read. Even the gods conform to the diplomatic norm. It is presumably the text on the tablets, carrying Yam's demands (the 'Word of God'), which cows the gods, rather than the messengers themselves. Speech carries its own autonomous power in ancient thought. Cf. Isa. 55.11 and Jer. 1.9-12. It is summed up in such formulae as 'I am Alpha and Omega' (Rev. 1.8 etc.). To this cf. the Heb. *urim* and *tummim*, as construed by Robertson (1964), playing on the merismic nature of aleph and taw.

109. The whole bicolon (here construed as having introductory anacrusis) is difficult. I take *aḥd* as 1 sg. G of *ḥdy* (Heb. *ḥāzâ*), 'I see', and *t'ny* as 3 du. or pl. D of *'ny*, 'humiliate'. This approach is taken by Driver (1956: 79), Jirku (1962: 22), Ginsberg (1969: 130) and del Olmo (1981a: 171). If *aḥd* is 'one' and √*'ny* 'answer', the following senses are understood: 'will any of the gods answer?' Gibson (1978: 41: vb and subj. disagree); 'alone I will answer', de Moor (1971a: 124; 1987: 33: the verb is not 1 p. sg.: de Moor has to correct to *a'ny*); 'one of the gods must answer', Caquot and Sznycer (1974: 130: vb and subj. disagree); 'in unison will the

Lift up, O gods, your heads from on your knees,
from the thrones of your princeships,

and I shall answer the messengers of Yam,
the embassy of Ruler Nahar.'

The gods raise their heads from on their knees,
from the thrones of their princeships.

1.2 i 30 When[110] the messengers of Yam arrived,
the embassy of Ruler Nahar,

at the feet of El they did indeed fall[111];
they did indeed honour the convocation of the Council.

Standing upright, they then spoke,
they [proclaimed] their message.

As a great blaze they appeared;
a sharpened sword was their [ton]gue.

They spoke to Bull his[112] father, El:

'Message of Yam, your[113] master,
of your lord, Ruler Nahar:

"Give up the god whom you obey,
1.2 i 35 the one whom you obey, [Tempe]st!
Give up Baal and his retinue,
the Son of Dagan, whose gold I shall seize!"'

And Bull, his father, El, replied:

'Baal is your slave, O Yam;
Baal is your slave, [Nahar].
The Son of Dagan is your prisoner:

he will bring you tribute like the gods;

gods answer', M.S. Smith (1994: 266) and Pardee (1997c: 246)—contradicted by the sequel. I have put the vb with the second colon for English style. It serves double duty in the first colon.

110. Translated thus on stylistic grounds. Lit. 'afterwards', 'after', adv. or conj. If so translated, to be construed as anacrusis.

111. The problem of whether *l* is negative or asseverative is to be resolved as with *al* in l. 15 above (n. 102).

112. Sc. Yam, on whose behalf they speak. Similarly in l. 36.

113. Ug. *b'lkm*, *adnkm*: 'your' includes all the assembled gods. No doubt the use of *b'lkm* is deliberately ironical in Baal's presence.

[ ] he will bring you offerings, like the sons of the Holy One.'

Then Prince Baal was enraged[114].

In his hand he [seiz]ed a knife,
in his right hand a weapon[115].

The divine assistants he [attacked?[116]].

1.2 i 40 His right hand A]nat seized;
his left hand Athtart seized.

'How could you smite [the messengers of Yam?[117]],
the embassy of Ruler Nahar?

The messenger cìas[ps][118] a noble's sceptre;
[[119]]
the messenger between his shoulders[120] (has) the word of his master
and [[121]].'

Then Prince Baal was enraged:

'The tendrils[122] of the v[ine]

114. Ug. *anš*. See Sznycer (1967), van Zijl (1975: 74-75; 1975b) and Caquot (1990).

115. Ug. *mšḫt...mḥṣ*. Van Selms (1970: 263) translates 'meat-hammer... slaughtering-knife': Baal grabs the instruments from the table.

116. Text *yš* [--]. Space for about two more letters. De Moor restores *yš*[*u*], 'he raised [a weapon]'. Caquot and Sznycer (1974: 132 n. a) suggest either *yš*[*ql*], 'he fells' or *yš*[*ḫṭ*], 'he attacks'. M.S. Smith (1994: 268) suggests the latter.

117. The words *mlak.ym* are what we would expect in the lacuna beginning l. 41. However, after allowing for [*t*'] of [*t*']*dt*, there is insufficient room. Perhaps a word was omitted?

118. Text *yḫb*[ ]. Caquot and Sznycer (1974: 132 n. b) propose *yḫb*[*š*]: 'attaches'. *KTU*^{2} reads *yḫb*[*q*], 'embraces'. Either is plausible.

119. There is room for up to four signs at the end of l. 41, and perhaps 5 at the beginning of l. 42.

120. A messenger would perhaps carry the tablet with the message in a distinctive pouch suspended from his neck.

121. A further 12 or so signs are missing in total at the end of l. 42 and the beginning of l. 43.

122. Ug. *šdmt*. See Wyatt (1992c). De Moor (1987: 34) interprets this in seasonal manner (dating it to January!). In KTU 1.23.10 the *šdmt* (not 'terraces' but 'tendrils') are shorn from El in what is a figurative description of a premarital rite of circumcision. See n. 12 *ad loc*. Thus *šdmt* is a metaphor for a foreskin. In view of

[ ] the messengers of Yam,
the embassy of Ruler Nahar.'

1.2 i 45 [Baal spoke,]
[he lifted up his voice and cried:]
'I say to Yam your master,
to your l[ord, Ruler Nahar]:
hear the word of Hadd the Avenger[123],
...'

1.2 ii (fragmentary, about 60 lines missing)

1.2 iii* (entire column missing, about 60 lines)[124]

1.2 iv 1 '[ ]
[ ]
[ ] I cannot drive out.
If I see[?] [ ]
and with Yam is the sieve of destruction[125].
By Yam I shall be worm-eaten[126] [ ]
[and thanks to] Nahar (devoured by) maggots.

this, are ll. 43-44 the first words of Baal's speech, before he gives a more measured answer in ll. 45-48? On this hypothesis, perhaps the tricolon is a coarse expletive, amounting to 'Balls to Yam!'

123. See Wyatt (1992a: 410 [§10]). The element *gmr* appears in various personal names: *UT*, 380 §19.592.

124. Not to be confused with the column now identified as 'KTU 1.2 iii', which I suggested should be 'iii b' to distinguish it from the rest of the separate tablet, treated above.

125. Ug. *mnḫlabd* (no word-dividers): construed by Gibson (1978: 43) as *mnḫl*, 'sieve' (Ar. *munḫulu*) and *abd*, 'destruction' (cf. Heb. *'abdān*, *'ᵃbaddôn*). Perhaps to be compared to the allusions in KTU 1.6 ii <34>, v 16 to a sieve (*kbrt*). 'My resting-place (repose) perished': de Moor (1971a: 126; 1987: 38). '...against Yam; I shall destroy his dwelling': Caquot and Sznycer (1974: 134). 'And in Yam the calm suffered no diminution': del Olmo (1981a: 174). 'And in Yammu I will indeed destroy the resting place': Pardee (1997c: 248).

126. Ug. *irtm*. Construed as 1 sg. Gt of √*rmm*, 'be full of maggots', in view of parallel *tl'm* ('worms'), by de Moor (1971a: 133), followed by Dahood (1972: 340: §II 521). 'I shall tie': Caquot and Sznycer (1974: 134: √*rtm*). 'Lungs (of death)': Gibson (1978: 43). Cf. 'breast (of death)': M.S. Smith (1994: 321).

There[127] with a sword I shall destroy,[128]
1.2 iv 5 I shall knock down[129] (his) [hou]ses[130].
Into the underworld will fall my strength,
and into the dust my power[131].'[132]
[From] his mouth his speech barely went[133] forth,
from his lips his word,

127. I take it that Baal speaks of destroying Yam when he is in the underworld. He is expecting to die. The similarity of Yam to Mot is apparent. Both are principles of chaos.

128. Ug. *its*. 'I shall (will) destroy': Bordreuil and Pardee (1993a: 63), and M.S. Smith (1994: 321, 332). Cf. Heb. √*nts*, *nṣ* and *ntś*. 'I was put (to the edge of the sword)': de Moor (1987: 38). 'Drawn are the swords (raised is the weapon)': Aistleitner (1964: 50).

129. Ug. *anšq*. Ug. *nšq* means 'weapon' (*WUS*: 216, §1867, Heb. *nešeq*: cf. *nṯq* at KTU 1.4 viii 39: 217, §1876): may this be a denom. vb, 'I shall strike'? 'I shall burn': Caquot and Sznycer (1974: 135), Bordreuil and Pardee (1993a: 63) and M.S. Smith (1994: 321, 332). Cf. Heb. *nśq*, 'burn' (wrongly classified as *ślq* by BDB). But one does not burn with a sword! And hardly 'I shall (will, had to) kiss' (*WUS*: 216, §1866, Heb. *nāšaq*, Akk. *našāku*), as for Gibson (1978: 43) and de Moor (1987: 38).

130. The word is pl., if correctly restored. Virolleaud (1935a: 30): [*b*(?)]*h*(?)*tm*. Bordreuil and Pardee (1993a: 63): [*b*]*htm*. *KTU*[2]: [p]i*tm*. This would be '(his two) temples'. M.S. Smith (1994: 319): [ ]*htm*. *CTA*: [-?]*htm*.

131. 'My strength...my power'. Ug. *ulny...'ẓmny*. So also del Olmo (1981a: 175: 'my/our...'). Gibson (1978: 43): 'The strength of us two...'. Bordreuil and Pardee (1993a: 63): 'the strong...the powerful'. Similarly M.S. Smith (1994: 322). Caquot and Sznycer (1974: 135 and n. k): 'the corpulent...the gigantic'.

132. Aistleitner (1964: 50), Caquot and Sznycer (1974: 135), Bordreuil and Pardee (1993a: 63), M.S. Smith (1994: 331) and Pardee (1997c: 248) interpret this difficult and damaged passage as a series of defiant threats uttered by Baal against Yam. It is an empty threat, however, for Baal is feeling sorry for himself, trussed up as a prisoner beneath Yam's throne. For del Olmo (1981a, p. 175), it is a narrative of Baal's violent response. For de Moor (1987: 38) it is a 1 p. narrative of Baal's submission. Ginsberg (1969: 130) has an unnamed goddess utter these words; de Moor (1987: 39 n. 173) and M.S. Smith (1994: 322) understand Athtart to be already present, and to speak in ll. 6-7. On the imagery of dust, mentioned so closely before Baal's rising up and triumphing over Yam, to obtain the kingship, see Brueggemann's important analysis (1972).

133. Ug. *lyṣa*. In the sense that he scarcely has the energy to speak. Alternatively, 'his speech had scarcely gone forth', with a sense of temporal immediacy. In this case the 'and' of l.6 would be translated by 'when'.

and he gave forth[134] his voice in groaning[135]
beneath the throne of Prince Yam.

And Kothar-and-Hasis spoke:

'Indeed I say to you, O Prince Baal,
I repeat, O Charioteer[136] of the Clouds,

now your foe, Baal,
now your foe you must smite;
now you must destroy your adversary!

1.2 iv 10 Take your everlasting kingdom,
your eternal dominion!'

Kothar fashioned[137] two maces[138],
and he pronounced their names:

'You, your name is "Expeller"[139].

134. Ug. *wttn*. Apparently 3 f. sg. in form, whence the introduction of Athtart or some other goddess by various commentators (see n. 132 above). Either correct to *wytn*, making Baal the subj. as above (cf. del Olmo [1981a: 175], proposing *ntn* or *tn*, after Gibson [1978: 43 n. 6]). Gibson (1978: 43) translates: 'the utterance of his voice'—prosodically unlikely. Impersonal vb: Aistleitner (1964: 51): 'a rumbling was heard', similarly Bordreuil and Pardee (1993a: 63).

135. Ug. *ygr*. 'Groan': *WUS* 133, §1208, *UT* 465, §19.1985. 'Sink down', √*gwr*, Ar. *ǧâra*: Gibson (1978: 43, 155). Cf. de Moor (1971a: 126, 134; 1987: 39). 'Be enraged': Driver (1956: 165, Ar. *waǧru*, but not p. 81, 'sank').

136. Ug. *rkb*. 'Charioteer' rather than 'rider': Wyatt (1992a: 420-22 [§20]). The chariot itself would be the clouds.

137. Ug. *ynḥt*. See Tropper (1995): 'carve out'; R.M. Good (1985): 'fashioned', and identification of two radicals. 'Fetched down' (Gibson 1978: 43, 152), with ref. to Aram. *nḥēt*, 'descended'. Cf. Heb. *nāḥēt* pi. This approach understands Kothar to bring the weapons *down* to where Baal is, sc. beneath Yam's throne. The point is rather Kothar's manufacture of the weapons, which ensures their efficacy. Cf. his other constructional work: furniture and accoutrements for Athirat (KTU 1.4 i 23-43), the palace-temple for Baal (allusively in KTU 1.4 v 36 vi 35) and the bow for Aqhat (allusively in KTU 1.17 i 1-33).

138. Ug. *ṣmd*, here du. *ṣmdm*. 'Maces', 'clubs' or 'axes'? Cf. KTU 1.65.14. On divine weapons see del Olmo (1992d), Durand (1993), Bordreuil and Pardee (1993a: 67-68), M.S. Smith (1994: 339) and Wyatt (1998a). The precise identity is not certain, beyond the probability that the head of the weapon was 'bound' (*ṣmd*, Ar. *ḍamada*) to the haft. For other etymologies see M.S. Smith (1994: 338-39). He himself (p. 322) reserves judgment: 'weapons'. 'Kothar forged two axes': Wyatt (1996b: 136).

139. Ug. *ygrš*, lit. 'he expels' or 'let him expel'. The role of the weapon is indi-

Expeller, expel Yam,
expel Yam from his throne,
Nahar from the siege of his dominion!

You must leap from the hand of Baal,
like a falcon[140] from his fingers.

Strike the shoulders of Prince Yam,
1.2 iv 15 the chest[141] of [Rul]er Nahar!'

The mace leapt from the hand of Baal,
like a falcon from his fingers.

It struck the shoulders of Prince Yam,
the chest of Ruler Nahar.

But Yam was strong:
he did not flinch[142].

His joints did not tremble;
his visage was not discomposed.

Kothar fashioned two maces,
and he pronounced their names:[143]

cated in its name. The giving of the name transmits the quality to the weapon, as in the case of naming people.

140. Ug. *nšr*. 'Falcon' rather than 'eagle', unless it is supposed that the gods used eagles for falconry, in keeping with their heroic stature. Claims that falconry was not practised in the second millennium BCE (e.g. Reiter 1990) are frustrated by this passage and the episode in KTU 1.18 iv 17 and n. 51, whatever the species. See M.S. Smith (1994: 343-44). Ar. *nasr*, *nisr*, means 'eagle' or 'vulture', and perhaps generically 'raptor', 'bird of prey'.

141. Ug. *bn ydm*: lit. 'between the two hands'. That is, on the back, || *ktp* (lit. 'flat blade'), here scapula(e), or front, by extension of the 'flatness' motif to the front of the body. Cf. M.S. Smith (1994: 323): 'torso... between the hands', Wyatt (1996b: 136): 'trunk...chest', sc. the front rather than the back. On the expression *bn ydm*, see Loewenstamm (1971a: 96-97). Blows on the front would be more probable than on the back with two opponents. Cf. the interchange between Siward and Ross in *Macbeth* V vii: 'Had he his hurts before?' 'Ay, on the front'.

142. Ug. *ymk* (√*mwk*). Lit. 'did not become low'. The idea is of reeling from the blow, or cowering, rather than falling.

143. While this general introduction to the fashioning of two weapons makes sense at l. 11 above, it reads decidedly oddly in translation at this point. It is a rather mechanical use of a formula, without regard to the internal logic of the narrative. Perhaps in translation we should adjust: 'Kothar fashioned a second mace | and he pronounced its name'.

'You, your name is "All-Driver"[144].

All-Driver, drive Yam away,
1.2 iv 20 drive Yam from his throne,
Nahar from the siege of his dominion!

You must leap from the hand of Baal,
like a falcon from his fingers.

Strike the skull of Prince Yam,
the brow[145] of Ruler Nahar!

Let Yam collapse in a heap,
and let him fall to the ground!'

Then the mace leapt from the hand of Baal,
like a falcon from his fingers.

It struck the skull of Prince Yam,
1.2 iv 25 the brow of Ruler Nahar.

Yam collapsed in a heap;
he fell to the ground.

His joints trembled,
and his visage was discomposed.

Baal gathered up[146]
and drank <Prince>[147] Yam to the dregs[148];

144. Ug. *aymr*, explained as *ay* + *mr* (√*mry*), 'All-driving', 'Let it drive everything' (cf. M.S. Smith 1994: 343).

145. Ug. *bn 'nm*, lit. 'between the eyes'. Note the matching pattern in ll. 14, 21-2. See Avishur (1980). Cf. the same expression at KTU 1.3 vi 3.

146. Ug. *yqṯ*. Or perhaps 'collected him together': the idea is of collecting chaff, a mirror image of Anat's treatment of Mot (KTU 1.6 ii 30-37). Or 'dried up' (sc. reduce to chaff), but this does not fit the drinking image. Yam is splattered about (a mixture of water-imagery and battlefield butchery). For both approaches cf. Heb. √*qšš*, T *qešaš* (cit. BDB, 905 '[orig. *be dried up*?]'). 'Stoop': Margalit (1982a: 82-83 [note his previous discussion 1979–80: 82-83]), on the same etymology: 'gleaning movement'. Usually translated 'drag' (Ar. *qaṭ ṭa*): de Moor (1971a: 127; 1987: 41), Caquot and Sznycer (1974: 138), Gibson (1978: 44), del Olmo (1981a: 177) and M.S. Smith (1994: 323, 351-52). 'Rend': Ginsberg (1969: 131). The same √ occurs at KTU 1.114.5. See n. 13 *ad loc*.

147. The *zbl* requires to be restored here, in contrast to the usage above (KTU 1.2 i 6-7 and n. 87).

148. Ug. *yšt*. 'Drank': Margalit (1982a: 82: √*šty*, or 'dried up', √*nšt*). 'Dismembered': Caquot and Sznycer (1974: 138), Ar. *šatta*, 'separate, throw about',

he exterminated Ruler Nahar.
By name Athtart chided[149] (him):
'Dry (him) up[150]. O Valiant Baal!

citing Obermann (1947: 205). Similarly M.S. Smith (1994: 323, 352-53) and Pardee (1997c: 249). 'Laid him down': Gibson (1978: 44; n. 9 'possibly "drank him down"'). 'Reduced': del Olmo (1981a: 177).

149. Ug. *tg'rm* (√*g'r*). Lit. 'she rebuked (him)', but the point is hardly to criticize Baal, but to exhort him to complete the task. On this vb see McCurley (1983: 46-52). For van Selms (1970: 266 n. 33, citing Macintosh 1969), tentatively wishing to make Athtart Yam's wife (cf. the Eg. myth of Ashtart and the tribute of the sea, *ANET*, 17-18) it is precisely a rebuke. But this would hardly fit the sense of the following bicolon. Athtart, here presumably paired with Anat (cf. KTU 1.2 i 40 above) also embodies traits of a war-goddess (and huntress: KTU 1.92). In Eg. iconography she appears on horseback or in a chariot, with weapons (see Leclant 1960). The character of the goddesses may perhaps be compared with that of camp-followers screaming defiance and insults at the enemy and shouting encouragement to their own men-folk. The present single combat is strictly a stylized act of war. The term is used of the porter in KTU 1.114.11.

150. Ug. *bṯ*. Imper. of *ybṯ*. To be explained as √*ybṯ*, cf. Heb. *yābēš*, Ar. *yabasa*, 'dry up'. (Ug. *ṯ* = Ar. *s* may be considered a problem, but Ug. *ṯdṯ* = Ar. *sadisa*). Other suggestions are 'shame' (√*bwṯ*, Heb. *bûš*): Driver (1956: 82), Ginsberg (1969: 131), van Selms (1970: 266), del Olmo (1981a: 177) and de Moor (1971a: 127; 1987: 41); 'hail!' or 'destroy': Aistleitner (1964: 52; *WUS*, §609); or 'tear apart': Jirku (1962: 25); or 'scatter' (√*bṯ ṯ*, Ar. *baṯ ṯa*): Caquot and Sznycer (1974: 139), Gibson (1978: 44), Xella (1982: 88), M.S. Smith (1994: 324) and Pardee (1997c: 249). Drying up is consistent with drinking (*wyšt*, l. 27), but none of the other options is. Margaret Barker has drawn my attention to a remarkable bicolon at Isa. 19.5, which strikingly confirms the approach adopted here, and again illustrates the fidelity at least of theme and often of vocabulary, with which the Heb. preserves the Ug. tradition:

w^{e}ništû-mayim mēhayyām	And drunk are the waters (of) {from} Sea,
w^{e}nahar yeḥ^{e}rab w^{e}yābēš	and River is dehydrated {and dried up}.

The text is that of MT; the translation incorporates the points outlined below. The second colon is overloaded (imbalance between cola: the pattern should be a:b::b1:a1). The precise nuance of *yeḥ^{e}rab* is not easy to determine, since it opens up three possibilities, depending on the radical chosen. See discussion at Wyatt (1996b: 85-86) where I have considered the sense of *yeḥ^{e}rāb* in Ps. 106.9, and concluded that it is √*ḥrb* III, 'attack, smite down', rather than *ḥārēb* I or II, 'be dry'. Here it is understood to be either of these (I or II), and is either glossed by, or is a gloss on, *yābēš*. If the latter, then the same vb is used in the Ug. and Heb. texts. That it is this rather than √ III is required by the parallelism. Note that while 'drinking' is a normal fate for water, 'drying up' is an explicit *negation* of its

Dry (him) up, O Charioteer of the Clouds!
For our captive is Pr[ince Yam],
1.2 iv 30 [for] our captive is Ruler Nahar!'
Then B[aal] went out [ ]
Valiant Baal dried him up,
and [ ]
'Yam is indeed dead!
Baal will rul[e]'

(7 unintelligible lines, followed by gap)

essence. Note that the article should be omitted from *hayyām* (as it is before *nahar*), yielding the binomial Yam-Nahar of Ugaritic usage. I have also suggested in the translation the omission of the *mē-*, but this is uncertain. Note the miniature chiasmus *mym...ym*.

KTU 1.3–1.4: Baal's Palace

1.3 i (about 25 lines missing)

'...

1.3 i 1 Do not lower [ ]'

Radaman[1] served Vali[ant] Baal;
he waited on the Prince, Lord of Earth.

1.3 i 5 he arose and served,
and gave him to eat:

he carved a breast in his presence,
with a jaw-shaped knife[2] fillets of fatling.

He busied himself and poured,
and gave him to drink:

1.3 i 10 he put a cup in his hands,
a goblet[3] in both his hands—

a great chalice, mighty to behold,
a drinking-vessel[4] of the inhabitants[5] of heaven,

1. Text *prdmn*. Caquot and Sznycer (1974: 153) take as one word, and consider it a name of Hurrian formation in *-enni*. Others treat the *p* as copula (*UT* 465, §19.1991 and *WUS* 251, §2178) followed by the name, which is compared with Gk Rhadamanthys: thus de Moor (1987: 2 n. 9). On Rhadamanthys see Graves (1960: I, 294). Gibson cites Akk. Radmānu (Tallqvist [1938: 185]). He appears to be a minor deity here. Pardee (1988b: 1; cf. 1997c: 249 n. 68) takes *prdmn* to be part of the preceding syntactic unit. See also Astour 1998.

2. Ug. *ḥrb mlḫt*. Explained by Chenet (1939–40) with reference to *lḥ* (= Heb. *leḥî*), 'jaw', as with the curved blade of a harpe (= *ḥrb*!). Several bronze harpes have been recovered from Ugarit. Archaeologically, the harpe is derived from flint-in-wood sickles, and even elegantly chiselled flint ones, themselves undoubtedly modelled on jawbones. See Gopher and Tsuk (1991: xvii, xxxiv). Preferable to 'salted' (*mlḥ* = Heb. *melaḥ*): thus Gibson (1978: 46), de Moor (1987: 3) and Pardee (1988b: 2). 'Good': Caquot and Sznycer (1974: 154 n. h), with same etymology.

3. Ug. *krpn*, a term surviving in 'carafe'.

4. 'To behold, a drinking-vessel': text *ridn*, separated as *ri* (cf. **r'y*, Heb. *rā'â*), *dn* (Ar., Akk. *dannu*). Thus Gibson (1978: 46), del Olmo (1981a: 179), Xella (1982: 97) and de Moor (1987: 3). Caquot and Sznycer (1974: 155 n. m) treat it as one word, and take it to be the name of the cup ('Ra'idân'). On the indivisibility of *ridn* see Dietrich and Loretz (1987b: 27 n. 3) and Watson (1988: 50).

5. Ug. *mt*: lit 'people, men'. Perhaps 'of heroic size'? 'Furnishings': Pardee (1997c: 250).

a holy cup, which women might not see,
1.3 i 15 a goblet which (even) a wife[6] could not look upon[7].
A thousand measures[8] it took from the winevat,[9]
ten thousand (draughts) it took[10] from the barrel.
He arose, intoned and sang,
the cymbals in the minstrel's hands;
1.3 i 20 he sang, the chorister of beautiful voice,
concerning Baal in the uttermost parts of Saphon.
Baal contemplated his daughters:
he looked at Pidray[11] the daughter of Light[12]

6. Ug. *aṯrt*: following the etymology of Margalit 1990. Or (as others): 'Athirat'. But 'wife' provides a better parallel to *aṯt* in previous colon. See also next note.

7. The rationale behind such a cultic restriction may have been that as women menstruated, they were always in danger of ritual pollution. If the institution of the *Marziḥu* (cf. KTU 1.114; 1.3 i 9) lies behind the imagery, membership of this appears to have been restricted to men. (In this case, why are Anat and Athtart present? Perhaps as virgin huntresses, they are supposedly free of this polluting restriction. This is hard to square with Anat's activity in KTU 1.10 iii and 1.11, but in 1.13.31 she apparently bears without conceiving, thus preserving her virginity.) However, there is no question of the present scene being of this kind, since Baal evidently eyes his daughter-wives a few lines later. But this leaves the point about the restriction concerning the presence of women and goddess quite unresolved, except that while it is quite possible that women were excluded from some ritual procedures, goddesses could hardly be.

8. Ug. *kd*. Lit. 'jugs'. Cf. Caquot and Sznycer (1974: 155 n. o).

9. Ug. *ḫmr*. The same term occurs at KTU 1.23.6, and is to be read at KTU 1.15 iv 23, v 6. Del Olmo (1992: 128) reads it at KTU 1.108.10. It is not 'new wine' (cf. de Moor 1971a: 78) but rather the container holding wine (Dahood 1964: 408-409; 1972: 186 §II 199). On del Olmo's approach, it could mean the contents of the vat, by extension.

10. Ug. *ymsk*. Lit. 'mixed'. I take the cup to be the subject: this is a measure of its capacity.

11. Ug. *pdry*. 'Fatty' (cf. Heb. *peder*) or 'Cloudy' (cf. Milik 1958: 252-54, citing Astour 1969: 11), but not 'Thunder' (cf. Dussaud 1932: 292 n. 6; Virolleaud 1938: 10; Ginsberg 1969: 131 n. 12: 'Flashie, Lightningette' and Astour 1969: 10). To this name cf. Gk Phaedra (*Phaidra*: Astour 1967: 267 n. 1), Pandrosos ('All-Bedewing'), with Erse (*Ersē*, [Ug. *arṣy*]) and Aglauros a daughter of Cecrops: Astour (1969) and Pandora ('All-Gifts', Harrison 1955: 280-85); as an earth-goddess Pandora may also be compared to Arṣiy (qv. col. iii l. 7). Pidray is identified with Hur. Ḫebat (van der Toorn [1995], consort of Baal's Hur. counterpart Teshup)

1.3 i 25 and also at Taliy[13] the daugh[ter] of Shower.
Pidra<y>?[14] certainly [kne]w
whether the [perfec]t brides [ ]

(about 14 lines missing)

1.3 ii (about 25 lines missing)
[Virgin Anat]
1.3 ii 1 [like a kid]
the perfumes of seven tamarisks[15],
the odour of coriander
and murex.[16]
Anat closed the doors of the house
1.3 ii 5 and she met the divine assistants at the foot of the mountain.
And lo,
Anat fought in the valley;

in KTU 1.47.17 = KTU 1.118.16 = RS 20.24.16. These combinations invite a comparison between Eve (*ḥawwah*, **ḥawwat*, cf. *Ḥebat*!) and Pandora, the more tempting as the latter becomes a primal woman in later tradition. Akk. ^{d}*Pi-id-di-r*[*i-ya*] appears as an epithet of Ishtar: Deimel (1914: §2988), Virolleaud (1938: 9 n. 1), van der Toorn (1995: col. 745). (If the name Pandora *is* related to Ug. *pdry*, its Gk explanation will be a later folk-etymology.)

12. Or: 'dawn' according to Astour (1969: 11). Pardee (1988b: 3): 'dew'.

13. To this name, *ṭly*, 'Dewy', from *ṭl* (Heb. *ṭal*), 'dew', cf. Gk *Thalia*, the muse of comedy.

14. Is the *y* missing through haplography, or is *pdr* another (m.) deity?

15. Ug. *bnt*, restored on the basis of KTU 1.7.35, is probably to be explained with reference to Akk. *bīnu*, Syr. *bīnā*, 'tamarisk'; cf. Akk. *bīnitu*, 'tamarisk wood', *AHw*, 126-27. Cf. *CAD*, II, 238. A translation such as 'daughters' does not fit. See n. 8 to KTU 1.124.8. Cf. the different construction by Caquot and Sznycer (1974: 157), 'seven young girls wiped her', to preserve this sense. Del Olmo (1981: 180) similar. Gibson (1978: 47): 'henna enough for seven girls'. De Moor (1987: 5): 'the seven girls (put) henna (on her)'. The seven tamarisks may have been different varieties whose oils were blended.

16. The identity of *anhbm* is not certain. But it appears to be a maritime product. I have followed *DLU*, 38. Cf. also de Moor (1968: 214-15) and Renfroe (1992: 80-81). It is hard to imagine that the *odour* of murex (dead) was pleasant! It is better construed, as here, with the tamarisk and coriander in parallel as sources of scent, and the murex following as a source of coloration.

she battled between the two towns.[17]

She smote the people of the sea-shore[18];
she destroyed the men of the sunrise.

Beneath her like balls were hea[ds];
1.3 ii 10 above[19] her like locusts[20] were palms[21],
like grasshoppers[22] heaps[23] of palms of warriors.

17. There is no need to give this a strictly geographical location (such as between Ugarit and Minet el Beida [ancient Mahadu, Ug. *mḫd*]), as supposed for example by de Moor (1971a: 94 n. 3; 1987: 5 n. 25). As war-goddess Anat would no doubt in theory be quite impartial in her visitation of misery on all combatant armies. She revels in destruction for its own sake. Cf. KTU 1.13.7 [14], where 'your warriors' appear to be soldiers in the goddess's service (sc. warriors), not just *enemy* soldiers. Thus the two towns would represent any two communities at war. There seems to be a broad cosmological scenic representation here, with Anat descending a mountain, presumably Aruru (KTU 1.10 iii 29-30) or Inbubu (cf. KTU 1.13.9-10), parts of the Saphon massif, involving two towns in the plain below, with further references to the limits of the world, the sea and the sunrise. Thus the scene is the paradigm of the war-goddess's martial role.

18. Ug. *ḫp y*[*m*]. Text reads *ḫp y*ˈ[ ], where only one set of strokes of the *y* survive (visible as *ḫ*). Most interpret *ḫp ym* as 'sea-shore': (Heb. *ḥôp yām*). See de Moor (1971a: 88; 1987: 5), Driver (1956: 85, 140 and n. 6: Ar. *ḫifāfu* [cit. as *-â-*], Akk. *ḫâpu*) and del Olmo (1981a: 181, 553; Ar. *ḫayfu*, *ḫifāfu*). The sea-shore is the west, while the *ṣat špš*, the 'emergence of the sun', is the east. However, despite their translation, Caquot and Sznycer (1974: 158 n. i) recognize the problem, since Ar. *ḫafa* corresponds to Heb. *ḥôp*. See also Lloyd (1994: 158 and n. 22). Driver's cognates seem to make these reservations unnecessary. The same term appears in KTU 1.23.30 (reading *ḫˈp ym* rather than *gp ym*). The merismus of the bicolon means 'all men from east to west'.

19. Or 'about'. She no doubt wore them strapped to her clothes, and perhaps in garlands around her neck.

20. The image is one of huge numbers.

21. Body-counts were achieved in antiquity by severing the right hands (the weapon hand) of the dead. Occasionally penises were severed, since circumcision could indicate ethnicity. Cf. 1 Sam. 18.25-27. Examples of both are shown in reliefs at Medinat Habu.

22. Ug. *qṣm*. The parallel *irbym* requires something like a grasshopper. Cf. Ar. *qaṣām*, Aram. *qamṣā*, 'locust' (Ar. *qamaṣa*, 'hop, jump'). See de Moor (1971a: 90-91). His later version, 'like scales of a plane-tree' (1987: 5), is far less convincing. Cf. Driver (1956: 85) and Caquot and Sznycer (1974: 159 n. l) for similar phytological treatments. For a further example of a simile between an army and a swarm of locusts see Joel 2.3-11.

23. Ug. *ǵrmn*. Driver (1956: 85, 142 n. 28: Ar. *'arrama*, 'heaped up', but ' is not

She fixed heads to her back;
she attached palms to her girdle.

Her knees she stee[ped] in the blood of soldiers;
1.3 ii 15 her thighs[24] in the gore[25] of warriors.

With shafts[26] she drove out the old men[27];
with the string of her bow the townsfolk[28].

And lo,
Anat came to her house;
the goddess went down to her palace[29].

ǵ), 'piled in heaps' (cf. Heb. *ʿrēmâ*, 'heap'); similarly del Olmo (1981a: 181): 'in a swarm'. Gibson (1978: 47, 155: Ar. *ǵarima*, 'paid a debt'): 'avenging'.

24. Ug. *ḥlqm*. The term is du. from √*ḥlq*, 'divide', and may denote 'thighs' or 'buttocks' (thus de Moor 1971a: 88, 92; 1987: 6). Less convincingly 'skirts' (MHeb. *ḥālūq*, 'underwear'): Caquot and Sznycer (1974: 159), Gibson (1978: 47). 'Neck': Pardee (1997c: 250).

25. Ug. *mmʿ*. 'Gore' (Ar. *māʿa*, 'flow'): Gibson (1978: 47, 151). 'Entrails': del Olmo (1981a: 181: Ar. *māʿa*, and Heb. *mēʿâ*: entrails). I have chosen the former on prosodic grounds: 'blood...gore' is a better parallel. Hardly 'pus' or other such bodily secretions (Caquot and Sznycer 1974: 159).

26. Ug. *mṭm*. Lit. 'with (a) rod(s)'. Reasonably interpreted as arrows in the light of the following colon. De Moor (1987: 7) translates 'staff', and has Anat use the stave of her bow as a cudgel in the following colon. But *ksl* is rather 'tendon' and therefore 'bow-string', fitting the bow of the following colon (l. 16). Watson (1976c: 373) draws attention to this, since it was over a bow, subsequently destroyed, that Anat had Aqhat murdered. Had she recovered it or obtained a substitute in the missing end of the story? There is no need to think that it was the same bow. Driver (1956: 85, 160 and n. 30), 'tottering', of the old men (Heb. *mûṭ*).

27. Ug. *šbm*. 'Old men': cf. Heb. *śāb*: Gibson (1978: 47, 158). These, with the women and children of the town (*mdnt*) would be non-combatants, caught up in Anat's enactment of total war. Lloyd (1994: 159): 'captives' (Heb. *śᵉbî*). But see Virolleaud (1938: 19 n. 2). Caquot and Sznycer (1974: 159): 'young men' (Ar. *šabb*). Discussion and further references in de Moor (1971a: 92). '(potential) captors': Pardee (1997c: 250).

28. 'Opponents': Pardee (1997c: 250).

29. Or 'temple': the cultic overtones are paramount here. Sc. Anat's temple. No such temple is known. Anat may have had a shrine on Mt Saphon or its subordinate summit Inbubu, though the narrative here oscillates confusingly between mountain-and-valley and urban setting. Saadé (1979) has identified the following temples at Ugarit: the palace chapel ('Hurrian sanctuary') (p. 115), the Baal and Dagan temples (pp. 133-41), a possible anonymous temple (pp. 146-47), sanctuaries at Mahadu (Minet el Beida) (p. 151) and temples of Athtart and Reshef (textual allusions) (p. 179). The 'temple aux rhytons' was discovered after he had published.

But she was not sated with her fighting in the valley,
1.3 ii 20 (nor her) battling between the towns.

She set chairs for warriors,
she put tables for armies,
footstools for heroes.

Fiercely[30] she fought and looked;
Anat battled and considered.

1.3 ii 25 Her liver shook with laughter;
her heart was filled with joy,
the liver of Anat with triumph,

as she steeped her knees in the blood of soldiers,
her thighs in the gore of warriors;

until she was sated she fought in the house,
1.3 ii 30 she battled between the tables.

From the house the blood of soldiers was wiped clean;
oil of peace was poured into[31] a bowl.

Virgin Anat washed her hands,
her fingers the Beloved of the Powerful One[32].

[She] washed her hands of[33] the blood of warriors,
1.3 ii 35 her [fin]gers of the gore of soldiers.

She [set] the chairs in order,
the tables in rows.
Footstools she set by footstools.[34]

30. Ug. *mid*. Lit. 'much'.

31. Or 'from'. I have translated the vb as passive, because Anat can hardly be the subj. Cf. KTU 1.16 iii 1; 1.101.14.

32. Ug. *ybmt limm* (var. *ymmt limm*). On this epithet and this explanation see Wyatt (1992a: 417-19 §17). A kinship explanation (see Walls 1992: 94-107) seems to offer no theological significance.

33. Ug. *b*. 'Of, free of' rather than 'in' (as for Pardee 1997c: 251). Unless we are to imagine Anat engaging in a particularly ghoulish washing in the blood and gore of her victims before the lustrations which follow. But against this see l. 31.

34. In the preceding scene Anat has acted as the war-goddess, indeed as the personification of war itself. Her glee is the personification of the frenzy of the warrior and the removal of all social restraints. Those killed are not necessarily just the enemies of Ugarit, but the troops of both sides in a battle (n. 17 above). Why does she engage in two battles, the second of a theatrical kind? See Lloyd (1996) for the interesting theory that the first is a 'real' battle (that is, war as actually conducted),

She drew water and she washed herself,
(with) dew of heaven,
oil of earth,
1.3 ii 40 the rain of the [Char]ioteer of the Clouds,
dew which heaven poured on her,
[rai]n with which the stars anointed her.
1.3 iii 1 She made herself beautiful with murex
whose source is [a thousand acres] in the sea,
[ ][35]

(about 20 lines missing)

[He took his lyre in his hand,]
1.3 iii 5 [he] clasped the bull-shaped instrument[36] to his breast,
singing[37] of the loves of Valiant Baal,

while the second is its ensuing ritual counterpart, carried on in the temple to resolve the conflicts which war has raised. Here prisoners would be killed under controlled, and therefore ideal conditions, the world ritually put to rights, and the whole untidy mess purified by cultic procedures. On the principle of ritual serving this function see J.Z. Smith (1981: 124-25).

35. Lines 1-3 occur on a small fragment (RS 2.[014]), quite detached from the rest of KTU 1.3. The same fragment supplies the closing lines of col. iv. (See Virolleaud 1938: Pll. II, VI; *CTA*, Figs. 8 [bottom], 11 [top], pll. IV, V).

36. Ug. [-]*št rimt*. In KTU 1.7.22, which appears to be a quotation of this line, the vb is f., *tšt*, but the context following here requires a m. sense. Is it to be corrected to *m*!*št*? See next n. The singer at KTU 1.3 i 18-22 is m. Cf. also KTU 1.17 vi 32-33. Cf. however at KTU. 1.101.17-18, where it is apparently Anat who serenades Baal, while in KTU 1.16 i 29, 39, I have rendered *ṯtmnt*, the putative name of Keret's daughter, as 'the lyre-player', explained at n. 155 to KTU 1.15 iii 12. On *rimt*, which perhaps alludes to a bull's head on the sounding-box of a harp, such as the one discovered at Ur, see Watson (1996a: 78). Note also the discussion by Pardee (1988a: 151 and n. 179). The term may alternatively allude to the material (sc. bull-horn) from which the instrument is made, or even to an instrument formed of the entire bull's skull, with the horns providing the frame. Ug. *rim*, Akk. *rêmu*, Heb. *rᵉ'ēm*, means 'aurochs, wild bull'. Since the term *rimt* occurs in parallel to *knr*, 'lyre', it is not to be translated as 'harp' or any instrument other than a lyre, but is rather to be seen as further defining *knr*. I have attempted to reflect this need in my version.

37. The pt. is m. (*mšr*), while the preceding vb is usually restored as f. on the basis of KTU 1.7.22 (previous n.). *KTU*^{2}: t]št (in Roman). Cf. Virolleaud (1938: 29): *m*(?)*št* (sc. *m*[?]*št*). Since the minstrel is male in col. i, it seems likely that the

the desire of Pidray daughter of Light,
the affection of Taliy daughter of Shower,
the love[38] of Arṣiy[39] daughter of Snatcher-for-ever[40].

'As divine assistants enter in[41];

1.3 iii 10 at the feet of Anat bow and fall down;
pay her homage and honour her,

and speak to Virgin Anat,
say to the Beloved of the Powerful One:

"Message of Valiant Baal,
word of Valiant Warrior[42]:

same is the case here. There are after all 20 lines of text missing following the last mention of Anat in col. iii 1. The singer is Anat according to Caquot and Sznycer (1974: 159 n. b: they correct the vb to *tšr*), Gibson (1978: 48), de Moor (1987: 8) and Lloyd (1994: 166); and in the following lines it is possible to imagine the messengers interrupting Anat's singing. I have taken it that the singing is going on while Baal gives his messengers their instructions, and therefore not in Anat's presence. She reacts from afar to their approach later, in col. iii 32-35. An appeal to KTU 1.101.16-17 (where Anat apparently sings—cf. n. 17 *ad loc.*) may be countered with an appeal to the more immediate text, KTU 1.3 i 20.

38. 'Desire...affection...love': Ug. *yd*, *ahbt*, *dd*. All the terms probably carry specifically sexual overtones.

39. Cf. Gk *Ersē*. The Ug. *arṣy*, epithetal from *arṣ*, here 'earth' = 'underworld'. The third of the triad. The Gk goddesses here named are evidently of WS origin. See Astour (1969). In KTU 1.47.23 = KTU 1.118.22 = RS 20.24.22, Arṣiy is identified with Allatum, that is, Ereshkigal, goddess of the underworld in the Babylonian pantheon.

40. Ug. *y'bdr*. 'Snatcher-for-Ever' (evidently m. form) I take to be an epithet of Mot. For this explanation, construing as *y'b* + *dr*, see Astour (1969: 13): he cites Ar. *wa'aba*, 'take (everything)'. De Moor (1971: 84), pursuing the seasonal argument, translates '(the girl of) the ample flowing', citing Ar. *wa'b*, 'wide, vast', *wa 'īb*, 'ample', and Ar. *darra*, 'flow copiously'. Cf. del Olmo (1981a: 560), 'spring'. 'Wide world', and so on: Driver (1956: 165 and n. 21), citing Ar. *wa 'iba*, 'was spacious' and Ar. *dauru*, 'circuit' or *dâru*, 'house, court, country'.

41. Text *km ǵlmm w 'rbn*. The presence of the copula *w* suggests that something has been omitted, and the evident comparison supports this. Perhaps something like:

| ... | as divine assistants
and enter in

is to be understood.

42. On the title *aliy qrdm* see Wyatt (1992a: 405 §2).

'Bury war in the earth;
set strife in the dust:

pour a libation into the midst of the earth,
honey from a jar into the midst of the steppe.

Grasp your spear (and) your mace:

let your feet hasten towards me,
1.3 iii 20 let your legs hurry to me!

For I have a word that I would say to you,
a message that I would repeat to you:

a word of tree and whisper of stone,

the sighing of the heavens to the earth,
1.3 iii 25 of the deep to the stars,

I understand the thunder
which the heavens do not know,

a word unknown to men,
and which the multitudes of the earth do not understand.

Come,
and I shall reveal it
in the midst of my divine mountain, Saphon,
1.3 iii 30 in the sanctuary[43],

on the mountain of my inheritance,
in Paradise[44], on the height of victory.[45]'''

Lo,
Anat caught sight of the (two) gods.

At this her feet trembled;

43. This language is clearly cultic, identifying a sanctuary (probably in Ugarit) with the cosmic mountain.

44. Cf. Wyatt (1996b: 40).

45. The double line scored across the tablet at this juncture seems to refer the reader back to a formulaic passage omitted here. See the instruction written in such a context after KTU 1.4 i 43, v 41 and the single line after l. 43. Cf. also at KTU 1.4 viii 45. *Contra* de Moor (1987: 10 n. 53), I take it that what is missing here is a brief statement that the messengers departed and approached Anat. 'Height': Ug. *gb'*. Cf. KTU 1.10 iii 28 n. 32. Elsewhere *ṣrrt*, 'uttermost parts' is used, as at KTU 1.4 v 55.

her tendons[46] snapped about her.

Above, her face sweated,
1.3 iii 35 the tendons of her back contracted,
(as did) the muscles[47] of her shoulders.

She lifted up her voice and cried:

'Why have Gupan and Ugar come?

What manner of enemy has arisen against Baal,
of foe against the Charioteer of the Clouds?

Surely I smote the Beloved of El, Yam?
Surely I exterminated Nahar, the mighty god?

1.3 iii 40 Surely I lifted up[48] the dragon,
I overpowered him?

I smote the writhing serpent,
Encircler[49]-with-seven-heads!

I smote the Beloved of El, Arsh[50],

46. Ug. *ksl*. Cf. this term as bow-string in KTU 1.3 ii 16. 'Loin' (*WUS* 154, §1357), del Olmo (1981a: 567): Heb. *kesel*, Aram. *kislā*, Ar. *kislu*, Akk. *kaslu*.

47. Ug. *anš*. 'Moving part of the body': *WUS* 28, §320. 'Muscle, tendon': *DLU*, 41. Hardly to be compared to Heb. *nāšê* (thus del Olmo 1981a: 515), 'sciatic nerve'! Taken as a vb: '(her spine) goes weak': Pardee (1997c: 252).

48. Ug. *lištbm*, √*šbm*. Lifting him up bodily (as in wrestling?) indicates Anat's superior strength. See Barr (1973) and Day (1985: 14 n. 32). Cf. KTU 1.83.8. Against this view see Pardee (1984; 1997c: 252 and n. 92): 'I have bound the dragon's jaws'.

49. Ug. *šlyṭ*, as at KTU 1.5 i 3. I follow the proposal of Margalit (1980: 90) to explain this as Š of √*lwṭ* (cf. Heb. *lwṭ*, 'enwrap, envelop'). As an epithet for a dragon this is preferable to 'tyrant' (*šlṭ*: Watson 1977: 274-75; del Olmo 1981a: 629; *WUS* 306, §2612: Akk. *šalaṭu*, Ar. *saliṭa*, Eth. *šalaṭa*, Heb. *šālaṭ* [cf. *šālîṭ*!]). Dragons frequently encircle treasures which they guard, such as the golden fleece or the golden apples of the Hesperides. Yam, like Ocean (Ὠκεανος), is a serpentine earth-surrounder, a Uroborus.

50. This character appears with a dragon at KTU 1.6 vi 51 as an enemy of Shapsh during her (nightly) subterranean journey, there driven away by Kothar. Is Arsh comparable to the Eg. Apepi, who threatened Ra nightly, and was beaten off by Seth, or even to Ammut, the devourer of BD? Margalit (1980: 199-200: *a* + *rš*, 'Sprayer') suggests that he or she may be a whale. Cf. n. 14 to KTU 1.5 i 15. There is nothing in the text to justify supposing that Arsh is bovine in form or is another name for 'El's calf Atik' (thus Day 1985: 81; Batto 1995: 320). Day's broader argument, that Arsh is the prototype of Behemoth (see also Batto 1995: col. 320),

I finished off El's calf, Atik[51],

1.3 iii 45 I smote El's bitch[52], Fire,
I exterminated El's daughter, Flame[53].

I fought for the silver,
I took possession of the gold

1.3 iv 1 of those who drove Baal from the heights of Saphon,
knocking him like a bird from his perch[54],
(who) drove him from the throne of his kingship,
from the back-rest,
from the siege of his dominion[55].

What manner of enemy has risen against Baal,
of foe against the Charioteer of the Clouds?'

1.3 iv 5 The divine assistants replied;
they answered her:

'No enemy has risen against Baal,
nor foe against the Charioteer of the Clouds!

"Message of Valiant Baal;
Word of Valiant Warrior:

seems to go beyond the evidence, however tempting. De Moor (1971: 242) admits defeat on the problem, which is perhaps wise counsel. Pardee's (1997c: 252 and n. 93) treatment ("Arišu [Demander]") is interesting.

51. Ug. *'tk*. A mythological figure mentioned only here. Perhaps to be linked to biblical Behemoth? So Day (1985: 181) and Batto (1995: col. 320). 'Binder': Pardee (1997c: 252).

52. To Ug. *klbt il*, cf. Gk Κερβερος, the three-headed guardian of the underworld. If there is a link between the two, as suggested by Gaster (1961: 239), the gender has changed. KTU 1.19 i 10 may preserve a congener in *klb ilnm*, though I have construed it differently. See n. 183 *ad loc*.

53. Ug. *ḏbb*. Or perhaps 'Fly'? Cf. de Moor (1981–82: 114-15). Perhaps to be related to the *dbbm* of KTU 1.169.1? De Moor notes the demonic associations of flies. West (1995: 281) identifies 'Fire' and 'Flame', and further associates them with the Lamashtu demoness, who appears in some Akk. texts (e.g. RS 17.155[.27]).

54. This idiom survives as a Heb. variant in Prov. 27.8, and is preserved more closely in 1QH 4.8.

55. These lines hint at a previous deposition of Baal from his throne. The extant narrative however suggests no such thing with certainty, though cf. the wording at KTU 1.1 iv 24-25. But disharmonies and uncertainties of this kind point to a complex prehistory to the tradition.

'Bury war in the earth,
set strife in the dust,
1.3 iv 10 pour a libation into the midst of the earth,
honey from a jar into the midst of the steppe.
Grasp your spear (and) your mace,
let you feet [hast]en towards me,
let your legs hurry to me!
[For I have a word] that I would say to you,
a message [that I would repeat to you]:
[a word of] tree
1.3 iv 15 and a whisper of [stone],
[a word unkno]wn to me[n],
[and which the multitudes of the ea]rth [do not]
understand:
the si[ghing of the heavens to the ear]th,
of the deep t[o the stars].
[I understand the lightning]
which [the heavens] do not know:
[come, and I shall] re[veal it]
[in the midst of] my [div]ine mountain Saphon,
1.3 iv 20 in the sanc[tuary],
[on the mountain of] my [in]heritance.'"'
And Virgin [A]nat replied;
the Be[loved of] the Powerful One responded:
'I myself shall bury war [in the earth];
[I shall] set strife in the dust.
I shall pour [a libation] into the midst of the earth,
1.3 iv 25 honey [from a jar] into the mid[st of the st]eppe.
Let Baal set his rope[56] [in the heavens],
Let [the Charioteer of the Clou]ds kindle his [light]ning.

56. The term is usually construed as relating to harness. See R.M. Good (1984), Watson (1986; 1996a: 76) and discussion at KTU 1.4 iv 4-5, nn. 121, 122. Here a shaft of lightning is the harness of Baal's chariot. Contrast Pardee (1997c: 253 and n. 95). He translates 'watering devices', explained from √*dly*, 'draw water'. This is a good alternative.

I shall bury war in the earth;
I shall set strife [in the d]ust.

1.3 iv 30 I shall pour a libation into the midst of the earth[57],
honey from a jar into the midst of the st[eppe].

Further, another thing I shall say:

Go, go! attendants of the gods!

You may delay,
but I shall hurry

to the mountain[58] of the remotest gods,
1.3 iv 35 Inbub of the remotest chthonian gods:

two layers beneath the springs of the earth,
three expanses of the depths.'

Then
she set her face indeed towards Baal in the heights of Saphon,

a thousand miles away,
ten thousand leagues off.

The coming of his sister Baal saw,
1.3 iv 40 the approach of his[59] father's daughter.

He dismissed the women from his presence;

he set an ox before her,
a fat ram also in front of her.

She drew water and washed herself,
(with) dew of heaven,
oil of earth,
dew which hea[ven pour]ed on her,
rain with which the stars anointed her.

1.3 iv 45 She made herself beautiful with murex,
[whose] source is a thousand acres in the s[ea].

(about 15 lines missing)

'...

57. Text *awṣ*. Read *arṣ*.
58. Text *úǵr*. Read *lǵr*.
59. Sc. El as father of Baal. Alternatively, 'her father's daughter'.

[There is no] house for [Baal like the gods,]
[nor dwelling] like the sons of A[thirat.]
[El has a home,]
his sons [have shelters;][60]
[the Great Lady-who-tramples-Yam[61] has] a home,

60. Usually construed as 'El's house is the shelter of his sons etc.', all the deities dwelling in El's house. See, e.g., Gibson (1978: 52), de Moor (1971a: 110; 1987: 15) and cf. Pardee (1997c: 253). While this is a possible reading, and seems at first glance to be the sense of the text, it leaves some problems unresolved. It would mean that none of the other second level deities have their own homes, because they all live with their parents. De Moor rationalizes, on the ground that Baal is El's son-in-law (1987: 15 n. 75). This would suggest a matrilocal marriage-system, in which the son goes to live with the wife's parents (cf. Jacob in Aram). But I do not believe that this (and a change in practice) is the point of the narrative here. It is all intended to contrast with the climactic achievement of Baal in gaining his own palace-temple. Therefore his complaint is best interpreted as meaning that all the other deities (down to his own daughter-wives!) have homes, but he, like the son of man, has nowhere to lay his head. But the sequel will put things right! My sense is tenable if each dwelling (*mṯb*, *mẓll*) from [*mṯb il*] in l. 48 is recognized as cs., with gen. of the owners following. Cf. Caquot and Sznycer (1974: 172-73): 'Baal has no house like the gods,| nor court like the sons of Athirat,| nor dwelling like El,| (nor) shelter like his sons,| nor dwelling like Lady Athirat of the Sea,| nor dwelling for...' (his daughter-wives being dispossessed like himself). This is also preferable to the usual sense understood.

61. Ug. *rbt aṯrt ym*. This title may be restored from KTU 1.3 v 40-41 and parallels. Notice its complete absence from KTU 1.1–1.2. Its use is restricted to KTU 1.3-6. Common translations (e.g. Gibson 1978: 52: 'Dame Athirat of the Sea') do not do justice to the verbal force of *aṯrt* in the expression. It is not the DN that is used, but a vb offering a word-play on it (rather like Exod. 3.14). The etymology of the DN is an independent question. On its intractability see Wiggins (1993: 192-93 and refs.). For my translation (based on the proposal of Albright 1968: 105), see Wyatt (1987c: 185-88; cf. 1995c: cols. 183-84, with refs. in both cases). 'She who organizes the day': Watson (1993) takes *ym* to mean 'day'. Cf. Binger (1997: 44-45), I agree with a solar assessment of Athirat (indicated in KTU 1.23, where she is geminated with Rahmay, the two forming the hypostases of Shapsh), but this need not detract from a maritime connection (seen of Shapsh, for instance, at KTU 1.6 vi 45-53). See also the discussion in Binger (1997: 44-45). The actual title used here of the goddess is the ideologically important one *Rabitu*, 'Great Lady', which serves at the interface of royal ideology and theology, and corresponds to Heb. *gᵉbîrâ*. Both terms denote the queen-mother. Cf. discussion at Pardee (1997c: 253 n. 98). His objection to the sense taken here, on grounds of vowel length, is of no consequence in so far as it is not the name Athirat here, but a verb playing on the name.

1.3 iv 50 Pidra[y daughter of Light has a home,]
Taliy daughter of Sho[wer has a shelter,]
[Arsiy] daughter of Snatcher-for-ever [has a home,]
the perfect [brides have a home]!'

And [Virgin Anat] said:

'Bull El [my father] will give me an answer,
he will give me an answer,

1.3 iv 55 or[62] [I shall give him an answer]:

1.3 v 1 [I] shall trample[63] him like a lamb to the ground;

[I shall make] his gray hair run with blood,
the gray hair of his beard [with gore],
if he does not give a house to Baal like the gods,
[and a dwelling] like the sons of Athirat!'

1.3 v 5 [She stamped her f]eet
and the earth [shook].

The[n]
[she set her f]ace
[towards El] at the source of the river[s],
[amid]st the [sprin]gs of the two [deeps].

She rolled back the tent of El,
and came to the [pavi]lion of the King, the Father of [the Bright One].

[She] came to the territory,
the tent of the creator,
[ ]

1.3 v 10 Bull [El] her father heard her voice.
E[l] r[eplie]d from within the seven c[ham]bers,

62. Text *w*, 'and'. But the sequel appears to demand that it be treated as an alternative: either she will get her way, or Anat will assault El.

63. Ug. [*a*]*mṯḫ.nn*. 'Trample'. Thus *UT* 436, §19.1527. 'Push, shove': *WUS* 192, §1639. 'Pull to the ground': de Moor (1971a: 110-11); 'drag': de Moor (1987: 15). In view of the parallels at KTU 1.3 v 23-25 and 1.18 i 11-12 (partially restored: 1.3 v 23 reads *amḫ*[*ṣ*], 'smite') it is worth asking whether [*a*]*mṯḫ* is an inadvertent metathesis of **amḫṣ*, 'I shall smite (him on the ground [= knock him to the ground])'. On the other hand, the text above may be a deliberate paronomasia on the other formula.

[through the e]ight façade[s of the closed] rooms[64]:

(3 lines illegible)

'...

1.3 v 15 At the feet of the divine assi[st]ants [I fall]:
I am much [afraid]!

[Will] the Luminary of the gods, Shapsh, [carry me off],
the Burning One, strength of the heavens[65].
into the han[d(s) of divine Mo]t?'[66]

Then Virgin Ana[t] replied:

64. 'Seven...eight'. Typical use of the 'n, n + 1' formula (occurring, e.g., in Amos 1.3, 6, 9 etc.) for climactic effect. The 'dominant' number here is the seven (Wyatt 1987b and references there; see also KTU 1.14 i 15-20). The pattern of a septuple universe is widespread in the ancient Near East, the seven gates of the Egyptian and Mesopotamian underworlds mirroring the seven planetary spheres of heaven above. See Wyatt (1996b: 46 n. 58). The figure locates El's dwelling at the exact centre of the universe, as Yahweh dwelt at the centre in rabbinic thought. Cf. Hayman (1986). The centre represents the absolute ontological status of the supreme deity. Pardee (1997c: 254 n. 105) interprets El's response from within as El's fear of encountering Anat's irascibility face to face. That does not save him!

65. As sun-goddess, Shapsh has a chthonian role, indicated by her nightly subterranean journey (see KTU 1.6 vi 45-53, comparable to the nightly conflict of Ra and Apepi). This suggests that she is the psychopomp, the guide of the dead into the underworld. This appears to be the meaning of the present passage. De Moor interprets this passage and parallels in a meteorological sense, as the sirocco (1971: 114-15; 1987: 16, 102). Others take a similar line in translation. Thus Caquot and Sznycer (1974: 175): 'Shapsh, the divine lamp, is burning | the skies are exhausted [√*la*] on account of divine Mot'. Cf. Driver (1956: 91), Gibson (1978: 53) and del Olmo (1981a: 190). I have taken *la* in its opposite sense ('be strong', as in Baal's epithet *aliyn*), as an abstract n. 'strength' (sc. strong one). I have taken *ṣḫrrt* here as an adj. epithet of the goddess rather than as a vb. (For the verbal sense see at KTU 1.23.45, 48, 'roasted'). This approach makes better sense than to take it as an aside by the poet on the weather!

66. If this is part of the dialogue between El and Anat, it may be construed as a mocking response by El: he pretends to quake in fear, but is in truth immovable at the cosmic centre, and unlike the gods around him who aspire to kingship in heaven, he is immortal. Ironically, El describes the fate that will befall Baal (cf. KTU 1.4 viii 20-24, 1.5 i 4-8, which warn of it, and 1.6 ii 15-25, where Mot describes how it happened).

'[Let not the sons[67] of] your house, O El,
let not the daughters of your ho[u]se rejoice[68],
let not the children[69] of your [pa]lace rejoice!

I shall surely seize them in my ri[ght hand],
[I shall smite them] by the strength of my long arm[70]!

I shall [strike the top of] your skull,
I shall make your gray hair run [with blood],
the gray hair of your beard with gore!'

El replied from within the seven chambers,
through the eight façades of the closed rooms:

'I know [you], daughter, that you are piti[less][71],
and that among goddesses there is no conte[mpt] like yours!

What do you desire of me, O Virgin Anat?'

67. Restoring *bn*, cs. pl. (thus de Moor 1987: 17: *bnm* in Dijkstra and de Moor 1975: 193, which I would construe as cs. with encl.) rather than *bnt* (as *CTA*, *KTU*[1 and 2] and other commentators). 'Sons...daughters' rather than 'building' (Gibson 1978: 53), 'you have built' (Caquot and Sznycer 1974: 175), or 'within' (del Olmo 1981a: 190). Pardee (1997c: 254): 'the grandeur of your house...height of your palace'. Cf. Cassuto (1971: 100-101) for a further view. See also discussion at Pardee (1997c: 254 n. 108). For the following five cola see also KTU 1.18 i 7-12.

68. 'Rejoice' (*tšmḥ*) 3 pl. rather than 2 sg. Anat's response confirms my interpretation of El's irony. The goddess realises she is being mocked. The lesser deities ('El's children') are probably sniggering. The lowly estimation of Handy (1994: 123-29) of this genre of material as theological 'malfunctioning' is a serious misconstruction. See my response (1996b: 328-30). A malfunctioning theology is a contradiction in terms, except to its opponents.

69. Only the *b* is clearly visible. *CTA br* [*m*] (p. 19 n. 6: 'the sign following the *b* may be read as *r*, *k*, *w*, or even *n*'!). *KTU*[1] b r*m*[ ]. *KTU*[2] *b* rm[ ]. If **brm* read, cf. Akk. *baru*, Aram. *bar*, 'son, child'. Or **bnm*. The progression is thus *bn*(*m*) || *bnt* || *brm* (**bnm*).

70. The royal significance of this gesture, ubiquitous in antiquity, is well expounded by L'Orange (1953: 139-70). Cf. the cognomen of Artaxerxes I, 'Longimanus', also borne by Ardashir Bahman (L'Orange 1953: 141).

71. Ug. *kan*[*št*]. Or perhaps: 'how pitiless you are!' √*anš* II, '(be) inexorable, implacable': del Olmo (1981a: 516: cf. Heb. *'ānûš*). The line recurs in KTU 1.18 i 16. The same √ occurs of Baal at KTU 1.2 i 38, 43 ('enraged'). So also Caquot and Sznycer (1974: 175). This is preferable to 'you are like men' (Gibson 1978: 54; n. 1: 'or [ironically] 'gentle''). Similarly de Moor (1987: 17) and Pardee (1997c: 254).

And Virgin Anat replied:

1.3 v 30 'Your word, El, is wise:
you are everlastingly wise;
a life of good fortune is your word[72].

Our king is Valiant,
Baal is our ruler,
there is none (who is) above him.

We should all carry[73] his chalice,
we should all carry his cup.[74]

1.3 v 35 Groaning he cries to Bull El his father[75],
to El the king who begot him.

He cries to Athirat and her sons,
to the goddess and the band of her kinsmen:

"There is no house for Baal like the gods,
nor dwelling like the son[s of] Athirat.

El has a home,
1.3 v 40 [his s]ons have shelters,

the Great Lady-who-tramples-Yam has a [h]ome,

Pidray daughter of Light has a home,
Taliy [daughter of] Shower has [a shelter];

72. Anat's opening words are entirely in keeping with her violent nature. El's words mollify her. This expression, used by Athirat at KTU 1.4 iv 41-43 (together with the following tricolon and bicolon), appears to be an excerpt from a hymn. Cf. the following two notes. On El's wisdom see Dietrich and Loretz (1992).

73. Ug. *klnyy...nbln*. The same formula occurs at KTU 1.4 iv 45-46. Pl.: Ginsberg (1969: 133), Caquot and Sznycer (1974: 176) and de Moor (1987: 18). Du.: Gibson (1978: 54), who takes it to be Anat and Athtart here, and Anat and Athirat at 1.4 iv 45-46. If hymnic (next n.) a pl. explanation is more satisfactory. Cf. Pardee (1997c: 255 n. 112).

74. These five cola have the appearance of a hymnic excerpt. They appear to allude to a cultic context, presenting as a divine obligation the duties of priests. Their use as a reason for granting Baal a palace-temple is an interesting appeal to 'Scripture'! It is a religious duty incumbent on the gods themselves. Note the henotheistic (quasi-monotheistic) language used of Baal. This is the natural extravagance of cultic language. Baal remains 'theologically' subordinate to El himself.

75. How is this to be accommodated to the usual assumption that Baal was Dagan's son? The expression *bn dgn* used of Baal may be alternatively construed, though I have followed convention here. See n. 106 at KTU 1.2 i 19.

[Arsiy, daughter of Snatcher-for-ever has] a home,
[the perfect brides have] homes."
...'

(about 25 lines missing)

1.3 vi (about 10 lines missing)

'...
1.3 vi 1 [ ]
[ ] your head,
[ ] your brow[76],
[ ]
1.3 vi 5 a thousand [miles] by sea,
ten thousand [leagues] across the river[77].
Pass beyond Byblos[78],

76. Lit. 'between your eyes'. Cf. KTU 1.2 iv 25. De Moor (1987: 19 n. 98), following Avishur (1980: 126-27), imagines the message being worn in phylacteries on the head. Cf. Exod. 13.9; Deut. 6.8; 11.18. But in KTU 1.2 i 42 a messenger appears to carry his message (no doubt in the form of a clay tablet). Does the present instance represent a secret message, in fact remembered rather than written? The context is clear though the text is broken: the divine messenger (or pair) Qadesh-and-Amurr is being charged by Baal with instructions for Kothar. The content of the message appears merely to be to pass on his complaint. The command to build will come later from El (KTU 1.4 iv 58–v 1).

77. 'Sea...river' (*ym...nhrm*). I take it that this describes Qadesh-and-Amurr's forthcoming journey to Crete and Egypt. This is viewed from a cosmological perspective: Crete, across the Mediterranean Sea, lies beyond the ocean which surrounds the world, also imagined as an encircling river. (This supports the idea that Yam's title 'River' [*nhr*] has nothing to do with fresh water rivers.) As for Egypt, this appears in biblical mythological thought to be equated with the underworld (see discussion in Wyatt 1996b: 81-89). This would explain the peculiar wording of KTU 1.1 iii 18-20 which defines the route of a similar journey to Kothar. The king's rule 'from sea to river' in passages like Pss. 72.8, 89.26 alludes to this cosmic as distinct from geographical imagery. De Moor (1987: 19) takes *nhrm* as du. On the problem of locating Kothar's dwelling see nn. 20 at KTU 1.1 iii [0] and 36 at 1.1 iii 20-21. See also n. 83 below.

78. Ug. *gbl*. Cf. Ar. *jabal*. Thus Driver (1956: 91), Caquot and Sznycer (1974: 177 n. b) and del Olmo (1981a: 192, 531). 'Byblos' (also *gbl*; cf. Eg. *gbl*): Gibson (1978: 54), de Moor (1987: 19). There is also the nearer town of Jabal (Gibala, modern Baniyas) in the territory of Amurru. Or it could less probably be taken as

pass by the summit[79],
pass by the islands[80] to heavenly Memphis[81].

1.3 vi 10 Set off, O fisherman of Athirat,
go forth, O Qadesh-and-Amurr!

Then indeed set your face
<towards Kothar-and-Hasis,>[82]

towards Egypt, of all of which he is god,
1.3 vi 15 Crete the seat of his dwelling,
Egypt the land of his inheritance.[83]

Over a thousand miles,
ten thousand leagues.

an aerial journey passing over Mount Saphon (Jebel el Aqra).

79. Ug. *q 'l*. Thus Driver (1956: 91), Caquot and Sznycer (1974: 177 n. b) and del Olmo (1981a: 192, 619; Ar. *qā 'ilatu*, *qaw 'alatu*). Perhaps the Lebanon or (less probably) the Carmel promontory. 'Keilah': Gibson (1978: 5)! 'Qa'ilu': de Moor (1987: 19).

80. Ug. *iht*. A pl. form, √*'wy* (del Olmo [1981a: 520). Cf. Heb. *'iy*. These would be the islands of the Delta of Egypt, as the ship sailed south to Memphis.

81. Ug. *np*. Cf. Heb. *nôp*, which may be Memphis: Wyatt 1996b: 31-33). Gibson (1978: 54 n. 6) identifies it with Memphis, as does de Moor (1987: 19 n. 100). Cf. Caquot and Sznycer (1974: 178 n. c). The epithetal *šmm* will be an allusion to the claim of Memphis to be a meeting-place of heaven and earth. This passage, a bicolon followed by a tricolon, describes the maritime journey (the 'sea || river', while cosmological in nomenclature, is also the Mediterranean Sea) of Qadesh-and-Amurr, who as a 'fisherman' will have travelled by ship. Dijkstra (1991: 128) suggests that the tricolon lists the stages on the voyage down to Memphis, and notes that Memphis actually had a shrine to Baal Saphon. He however identifies *np* with Carmel or 'some other projecting cape'. This 'real geography' interpretation is supported by the following lines, which confirm that Memphis (*ḥkpt*) is the messengers' goal.

82. Conjectural restoration. The context, and particularly the following tricolon, require this identification of the intended recipient of the message. Cf. Driver (1956: 91). He, however, inserts it after 'towards Egypt', which may be the logical place in Ugaritic, but is absurd in translation. Cf. KTU 1.1 iii restoration before l. 1.

83. In view of this passage, we might expect *kptr* also to refer to Egypt, but no plausible explanation has been offered. The usual explanation (Crete, cf. Heb. *Kaptôr*, Eg. *Keftiu*) is quite plausible in view of the close economic ties between Minoan Crete and Egypt, now revealed by the discoveries at Tell ed Daba. See now Morgan (1995). Political symbolism has perhaps preempted geographical realism. Kothar is of course Ptah, the artificer god of Memphis (above at KTU 1.1 iii *1). Cf. also n. 36 to KTU 1.1 iii 20-21.

At the feet of Kotha<r> bow and fall down,
pay him homage and honour him.

1.3 vi 20 And say to Kothar-and-Hasis,
declare to Hayin, who is the ambidextrous[84] craftsman:

"Message of Val[iant Baal],
wo[rd of Valiant Warrior]
'...'"'

(about 20 lines missing)[85]

1.4 i (about 20 lines missing)

1.4 i 1 [ ]
[ ]
[ ]
[ ]
'...

1.4 i 5 [Groaning he cr]ies to Bull [El his father],
[to E]l the king [who begot him];

[he cr]ies to Athi[rat and her sons],
to the goddess and [the band of] her [kinsmen],

1.4 i 10 "[there is no house for Baal like the gods],
[nor dwelling like the sons of] Athira[t].

El has a home,
his sons have shelters,

the Great Lady-who-tramples-Yam has a home,
1.4 i 15 the perfect brides have homes[86],

Pidray daughter of Light has a home,
Taliy daughter of Shower has a shelter,
Arsiy daughter of Snatcher-for-ever has a home."

1.4 i 20 There is something else I would tell you:

84. Cf. n. 23 at KTU 1.1 iii 5.

85. Perhaps the standard 'message formula' of KTU 1.1 ii 17-23 etc. is to be read here.

86. At KTU 1.3 iv 52-53, v 3 (restored) this formula follows the naming of the three goddesses Pidray, Taliy and Arsiy.

prepare, I pray, a gift for the Great Lady-who-
tramples-Yam,
a present for the Mother[87] of the gods.'

Hayin went up to the bellows:
in the hands of Hasis were the tongs.

1.4 i 25 He melted silver;
he poured out[88] gold.

He melted silver by the thousands (of shekels);
gold he poured out[89] by the ten thousands.

He cast a canopy and a bed,

1.4 i 30 a tremendous frame of twenty thousand (shekels),
a huge frame hollowed out from silver
with emeralds[90] (set) in red gold;

87. Ug. *qnyt*. Lit. 'one begetting', but 'progenitress' (Ginsberg 1969: 131) is scarcely poetical!

88. Ug. *yšlḥ*. See Caquot and Sznycer (1974: 194 n. e) on the difficulties of fixing the etymology. √*šlḥ* I, ('send') secondary sense of 'smelt': *WUS* 305, §2610. Listed as second √, 'cast, beat out (metal)': *UT* 490, §19.2420. √*lwḥ*, Š stem, 'made into plates': Gibson (1978: 150). √*lḥḥ*, Š stem, 'cause to be wet, liquify': Margalit (1980: 15). *DLU* 437, √*šlḥ* II.

89. Text *yṣqm*. Scribal error? Note that in ll. 25-6 *yṣq* || *yšlḥ*, while in ll. 26-27 *yṣq* || *yṣqm*. Is there an error in one of the word-pairs? The latter instance is the more suspicious. I have conjecturally read **yšlḥ*.

90. Ug. *šmrḫt* (*KTU*[2]) or *šmrgt* (CTA, *KTU*[1]). I explain by reference to Skt. *marakata* and Gk. *smaragdos* (also found as *maragdos*), both meaning 'emerald'. Van Selms (1975: 471 n. 18) rejected a link with Gk. *smaragdos* on the ground that the latter is derived from √*brq*. A better WS explanation would however be √*mrq* I, 'to scour, polish', appropriate for a gem, and perhaps both Gk and WS terms relate to the √ of Skt. *marakata*, *mṛj*, 'to polish'. Cf. Heb. *bāreqet*, which BDB, listing it under √*brq*, 'flash', explains with ref. to the same Skt and Gk forms (BDB, 140). It could also be cognate with the Ug. form. The same word (in the form *šmrgt*) may occur in the Zinjirli inscription KAI 215.16, though it is regarded as being of uncertain meaning (Tropper 1993a: 123-24; *DNSWI*, 1167). Wilfred Watson obligingly drew my attention to these references. Usually explained as Š pass. pt. of *mrg*, 'cover' (cf. Eth. *maraga*); thus Driver (1956: 161), Gibson (1978: 56) and del Olmo (1981a: 583), following Gaster (1950: 447). So also Caquot and Sznycer (1974: 195 n. j) with some hesitation (Tropper 1993a: 38-39). This would however be **mšmrḫ/gt*, with preformative *m*. They also cite Ar. *maraǧa*, 'cause to flow' and Ar. *maraḥa*, 'rub'. *WUS* 195, §1673: Š pt. of *mrḫ*, 'overlay, plate' (Heb. *māraḥ*, Aram. *meraḥ*, Ar. *maraḥa*). On the usual understanding, why gild silver? That is

a mighty seat with a back-rest[91] to head-height[92],
1.4 i 35 a huge footstool overlaid with polished metal;
a mighty palanquin[93] with handles,
the poles of which were of gold;
a huge table inlaid with all kinds of monsters
4 i 40 from the foundations of the earth[94];
an enormous[95] bowl in the style of Amurru
whose finish was the animals of Yaman[96],
on which were wild oxen by the ten thousand.[97]

1.4 ii (about 16 lines missing)

1.4 ii 1 [ ]
[ ]

gilding the lily! (Unless electrum is meant?) Margalit (1980: 16-17) sees a Š formation on Ar. *marǧan*, 'red coral'.

91. Ug. *nḫt*. This is a seat like El's, designed no doubt to flatter the goddess's vanity, unless the gift is supposed to be for El (see n. 95 below). It establishes the sense of the term as part of a throne. See n. 56 at KTU 1.1 iv 24 and cf. Mayer-Opificius (1983) and Metzger (1985).

92. See the statuette of the enthroned god, probably El, found in the building immediately north of the rhyton temple at Ugarit, RS 88.70 in Yon (1991: 351 fig. 2a), and the empty throne from the palace, RS 90.1, (p. 350 fig. 1b). Contrast El's low-backed throne in the small stela, RS 8.295, (p. 336 fig. 16a). See also discussion at KTU 1.1 iv 24 above and Athtar's experience at KTU 1.6 i 60-61.

93. Ug. *n'l*. 'Litter, palanquin': del Olmo (1981a: 194, 590), N of √*'ly*. 'Sandals': Caquot and Sznycer (1974: 196 and n. o), Heb. *na'al*.

94. Ug. *dbbm*. Sc. mythical monsters, dragons and the like. Cf. Gen. 1.21. At KTU 1.169.1 *dbbm* is construed as 'demons'. Pardee (1997c: 256 n. 129) is probably correct in positing two distinct lexemes.

95. 'Tremendous...enormous'. The superlative *il* is used in each case. Cf. the similar usage with *adr* at KTU 1.17 vi 20-24 and n. 104. Text *id* in l. 34 to be read *il*[!]. Pardee (1997c: 256 and n. 125) takes these to be gifts made for El (hence the ref. to *il*). This seems a viable alternative at first glance, but see KTU 1.4 iii 28-29, 33-36, which evidently distinguishes these gifts for Athirat from future gifts to El. I have taken the gifts as aimed at Athirat's greed.

96. TN occurring in KTU 1.40.27. Its location is uncertain. Lit. 'South country'.

97. The double lines following may be an instruction to repeat an omitted passage, as elsewhere (KTU 1.3 iii 31; 1.4 v 41, viii 47). In view of the damaged sequel, it is impossible to be certain what the passage was.

She took her distaff [in her hand],
the spindle-whorl[98] in her right hand;
1.4 ii 5 her robe[99], the covering of her body, she removed,
her loincloth (made) from the sea,
her folded robe (made) from the river(s).[100]

She set a cooking pot on the fire,
a pot on top of the coals.[101]

98. Following Margalit (1980: 25, 28-29), who reads *q'lt* for *t'lt* of *KTU*[1] (cf. *CTA*: [*t'/q*]*lt*, *KTU*[2]: *t'lt*, n. 2: {*t*}'*lt* or *qlt*). For *qlt* he supposes √*ql*(*l*), and cites Ezek. 21.26 *qalqēl*. 'Spindle-whorl' makes a convincing parallel to 'distaff', particularly in view of the sexual nuance which is discernible in the sequel (thus Margalit). With the same reading, 'the spindle fell from her right hand': Caquot and Sznycer (1974: 197). Similarly de Moor (1987: 47). Reading *t'lt*, 'the spindle of (her) high estate': Driver (1956: 93), followed by Gibson (1978: 56) and Pardee (1997c: 257); 'the distaff of conjuring (sc. wand?)': del Olmo (1981a: 195); 'the spindle she raised': Xella (1982: 109); 'the shawl, that had fallen in the sea': Aistleitner (1964: 38).

99. Ug. *npynh*. Some sort of a garment, the sense derived from the following *md* || *npy* (thus Margalit 1980: 29, following Driver 1956: 93, 157 n. 24). Similarly del Olmo (1981a: 195). See further Margalit (1983a) and Malul (1986). 'Its skin': Ginsberg (1969: 132). Van Selms (1971: 236-37) has identified a √*npy* 'to weave' as the basis for the term, though his application of this sense, appropriate here, at KTU 1.40.1 etc. is untenable. (I have translated this evidently quite distinct lexeme as 'atonement'.)

100. For Caquot and Sznycer (1974: 197-98) this tricolon describes Athirat washing herself clean of excrement! Gibson (1978: 56) understands it to mean that she carries her clothes into the sea (to wash them?). Similarly del Olmo (1981a: 195), de Moor (1987: 47) and Pardee (1997c: 257). Cf. also Margalit (1980: 25). Driver (1956: 93) takes *ym* to mean 'day', while Gaster (1961: 175) has Athirat chasing Yam back into the sea! I have taken an independent line, supposing the goddess's clothes to be *made* of the sea.

101. This culinary enterprise evidently taking place on the sea-shore is perhaps an allusion to the mythical tradition narrated in KTU 1.23. The goddess is seemingly interrupted while preparing for a nuptial visit from El. No wonder she is flustered when Baal and Anat turn up! Later on (at KTU 1.4 iii 14-16) Baal demands that a spindle and a whorl be removed from his cup. Are these now love-tokens which the distracted Athirat has given to him? The text allows no more than conjecture, but the curious Hittite myth in which the storm-god seduces Ashertu on Elkunirsha's instructions (Hoffner 1990: 69-70) after she has attempted to seduce him seems to bear some resemblance to the present passage. (See Margalit's remarks 1980: 42-43).

She implored[102] Bull, the perceptive god[103],
she entreated the Creator of Creatures.

In lifting up her eyes she beheld:

the coming of Baal Athirat saw indeed,
the coming of Virgin Anat,
the approach of the Beloved of [the Powerful One].

At this her feet [trembled];
her tendons [snapped about] her.

[Above, her fa]ce sweated,
[the tendons of her b]ack contracted[104],
(as did) the muscles of [her] shoulders.

She lifted up her voice and cried:

'Why has Valiant Baal come?
Why has V[ir]gin Anat come?
Are my enemies about to [sm]ite my sons?
Are they [about to destroy the co]mpany of my kinsfolk?'[105]

[The glint of] silver then [A]thirat espied,

102. Ug. *t'pp*. While this may be intended fairly neutrally ('invoke'), since presumably El is not present, the term may have the sense of 'make eyes at', 'flutter the eyelids' (like the flapping of a bird's wings). Thus Gibson (1978: 56). Cf. de Moor (1987: 47): 'wanted to charm'. 'Plead(?)': Driver (1956: 93; cf. p. 142 and n. 9 [Ar. *'afâ*]). So also Caquot and Sznycer (1974: 198) and del Olmo (1981a: 195).

103. Note the intriguing fusion of titles: *ṯr il* (*abh*) and (*ltpn*) *il dpid*. Has a colon dropped out through haplography? Perhaps this may be tentatively read as a possible original:

t'pp ṯr il <abh	She implored Bull El <her father,
tšal ltpn il> dpid	she begged the Wise One>, the perceptive <god>,
tgzy bny bnwt	she entreated the Creator of Creatures.

104. 'Tendons...contracted': Margalit (1980: 25, 30-31) detects a word-play between *ksl* I, 'tendon' (given as 'back' by Gordon) occurring in l. 17 and *ksl* II, 'garment' (see *UT* 421-22, §§19.1280-81) occurring here: 'the hem of her (under-?) garment fluttered'. *WUS* 154, §1357 recognises only one lexeme, 'loin'. *DLU*, 226: (1) 'loin', (2) 'tendon', (3) 'side'.

105. Apparently an allusion to another theomachy tradition, unless this is an exaggerated reference to the death of Yam (and the subsequent fate of Mot). Each of these gods is beaten by both Baal and Anat. Cf. also KTU 1.6 i 39-42, v 1-4, vi 10-11.

the glint of silver and [ ]
the gleam of gold.

The Great Lady-who-tra[mples]-Yam rejoiced[106].
Aloud [she cried] to her divine assistants:

1.4 ii 30 'See the cunning work [ ][107]
O fisherman of the Great Lady-who-tramp[les-Yam];

take a net in your hands [ ]
a dragnet in both hands [ ][108]

in the Beloved of El, Y[am]
1.4 ii 35 in Yam, the god who [ ]
[Na]har, the god [ ][109]

Valiant [Baal]
Virgin [Anat]'

(about 10 fragmentary lines)

1.4 iii (about 12 lines missing)

(9 fragmentery lines)

1.4 iii 10 Valiant Baal re[plie]d;
the Charioteer of the Clouds responded:

'The Beloved came up and insulted me;
he arose and spat upon me

106. The goddess's transformation is a delight to behold! A Balzacian touch. Solid gold is a theological certainty!

107. Ug. *'n.mk̲r.ap*[ ]. Cf. Caquot and Sznycer (1974: 199): 'look at the masterpiece...'. Similarly Gibson (1978: 57). Driver (1956: 93): 'Look, cunning workers...'. Del Olmo (1981: 196): 'look seriously...'. De Moor (1987: 48): 'look, successful explorer (of the bottom [of the sea])'. On another approach, Margalit (1980: 26): '(he of) the spring which nurtures dry land' (sc. epithet of Qadesh-and-Amurr).

108. Presumably the net is to catch these treasures in case they are whisked away! For de Moor (1971a: 143-45; 1987: 48 n. 214), its casting marks the beginning of the fishing-season. The sea is the cosmic ocean, and the giving to it of divine titles (specifically subordinating it to El) is a means of giving it conceptual form, and thus controlling it.

109. Normally there appears to be a clear distinction between the gods as characters and the realities they represent. Here the sea itself is personified as Yam.

in the midst of the ass[emb]ly of the sons of El.[110]

1.4 iii 15 Take the [spindle] from my table,
the whorl from the cup from which I drink,[111]

for two sacrifices Baal abhors,
three the Charioteer of the Clouds:

a sacrifice of shame
1.4 iii 20 and a sacrifice[112] of whoredom,
and a sacrifice of the debauching[113] of handmaidens.

For in it the shame is patent[114],
and in it[115] are handmaidens debauched.'[116]

110. It is impossible to determine whether this describes an event that has just taken place, or refers back to the scene in KTU 1.2 i 30-47. If the former, Yam is *redivivus*, which would explain the threat he apparently poses at KTU 1.4 vi 10-13.

111. Again, because of gaps in the text, we cannot with certainty relate this to the sequence at KTU 1.4 ii 5-9, though it was possibly Athirat who placed these tokens in Baal's cup. (This view however causes a problem in the sequence at l. 23 below, *q.v.*) There is a distinct flavour of Italian opera about the scene. For a different approach see Caquot and Sznycer (1974: 200-201). But their interpretation removes any motive for Baal's angry outburst.

112. By dittography, the word *wdbḥ* appears twice.

113. Ug. *tdmm*. Usually explained contextually in this sense; del Olmo (1981a: 537) notes parallels *dnt*, *btt*, and cites √*dm* V: 'act lasciviously'; cf. Ar. *ḏammama*, *'aḏamma*, Heb. *zimmâ* as cognates. Alternatively, does the term denote bloodletting (√*dm* II), and thus 'deflowering'?

114. Ug. *ltbṭ*. √*nbṭ*. Akk. *nabāṭu*, 'appear, arise'. Thus most commentators (e.g. del Olmo [1981a: 587]). Margalit (1980: 44) explains the term with reference to Ar. and MHeb. √*nbṭ*, 'sprout forth', as an allusion to birth: 'from him ([*bh*] = Baal) no shame can issue forth'. Note that Margalit takes the initial *l* to be the negative particle.

115. 'For in it...and in it...': Ug. *bh...bh...* The suff. requires that one kind of ritual (or one means of mismanaging ritual?) is at issue, and not three different kinds, as supposed by Loewenstamm (1975b: 105), in comparing Prov. 6.16. But he is surely correct in supposing that the author is quoting a well-known proverb.

116. An interesting passage for assessing the moral dimension of Ugaritic religion, often supposed (by biblical standards) to be deficient. Apart from the lack of any evidence of the cultic use of sex in the Ugaritic texts (KTU 1.23 describes a mythical marriage, rather than events performed in a temple, and is in any case the paradigm of the royal marriage) it is clear from this passage that a high moral tone was demanded, whatever dissident groups got up to in private. The fashionable account of Canaanite religion as decadent and corrupt, and sufficient justification

Following this Valiant Baal arrived;[117]
Virgin Anat arrived.

1.4 iii 25 They offered gifts to the Great Lady-who-tramples-Yam;
they gave presents to the Mother of the gods.[118]

Then the Great Lady-who-tramples-Yam responded:

'Why do you bring gifts to the Great Lady-who-
tramples-Yam,

1.4 iii 30 (and) entreat the Mother of the gods?

You should bring gifts to Bull, the perceptive god,
or should entreat the Creator of Creatures!'

But Virgin Anat replied:

'We offer gifts to the Great Lady-who-tramples-Yam,

1.4 iii 35 [we] entreat the Mother of the gods;
[later] we shall bring him gifts.'[119]

[ ] Valiant Baal;
[ ] the Great Lady-who-tramples-Yam;
[ ] Virgin Anat.

1.4 iii 40 [the gods a]te (and) drank.

[Then they were serv]ed [suckling] animals,
with jaw-shaped [knife] fillets of [fatling].

[They drank] goblets of wine,
[and from golden cups the j]uice of grapes[120].

for contemporary historical judgments, has been well judged as ideologically motivated by Whitelam (1996).

117. This suggests that Baal has made the preceding complaint while on his way to see Athirat. See following note.

118. There are a number of *non-sequiturs* in the text of the 'Baal Cycle', supporting the view that it is really a series of rather loosely related episodes. This sequence is not easily squared with the preceding sea-shore episode in which Athirat's reaction on seeing the gifts is described, since no connection is drawn in the narrative. The problem is compounded by the gaps in the text.

119. There were evidently regular procedures for gaining access to El, which involved invoking intermediaries in the first instance. This would reflect procedures at court.

120. Ug. *dm 'ṣm*. Lit. 'the blood of trees'. Either 'blood' is a metaphor for the red juice, or it is an extended use of *dm* for any life-fluid. Cf. *dam-ʿᵃnābîm* in Gen. 49.11. The vine is classified as a tree in Judg. 9.13 and elsewhere (Wyatt 1992b, p. 426).

(about 9 lines missing)

1.4 iv (about 12 lines missing)

Bull [El]

[And the Great Lady]-who-trample[s-Yam replied]:

'[Listen, O Qadesh]-and-Amu[rr],
[O fisherman of the Great Lady]-who-tramples-Yam!

[Harness[121] an ass],
rope up[122] a donkey;

pu[t on trappings of] silver,
of gold [the fitments].

Prepare the harness of [my] she-ass[123]!'

Qade<sh>-and-Amur[r] obeyed.

He harnessed an ass,
he roped up a donkey.

He put on trappings of silver,
of gold the fitments.

He prepared the harness of her she-ass.

Qadesh-and-Amurr clasped (her):
he set Athirat on the back of the ass,
on the most comfortable part of the back of the donkey.

121. Ug. *mdl* (restored from l. 9). See R.M. Good (1984: 80-81: √Ar. *dalla*, 'guide'), Watson (1986: √Akk. *madālu*, *muddulu*, 'preserve'; *muddulû*, 'elastic strip', either giving sense of leather strip). Not 'saddle', as Caquot and Sznycer (1974: 203), Gibson (1978: 59) and de Moor (1987: 52). The animal was ridden bare-back. Del Olmo's translation ('enjaeza[d]': 1981: 199) means either 'harness' or 'saddle'. Interestingly, bronze bits for the mouth have been found at Tell Ajjul (W.M.F. Petrie) and Tell Haror (E. Oren) in MBA donkey-burial contexts. See n. 17 to KTU 1.40.26.

122. Ug. *ṣmd*. Same √ as *ṣmd*, 'mace' (KTU 1.2 iv 11), the connection being the attaching with a rope. (See R.M. Good 1984: 80.)

123. The *'r*, 'ass' of l. 4 is commonly construed as a male (cf. Heb. *'ayyir*, BDB, 747), but the term used here, *atnt* (Heb. *'ātôn*, BDB, 87), is explicitly female. The third term, *phl*, occurring in l. 5, is also m. Cf. KTU 1.20 ii [4] and parallels, where I have translated *'rhm* as 'their mounts'.

Qadesh took hold of a torch[124];
Amurr was like a star in front.
Virgin Anat followed behind.[125]

And[126] Baal departed for the heights of Saphon.

1.4 iv 20 Then indeed she[127] set her face towards El
at the source of the rivers,
at the midst of the springs of the two deeps.[128]

She rolled back the tent of El
and came to the pavilion of the King, the Father of the Bright One.

1.4 iv 25 At the feet of El she bowed and fell down.
She paid him homage and honoured him.

Lo, El verily saw her.

He unfurrowed his brow and laughed.
He set his feet upon the footstool.
1.4 iv 30 He twiddled his fingers.

He opened his mouth and cried:

'Why has the Great Lady-who-tramp[les-Ya]m come?
Why has the Mother of the g[ods] arrived?

Are you very hungry? Then ea[t]!
Are you very thirsty? Then drin[k]!

124. For the awkward reading *yuḫdm.šb'r* it is preferable to read **yuḫd.mšb'r*. The latter word is √*b'r*, 'to burn'.

125. The passage evokes the scene of a cultic procession, the images of Qadesh-and-Amurr (two gods or one?) precede that of Athirat, while that of Anat brings up the rear. A further example of ritual procedure being modelled on courtly etiquette.

126. Ug. *w*. Cf. following two notes. If a contrast is to be drawn here, this should be translated 'but'.

127. 'She' is Athirat. Here and in the sequel, it is possible to translate 'they' (pl. in *t-*), especially if Baal did in spite of appearances accompany the goddesses. However, El addresses himself to Athirat alone, supporting the translation given here.

128. It appears at first glance as though all depart in different directions. In fact El also dwells on Mt Saphon (it is his throne that is delegated in turn to Yam, Baal and Athtar; see Wyatt 1996b: 34-44; 1996c): the different descriptions are for dramatic differentiation and effect. See at KTU 1.2 iii 4-5 (nn. 63, 64) and cf. KTU 1.1 iii 22-23.

Eat and drink![129]

Eat foo[d] from the table,
from goblets drink wine,
from cup(s) of gold the juice of grapes.

Is it the love[130] of El the king which stirs you,
the affection of Bull which arouses you?'

And the Great Lady-who-tramples-Yam replied:

'Your word, El, is wise;
you are everlastingly wise:
a life of good fortune is your word.

Our king is Valian[t],
Baal is our ruler:
and there is none above him!

We should all bring his cha[lice],
we should all bri[ng] his cup[131].

[Groan]ing[132] he cries to Bull El his father,
to [E]l the king who begot him.

He cries to Athirat and her sons,
to the goddess and the band of her kinsmen:

"There is no house for Baal like the gods,
nor dwelling like the sons of Athirat.

El has a home,
his sons have shelters;

the Great Lady-who-tramples-Yam has a home,
the perfect brides have a home;

Pidray daughter of Light has a home,
Taliy daughter of Shower has a shelter,

129. To this invitation cf. KTU 1.23.72-76 and Isa. 55.1.

130. Ug. *yd*. Is this 'love' or 'penis'? There certainly seems to be a sexual nuance. As we noted above at KTU 1.4 ii 5-11, the scene, though now located at the centre, not the end, of the world, is reminiscent of KTU 1.23.

131. These two tricola and bicolon have all the hallmarks of cultic language, and are perhaps cited from a hymn. Cf. the identical formulation in Anat's mouth at KTU 1.3 v 30-34.

132. The following sequence reiterates KTU 1.3 iv 47-52 (on which see n. 60) and v 35-44.

Arsiy, daughter of Snatcher-for-ever has a home."'

And the Wise One, the perceptive god, replied:

'Am I a servant,
an attendant of Athirat?

1.4 iv 60 Am I a servant, to take hold of a brick-mould,
or a handmaid of Athirat, to make bricks?

1.4 v 1 Let a house be built[133] for Baal like the gods,
and a dwelling like the sons of Athirat!'

And the Great Lady-who-tramples-Yam replied:

'You are great, O El!
The greyness of your beard does indeed make you wise;
1.4 v 5 the knowledge in[134] your breast does indeed instruct you!

And now
the season of his rains may Baal indeed appoint,
the season of his storm[135]-chariot[136].

And the sound of his voice from the clouds,
his hurling[137] to the earth of lightning-flashes[138].

133. Ug. *ybn*. Perhaps it is to be construed 'let *him* build...!' he being the putative servant of Athirat. Against this is the allusion to a handmaid, though the constraints of poetry should not be taken too literally. Perhaps it means 'let Baal build his own house!', though the form *lb'l* shows this not to be strictly the sense.

134. Ug. *dt l*. Lit. 'which (is) from'. For translation see Watson 2001.

135. Ug. *b glṯ*. The term *glṯ* means 'storm' rather than 'snow' or 'wave': Loretz (1996: 172 n. 44), following Tuell (1993) and Smith (1994: 53). Lit. 'chariot in the storm'.

136. Ug. *ṯkt*. For this interpretation, based on Hur. *šuḫitu*, *šukitu*, see Loretz (1996). His argument that it cannot mean 'ship' (Eg. *ṯkty*, thus, e.g., Gibson [1978: 60, 160]) is, however, wrong. As Gibson notes, Ra crosses the heavens daily in a ship. *ṯkt* means 'ship' in economic texts (e.g. KTU 4.81, 4.366). Aistleitner (*WUS*, §2861) distinguishes two lexemes: I, 'become solid' (Ar. *waṯuqa*, Akk. *ešēqu*, and II, 'ship', as above). Loretz has identified a third. Cf. Driver (1956: 97, 151) 'abundance of moisture', followed by del Olmo (1981a: 202, cf. p. 641): reading *ṯrt*.

137. Cf. de Moor (1987: 54) and Loretz (1996: 172).

138. These four cola constitute the only serious evidence for a seasonal dimension to the Baal cycle of texts. They hardly support the thoroughgoing expositions of the past (notably Gaster [1950, 1961] and de Moor [1971a]). For my assessment see Wyatt (1996b: 117-58). The phenomena of the storm are Baal's theophany,

A house of cedars let them build for him;
and let them[139] build him a house of bricks.

Let it be announced to Baal:

"Call a caravan into your house,
merchandise into the midst of your temple.

Let the rocks yield you much silver,
the hills desirable gold,
let the quarries[?140] bring you choicest gems.

And build a house of silver and of gold,
a house of jewels and lapis lazuli!"'

Virgin Anat rejoiced:
she stamped her feet
and the earth shook.

Then she set her face towards Baal,
in the heights of Saphon,
a thousand miles away,
ten thousand leagues off.

Virgin Anat laughed;
she lifted up her voice and cried:

'Rejoice, Baal!
Good news I bring:

A house will be given to you like your brothers,
and a dwelling like your kinsmen!

Call a caravan into your house,
merchandise into the midst of your palace.

The rocks will yield you much silver,

which is appropriate to the construction of his palace-temple.

139. 'Let them build...let them build...'. This could alternatively be construed as 'let him build...' or 'let...be built...'.

140. Ug. *udr*. 'Quarry' (italicized as a guess): *UT* 353, §19.94. While conjectural, this makes sense of the prosodic balance: 'rocks || hills || quarries'. Less convincing is Aistleitner (1964: 41; *WUS* 9, §97), 'camel' (Akk. *udru*); similarly Caquot and Sznycer (1974: 208). Cf. Jirku (1962: 46): 'caravans'. De Moor (1987: 55): 'slopes'. Del Olmo (1981a: 203): 'the most noble' (cf. Heb. *'eder*, *'addîr*); cf. *DLU*, 11; similarly Driver (1956: 97), Gibson (1978: 61) and Xella (1982: 114). This gives the sequence 'much || desirable || noblest'. Gaster (1961: 186): 'tall trees(??)'. Cf. *arz*, Heb. *'erez*, 'cedar'.

the hills desirable gold.
And build a house of silver and of gold,
1.4 v 35 a house of jewels and lapis lazuli!'

Valiant Baal rejoiced.

He called a caravan into his house,
merchandise into the midst of his palace.

The rocks yielded him much silver,
the hills desirable gold;
1.4 v 40 The quarries brought him choicest gems.

He <s>ent for Kothar-and-Hasis.

(Now return to the narrative of how the divine assistants were sent for.)[141]

Then Kothar-and-Hasis arrived.

1.4 v 45 They set an ox before him,
and a fatling before his face.[142]

A seat was prepared and he was seated
at the right hand[143] of Valiant Baal,
until [the gods] had eaten and drunk.

[Then] Val[iant Baal] said,
1.4 v 50 '[De]part, Ko[thar-and-Hasis]!

141. Editorial note. Cf. the double lines at KTU 1.3 iii 31, 1.4 i 43 and viii 47. The instruction presumably refers the reader back to a formula of messenger-sending, adapted to a message from Baal to Kothar to proceed. But it is not clear which passage is involved. The reference can hardly be to KTU 1.4 iv 2-15, for there Qadesh-and-Amurr are specifically associated with Athirat and her preparations for a journey. The other most closely antecedent passage is KTU 1.3 vi 1-25 and missing sequel, which though on a different tablet, has the advantage in terms of plausibility, since it is a message (from Baal?) to Kothar and even, despite an estimated some 40 missing lines between the two sections of text, which may have repeated the instructions, apparently continues to deal with the same matter in KTU 1.4 i 1-22. Kothar responds immediately in l. 23.

142. A feast represents the initial courtesies extended to a guest. The feasting of the gods is undoubtedly based on the realities of the sacrificial cult, which was in turn an adaptation to religious purposes of the symbolism of human commensality. The language is formulaic (Lloyd 1990).

143. The seat of honour. Cf. Ps. 110.1.

Hasten! [Build] a house indeed;
hasten! Construct a pala[ce]!

Hasten! [Let] them build a house;
Hasten! Let them construct a pala[ce],
1.4 v 55 in the midst of the uttermost parts of Saphon.

A thousand square yards let the house take up,
ten thousand acres the palace!'

And Kothar-and-Hasis replied:

'Listen, O Valiant Baal!
1.4 v 60 Understand, O Charioteer of the Clouds!

shall I not put a window in the hou[se],
a casement in the midst of the palace?'

But Valiant Baal replied:

'You shall on no account put a window in [the house],
1.4 v 65 [(nor) a case]ment in the midst of the pal[ace]!'[144]

144. The window episode is obscure, but serves to lead us up to the climax of the completion and inauguration of Baal's palace. This is undoubtedly the foundation-myth of the Baal temple at Ugarit (the northwesterly of the two on the acropolis). Reference to Jer. 9.20, where death has come in at the windows of the houses in Jerusalem, is probably not relevant to this context. Cf. Cassuto (1975: 133-35), Paul (1968: 374) and M.S. Smith (1987: 289-90; his further discussion is enlightening). The majority view has been that Kothar proposes putting windows in Baal's palace, but Baal refuses, to be told that he will in due course change his mind. Margalit (1980: 45-50) has argued persuasively that this reverses the sense intended, and I am tempted to accept his view here, though the argument is finely balanced. That Kothar would *not* want to instal windows (for whatever reason, but neither solution clarifies the motive) is certainly more remarkable than that he should. There would be little point in announcing a plan to put them in, except as a foil to Baal's response. Baal thus, on this argument, gets his way after all. The problem is twofold. Firstly, it lies in the ambiguity of the terms *bl* and *al*. Kothar's words *bl ašt* can mean either 'shall I not put?' or 'I shall not put', while Baal's words *al tšt* can mean either 'on no account (shall you) put' or 'you shall indeed put'. (See *UT* 108, 357, 372, §§12.4, 19.162, 466, 467). Caquot and Sznycer (1974: 211 n. g) propose that the windows are to allow Baal's rains to fall (the temple is thus celestial). Cf. KTU 1.2 i 14-15 (and nn. 102, 103), 1.4 vii 17-34. On the other hand, on the usual interpretation, Baal's objection is compelling, lest his consorts be stolen away and Yam rise up against him (KTU 1.4 vi 10-13: see, e.g., del Olmo [1981a: 205], and cf. de Moor [1987: 58]). The second objection to Margalit's approach, which finally clinches the argument, is in the wording of KTU 1.4 vii 19-20.

(perhaps 3 lines missing—cf. 4 vi 10-13?)

1.4 vi 1 And Ko[thar-and-Ha]sis replied
'You will return, Baal, to [my advice]'.
Ko[thar]-and-Hasis repeated his question:
'Listen, I pray, O Valiant Baal!
1.4 vi 5 shall I not put a win[dow] in the house,
a casement in the midst of the [pal]ace?'
But Valiant Baal replied:
'You shall on no account put a wi[ndo]w in the house,
(nor) a casement in the mi[dst of the pa]lace!
1.4 vi 10 Lest [Pidra]y, daughter of Light, should esc[ape][145]
[and Tali]y, daughter of Shower, [should flee?][146],
[or the Be]loved of El, Yam, [should arise],
[ ]insult and spit (on me).'
1.4 vi 15 And Kothar-[and-Hasis] replied:
'You will return, Baal, to my advice'.
[Quickly] his house they built;
[quickly] they constructed his palace.
They [we]nt to Lebanon and its trees,

Though the reading is uncertain (*CTA* reads *'l* h[wt], *KTU*[1] 'l h*w*t, *KTU*[2] *'l* hwt; cf. *CTA*, I, 29 n. 8 for alternatives), it arguably supports the majority view, that it is Kothar, after all, who is in favour of the window installation. The reference to windows in Baal's palace, which presumably amounts to openings in the sky through which rain may fall and his thunder be heard, is to be compared to the openings in the sky in Gen. 7.11-12, 8.2, Isa. 24.18 and Mal. 3.10, to the temple windows (1 Kgs 6.4) and to the apparently unfulfilled condition (?) in the expression 'even if Yahweh made windows in the sky' (2 Kgs 7.2, 19; cf. LXX; MT appears unconditional).

145. Text *td* [ ]. *CTA*, *KTU*[1] read *td* [*d*], 'escape' (√*ndd*, *nwd*). Cf. Gibson (1978: 62), del Olmo (1981a: 205) and de Moor (1987: 58). *KTU*[2] leaves lacuna blank. Margalit (1980: 47) proposes *td* [*r*], 'shine' (√*dr*[*r*], 'move, flow, shine': Akk. *darāru*, Ar. *darra*). This could still yield the sense 'flow (away)'.

146. Conjectural. 'Flee': del Olmo (1981a: 205). Text [-] h/i *ṯ*/*ḫ* [ ]: thus *CTA*, *KTU*[1 and 2], followed by a gap of about six letters. Margalit (1980: 48) reads [*t*]*ḥṭ* [*l*], √*ḥṭl*, Ar. *ḥaṭala*, 'flow, pour down'. There is no recognizable word-pair here with any permutation, so that any interpretation is provisional.

to [Si]ryon and its choicest cedars;

1.4 vi 20 Yes, [Le]banon and its trees,
Siryon and its choicest cedars.

Fire was placed in the house,
fla[m]es in the palace.

Lo,
a day and a second,
1.4 vi 25 fire burned in the house,
flames in the palace.

A third and a fourth day,
[fi]re burned in the house,
flames in the palace.

A fifth and a sixth day,
1.4 vi 30 fire burned [in] the house,
flames in [the midst of the p]alace.

Look!
On the seventh da[y],
the fire was removed from the house,
the f[lam]es from the palace.

The silver had turned into ingots;
1.4 vi 35 the gold had been changed into bricks![147]

Valiant Baal rejoiced:

'My house I have built of silver,
my palace out of gold!'

The offerings of [his] house [Baal] presented;
1.4 vi 40 Hadd presented the [off]erings of his palace.[148]

147. Fire is the medium of transformation, a powerful symbol of its cultural impact. Out of the materials *crus* is constructed a palace-temple *cuit.* Cf. Lévi-Strauss's (1964) idea of the raw and the cooked. The earthly construction is thus mystically identified with its celestial archetype. Similarly, fire transforms sacrifices, and in Plutarch's *De Iside* 16, it changes a mortal into a divine person. James Mackey has drawn my attention to the sacred site of Navan Fort in Co. Armagh in Northern Ireland, used during the Iron Age in coronation ceremonies, and afterwards ritually burnt (see Harbison 1988: 155-58).

148. The term *'db*, used here in both vb and n. forms, is a technical term from the cult. Cf. KTU 1.4 viii 17; 1.6 ii 22; 1.23.54, 65, etc. For this interpretation see Levine and de Tarragon (1993: 81-82). It is preferable to the more neutral sense of

He slaughtered oxen [and] sheep:
he felled bulls
[and] the fattest of rams,
year-old calves,
skipping lambs,
kids.

He invited his brothers into his house,
1.4 vi 45 his kinsmen into the midst of his palace;
he invited the seventy sons of Athirat.

He gave wine to drink to the ram-gods;
he gave to drink to the ewe-goddesses.

He gave wine to drink to the ox-gods;
1.4 vi 50 he gave to drink to the cow-goddesses.

He gave wine to drink to the siege-gods;
he gave to drink to the throne-goddesses.

He gave wine to drink to the amphora-gods;
he gave to drink to the jar-goddesses.[149]

'db understood by e.g. Caquot and Sznycer (1974: 213), Gibson (1978: 63), de Moor (1987: 60). This cultic statement is then followed by the list of offerings in ll. 40-43. As Levine and de Tarragon note, 'phenomenologically, a feast of the gods is a heavenly, sacrificial ritual'.

149. These are evidently classes of minor deities, the apotheosis of the cultural and economic realities of Ugarit. These are summed up in domestic livestock, technology (unless the significance of the amphora and jar deities is not rather their contents) and the royal throne. To the latter, cf. Isis (*jst*, 'throne') and Nephthys (*nbt.ḥt*, 'mistress of the house'), who were respectively the deified Egyptian throne and palace. Pardee (1997c: 262 and n. 178) interprets this differently. The pattern he sees continues from this initial bicolon:

> He provides the gods with rams (and) wine,
> he provides the goddesses with cows (and) [wine].

That is, all the deities are given a rich meal consisting of rams, ewes, oxen, cows, served up once they have subsequently been provided with sieges, thrones, amphoras and jars. There are three difficulties with this at first glance preferable alternative. Firstly, it requires the provision of several copulas (in ll. 47, 48, 49, 50, 51, 52), and for each mention of the goddesses it also requires the restoration of 'wine' (in ll. 48, 50, 52: reflected in KTU^2). This is asking a lot. Secondly, the wherewithal to sit and enjoy this fantastic meal is provided only secondarily! Thirdly it does not conform to the formulaic language (and presumably menu conventions) listed for such feasts. I take it that these minor deities are the attendants

1.4 vi 55 While they ate the gods drank.

Then they were served suckling animals,
with a jaw-shaped knife fillets of [fat]ling.

From gob[lets they drank wi]ne,
[from cu]ps of gold the jui[ce of grapes].

(5 fragmentary lines, perhaps followed by 2 missing lines)

1.4 vii 1 [ ] lapis lazuli
[ ] Valiant Baal

[ ] like the Beloved of El, Y[am],
[ ] on top of his skull.

1.4 vii 5 [ ] far...on the rock,
[ ] the gods on Saphon.

He travelled [from city to] city;
he went from tow[n to to]wn.

He seized sixty-six cities,
1.4 vii 10 seventy-seven towns.[150]

Eighty Baal [smote]
ninety Baal [captured?].

Baal [sett]led into his house,
into the midst of his palace!.

1.4 vii 15 And Valiant Baal said:

'I shall do it, Kothar, this very day,
Kothar, this very hour?!

Let a window be opened in the house,
a casement in the midst of the palace,

and mythic personnel of Baal's palace, corresponding to the human personnel in the Ugarit temple. Every item of furniture and cult is deified, or in more modern parlance, has its prototype in heaven. The strict gender matching suggests personalities comprising unities from each pair of terms (gods *and* rams etc.).

150. Baal's tour of inspection would correspond to the royal progress of a king, at once an affirmation of his territorial authority, and the opportunity to quell local rebellions. The military action of a king is the earthly counterpart of the mythical action of the *Chaoskampf*. See Wyatt (1998a). Baal's tour is the paradigm of the king's.

and let a rift [be op]ened in the clouds
1.4 vii 20 according to the word[151] of Kothar-and-Hasis!'

Kothar-and-Hasis laughed;
he opened his voice and cried:

'Did I not say to you, O Valiant Baal,
1.4 vii 25 that you would return, Baal, to my suggestion?

Let a window be opened[152] in the house,
a casement in the midst of the palace!'

Baal opened a rift in the clouds;

his holy voice Baal gave forth;
1.4 vii 30 Baal repeated the is[sue of] his lips[153].

At his h[oly] voice the earth quaked;
at the issue of his [lips] the mountains were afr[aid].

The ancient[154] [mountains] were afraid;
1.4 vii 35 the hills of the ear[th] tottered[155].

The enemies of Baal took possession of the forests,
those hating Hadd the flanks[156] of the mountain.[157]

151. Ug. *'l hwt*. Understood as above by most scholars. Margalit (1980: 61-62) reads *'lh ktr*: 'Kothar-Hasis pounded the anvil (|Kothar-Hasis did laugh)', thus avoiding the difficulty the conventional reading raises for his interpretation of the window incident.

152. Ug. *yptḥ*. G juss. pass. Thus also de Moor (1987: 63). 'He opened' (del Olmo 1981a: 209; cf. Margalit 1980: 58, who supplies a disjunctive, and Gibson 1978: 65, who supplies the subject, 'Baal'). While a 3 sg. G active is grammatically possible, it is improbable, in that the subject (*b'l*) comes only in l. 28.

153. Sc. the thunder. Cf. KTU 1.101.3-4, and the sevenfold voice of Yahweh in Ps. 29, derived from the Canaanite tradition. Discussions in J. Day (1985: 57-60) and Avishur (1995: 88-89).

154. Ug. *qdmym*. Gibson (1978: 65): 'the peoples of the east'. Virolleaud (1949: 94-95) followed by Caquot and Sznycer (1974: 217 and n. i') take this to mean 'before Yam'. Del Olmo (1981: 209): '[the shores] along the sea'.

155. While this is the conventional language of theophany descriptions, drawing on the overpowering auditory and visual experience of the cult (cf. PT 477 and Isa. 6.1-4), it shows that Baal transcends nature. He is not simply a 'nature god'.

156. Ug. *gpt*. Cf. Heb. *gap* (Prov. 9.3), Aram. *gap*, *'ᵃgap*. Thus de Moor (1971a: 266), del Olmo (1981a: 533), etc. Preferable to 'interior' (Caquot and Sznycer 1974: 217 and n. k: Ar. *ǧawf*).

157. Baal has driven his enemies beyond the frontiers of his territory. Then, uttering his challenge to them (meaning that they dare not invade) he returns to his

And Valiant Baal said:

'Enemies of Hadd,[158] you should indeed[159] fear[160],
you should indeed fear the weapons of the Mighty One[161]!'[162]

1.4 vii 40 Baal spoke[163]:

the axe[164] his (left) hand indeed brandished,

palace. Within the confines of the narrative, these foes are the forces of chaos, Yam, Mot and their allies. Ideologically, they represent all enemies of Ugarit. Gaster (1944: 32) has the bicolon addressed to Mot, 'consigning [him] to the woodlands and barren places'.

158. Text damaged. *CTA*: *hd*t, *KTU*[1]: hdt (n. 5: 't written over erasure'), *KTU*[2]: *hd* [[x]]*t*. De Moor (1971: 164, 166) reads *hd*{t}, while Margalit (1980: 63) reads *hd*m[!]. In any event the sense is plain: 'Hadd(u)' (*hd*) is the equivalent of Hadad, Adad ('thunderer'), epithet of the storm-god. See Wyatt (1992a: 412, §12).

159. Ug. *lm*. I have taken it as emphatic *l* with enclitic. Others: 'why...?'. Thus, e.g., Caquot and Sznycer (1974: 217) and del Olmo (1981a: 209). As a question, it is surely meaningless, since Baal is challenging his foes, daring them to invade his kingdom. The same translation by de Moor (1971a: 164; 1987: 63) and Margalit (1980: 63) makes sense in conformity with their different translation of the verb *ṯḫš*, on which see next note.

160. Ug. *ṯḫš*. 'Fear': √*ḫš*, Akk. *ḫāšu*, Ar. *ḫāša*. Thus del Olmo (1981a: 554). Cf. l. 32 above. De Moor and Margalit take it to mean 'invade' (Ar. *ḫaššа*), which I take to be less appropriate to the context (de Moor 1971a: 1, 64; de Moor 1987: 63; Margalit 1980: 63).

161. Ug. *dmrn*. Cf. Wyatt (1992a: 410-12 §11) for references and interpretations, to which should be added Cassuto (1949). The same epithet appears at KTU 1.92.30. It occurs in the Gk form Demarous as an epithet of Zeus, associated with Adodos (sc. Hadad) in Eusebius' *Praeparatio Evangelica* 1.10. See discussion in Pardee (1997c: 263 n. 190).

162. Gaster (1944: 32), following his interpretation of ll. 35-37, makes of this bicolon a challenge addressed to Mot.

163. Lit. 'replied' (Ug. '*n*). Rather than 'viewed', as de Moor (1971a: 164; 'watched'; 1987: 64). For discussion of what I present here as a monocolon followed by a bicolon see Wyatt (1990b). Some of the alternative translations cited there are frankly incredible. Baal's words in the preceding bicolon are mirrored in his action of the following one, the two forming a kind of chiasmus about this statement of him speaking. Thus the divine word is central to the construction, as it is central to all theologies.

164. Reading either *q<r>dm*, or *qdm* (thus tablet) with sense of 'axe'. For the former suggestion see Wyatt (1990b); for the latter see Wyatt (1996a: 354-55), Durand (1984) and Mayer (1989: 268). (Thanks to Wilfred Watson for these references.)

the cedar (was) in his right hand.[165]

Then Baal returned to his house.

'Will either king or commoner[166]
establish for himself dominion in the earth?[167]

1.4 vii 45 I shall surely send a messenger[168] to divine Mot,
an envoy to the Beloved of El, the hero.

Mot may mutter to himself,
the Beloved may scheme in his heart[169];

1.4 vii 50 (but) I alone[170] it is who will rule over the gods,
who will fill gods and men,
who will satisfy the multitudes of earth!'

Aloud to his divine assistants Baal cries:
'Look, [Gupan] and Ugar,

1.4 vii 55 The Dark One[171] [has obscured[172]] the day,

165. For my interpretation of this bicolon see Wyatt (1990b). This visual representation of Baal corresponds closely to the 'Baal au foudre' stela, RS 4.427 (Yon 1991: 331, §11a), on which the god flourishes a fenestrated axe in his right hand, while holding a spear that becomes a tree in his left. Cf. also the inscription concerning Baal from Medinat Habu cited in *ANET*, 249: 'Baal smites thee with the cedar tree which is in his hand'.

166. Cf. Pardee (1997c: 263): 'Is there or is there not a king...?'.

167. This bicolon appears to be a further challenge addressed to any who would contest Baal's kingship. The question invites the inevitable response 'of course not!', which supports my approach to the preceding. What precedes has been addressed to foes on earth. What follows is addressed to Mot, lord of the underworld. In view of this firm rebuttal of any claim by Mot, Baal's subsequent capitulation is strange. Gaster (1944: 32) understands this to be an allusion to Mot.

168. Ug. *dll*. Ar. *dalîlu*, 'guide' (Albright [1933: 18 n. 48], followed by de Moor [1971a: 168] and del Olmo [1981a: 536]). Cf. Jirku (1962: 52): 'herald(?)'. Cf. also Akk. *dayyālu*, 'messenger'. Gaster (1944: 32, 45): 'cheapskate' (Ar. *dallu*, BHeb. *zôlēl*), construed with preceding words: 'shall ever a cheapskate instal himself o'er the land of my dominion?'. The views of Gaster noted above were all later abandoned (Gaster 1961: 197-99).

169. 'To himself...heart'. Lit. 'in his chest...in his gullet' (*npšh...gngnh*).

170. In grammatical terms this tricolon could be the content of Mot's scheming, which Baal quotes. Thus Caquot and Sznycer (1974: 218-19) and Pardee (1997c: 263). In this case it would be full of ironies, since only Mot would be full! I have taken it rather as Baal's rejection of Mot's pretensions.

171. Text *bġlmt*. *CTA b<n.>ġlmt*, followed by *KTU*[1 and 2], following reading of KTU 1.8.7. Margalit (1980: 68) thus translates as 's<ons> of the maiden [with the

the Gloomy One the ex[alted Soverei]gn[173]'.

(5 unintelligible lines, followed by about 7 missing lines)[174]

1.4 viii 1 'So set your faces towards Mount *Trġzz*,
towards Mount Shirmegi[175],
towards the twin (peaks) of the Ruler of the underworld.

1.4 viii 5 Raise the mountain on your hands,
the hill on top of your hands,

turban]' (the latter expression a rendering of *ʾmm*). Cf. de Moor (1971a: 164): 'the sons of Concealment...', evidently denoting Gupan and Ugar. See also Caquot and Sznycer (1974: 219 and n. w). I have followed this latter sense. Note that *bn<n> ġlmt* is paralleled by *bn ẓlmt* in l. 55, from which it takes its sense. I have taken the parallel expressions to be epithets of Mot. Lit. 'son of darkness...son of gloom'. Note the word-play, in which each title contains the element *mt*.

172. Ug. *ʾmm* restored after KTU 1.8.8. The verb does double-duty, with 'the exalted Sovereign' (sc. Shapsh) the object in the second colon.

173. Ug. *rmt prʾt*. The damaged text here may be confidently restored from KTU 1.8.9. Translation, though not interpretation, follows de Moor (1971a: 164, 172). Cf. Gibson (1978: 66). To *rmt* cf. the second element in Gk Andromeda, which I interpret as **Anatu ramitu*: cf. Wyatt (1988a: 376 n. 11). To *prʾt* (Gibson, 'princess' [so also de Moor (1987: 65)]), cf. Heb. *perāʿ*, 'prince'; Ar. *farʿu*, 'chief'. Perhaps the source of this is Eg. *pr ʿȝ*, 'great house' (sc. royal palace) and by extension 'king (pharaoh)', Heb. *parʿô*. De Moor takes this to be a description of a sirocco, obscuring the sunlight. I take it to be the appearance of Mot, perhaps in the form of a solar eclipse, which is an awful omen for Baal. It would be on account of this that he sends his messengers to Mot, perhaps hoping to appease him. Unfortunately, the reason for the embassy must have been in the lacuna following. For what some have taken to be an account of a solar eclipse, see KTU 1.78.

174. The missing section of KTU 1.4 vii 56-60 can be partially restored from KTU 1.8.9-17, but to no useful purpose. For attempted translations see de Moor (1971a: 164; 1987: 65-66), Gibson (1978: 66), and Margalit (1980: 68).

175. Ug. *trġzz...ṯrmg*. See Tsevat (1974b) for the suggestion that the two terms are Hur., the *r* being interpolated to suit Ug. phonetic rules. To the latter (Hur. Shimegi + *r*) cf. the name Thamaq occurring at KTU 1.22 i 8. Tsevat interprets these as the mountains of the horizon, between which the sun rises and (or) sets. I understand it to be the western flank of Saphon (Jebel el Aqra) which drops abruptly into the sea. Cf. Margalit (1980: 75). Gaster (1961: 197) sees the mountains as northern, and identifies the names with the 'Asiatic deities Tarhu and Sharruma'. The former (Tarḫu) is the Hittite storm-god, the latter the son of the Hurrian storm-god Teshub and his consort Ḫebat (van der Toorn 1995: col. 745).

and go down into the house of the couch[176] of the earth,
be numbered among those who go down into the earth.

Then set your faces indeed
towards his city Muddy,

a pit the seat of his enthronement,
a crevice the land of his inheritance.

But take care, attendants of the god,
do not draw near divine Mot,

lest he offer you up[177] like a lamb in his mouth,
like a kid in the opening of his maw!

Lest you be carried away by the Luminary of the gods, Shapsh,
the Burning One, strength of the heavens[178],
into the hand(s) of the Beloved of El[179], Mot.

Over a thousand miles,
ten thousand leagues,

at the feet of Mot bow and fall down,
pay him homage and honour him.

And say to divine Mot,
declare to the Beloved of El, the hero:

"Message of Valiant Baal,
[wor]d of Valiant War[rior]:

My house I have built [of silver],
[I have constructed my palace out of gold]
..."[180]

176. For this designation of the tomb, cf. Heb. *bêt ḥopšît*, and see Tromp (1969: 157-59). Note the irony here: Baal's messengers are to experience in their journey to Mot the threat voiced by Mot with regard to Baal himself in KTU 1.5 i 5-8, 31[-35], v 11-17 and fulfilled in KTU 1.5 v 17-25 and the missing sequel. Pardee (1997c: 263): 'the place of seclusion'.

177. Ug. *'dbkm*. The cultic use of the vb is to be understood here, as at KTU 1.4 vi 39 (n. 148).

178. Ug. *ṣḥrrt la šmm*. For explanation see n. 65 at KTU 1.3 v 17-18.

179. Text: *mdd.ilm.mt*. || at KTU 1.6 ii 24-25 reads *bn.ilm.mt*. || at KTU 1.3 v 18 restored thus. Variation of this kind is to be expected against a background of oral tradition.

180. We can only guess at the precise content of the missing message Baal sent

(9 unintelligible lines)

(about 17 lines missing)

1.4 viii edge: [the scribe is Ilimilku the sac]rificer of Niqmad king of Ugarit[181].

to Mot. It probably has something to do with his belligerent language at KTU 1.4 vii 45-52. Mot's response at KTU 1.5 i 1-8 (given to Gupan and Ugar) and ll. 12-31 [32-35] (delivered to Baal) is equally belligerent. There is something of the wicked fairy motif here: Mot was not invited to the feast. He will therefore make a feast of Baal!

181. See nn. 127-34 at KTU 1.6 vi 54-58, and discussion in the notes of KTU 1.113 and 1.161.

KTU 1.5–1.6: Baal and Mot

1.5 i '...

1.5 i 1 Though you smote[1] Litan[2] the wriggling[3] serpent,
finished off the writhing serpent,[4]
Encircler[5]-with-seven-heads[6],
the skies will be hot, they will shine[7]

1. This is generally accepted as concessive *k* with 2 sg. vb (and those following). Margalit (1980: 88-90) takes the verbs as imper.

2. Ug. *ltn*. Emerton (1982) proposed the vocalisation *Lītān*; cf. Udd (1983). Cf. Heb. *liwyātān*, 'Leviathan' and Gk Ladon, the serpent guarding the golden apples of the Hesperides (Graves 1960, II, 145-52 §133: various classical sources).

3. Ug. *brḥ* cf. Heb. *bāriaḥ*. 'Wriggling': so also Driver (1956: 103); cf. Day (1985: 142): 'twisting'. Alternatives include 'evasive': Gaster (1961: 201); cf. 'fleeting': Caquot and Sznycer (1974: 239); 'slippery': Gibson (1978: 68); 'fleet': Margalit (1980: 88); 'fleeing': del Olmo (1981a: 529; *DLU*), Heb. *bāraḥ*. 'Sinister': Gaster (1944: 47); 'evil': Gordon (1953: 243-44), Ar. *barḥ*. 'Primeval': Albright (1941: 39 n. 5). The sense should be determined by || *'qltn*.

4. The first two lines of this tricolon are, allowing for translation, remarkably close to the Heb. text of Isa. 27.1, demonstrating the close affinity between the forms of Ug. and Heb. poetry:

Ugaritic	Hebrew
	b'yôm hahû' yipqōd yhwh...
k tmḥṣ.ltn.bṯn.brḥ	*...'al liwyātān nāḥāš bāriaḥ*
tkly.bṯn.'qltn	*we'al liwyātān nāḥāš 'aqallātôn.*

5. Ug. *šlyṭ*. see KTU 1.3 iii 42 (n. 49). On the concept see Neiman (1977). This serpentine epithet is preferable to 'ruler', 'tyrant' (e.g. Driver 1956, 103; Gibson 1978: 68; del Olmo 1981a: 213; Day 1985: 142) or the like, based on Akk. *šalāṭu*, Heb. *šālaṭ*, 'rule'. Pardee (1997c: 265): 'the close-coiling one'.

6. Cf. Lewis (1996c) for the iconographic tradition of the seven-headed dragon. The biblical allusions to the motif are unspecific in Ps. 74.13-14 ('heads of the dragon [read *tannînîm* as old gen. sg.]...heads of Leviathan'), but explicit in Rev. 12.3 etc., and a Christian iconography developed from this.

7. Ug. *tṯkḥ.ttrp.šmm*. This colon is susceptible of various interpretations. The first vb (√*ṯkḥ*), which has continued to cause difficulties (cf. Rabe 1995: 433-36 and n. 23), appears to be used of sexual arousal at KTU 1.11.1. The underlying sense appears to be 'heat'. The second is construed by Gibson (1978: 68, 158) as Dt form of √*rpy*, 'droop' (cf. Heb. *rāpâ*): 'the heavens will burn up (and) droop (helpless)'. Margalit (1980: 88, 91-92), construing entirely differently, and dividing the cola differently, understands the first as 'wither' (citing Ps. 102.5, where √*škḥ* || √*ybš*), and the second as 'convulse' (citing √*rpp*, MHeb. *raprēp*, Ar. *raffa*, *rafrafa*). My

1.5 i 5 when I tear you in pieces:
I shall devour (you)[8],
elbows[9], blood and forearms;[10]

You will indeed go down into the throat of divine Mot,
into the maw of the Beloved of El, the hero.'

The gods departed and did not stay.

1.5 i 10 Thereupon they set their faces
towards the lord of the heights of Saphon,

and Gupan and Ugar said:

'Message of divine Mot,
word of the Beloved of El, the hero:

1.5 i 15 "My appetite is the appetite of the lion in the waste-land[11],

translation is indebted to Emerton (1972: 62-66, 69). He cites Ar. *raffa*, 'shine, glisten', and explains *ṯṯkḥ* contextually (cf. 'heat' above). Van Selms (1975b: 481) concurs on *ṯṯkh*, though translating as 2 sg. D, 'you set alight, made burn'. Cf. Emerton's response (1978: 74).

8. Wilfred Watson (privately) expresses a doubt as to whether the first two cola here are separate. Cf. his stichometry (1995: 222).

9. Ug. *uṭm*. For this sense, or 'hands', see *DLU*, 59-60. 'Thigh': Emerton (1978: 77, following van Selms 1975b: 482). These senses are not recognized by Renfroe (1992: 84-85). Watson (1995a: 222-23) makes some tentative remarks on the colon.

10. For justification of the translation of this tricolon see the discussion between Emerton (1972 and 1978) and van Selms (1975b). The idiom is a corporeal equivalent to 'lock, stock and barrel'. For similar treatments see Gibson (1978: 68) and de Moor (1979: 642). For entirely different approaches see, for example Caquot and Sznycer (1974: 239-41), Margalit (1980: 88-96) and del Olmo (1981a: 213; 1984: 158-59). The material remains intractable. The expression recurs at KTU 1.18 iv 3.

11. Ug. *lbim thw*. Translated as above on this reading, and the prosody understood accordingly. It is possible, however, that we should reconstruct the colon as follows, *lbim thw hm* >**lbim th*(*w*)*m*, to yield:

pnp̄š.npš.lbim thm.	My appetite is the appetite of the monster of the deep,
brlt.anḫr.bym	the desire of the shark in the sea...

This would give a maritime bicolon, followed by a wilderness bicolon ('wild bulls...hind...') in ll. 16-17. Such an arrangement is arguably a better prosody in terms of the internal construction of each bicolon than that given above. The term *lbu*, while normally construed as 'lion', appears as a designation of Tiamat in monstrous form in CT 13.33-34 obv. 17, 24, rev. 4, 7, 9 (Lewis 1996c: 32-34; translated

as[12] the desire[13] of the shark[14] is in the sea;
as wild bulls yearn for pools,

'dragon' and explained by ref. to Wiggerman 1989: 118). Spronk (1995: col. 1292) wonders whether this Akk. term and Heb. *rāhāb* (a designation of the raging sea) are not perhaps cognate. We may ask whether a link may not also exist between *labbû* and *ltn/lwyṯn*. Watson (1994d: 280) has also drawn attention to Ahiqar §34 (viii 117: ET of Charlesworth 1985: II, 502 [and see n. i]):

> There is no lion in the sea;
> therefore the sea-snake is called *labbu*.

For further comments see also Lindberger (1983: 105-107). Cf. also Ahiqar §28 (vii 110). While *thw* means 'wilderness' (Heb. *tōhû*), *thm* (Heb. *t^{e}hôm* [*thwm*]) means 'deep', as in 'cosmic ocean' (KTU 1.23.30 and 1.100.1). Its written form *thwm* is not otherwise attested in Ugaritic, and the error may be scribal. Either the 'o' vowel has been written inadvertently, or, a better explanation, the *w.h* sequence is an erroneous insertion, anticipating the *hm* of the following colon. This conjecture cannot however be squared with the reading of KTU 1.133.2-5—which is why it is relegated to a footnote—though the latter is not necessarily to be preferred, especially since it is a scribal exercise (*KTU*^{2} 140). See Pardee (1988a: 158-61) for comments on the two passages. Another possible parallel is 1QH 5.9-10, where *k^{e}pîrîm* appears in parallel with *tannînîm*. Because it is usually translated 'young lions... vipers' or similarly the possible maritime origin of the image has been missed. While *k^{e}pîrîm* occurs here, *l^{e}bî'îm* occurs in ll. 7, 13 (ref. to the lions' den), and *'ariyôt* in l. 19. A wide range of chthonian images appear in this hymn, and it seems to me that ll. 9-10 may have been intended as an allusion to the sea-monster (a putative **labbû* || *tannîn*, both terms subsequently pluralized).

12. Ug. *hm*. Lit. 'if'. But the real point here, if we retain the text (see previous n.) is a comparison, 'as... so...'. Mot claims that he is merely conforming to his nature ('death by name, death by nature'). Margalit (1980: 97): 'my 'soul' is the 'soul' of a wild lion [sc. lion of the wilderness]'. Does this mean that other predators are merely avatars of Mot?

13. 'Appetite... desire...'. The terms *npš*, *brlt* here both denote something like the 'élan vital'.

14. Ug. *anḫr*. On the basis of Akk. *nāḫiru*, this is usually understood to mean 'whale' or 'dolphin' (Dietrich, Loretz and Sanmartín 1975g: 538; del Olmo 1981a: 515). De Moor (1979: 64): 'sperm whale'. Whales up to lengths of some fifty feet (fifteen metres) appear occasionally in the Mediterranean Sea. See n. 50 at KTU 1.3 iii 43. I have translated 'shark' because of the resonances of this word for an English speaker. I have taken the sequence to mean not simply the affinity of various creatures for a specific environment—though that is also present, and particularly so in the following bicolon—but rather as placing an emphasis on the appetite itself. The point of the present bicolon is a pair of metaphors to illustrate Mot's gargantuan capacity for food. The following bicolon extends the element of longing, of intrinsic need.

or the hind longs[15] for the spring.
Look, in truth[16] does my throat devour clay[17],
1.5 i 20 and[18] with both my hands I devour them[19].[20]

15. Text *kḏd*. I have corrected *ḏ* to *š* (the central stroke has been omitted) and read **<t>kšd* as in previous colon, 'desire' (vb). (Or the two forms are to be differentiated more for prosodic than for semantic purposes.) For the idiom cf. Ps. 42.2. Cf. Dietrich, Loretz and Sanmartín (1975g: 538) and Caquot and Sznycer (1974: 242), where however the verbal and substantival senses respectively of the words destroy the prosodic balance. Gibson (1978: 68, 145): 'herds', Ar. *ḏawdu*. Cf. Renfroe (1992: 100-102). Cf. also del Olmo (1981a: 214 [but cf. p. 564 √*kḏd*]) and de Moor (1987: 70). Margalit (1980: 97): 'like the teat' (*ḏd* = *ṯd*). The approach of Dietrich and Loretz (1978a: 435) is different again.

16. Understanding the repeated *imt* here to be a dittography. On the term see Tropper (1992).

17. Sc. flesh. The contrast is surely between the life-breath and the body, made of clay, both of which Mot destroys. Cf. the dual nature of Adam in Gen. 2.7, where the divine *nᵉšāmâ* is breathed into the body made of 'dust' (*ʿāpār*, cf. the present 'clay', *ḥmr*), thus becoming a 'living being' (*nepeš*). The Ug. text represents an earlier stage of this anthropology, the *npš* serving as the 'breath' element, though the present text in no way hints that it is divine in origin. When a person dies in Hebrew thought, the *nᵉšāmâ* returns to its divine source (Job 34.14). Mot here appears to devour everything. Cf. Husser (1995), who argues that the point of the funeral rites performed by the dutiful son is to keep the 'breath' (*qṭr*) *in* the tomb, not to release it. See at KTU 1.17 i 27 and n. 30. The present passage is not a key to understanding Ugaritic psychology, but rather a maximalist view of death, put into the mouth of Mot himself. The two need not coincide. There is no need to think of 'clay' as a euphemism (thus de Moor 1979: 640).

18. Dietrich and Loretz (1991a: 92) also take the repeated *imt* here to be dittographic.

19. Ug. *hm*. This is taken here to be the suffix of the preceding vb. With so many instances of *hm* (five in eight lines), it is scarcely surprising that one or two errors have occurred. Others, 'if'. Errors of this type (putting in an erroneous word-divider), and such as *thw.hm* for *thm* above at l. 15 (discussion in n. 11) suggest that the errors have arisen in copying, not in dictation.

20. The syntax of this bicolon is not entirely satisfactory. Is it possible that *imt* is verbal? This could yield the following sense (retaining all three instances, two treated above as dittography), which I offer tentatively:

them do I kill,
I kill the life-force,
I consume the clay,
and I kill with both hands!

My seven portions are on the plate,
and Nahar[21] has mixed my cup.

For Baal did not[22] invite me with my brothers,
(nor) did Hadd summon me with my kinsmen,

but he ate food with my brothers,
1.5 i 25 and drank wine with my kinsmen[23]![24]

But you forget, Baal[25], that I can indeed pierce you,
[.]

Ug. *hm* in the first colon is generally construed as the particle 'if'. I am taking it here to be the 3 pl. obj. pron. (error for *hmt*? cf. *UT*, 149: thus *hm<t>*). Cf. the treatment of final *hm* in the translation above, which I take to be the 3 pl. obj. suff., taking the word-divider to be an error. Note the chiastic arrangement of this and the following colon. I have here taken *imt* to be the D form of *m(w)t*, 'to kill' (cf. Heb. polel). Note initial *i* vowel (*amt* is G form). Caquot and Sznycer (1974: 242) and others take *imt* to mean 'truth' (Heb. *'emet*), and see its repetition as emphatic. This is however prosodically quite unconvincing, and certainly unparalleled. Margalit (1980: 101-102) takes the first and third instances of *imt* to be 'verdure' (Ar. *'amat*), thus half-turning Mot into a vegetarian, who lives on a diet of plants and clay! The point is however that he devours all living things (all flesh). I doubt that Ilimilku had vegetables in mind.

21. Ug. *nhr*. 'Cup-bearer': Caquot and Sznycer (1974: 242). I take it that Yam-Nahar *redivivus* is Mot's cup-bearer.

22. Ug. *kl*, construed as *k* + *l* neg. part. Caquot and Sznycer (1974: 243), Margalit (1980: 104) and del Olmo (1981a: 215) construe the *l* as asseverative, with Mot daring Baal to invite him. This surely misses the point, however, as Mot was *not* invited to the consecration of Baal's temple-palace. He is hardly to be placated by a late invitation!

23. Textual difficulty. *CTA*: *a*[*ḫ*]<*y*>*yn*; *KTU*^{1}: a*[*ḫ*]y* yn; *KTU*^{2}: a*ḫy.yn*. I have supposed this to be a scribal error for *aryy yn*, *ary* being the standard *b* word to *aḫ* as *a* word (as in l. 23 immediately above). Cf. *UT*, 178: *a*[*r*]*y*<*y*>*n*, a reading rejected by *CTA* (p. 33 n. 9). But the reading is to be supported on the basis of scribal error.

24. Baal's omission of Mot from an invitation which did include his brothers is rightly construed by him as a deliberate insult. The consequence, which will be disastrous for Baal, is that Mot, excluded from the feast, is not bound by ties of commensality to Baal. This is the classic 'wicked fairy' or 'exclusion from the feast' motif.

25. The abrupt change from describing Baal's failure to invite him in the 3 p. to a challenge to Baal himself in the body of the message is a masterly treatment of Mot's discourse. He has rambled off into a reminiscence of why he is peeved, almost an aside, then reverts suddenly to its consequence: he now throws down the gauntlet to Baal.

Though you smote [Litan the wr]iggling [serpent],
finished off [the writhing serpent],
1.5 i 30 Encircler-[with-seven-heads],
[the heavens] will be hot, [they will shine]
[when I tear you in pieces],
[I shall devour (you),]
[thighs, blood and forearms;]
[you will indeed go down into the throat of divine Mot,]
1.5 i 35 [into the maw of the Beloved of El, the hero.][26]
..."

(about 30 lines missing)

1.5 ii (12 lines missing)

1.5 ii 1 [ ]
[He extends[27] a lip to the ea]rth,
a lip to the heavens,
[he extends] a tongue to the stars.[28]
[Ba]al must enter[29] his belly,
1.5 ii 5 down into his mouth he must go,[30]
since he[31] scorched the olive,
the produce of the earth,
and the fruit of the trees.[32]

26. Ll. 31-35 conjectural, based on ll. 4-8. Cf. *CTA*.

27. Margalit (1980: 107) restores [*št*]*m* preceding, parallel with [*šlḥ*] in the following colon. Cf. *št* in KTU 1.23.61, which however does double duty. *KTU*^{2} reads [xxxxxx]xxḫm (Rom.) in l. 1.

28. This tricolon echoes the description of the voracious appetites of Shahar and Shalem in KTU 1.23.61-62, on which basis it is restored, the tongue being an additional feature peculiar to the present passage.

29. Some such modal sense is required, because Baal's descent does not occur until some point during the lacuna of KTU 1.5 v–vi.

30. Note the chiastic structure of the bicolon, framed by the assonantal verbs of movement *y'rb* || *yrd*.

31. Sc. Mot.

32. De Moor (1971: 180) gives a seasonal explanation of this tricolon. More pertinent is the language of cosmic dessication which occurs at an untimely death such as Aqhat's (KTU 1.19 i 30-31, 42-46), which anticipates David's curse in

Valiant Baal was afraid of him;
Valiant Warrior was in dread of him.

'Depart[33], say to divine Mot,
declare to the Beloved of El, the hero:

1.5 ii 10 "Message of Valiant Baal,
word of Valiant Warrior:

Greetings, O divine Mot,
your servant am I, and forever so[34]"'.

The gods departed and did not stay.

Then
they set their faces
towards divine Mot,
1.5 ii 15 towards his city Muddy,

a pit the seat of [his] enthronement,
a crevice the land of his inheritance.

They lifted up their voices and cried:

'Message of Valiant Baal,
word of Valiant Warrior:

"Greetings, O divine Mot,
1.5 ii 20 your servant am I, and forever so"'.

Divine Mot rejoiced,
[he lifted up] his voice and cried:

'Why, has [Baal] invited me [with my brothers],
has Hadd summoned me [with my kinsmen]?
...'

2 Sam. 1.21. Nature is in mourning here. The present passage appears to involve Mot's malevolence.

33. This is the content of a message instruction given to Gupan and Ugar. They must have been summoned again in the missing section between the end of KTU 1.5 i and ii.

34. This message is ambiguous. It could be no more than a polite vacuity, though the description of Baal's feelings in ll. 6-7 suggests rather more. Whatever the nuance, Mot will accept it as a capitulation. But we must not conclude simply that Baal is preparing to die, despite the wording of ll. 3-5, for Mot's immediate response is to expect a fresh invitation! It is too easily forgotten that two entire columns (about 115 lines) are in effect missing before the narrative resumes at KTU 1.5 iv 5.

(5 unintelligible lines, followed by about 23 missing lines)

1.5 iii (10 lines missing at beginning and about 20 at the end; the extant text covers only half the width of the column over 30 lines, and is unintelligible)[35]

1.5 iv (in much the same condition as col. iii, of which it is the reverse: about 22 missing lines)

(4 unintelligible lines)

1.5 iv 5 He lifted up his voice [and cried]:

'Now where is Baa[l]
where is Hadd[36], who [ ]?'

Baal appeared [with his seven divine assistants],
with his eight [boars[37]]

35. For an attempt at col. iii see Driver (1956: 104-105), Gibson (1978: 70-71) and de Moor (1987: 74-75).

36. Text *i...b' [l]...i hd...* Does the formula perhaps arise from the cult, perhaps in the context of a hymn of lament over Baal's death? We have noted apparent snatches of cultic hymnody already. To the double formula used here, cf. the putative *i zbl*, which would become in Heb. *'ay ṣ^{e}bul*, 'where is the prince (sc. Baal)?', lampooned as *'îzebel*, (pause *'îzābel*, 'Jezebel'), 'where is the dung?' (or some such scatological sentiment: perhaps Akk., Ar. *ziblu*). Cf. Virolleaud (1935c: 185 n. 1), and see Montgomery and Gehman (1951: 291) and Gray (1964: 332-33). Mussies (1995: col. 889) does not recognize this interpretation of the PN.

37. On Baal's assistants as boars see Wyatt (1987b: for which see also on the 'seven...eight' numerical sequence, with refs.). My suggestion that they may be related to the Maruts, assistants of Indra, is not invalidated by my change of mind on the question of the overall origin of the *Chaoskampf* myth (Wyatt [1988a], modified in the light of new early discoveries of a Near Eastern tradition [1998a]). The fact remains that Indra *is* known in the Near East, in a Hurro-Hittite treaty text (*ANET*, 206). However, 'boar' (*ḫnzr*) may be an animal term for military rank (cf. Heb. *'ālûp*, *ṣ^{e}bî*): 'officers', Caquot and Sznycer (1974: 247). Cf. at KTU 1.15 iv 6-7 and n. 169. Pigs also featured in the Gk Thesmophoria rites which involved chthonian goddesses, of whom Baal's consorts appear to have been Semitic analogues, if not prototypes. Cf. Astour (1969: 14), who cites Harrison (1922 [= 1955]: 124-26). See also nn. 11-13 at KTU 1.3 i 23-25. Apropos of this, note the association of boars and goddesses in the descent instruction below, KTU 1.5 v 9-11. A more prosaic account may be given of *ḫnzr*. *CAD*, VI Ḫ, 166 cites Akk. *ḫaziru*, var.

1.5 iv 10 He drew near [ ]
to eat [ ]
While [the gods] ate [and drank].

the [gods] were served with suck[ling animals],
with [a jaw-shaped] knife [fillets of fatling].

1.5 iv 15 They drank gob[lets of wine],
from cups of gol[d the juice of grapes].

Cups of silver [ ]
goblets [of gold]

(7 more unintelligible lines, followed by about 11 missing lines)

1.5 v (about 25 lines missing)

1.5 v 1 '[ ]
Valiant [Baal]
[ ]your torch[38]
[ ] your right hand
your [so]n [will have?] the appetite[39] of a bull-calf.
1.5 v 5 I shall place him in a hole of the earth-gods[40].

As for you[41],
take your clouds,

ḫanziru, *āziru*, 'helper', perhaps linked to WS √'*zr*, appearing in such PNs as *Iliḫaziri*, ^{d}UTU-*ḫazir*. Cf. *AHw*, 166-67.

38. Text [ ] *ipd prk*: *KTU*^{2}. *CTA*, *KTU*^{1} read *ip.dprk*, i*p.dprk respectively. Del Olmo (1981a: 220, 522): text as *CTA*, but translated as 'tunic (*ipd*) of your bull (*pr* + *k*)'. Gaster (1961: 210), 'thy torches'. Caquot and Sznycer (1974: 247 [as *CTA*]: '...your torch [Akk. *dipāru*]'). So also Gibson (1978: 72). De Moor (1987: 77): 'the cloak of your sovereignty'. But with a broken context, no clear contextual sense can be recovered.

39. Ug. *npš*. De Moor (1971: 183; 1987: 77): 'soul'. Cf. del Olmo (1981a: 220). Alternatively, may this be construed as the lung of a calf (*npš 'gl*) which will be offered as a sacrifice of redemption for a first-born son? (Cf. Exod. 13.11-15.) But such an interpretation would not be compatible with the threat of Mot's next words. Gibson's interpretation (1978: 72), 'the life of a calf', may point to the son himself being sacrificed like a calf. Cf. KTU 1.9?

40. Mot is speaking, and appears to be threatening the son whom Baal will father shortly after (ll. 22-25).

41. Ug. *wat*.

your winds, your lightnings[42], your rains,
(take) with you your seven divine assistants,
your eight boars,

1.5 v 10 (take) with you Pidray, daughter of Light,
(take) with you Taliy, daughter of Shower;

then set your face towards the mountain of my gullet[43].

Raise[44] the mountain on your hands,
the hill on top of your palms,

1.5 v 15 and go down into the house of the couch[45] of the earth,
be numbered among those who go down into the earth.
And you will know, god, that you are mortal.[46]'

Valiant Baal obeyed.

He loved a heifer in the pastureland[47],
a cow in the steppe by the shore of death[48].

42. Ug. *mdlk*. The basic sense of *mdl* is 'rope': Good (1984), Watson (1986). Cf. KTU 1.4 iv 4 and n. 121.

43. Ug. *knkny*. 'Tunnel': de Moor (1987: 78). Cf. *gngn* at KTU 1.4 vii 49 ('heart', but lit. 'gullet'). 'Grave': Caquot and Sznycer (1974: 248, 'conjectural') and Gibson (1978: 72, 149, 'from context'). The 'libation-tube' interpretation of Schaeffer (1939a: 46-56) for this term and the structures discovered at Ugarit has recently been reassessed and found to be untenable. See Pitard (1994a) and Pardee (1996: 280). On the basis of these articles *DLU*, 148-49 (*gngn*) should be updated. I take this to allude to some natural cave on Mt Saphon which was understood to be an entrance to the underworld. Cf. the entrance to Hades at Cumae near Naples. Is the Ugaritic site that may be discerned here to be identified with *ḫlb gngnt* of KTU 1.91.22? The colon appears to identify a part of the mountain with Mot's gullet, and thus the whole mountain with Mot. This is not inconsistent with my proposal that Saphon is constructed out of the corpse of Yam: Wyatt (1995a: 226-27). Both gods represent the principles of chaos and dissolution.

44. 'Climb': Xella (1981: 135).

45. Cf. KTU 1.4 viii 7 and n. 176.

46. Ug. *wtd'.ilm.kmtt*. On the reading *ilm* for Virolleaud's *ill* see *CTA* (p. 36 n. 1). Xella (1981: 135) takes *ilm* to be 'the gods', as does Pardee (1997c: 267). I have taken it to be vocative with enclitic *m*. Reading *ill*, Driver (1956: 107, cf. n. 4: 'or "the weakness of a ghost"') has 'inanition', followed by Gibson (1978: 73); cf. de Moor (1971a: 183): 'weakness'.

47. Text *dbr*. Read perhaps *<arṣ> dbr*, as in KTU 1.5 vi 6 below (*KTU*^{2}).

48. Ug. *šḫl mmt*. See discussion in de Moor (1971a: 186). Explaining *šḫl* with ref. to Ar. *sāḥil*, 'shore, coast' after Dussaud (1935: 44 n. 1). Alternatively it may

1.5 v 20 He lay with her seventy-seven times,
she made him mount eighty-eight times.

And he [imp]regnated her
and she bore a young male[49];

Va[liant Baal] caused him to be clothed.

(3 illegible lines, followed by about 11 missing ones)

1.5 vi (about 30 lines missing, containing:)

[Then they set their faces indeed]

be explained with reference to Akk. *šalḫu*, Heb. *šelaḥ*, 'channel, stream', after Ginsberg (1936b: 53). Whichever explanation is accepted, the result is a ref. to the same cosmological point. This is the ocean which bounds the world. To cross it is to die. Cf. the exodus tradition, in which the Israelites cross the *yam sûp*, the 'sea of extinction' from the land of the dead, Egypt, to the land of the living, the promised land. Discussion in Wyatt (1996b: 84-89 and refs.). The idea was first outlined by Montgomery (1938). De Moor further explained the form *mmt* as *m-locale*. Perhaps the word, though undivided in the text, is to be construed *šḫlm mt*, with the final letter of *šḫlm* construed as an enclitic attached to a construct. As a fixed form it may simply have come to be written as one word. On the form *-m* cf. *bn ilm mt*, where *ilm* is sg.

49. Ug. *mṯ*. Various explanations have been offered: 'twin' (Akk. *mašu*): de Moor (1969b: 106-107), followed by Caquot and Sznycer (1974: 249 n. m, but text 'a young male'); cf. Gibson (1978: 72), del Olmo (1981a: 221); 'male (?)': Margalit (1980: 122). Cf. also Eg. *ms*, Heb. *mōšê*. 'Serpent': Astour (1967: 229-33), from Sum. *Muš*. He identifies this 'serpent' with the ophic deity Ninazu, and him in turn with *Rpu B'l*, the deity invoked in KTU 1.108. This dragon-deity, vehicle of Marduk, appears to have been nothing other than the *Labbû*-serpent in origin, the *mušḫuššu* overcome by Tishpak, and is thus ultimately an analogue of Baal's opponent! See Wiggermann (1989: 123) and Wyatt (1998a). Since no other portion of the extant text elaborates on the identity of *mṯ*, any solution remains conjectural. The f. form *mṯt* occurs at KTU 1.14 iii 9 etc., as an epithet of Hurriy and at KTU 1.17 v 16 of Dantiy. See n. 167 at KTU 1.15 iv 3. The problem with identifying the two is that *mṯ* here is evidently a bull-calf (clothed?!), while Hurriy is clearly human, as is Dantiy. I have adopted the view of Caquot and Sznycer as the least contentious for the two contexts. The 'young male' will become a 'youth', the pair-word for 'maiden' used of the two royal wives. See also n. 95 to KTU 1.14 iii 39 and n. 75 to KTU 1.17 v 16. Remarkably, the whole conception and birth sequence lying behind KTU 1.17 i 39–ii 47 is without any reference to Dantiy by name. She appears merely anonymously and functionally(!) as 'his wife' (*aṯth*) in col. i 39. The romance implicit in the description of Hurriy (who must be wooed and won) is entirely missing.

[towards El at the source of the rivers]
[at the midst of the springs of the two deeps.]

1.5 vi 1 [They rolled back the tent of El]
and came [to the pavilion of the King, the Father of] the Bright One.

[They lifted up their voices and cri]ed:

'We travelled to [the ends of the earth],
1.5 vi 5 to the edge of the abyss;

we came to "Paradise"[50] the land of pasture,
to "Delight", the steppe[51] by the shore of death.

We came upon Baal fallen to the earth:

dead was Valiant Baal,
1.5 vi 10 perished was the Prince, Lord of the earth!'

Then the Wise One, the perceptive god,
went down from his throne:
he sat on his footstool.
And from his footstool
he sat on the ground.[52]

50. Ug. *n'my*. I have translated the related form *n'm* as 'Paradise' at KTU 1.10 iii 31. But the present location seems at first glance to be scarcely paradisal, being on the threshold of the land of the dead. Is it an 'anti-paradise', a negative counterpart? Probably not: paradise is a point of intersection of two realms. On the paradox see Wyatt (1996b: 56-70, 96-100).

51. 'Paradise ... land || Delight ... steppe': alternatively to be taken as a superlative construction, according to Caquot and Sznycer (1974: 250): 'the most agreeable of pasturelands ... the most beautiful of meadows'. Cf. n. 67 at KTU 1.17 ii 41-42.

52. The two stages of El's descent conform to the imagery of Isa. 66.1 ('heaven is my throne | and the earth is my footstool'), except that a third level is implied: if El's throne is heaven and his footstool earth, then the 'ground' (*arṣ*) must be the underworld. The usual Heb. division (*šāmayim*, *tēbēl*, *'ereṣ*) does not however correspond to Ug. usage, where *arṣ* is ambiguous, having a double sense (though this ambiguity is found in Heb. too). El's descent is a ritual counterpart to Baal's. This element is not present in the parallel description of Anat's response. For discussion of the implications of this language for divine rank see Kruger (1995). Note also that El recapitulates in his mourning behaviour the descent of Baal into the underworld, which in turn was no doubt modelled on real burial rites. For the descent of the last King Niqmad (III or IV) see KTU 1.161.20-26.

1.5 vi 15 He poured the ashes of affliction on his head,
the dust of grovelling on his skull[53].
For clothing he put on a loin-cloth[54].

His skin with a stone he scored,
his side-locks[55] with a razor;
he gashed cheeks and chin.[56]

1.5 vi 20 He ploughed his collar-bones,
he turned over like a garden his chest,
like a valley he ploughed his breast[57].[58]

53. 'Ashes...dust': Ug. *'mr*, *'pr*. The first term is variously interpreted. *'mr*: 'ashes', del Olmo (1981a: 222, 601); 'ears', de Moor (1971a: 191): cf. Heb. *'ōmer*, 'sheaf' (and presumably English 'emmer'?). This amounts to a ritual self-burial. Cf. Job 2.12. An agricultural approach is less convincing. Pardee (1997c: 268 n. 240) notes that this bicolon is not repeated when Anat mourns below.

54. That is, he remains barely decent: almost a symbolic nakedness. A change of clothes is frequently symbolic (cf. Gen. 37.23; 41.14; 2 Kgs 25.29). El provides the paradigm for the human institution.

55. Ug. *psltm*. Cf. Caquot and Sznycer (1974: 251), Margalit (1980: 129): 'twin-braids' (after *WUS* 258, §2241, Akk. *pasālu*, 'be twisted'). 'Flint': de Moor (1971a: 193: Ug. *psl*, 'cutter of stone or wood', JAram. *p^{e}sūlâ*, 'chip'), Gibson (1978: 73: Heb. *pāsal*, 'hewed'). The translation choice made here affects the interpretation of the following colon, since *lḥm* on the above approach would be redundant as 'side-whiskers' (de Moor 1971a: 190, 193). This in turn has a knock-on effect for interpreting Anat's behaviour.

56. This and the following tricolon take the description of El's mourning to its ritual culmination. Self-mutilation is a classic expression of grief and guilt (both emotions are present at funerals!). El gouges his skin with a stone. Cf. Job 2.8. He also shaves. The prohibition against these actions in Lev. 19.27-28 and Deut. 14.1 presupposes that this was hitherto normal practice. An important symbolic aspect may be that to break the skin is to destroy the boundary between self and not-self, thus inviting the irruption of chaos. Boundaries must be maintained! See Job 7.5. Cutting of the hair 'killed' it, again reinforcing the sense of sharing in the experience of the dead. See refs. in de Moor (1971a: 193). In the final colon, 'cheeks and chin' (Ug. *lḥm wdqn*) is translated 'side-whiskers and beard' by some, e.g. de Moor (1971a: 190, 193).

57. Ug. *bmt*. Or: 'back'.

58. This tricolon takes up the ritual behaviour of the previous one and applies a powerful agricultural metaphor. El's self-mutilation is on a heroic scale. For detailed philological notes on El's mourning see de Moor (1971a: 190-95). The seasonal interpretation which follows (pp. 195-96), however, turns the meaning of the text on its head, by turning it into a metaphor *for* agriculture, that is, the reverse

He lifted up his voice and cried:

'Baal is dead!
What has become of the Powerful One?
The Son of Dagan!
1.5 vi 25 What has become of Tempest?[59]

After Baal I shall go down into the underworld.[60]'

Anat also went out,
and searched every mountain in the midst of the earth,
every hill in the midst of the steppe.

She came to 'Para[dise', the land of] pasture,
1.5 vi 30 'Delight', the steppe by the [shore of] death.

She f[ound] Baal,
fall[en to the ea]rth[61].

[For clothing] she put on a loin[-cloth].

1.6 i 1 (Concerning Baal)[62]

Her skin with a stone she scored,
her side-locks [with a razor],
she gashed cheeks and chin[63].

of the way in which the figure is working. No calendrical significance is to be gleaned from the text. The prosody of both tricola, in terms of the grouping of the words and syntax of each unit, remains uncertain. The above reflects de Moor (1971a: 190; 1987: 80-81), Gibson (1978: 73) and del Olmo (1981a: 222). Contrast Margalit (1980: 129) and Caquot and Sznycer (1974: 250-51). This last is implausible.

59. For the prosody of this tetracolon, and alternative approaches, see Wyatt (1992a: 412-15). Cf. also KTU 1.2 i 18-19, 34-5. It looks like a hymnic excerpt.

60. Thus Baal's death presages other deaths. This also has the appearance of a liturgical phrase, perhaps reproduced from real funeral ceremonies. Cf. n. 40 at KTU 1.161.20, where Niqmad III (IV?) is being laid to rest.

61. Or: 'into the underworld'. Cf. l. 25. Should this be followed by the following bicolon (adapted from KTU 1.5 vi 14-16)?

> <She poured the ashes of affliction on her head,
> the dust of grovelling on her skull.>

62. Tablet labelling note.

63. This colon has raised much discussion, since on the translation of de Moor *et al.* it appears to attribute a beard to Anat. But on the approach I have taken this is not a necessary conclusion. In any case, we have the mechanical application of

She [ploughed] her collar-bones,
1.6 i 5 she turned over like a garden her chest,
like a valley she ploughed her breast.

'Baal is dead!
What has become of the Powerful One?
The Son of Dagan!
What has become of Tempest?

After Baal we shall go down into the underworld.'[64]

With her went down the Luminary of the gods, Shapsh[65].
Until she was sated she wept,
1.6 i 10 like wine she drank (her) tears.

Aloud she cried to the Luminary of the gods, Shapsh:

'Pray, load on to me Valiant Baal!'

The Luminary of the gods, Shapsh, obeyed:

she lifted up Valiant Baal;
1.6 i 15 on to the shoulders of Anat did she set him.

formulaic language, as with El, rather than a text tailored to Anat's needs, beyond the form of the vbs. See in particular Loewenstamm (1974, 1982) and Marcus (1977).

64. Anat's response to Baal's death is exactly the same as El's, except that it lacks the first two elements in his reaction, the descent from the throne (KTU 1.5 vi 12-14) and the use of ashes and dust (KTU 1.5 vi 14-16, see n. 61). It however goes on to record the burial and sacrificial rites. The result is a fairly extended case of narrative staircase parallelism, the structure being a:b:c:d:e:f:c1:d1:e1:f1:g:h. This highlights the cooperation of El and Anat. This is probably a fairly accurate description of actual mourning behaviour, in effect an expression on the one hand of solidarity with the deceased, and on the other of the hope that by going through the ritual motions of death, the catastrophe itself can be averted, with regard both to the dead and the mourner. The rites are also part of the psychological process of acceptance. Needless to say, a seasonal interpretation of Anat's mourning (e.g. de Moor 1971a: 200-201; 1987: 82) is inappropriate.

65. Shapsh's apparently subordinate role in the episode beginning here is misleading. As sun-goddess, she goes nightly into the underworld, and as is clear both from her role in subduing Mot in KTU 1.6 vi 22-35 and the closing hymn of KTU 1.6 vi 42-53, she has a pivotal role in restoring the *status quo*, in effect maintaining cosmic equilibrium. See also her role in KTU 1.23, where she is geminated into the forms of Athirat and Rahmay. Her role here is the powerful one of the psychopomp: she restores Baal when Anat (and El) cannot, just as she subdues Mot when Baal cannot do so.

She took him up into the uttermost parts of Saphon,

she wept for him
and buried him.

She placed him in a grave of the gods of the underworld[66].

She slaughtered seventy wild bulls
1.6 i 20 [as a fun]eral offering[67] for Valiant Baal.

She slaughtered seventy oxen
as a funeral offering for Valiant Baal.

[she slaugh]tered seventy sheep
[as a fu]neral offering for Valiant Baal.

[She slau]ghtered seventy stags
1.6 i 25 [as a funeral offering for] Valiant Baal.

[She slaughtered se]venty mountain-goats
[as a funeral offering for Val]iant Baal.

[She slaughtered seventy an]telopes[68]
[as a funeral offer]ing for Valiant Baal.

66. Ug. *bḫrt ilm.arṣ*. Or: 'in a mighty cavern in the earth (underworld)'.

67. Ug. *kgmn*. 'Funeral offering'. Tentative suggestion, following del Olmo (1981a: 533, Akk. *kamānu*). Cf. Dietrich and Loretz (1967: 538), who cite Hur. *kukumnu*, 'three year-old animal' (see *AHw*, 501). Cf. extensive refs. in de Moor (1971a: 199), many scholars having cited Heb. *g^{e}mūl*, which raises difficulties. He (1971a: 199; 1987: 83) construes as 'because [Baal] had been defiled' (D stem of √*gmn*, cf. Eth. *gammana*, 'to profane, defile', *g^{e}mūn*, 'defiled, unclean'). Caquot and Sznycer (1974: 254-55) leave untranslated. *UT* 380, §19.591: 'a kind of sacrifice for the dead'. *WUS* 66, §663: 'refreshment' (Ar. *ǧamma*, 'rest, gather strength'), followed by Margalit (1980: 141-42), 'nourishment'; *DLU* 147: 'funeral offering'. Watson (1989) advises caution, though suggesting 'as mourning'. Cf. Watson 1996b.

68. Text [*ṭṭbḫ.šb'm y*]*ḥmrm*. Thus *KTU*^{2} against *CTA*, *KTU*^{1}. For completion of [*y*]*ḥmrm*, 'antelopes' rather than reading *ḥmrm* as the complete word, 'donkeys', see Ginsberg (1950: 158; 1973: 131-32 with refs.). 'Donkeys': Caquot and Sznycer (1974: 255; n. e rejects Ginsberg) and del Olmo (1981a: 224). 'Roebucks', de Moor (1987: 84 and n. 406, citing Ginsberg 1973: 131-32); de Moor and Spronk (1987: 37) restore the *y*. Again rejected by Pardee (1997c: 268 n. 242). If 'donkeys' be preferred, note comments at n. 17 to KTU 1.40.26. The term used there for sacrificial donkeys is however not *ḥmr*, but *'r*.

1.6 i 30 Her [sacrifi]ce she placed in the fu[rrows],
her [off]ering(?) as a gift for the god(s).

[The]n indeed she set her face
towards El at the source of the rivers,
at the midst of the springs of the two deeps.

1.6 i 35 She rolled back the tent of El
and came to the pavilion of the king, the Father of the Bright One.

At the feet of El she bowed and fell down,
she paid him homage and honoured him.

She lifted up her voice and cried:

'Let her rejoice now[69],
1.6 i 40 Athirat and her sons,
the goddess and the band of her kinsmen!

For dead is Valiant Baal,
for perished is the Prince, Lord of the Earth!'

Aloud cried El to the Great Lady-who-tramples-Yam:
1.6 i 45 'Listen, O Great Lady-who-tramples-Yam.

Give the first[70] of your sons;
I shall make him king[71].'

69. What amounts from the perspective of a systematic theology to a theological tension between the different symbolic functions of the gods is typically represented in the mythological idiom as rivalries between different groups among the gods. The tensions of the Iliad are treated in the same way. Handy's bureaucratic model of the pantheon (1994) fails precisely when it comes to an assessment of conflicts of interest of this kind. He regards it as a breakdown of the system. It is on the contrary the basic working of the system. Cf. Wyatt (1996b: 327-30, 1998b). The world is first of all processed through human analogues. Cf. the archaic pattern described by Mithen (1996: 48-49), which forms the basis of mythic structures. The tension here is a dramatic one, and does not indicate a different genealogy for Anat, who is herself El's daughter: KTU 1.3 iv [54], v 10, 27 (= 1.18 i 16).

70. Ug. *aḥd*. Normally construed as 'one (of your sons)', but rather to be taken as ordinal: 'the first...'. Cf. the ordinal use of *'eḥād* at Gen. 1.5, corresponding to the *šēnî*, *šᵉlîšî* of the series, and cf. Ruth 1.4 (*ha'aḥat...haššēnît*). The pattern here for royal succession appears to be matrilineal, the first son of the chief wife succeeding the father. Cf. Solomon's similar destiny (Wyatt 1985b).

71. As he had made Yam king (KTU 1.1 iv 13-32), and presumably, perhaps at the end of 1.4 viii, Baal too on the completion of his palace.

And the Great Lady-who-tramples-Yam replied:
'Shall we not make king one who has knowledge and wit[72]?'

1.6 i 50 And the Compassionate, god of mercy, replied:

'Let the finest of pigments be ground,
let the people of Baal prepare unguents,
the people of the the Son of Dagan crushed herbs.'[73]

The Great Lady-who-tramples-Yam replied:

'Indeed, let us make Athtar the Brilliant king:
1.6 i 55 Athtar the Brilliant shall rule!'

Then Athtar the Brilliant went up into the uttermost parts of Saphon;
he sat on the throne of Valiant Baal.

[But] his feet did not reach the footstool;
1.6 i 60 his head did not come up to its top[74].
Then Athtar the Brilliant said:

'I shall not rule in the uttermost parts of Saphon!'

Athtar the Brilliant came down,
he came down from the throne of Valiant Baal,

1.6 i 65 and ruled in the earth[75],

72. Ug. *yd'.ỿlḥn*. Margalit (1980: 143, 145) understands this to be the name (or epithet: 'He who knows how to make moisture', in accordance with his seasonal view) of a candidate for the throne, with El's response applying to him as a disqualification. Athtar is then Athirat's second nominee, who *is* acceptable to El. In my view he is the only candidate. His epither '*rṣ* is usually construed as 'tyrant', 'terrible' or variations on the theme. I have followed Gray (1965: 66 n. 4) and Craigie (1973: 223). See Wyatt (1996b: 41 and n. 43).

73. Wyatt (2001b, 599 n. 7), following Virolleaud (1931), Emerton (1965) and Day (1998: 81 and n. 23), rather than following the broad consensus as in first edition, and in Gibson (1978: 75), Pardee (1997c: 269). For 'people' perhaps read 'kinsmen' (Ug. *'m*).

74. Sc. the top of the backrest, the *nḫt* of KTU 1.1 iv [24]: see n. 56 *ad loc*. There is no need to read here a satire on Athtar. Rather should it be compared with 1 Sam. 17.39, where David cannot wear Saul's armour.

75. Ug. *arṣ*. Here denoting the earth. Athtar becomes 'king of the world', implicitly ruling from sea to sea. He is the apotheosis of the human institution of kingship (Wyatt 1986b, 1989b). The present section of the narrative is the paradigm of the 'royal ascent', which is the mythological account of how a king obtains his

god of it all.

[they d]rew water from amphorae,
[they drew] water from vases[76].

1.6 ii (about 30 lines missing)

1.6 ii 1 (4 lines fragmentary)

[ ]
[ ]
[ ]

1.6 ii 5 [A day, two days] passed,
and the wo[mb[77] of Anat] sought him.

As the heart of a cow to her calf,
as the heart of a ewe to her lamb,

authority and wisdom from the gods in heaven, before returning to earth to exercise authority. On this see Wyatt (1986a; 1996b: 307-22, 341-45). There is no warrant for seeing the present episode as itself a deposition myth (thus, e.g., Page 1996), even though it is thematically linked to such passages as Isa. 14.9-15, Ezek. 28.2-10, 12-19, which develop the deposition theme. The seasonal interpretation, which sees Athtar as an irrigation-god replacing Baal as storm-god as the source of the land's fertility during the summer (thus, e.g., Gaster 1961: 120-27; de Moor 1971a: 205-206; 1987: 107; Margalit 1980: 149-50; 1996, 179-80) is in my view a complete misunderstanding of the text. The successor to Baal is actually Mot, the three deities Yam, Baal and Mot representing in their conflicts the intra-pantheonic tensions among the second-level gods under the overall aegis of El. Athtar represents a tertiary level, the human world, whose institutions are subject to pressures from above and below. We might have a more adequate understanding of Athtar's role in the Baal Cycle were the text complete.

76. This appears to be an allusion to a ritual accompanying Athtar's enthronement. The dispensing of water, a vital matter in the management of the kingdom, is one of the king's first acts. Cf. Ps. 110.7; Num. 20.8-11 (where Moses acts like a king). In parting the waters, Exod. 15.1-8, Moses may also betray something of the general water-symbolism of the *Chaoskampf* as appropriated in royal rituals. (See Wyatt 1998a.) But not every drop of water is to be understood seasonally!

77. Ug. *r*[*ḥm*]. Not 'maiden (Anat)' as so often supposed (e.g. Gibson 1978: 76: 'damsel'; similarly del Olmo 1981a: 226), but rather the goddess's womb as the seat of her emotions. Her instinctive reaction here is maternal and protective. Cf. adj. *raḥûm* (qal pass. pt., ep. of deity) n. *raḥ^{a}mayim* (commonly ep. of deity) and denom. vb *riḥam* based on the n. in Heb. See KTU 1.19 i 1-9, where Anat's maternal and savage instincts are in conflict.

so the heart of Anat went out to Baal.

1.6 ii 10 She seized Mot by the edge of his garment,
she grasped [him] by the end of his robe.

She lifted up her voice and cried:
'Come[78], Mot, give (me) my brother!'

But divine Mot replied:

'What do you ask of me, O Virgin Anat?

1.6 ii 15 I went out myself,
and searched every mountain in the midst of the earth,
every hill in the midst of the steppe.

My appetite felt the want of human beings,
my appetite the multitudes of the earth.

1.6 ii 20 I reached "Paradise", the land of pasture,
"Delight", the steppe by the shore of death.

It was I who approached[79] Valiant Baal:
it was I who offered him up[80] <like> a lamb in my mouth.
Like a kid in the opening of my maw.

It was he who <was> carried away by the Luminary of the gods, Shapsh!

1.6 ii 25 by the Burning One, strength of the heavens,
into the hand(s) of the divine Mot!'[81]

A day, two days passed,
days (turned) to months.

78. Ug. *at*. Taking it as √*atw*, 'to come'. See Dressler (1979: 216). Cf. KTU 1.1 iii 16.

79. The suggestion of Cathcart and Watson (1980: 41) that this may be *ngš*, 'oppress' (cf. Heb. *nāgaś*) rather than 'approach' (Heb. *nāgaš*) is attractive. See n. 39 at KTU 1.114.19.

80. Ug. *'dbnn*. The cultic use of the vb is to be understood here, as at KTU 1.4 viii 17. Cf. KTU 1.4 vi 39-40. There is no evidence from Ugarit of cult being offered to Mot. Perhaps this is part of the irony here, that Baal himself, recipient of so many offerings, will himself become the sacrificial victim of Mot, the unworshipped, the all-devourer. Here the sacrificial image is of course a metaphor for death.

81. For the same formula see KTU 1.3 v 17-18 (restored). Slight variation at KTU 1.4 viii 23-24. Mot claims that Shapsh helped him in his devouring of Baal.

The womb of Anat sought him.

As the heart of a cow to her calf,
as the heart of a ewe to her lamb,
1.6 ii 30 so the heart of Anat went out to Baal.

She seized divine Mot.

With a knife she split him;
with a fan she winnowed him[82];
with fire she burnt him;
with millstones she ground him;
<with a sieve she sifted him;>
on the steppe <she abandoned him;
1.6 ii 35 in the sea> she sowed him.[83]

82. Ug. *bḫṯr.tdry*. Watson (1996b) suggests tentatively that *ḫṯr* be interpreted by reference to Hur. *ḫateri*, 'dagger, knife', and *dry* as 'cut' (see Watson [1995a: 220], √*adr*, corresponding to Phoen. *azr*, but cf. *DLU* [pp. 10, 138]) yielding the following parallelism:

b ḫrb tbq'nn	with a sword she split him,
bḫṯr tdrynn	with a blade she cut him.

Were these cola unrelated to the rest of the series this might be an attractive option, but the heptacolon surely lists seven *different* things done to Mot. Any repetition would diminish the cumulative effect of Anat's actions. See next note.

83. This unusual heptacolon is to be partially restored on the basis of KTU 1.6 v 11-19. The sevenfold structure (not a fivefold one as supposed by Watson 1979a: 117) serves to emphasize the total efficacy of the process applied to Mot: he is destroyed seven times. The apparently ritual procedure followed here by Anat has proved a crux for the overall interpretation of KTU 1.1–1.6. It has been taken seriously as a sequence of agricultural procedures, as for instance by Hvidberg (1962: 51): 'Anat's killing of Mot... represents the harvest'. See also Virolleaud (1931), Ginsberg (1932, 1950) Albright (1969: 84) and de Moor (1971a: 212-15, with extensive refs.). Others have rejected this view, notably Loewenstamm (1962, 1972 and 1975). It is to be seen rather as a rite of annihilation, with several parallels, such as PT 292, Plutarch *De Iside* 73, Sennacherib's punishment of his grandfather's assassins (*ANET*, 288), and the destruction of the golden calf (Exod. 32.20). The principle textual element which might be thought to support the former view is the omission of the sequence 'she abandoned him, in the sea' at the end of KTU 1.6 ii 34, which then brought the words *bšd* and *tdr'nn* together. This is widely supposed to mean 'in the field she scattered him' (thus, e.g., Gibson 1978: 77), or 'in the field she sowed him' (thus, e.g., de Moor 1987: 89), whereas the *šd*, lit. 'steppe', is hardly the place for *sowing* grain. At least 'scattering' gives the better sense of waste, but is in any event to be harmonized with KTU 1.6 v 18-19,

His remains the birds did indeed eat,
his scraps[84] the sparrows did indeed consume.
remains to remains cried out[85].

1.6 iii (about 40 lines missing)

'...
[For dead is Valiant Baal,]
1.6 iii 1 for perished is the Prin[ce, Lord of the earth!]
But if V[aliant Baal] should be alive,
and if the Prince, Lo[rd of the earth] should exist
in a dream of the Wise One, the perceptive god,
1.6 iii 5 in a vision[86] of the Creator of Creatures,
let the skies rain oil,

as above. If there is *any* real agricultural procedure intended in these lines, I suggest that it is the language of brewing (cracking and parching the grain), which evokes the Egyptian myth of the destruction of mankind and the drunkenness of Hathor, who wades in beer, thinking it to be blood. See Wilson (1969: 11) and Lichtheim (1997). But the improbability of the procedures is more likely to be the real sense of the passage. I find Richardson's (1973: 17-18) attempt to account for the difference between the two texts less convincing than the harmonization proposed here. A study appearing too late for inclusion in the present discussion is Mazzini (1997).

84. 'Scraps...remains', rather than 'flesh...limbs'. Ug. *širh...mnth*. Cf. the distinct Heb. terms *śᵉʾār*, 'residue' and *śᵉʾēr*, 'flesh'. *WUS* (p. 299, §2570) allows either; *UT* (p. 487, §19.2372) only the latter. For *mnt*, (cf. Heb. √*mîn*), the basic sense is division, which allows either nuance. Del Olmo (1981: 228) combines the two: 'flesh...scraps'. But the Ug. term for 'flesh' is *ṯir*. This makes Pardee's (1997c: 270 and n. 258) point immaterial. Scraps hardly 'grow fat'.

85. Mot's fragments have been scattered and devoured, but *not* ritually buried, and with Death himself this is not good enough. This colon may presage Mot's subsequent revival and return to the fray, for it suggests a soul that is restless and not pacified. Cf. KTU 1.17 i 27, and the broader question of Aqhat's destiny in KTU 1.19. Anat specifically leaves the hero unburied, with the result that he is devoured by the mother-falcon Sumul. It takes Danel's intervention to assure his proper burial.

86. Ug. *bḏrt*. See Tropper (1996a), who argues that it is a by-form of **bḏhrt*. El's dream is the type of the seer's dream: he sees in his mind's eye that which will be hereafter. Things experienced in dreams were regarded by the ancients as being as real as waking experience.

let the wadis run with honey![87]

And I shall know that Valiant Baal is alive,
that the Prince, Lord of the earth, exists!'

1.6 iii 10 In a dream of the Wise One, the perceptive god,
in a vision of the Creator of Creatures

the skies rained oil,
the wadis ran with honey.[88]

The Wise One, the perceptive god, rejoiced.
1.6 iii 15 His feet on the footstool he placed;
He unfurrowed his brow and laughed.

He lifted up his voice and cried:

'At last I may sit down and rest,
and my soul[89] can rest in my breast!

1.6 iii 20 For alive is Valiant Baal,
for the Prince, Lord of the earth, exists!'[90]

Aloud he cried to Virgin Anat:

'Listen, O Virgin Anat!

Say to the Luminary of the god<s>, Shapsh:

1.6 iv 1 "Search[91] the wells[92] of the steppe, O Shapsh, .

87. This dream presages a paradisal restoration. Cf. the biblical formula 'a land flowing with milk and honey'. Cf. however E. Levine 1986 on the latter formula.

88. Baal is not yet alive again: the present supernatural manifestation of plenty is a portent of his restoration to come. See below.

89. Ug. *npš*. Perhaps more literally, 'my lung(s)' (du.)? The term can denote 'thorax, throat, appetite' etc. The point is that bodily organs reflect emotional states, as with livers, wombs and hearts. Perhaps El has been suffering from breathlessness and palpitations. The gods are credited generally with every human emotion, as with the reactions of goddesses to perceived bad news (KTU 1.3 iii 33-35; 1.4 ii 16-20).

90. El draws this conclusion from the portent, according to the logic of ll. 2-3, 6-7, now reversed in ll. 12-13, 20-21.

91. Ug. *pl*. Following Ginsberg (1936b: 64), Dussaud (1934: 204), and Margalit (1980: 170), who see here the Ar. and MHeb. √*ply/plh*, 'to search'. The basic sense behind this is seen in Heb. *pālâ*, Niph. 'to be separated, distinct'. 'Cracked': de Moor (1971a: 220-21: full bibliography to date); similarly Gibson (1978: 155), Ar. *falla*, or 'waterless desert', Ar. *fallu*, and del Olmo (1981a: 610): Ar. *fallu*, *'afalla*. 'Made ragged. destroyed': Aartun (1985: 14 §84): √*pll* pass. *UT*, 468 §19.2042: = ESA *flt*, pl. *'fl*, 'trench, excavation', or perhaps *p* + *l*; *WUS*, 255 §2219, √*pl*:

search the wells of the vast steppe[93].

Baal has forsaken[94] the furrows of the ploughland[95].
Where is Valiant Baal?
1.6 iv 5 Where is the Prince, Lord of the earth?"'

Virgin Anat departed.
Then she set her face towards the Luminary of the gods, Shapsh.

She lifted up her voice and cried:
1.6 iv 10 'Message of Bull El, your father[96],

'trickle'. De Moor's objection to the proposal adopted (Shapsh will have to look in the underworld) is obviated as soon as the rhetorical nature of the command is understood, or even a ritual *Sitz im Leben* if that is where the search motif has its origins. Besides, wells are not cracked like furrows (see next note), and Shapsh's response in l. 20 (*abqṯ*: 'I shall search...') is consonant with the line taken here.

92. Ug. *'nt*. 'Wells' here and in l. 2, but 'furrows' in l. 3. So already Virolleaud (1931: 216). Many (e.g., de Moor 1971a: 220; Gibson 1978: 78; del Olmo 1981a: 229) translate the first two occurrences as 'furrows' as well. But this is inappropriate: steppeland (*šd*) is the place for pasturing, and hence wells for watering sheep; *šd* is contrasted here with *mḥrṯt*, 'ploughland', in l. 3. Baal is lord of both grazing and arable land. Both depend on his beneficent activity. This is to recognize the importance of Baal for the economic life of Ugarit; it falls far short of providing evidence for a specifically *seasonal* view of his role, or at any rate of this narrative. Caquot and Sznycer (1974: 262-63) translate the expressions *'nt šd...'nt mḥrṯt* as 'Anat of the fields...Anat of the ploughlands', making heavy weather of them. Fensham (1981: 53), appealing to Johnstone (1969: 315), insists that *šd* means the farmland round a city, but in the passage he discusses, KTU 1.14 ii 51–iii 1, the phrase is *šd* || *pat mdbr*, 'steppe...edge of the desert'.

93. Baal cannot really be dead at all, El appears to be saying, in spite of the fact that he was buried (KTU 1.6 i 17). It is now a matter of searching for him.

94. Ug. *yštk*. Following Ginsberg (1969: 141), Gaster (1961: 223) and Avishur (1972: 2): 'neglect'. Other views: 'provide for': Driver (1956: 113), sc. √*škn* II Gt (or *k*[*w*]*n* Št?); 'the furrows of the ploughland *lament over* Baal': Hvidberg (1962: 36), √*škw* Gt, 'complain'; 'Ba'lu has to make...': de Moor (1971a: 220), √*yšt* juss. (final *n* 'a wrong conjecture'); 'Baal should be occupying...': Gibson (1978: 78, 158), √*škn* Gt; 'is Baal visible (?)...': Margalit (1980: 169-70), √*šky* (JAram., MHeb. *sky*, 'look out'); 'did they make you "Lord"...?': del Olmo (1981a: 230), √*šṯ* (cf. de Moor 1971a). See Pardee (1997c: 271 n. 262).

95. Ug. *mḥrṯt*. See Loretz (1993) and de Moor (1995: 5 n. 26).

96. 'Your father' (*abk*): not merely a routine formula. In KTU 1.23.32-33 El is the father and mother (as well as the husband) of the goddesses Athirat and Rahmay, who together form hypostases of the sun (Wyatt 1996b: 227-29).

word of the Wise One, your sire:

"Search the wells of the steppe, O Shapsh,
search the wells of the vast steppe.

Baal has forsaken the furrows of the ploughland.

1.6 iv 15 Where is Valiant Baal?
Where is the Prince, Lord of the earth?"'

And the Luminary of the gods, Shapsh, replied:

'Pour out sparkling wine[97] from the chalice[98].
Let your kinsmen bring garlands[99],

1.6 iv 20 and I shall search for Valiant Baal.'

And Virgin Anat replied:

'Wherever, O Shapsh,
wherever (you go)[100] may El ke[ep you],
may [the gods] keep you in pe[ace]!'[101]

97. Ug. *šd yn.'n*. Lit. 'pour (√*šdy*) wine of an eye': thus Driver (1956: 113), de Moor (1971a: 223), Caquot and Sznycer (1974: 264), Gibson (1978: 78, citing Prov. 23.31) and del Olmo (1981a: 230). Aistleitner (*WUS*, 303 §2584): 'I lift up my eyes at [your] behest'. Margalit (1980: 171-72, reading *šdyn.'n*): 'I'll cast an eye'. His objection to the approach taken here is misguided. We have a classic libation rite.

98. Ug. *bqbt* (*CTA*, *KTU*[1]), *bqb't* (*KTU*[2]). Initial *b* is 'from' rather than 'in'. To *qbt* cf. also Akk. *qabūtu*; to *qb't* (cf. Heb. *qubba'at*) note same form in KTU 1.19 iv 53, 55 (*ks* || *qb't*) and *qb'*, 'cup, goblet' (Hoftijzer and Jongeling [1994: 983]). *WUS*, 273 §2388: Akk. *qibītu*. Margalit (1980: 171-72): 'from the dome of the world' (Ar. *qubbat*, 'cupola, dome'). But a chalice is also dome-shaped.

99. Ug. *lyt*. Construed as 'garland, wreath' (cf. Heb. *liwyâ*): thus Virolleaud (1931: 217), followed by Driver (1956: 113), de Moor (1971a: 224), Caquot and Sznycer (1974: 264) and Gibson (1978: 78). 'Anxiety': Gray (1957: 72 n. 4); 'curse': Hvidberg (1962: 37 n. 3), reading **ulyt*, Ar. *'ulwatu*, Heb. *'ālâ*; 'bulge (of your mother's suckling)'(!): Margalit (1980: 171, 173), Ar. *layya*, 'bend, fold'; 'suite, retinue': del Olmo (1981a: 230, 572), √*lwy*, Heb. *nilwâ*.

100. Ug. *an.l.an*. Virolleaud (1931: 218) cites Heb. *'ān*, 'where?' or 'whither?' (interrog.) So *WUS*, 26 §293 (citing Ar. *'annā*). Cf. Driver (1956: 113). Others rel. 'where(soe)ver' or similar: de Moor (1971a: 223-24), Caquot and Sznycer (1974: 264), Gibson (1978: 78), del Olmo (1981a: 230) and *DLU*, 37. Margalit (1980: 171, 173): 'from strength to strength', followed by Watson (1983: 158).

101. Text *tġrk.*šlm[ ] (*KTU*[2]). With up to six signs missing, any restoration is conjectural. The vb *tġrk* is either 3 du. or 3 pl. (*ngr* G: 'protect'). In the former case

(1 fragmentary line, followed by about 38 missing lines)

1.6 v 1 Baal seized the sons of Athirat.
The great ones he smote with a blade[102],
the brilliant ones[103] he smote with a mace,
the small ones he smote to the earth.

1.6 v 5 And Baal went up to the throne of his kingship,
[to the back-rest], to the siege of his dominion.[104]

perhaps restore **šḥr*: 'May Shalem [and Shahar] protect you'. These two deities are sons of Shapsh, so that the prayer invokes the protection of her father (and mother!) and husband on the one hand, and sons on the other. The normal arrangement of the DNs is however *šḥr wšlm* (e.g. KTU 1.23.53-54; 1.100.52, 1.107.43; 1.123.11), which reduces the likelihood of this solution. The alternative requires a parallel to *il*, such as *bn il* ('gods'), with *šlm* taken as an instr. acc. (double acc. construction). I have tentatively followed this line here. Cf. de Moor (1971a: 223) and Margalit (1980: 171-72).

102. Ug. *ktp*, 'blade', which can denote a scapula (as at KTU 1.2 iv 14, 16, cf. Heb. *kātēp*) or a weapon ('scimitar') as here. See O'Callaghan (1952), Bordreuil and Pardee (1993a: 68), Watson (1995a: 545) and Vita (1996: 442 n. 24).

103. Ug. *dkym*. This has been variously understood: de Moor (1971a: 227), Caquot and Sznycer (1974: 265 n. c) and del Olmo (1982: 68-69) list various options. I have here provisionally followed Gaster (1961: 224) and Driver (1956: 154), citing Ar. *ḍakîyu*, 'brilliant', in spite of de Moor. Renfroe (1992: 130) notes that no satisfactory solution has yet been found. The division *dk ym*, 'pounders of the sea' (cf. Dijkstra 1974: 64; Gibson 1978: 79) or 'those who were like Yam' (del Olmo 1981a: 231) are equally conjectural. Something intermediate between *rbm* ('great ones') and *ṣġrm* 'small ones') is required, in what looks like a ranking of the gods whom Baal kills. Wilfred Watson suggests to me tentatively that the meaning of *dkym* may perhaps be found in Akk. *dekû*, 'to mobilize' (see *CAD*, III [D], 123-28 [124, 126] *AHw*, 166-67) so that we would have the series 'great ones... warriors...small ones'. As we have members of the pantheon, perhaps denoting three ranks of gods in descending order, this would perhaps indicate that the second rank are military in character. In KTU 1.1–1.6 the second rank of gods appear to be the royal figures Yam, Baal, and Mot who exercise monarchical power under the aegis of El. Athtar, as representing human kingship (KTU 1.6 i 65—see n. 75) is on a lower level. Cf. the levels proposed by Petersen and Woodward (1977); in my view the position they allocate to Anat belongs to Athtar. But the etymology, and consequently interpretation, remains conjectural.

104. In the surviving text this is the first time that Baal actually occupies his throne. Cf. KTU 1.1 iv 24-25, 1.3 iv 1-3 and 1.6 vi 33-35 below. Occupancy of the throne is a central motif of the epic form of the tradition. See Wyatt (1996b: 36-43; 1996c). Binger (1997) arrived too late for full consideration in this study. However,

[da]ys (turned) to months,
months (turned) to years[105].

[Lo,] in the seventh year[106],
divine Mot [came]
1.6 v 10 towards Valiant Baal.

He lifted up his voice and cried:

'Because of you, O Baal, I experienced downfall.

Because of you I experienced winnowing with <a fan;
because of you I experienced splitting with>[107] a knife;
because of you I experienced burning with fire;
1.6 v 15 because of you I experienced grinding with millstones;
because of you I experienced sifting with a sieve;
because of you I experienced abandonment on the steppe;
because of you I experienced sowing in the sea[108].

1.6 v 20 Give the first[109] of your brothers (whom) I may eat,
and the anger I feel will depart.

If the first of your brothers you do not give,
then I shall seize [ ][110]

in view of her interesting discussion of this section (pp. 60-63), I append an alternative approach based on the first of her two analyses of the text:

Baal seized the sons of Athirat.
The mighty gods he smote.

With a blade he smote those resembling Yam;
with a mace he smote the underlings of Mot.

from the earth Baal went up
to the throne of his kingship,
[to the back-rest.]
to the siege of his domin|at|ion.

105. Lit. 'from days to months | from months to years'.

106. Cf. Gordon (1949: 4-5) on the sabbatical pattern.

107. Text corrected on the basis of KTU 1.6 ii 32-33. The actual text of the tablet cannot be left as a legitimate poetic variant: it merely makes no sense.

108. The form of this unit is another rare heptacolon (cf. KTU 1.6 ii 31-35 above and nn. 82, 83). It represents the total annihilation of Mot. Paradoxically, of course, he is not destroyed. As the sequel will show, he can only be tamed.

109. Ug. *aḥd*. On the ordinal use cf. KTU 1.6 i 46 and n. 70.

110. Cf. de Moor (1987: 95 n. 465).

(it will be) time I ate [mankind],
that I ate the multitud[es of the earth][111]!'

(4 illegible lines, followed by about 25 missing lines)

'[dr]ive him out,
[ex]pel him.
[ ]
[ ]
[ ] Mot,
[ ] the Powerful One.'
[ ] divine Mot,
[He ate] his seven divine assistants.

Divine Mot [cried]:

'Loo[k!]
[It is] my brothers[112] whom Baal has given me for my meal,
my mother's sons for my consumption!'

He returned to Baal in the recesses of Saphon.
He lifted up[113] his voice and cried:

'It is my brothers you have given me, Baal, for my meal,
my mother's sons for my consumption!'

They glowered at each other like burning coals.

Mot was strong;
Baal was strong.

They gored like wild bulls.

Mot was strong;
Baal was strong.

They bit like serpents.

111. Thus Baal is challenged to offer a substitute, so redeeming human victims from Mot's threat. Who 'the first of his brothers' is remains unclear. One possibility is that it is the first of the seven Baals of KTU 1.47.5-11 and parallels, that is Baal himself. Cf. also the putative son in KTU 1.9. Baal himself appears to fulfil some obscure self-sacrificial, atoning role in KTU 1.12 ii 46-49.

112. Baal appears to have tricked Mot into eating his own brothers.

113. Text *yšl*. Read *yšu* (*KTU*^{2}).

Mot was strong;
Baal was strong.

They tugged like hunting-dogs.

Mot fell.
Baal fell on top of him.[114]

Shapsh cried to Mot:

'Listen, pray, O divine Mot!

How can you fight with Valiant Baal?
How will Bull El your father not hear you?

He will surely pull down the pillars[115] of your dwelling,
he will surely overturn the throne of your kingship,
he will surely break the sceptre[116] of your rule!'

Divine <M>ot was afraid;
the Beloved of El, the hero was in dread.[117]
Mot started at her voice.

[He lifted up his voice and cried:]

'Let Baal be installed [on the throne of] his kingship,
on [the back-rest, on the siege of] his dominion!'[118]

(6 fragmentary lines)

Come, pray, to the fresh meat;
yes, eat the offering-bread;
pray drink the libation-wine.[119]

114. On this lively account of the fight between Baal and Mot see Dietrich and Loretz (1987a) and R.M. Good (1994).

115. Cf. van Zijl (1972: 80). 'Door-jambs': de Moor (1971a: 230). 'Support': Gibson (1978: 80).

116. The movement here ('pillars... throne... sceptre') is from the general to the particular as aspects of royal power.

117. Mot is not cowed by Baal, but trembles at the thought of offending Shapsh. She is mistress of heaven and the underworld, which she traverses nightly.

118. Thus Baal's arch-enemy and rival for the throne, in response to Shapsh's words, is himself the official announcer of Baal's rule.

119. The vbs here may be 2 sg. f. jussives, addressed to Shapsh, or 2 m. pl. jussives, addressed to all the gods.

Shapsh, you rule[120] the saviours[121];
Shapsh, you rule the chthonian gods.

Your company are the gods;
lo, mortals[122] are your company.[123]

Kothar is your associate,
1.6 vi 50 and Hasis is your companion.

120. Ug. *tḥtk*. To be taken as √*ḥtk*, 'to rule' (so de Moor 1971a: 240-41), and 2 f. sg. with Shapsh in apposition (as voc.) rather than 3 f. sg. with her as subject, in preference to prep. *tḥt* with 2 p. suff. (thus Virolleaud 1934a: 238; Caquot and Sznycer 1974: 270 n. i; Gibson 1978: 81 [but see n. 7]; Levine and de Tarragon 1984: 657). The latter would require *rpum*, not *rpim*, as the tablet reads. Healey (1980) suggests 'care for'. Cf. Renfroe (1992: 93). Like Dagan (KTU 6.13; 6.14), Shapsh is a recipient of *pgr* sacrifices (KTU 1.39.12, 17; 1.101.12) in accordance with her chthonian role outlined here. See discussion in Spronk (1986: 150). Schmidt (1994: 84-88) disputes the view that Shapsh actually enters the underworld.

121. I take this to be a hymn to Shapsh, following Caquot and Sznycer (1974: 270): '(?)'. Del Olmo (1981: 234-35), taking it to be one to Baal, translates this colon 'Shapsh will submit you to the Rephaim'. This is theologically implausible, since this would offend the matter of the relative ranking of the deities. See also n. 123. Cf., however, Husser's (1997) new argument in favour of this interpretation.

122. Ug. *mtm*. For choice of translation see next note. In this I agree with del Olmo (1981a: 235), 'men', rather than taking them to be 'dead' (thus de Moor 1971a: 240; Caquot and Sznycer 1974: 270; Gibson 1978: 81). In so far as the hymn addresses Shapsh's journey through the underworld, it may however be understood to include the dead, in a kind of 'community of saints', a nuance I attempt to give with my translation.

123. The bicolon is translated by Schmidt (1994: 88): 'Your witnesses are the gods. | Behold, humans are your witnesses'. The chiastic arrangement of the Ug. is to be noted, with its inversion of rank, location and status, for it has a bearing on the interpretation of the last term (*mtm*):

shades (*rpum*) : chthonian gods (*ilnym*) :: gods (*ilm*) : mortals (*mtm*)

The *Rpum* are higher in rank than mere mortals, but are below the chthonian gods in rank in the underworld. These are the categories of beings in the underworld, under the control of Shapsh by night as she passes through (*pace* Schmidt 1994: 84-88). By day, she is mistress over the gods (celestial powers) and mortals above. The last category, belonging with the gods to the upper realm (on and above the *arṣ*) cannot be the dead.

In the sea[124] of Arsh and the dragon[125],
Kothar-and-Hasis, steer (the bark)!
Pilot (the ship), Kothar-and-Hasis![126]

1.6 vi 54-58 Ilimilku[127] the Shubanite wrote (it), the student[128] of Attanu the diviner[129], chief of the priests, chief of the

124. This sea is the ambiguous cosmic ocean (Akk. *apsû*, Gk ἀβυσσος, Heb. *yam sûp*: Akk. *Ti'amat*, Ug. *thm*, Heb. *t'hôm*, etc.; cf. KTU 1.5 i 14-15 and n. 11) which both separates the land of the living from that of the dead, and also bounds all territories. For its more elaborate yet similar treatment in the biblical tradition see Wyatt (1996b: 81-105). The dragon sometimes dwells in the sea, and sometimes *is* the sea. See next note.

125. The identity of the dragon is not a serious problem: he is either an analogue or an avatar of Yam himself, the deified ocean. The identity of Arsh (*arš*) is however quite uncertain. See n. 50 at KTU 1.3 iii 43, where Anat claims to have smitten him.

126. The vbs are *yd*, *ytr*. This approach is offered by Caquot and Sznycer (1974: 270 and nn. n, o): 'navigate...voyage', Akk. *nadû*, 'throw', with the secondary sense 'put to sea'; or Heb. *nôd*, 'wander'; Heb. *tûr*, 'seek out, explore'. Cf. Gibson (1978: 81 n. 10). Wilfred Watson suggests to me that the latter vb may be better explained by ref. to Akk. *warûm*, yielding Gt 'to pilot ships'. Eusebius (*Praep. Ev.* 1.10.9) has Chousor (= Kothar, one ms. tradition reads Chrysor, 'Fire-worker') as the inventor of navigation, perhaps as a parallel to a similar Eg. tradition concerning Ptah? Cf. the Shabaka Stone (*ANET*, 5) which attributes to his creativity 'all work and all crafts'. An alternative approach might yield the following translation (as monocolon and bicolon):

In the sea are Arsh and the dragon:

Kothar-and-Hasis, drive (them) away!
Banish (them), Kothar-and-Hasis!

Kothar appears here to be given the task of driving off these enemies of Shapsh, as Seth drove off Apepi on the occasion of his nightly threat of Ra's subterranean bark. This interpretation is offered by the following: Driver (1956: 115): 'threw (into the sea)...cut (them) off'; Gibson (1978: 81): 'banish (them)...drive (them) away'; similarly del Olmo (1981a: 235), de Moor (1987: 99) and Pardee (1997c: 273 and n. 280). Cf. Akk. *nadû*, 'repel'.

127. For an estimate of Ilimilku see Sasson (1981: 91-92). On the rare phenomenon of an autograph, whether authorial or scribal, cf. *Atraḫasis* 3 viii end (Dalley 1991: 35).

128. Ug. *lmd*. 'Apprentice': Sasson (1981: 91).

129. Ug. *prln*, perhaps a transcription of Hur. *pu-ru-di-ni*, = Akk. *bârû*, a class of

temple herdsmen[130], sacrificer[131] of Niqmad[132] king of Ugarit, Lord of Yargub[133] and Ruler of Sharruman.[134]

priest. The titles following this designation belong to Attanu rather than to Ilimilku. Cf. Pardee (1997c: 273 n. 283).

130. Ug. *nqd*. For most recent discussion see Jeffers (1996: 111-16). She suggests that one of the duties of the *nqd* may have been hepatoscopy.

131. Ug. *ṯ'y*. See Aartun (1985: 46-47 §128, with references), Dietrich and Loretz (1987c), van Soldt (1988, 1989), Fleming (1991: 146-48), Freilich (1992) and del Olmo (1995: 41-42). What the relation is between this term and Keret's epithet *ṯ'* remains obscure. See n. 115 at KTU 1.14 iv 37 for further discussion and my proposal. 'An as yet uniquely attested ethnicon, applied to 'atn prln': Sasson (1981: 91).

132. The following kings of this name may be identified: (1) Niqmad I, son of Yaqaru (KTU 1.113.26 right), (2) Niqmad II (KTU 1.113.23 left: only the [ ]*d* survives); (3) Niqmad III (KTU 1.113.20, but only if the surviving letter is read as *d*; if it is *b*, this becomes Arḫalbu); (4) Niqmad IV (penultimate king of Ugarit; if the previous case falls, he is III). He does not feature in KTU 1.113, but is named at KTU 1.161.13. This still leaves the problem of the identity of the present king. Most have taken him to be Niqmad II. This is as good a label as any, though if there were four, he could conceivably be III. It is sad to reflect that he persists in the king list in the form of one surviving letter! But at least Ilimilku has made him the most interesting to the modern historian.

The king named at KTU 1.161.12 and 26 will be Niqmad II, or perhaps III if there were four. See nn. 9 and 11 at KTU 1.113 and n. 27 at KTU 1.161.12-13.

With the discovery of the Urtenu archive, Ilimilku is now known to have flourished in the time of Niqmad III or IV (my designation 'III-IV'). See Bordreuil and Malbran-Labat 1997 and Wyatt 2001b.

133. Or: 'formidable lord'. Cf. Del Olmo (1981: 562).

134. On the colophon and its meaning see especially van Soldt (1989). But cf. del Olmo (1992a: 117) on discerning here a fivefold titulary.

Part II
KTU 1.7–1.13

FRAGMENTS AND SHORTER MYTHS CONCERNING BAAL AND ANAT

KTU 1.7: Excerpts from KTU 1.3 concerning Anat

(KTU 1.7 = CTA 7 = UT 130, 131 = V AB variants A and B = RS 5.180 + 5.198)

Select Bibliography
Gordon 1949: 10, 27-28; Driver 1956: 118-19; Cassuto 1971: 175-83; del Olmo 1981a: 497-501.

KTU 1.7 is extremely fragmentary, consisting of two pieces constituting the upper right and lower left portions respectively of a text written without column-division on both sides; the original width and length of the whole tablet cannot be determined with complete certainty, making the estimate of missing numbers of letters hazardous.[1] Were it an isolated composition, no serious translation would be possible. However, the surviving text appears largely to duplicate parts of KTU 1.3 ii and iii, though in no coherent order, which allows tentative reconstruction, and the parallels are noted in the margin. (Cf. KTU 1.8 below.) See at the other locations for notes on the translation. Some of the restoration offered below is inevitably conjectural. The tablet is probably a scribal exercise, and the use of mythological material for such work, and the 'non-canonical' order of the text is eloquent testimony not only of the freedom with which the text was probably used, but of the existence of scribal schools apparently specializing in this genre of literature. This has implications for our understanding of the transmission of mythological tradition and also our estimate of the innovative role of Ilimilku in the larger texts.

1. Herdner (*CTA*, 44 n. 1) estimated line-length to be 25 to 30 signs. She also pointed out that extra line-length was available on the edges. Note also Cassuto's (1971: 178) diagrammatic reconstruction, in which a considerable lateral gap falls between the two fragments.

1.7	R	1	[ ]	
			[she attached palms to] her [gird]le;	= 1.3 ii 12-3

2. *CTA* adds ['lh kirbym kp...]: ['above her like locusts were palms...'] = KTU 1.3 ii 10.

3. Or (l. 34): '[She] washed [her] hands [of the blood of warriors]'.

he clasped[4] the bull-shaped instrument
[to his breast,]

[singing of the loves of Valiant Baal,]
the [aff]ect[io]n[5] of Pidray [daughter of light,]
[the affection of Taliy daughter of Shower,]
[the love] of Arsiy daughter of Sn[atcher-for-ever].

1.7 R lower edge 25 '[And] speak to Virg[in Anat,] = 1.3 iii 11-29
[say to the Beloved of the Powerful One:]
["Message of Valiant Baal,]
word of [Valiant Warrior]:

['Bury war in the earth;]
[set strife in] the dust:

[pour a communion-offering into the midst of the earth,]
[honey from a jar] into the midst of the st[eppe].

[Grasp your spear (and) your mace:]

[let your feet hast]en [towards me],
[let your legs] hu[rry to me]!

1.7 V 30 [For I have a word that I would say to you,]
a message that I would rep[eat to you]:

[a word of tree] and whisper of stone,

[the sighing of the heavens to the earth,]
[of the deep] to the stars,
[I understand the thunder which the heavens do not know.][6]

[Come,]
and I shall re[veal it]
[in the midst of my divine mountain, Saphon.'"']

He shall not stand[7] [ ]

1.7 V 35 the perfumes of seven tamarisk[s], = 1.3 ii 2-8
[the odour of coriander]
[and murex.]

4. Cf. discussion at KTU 1.3 iii 4 n. 36. Perhaps to be read *m!št*?

5. Ug. [a]h[b]t (*KTU*[2]). In KTU 1.3 iii 6 the corresponding term is *yd*, which probably carries a more overtly sexual connotation.

6. As restored by *CTA*.

[Anat] close[d the doo]r[s of the house] = 1.3 ii 4-5
[and she met the divine assistants at the foot of the mountain.]

Then Anat fo[ught in the valley;]
[she battled between the two cities.]

She smote] the people of the sea-shore;
[she destroyed the men of the sunrise.]

...

(a further ten lines missing, not including the gap of uncertain length between fragments: almost entire reverse of RS 5.180 now eroded)

KTU 1.8: Excerpts from KTU 1.4

(KTU 1.8 = CTA 8 = UT 51 fragment = II AB Variant = RS 3.364)

Select Bibliography
Del Olmo 1981: 497-501; M.S. Smith in Parker 1997: 179-80.

This text, like KTU 1.7, also consists of short excerpts or paraphrases from other passages, as indicated. See at other locations for notes on the translation. One column (ii or v) remains of a six-column tablet.[1] Perhaps a scribal exercise?

1.8 ii 1 'Where is the gift for the Lady-who-tramples-[S]ea, = 1.4 i 20-22
the present for the Mother of the gods?'

'And there is no house for Baal like the gods, = 1.4 iv 50-51[2]
nor dwelling like the sons of Athirat.'

1.8 ii 5 Aloud to his divine assistants Baal cries: = 1.4 vii 52-59
'Look, Gupan and Ugar,

the Dark One has obscured the day,
the Gloomy One the Exalted Sovereign.
...'

1. *KTU*^{2}, 30 col. 1 n. 1.

2. I suppose that KTU 1.4 iv 50-51 is the direct source for the present text, since the surrounding sections are also drawn from tablet 4. The text is similar to other passages, such as KTU 1.3 iv 46-48, v 3-4, v 38, 1.4 [i 9-11], iv 62–v 1, v 27-29. At first glance it is a hybrid, but it is preferable to read an error in the first signs. Here are the main forms for comparison:

KTU 1.3 v 3-4	*lytn bt lb'l kilm* [*whẓ*]*r kbn aṯrt*
KTU 1.3 v 38-39	*wn in bt lb'l kilm whẓr kb*[*n*] *aṯrt*
KTU 1.4 iv 50-51	*wn in bt lb'l kilm whẓr kbn aṯrt*
KTU 1.8 ii 3-4	*w tn bt lb'l kilm whẓr kbn aṯrt*

This comparison suggests that the present text be read *wn*[!] *i*[!]*n bt lb'l*...where perhaps the student began the *n* of *wn*, but moved on too quickly, after making only its first stroke. If he had been copying out various sections of the Baal-myths, variants such as this may have caused some confusion. I have translated accordingly.

KTU 1.9: A Fragment of a Myth concerning Baal or his Son

(KTU 1.9 = CTA 9 = UT 133 = RS 5.229)

Select Bibliography
Gordon 1949: 10, 15; Astour 1967: 200-201; del Olmo 1981a: 497-502.

Apparently a further scribal exercise. It is not certain which side should be read first, but the non-continuation of the text on the surviving lower edge suggests that the main surviving group of lines constitutes the verso. The width is indeterminate. This text does not correspond to any other known material from Ugarit. We have nothing with which to compare the fragment directly, though Astour attempts to link it with the Gk Dionysus-Zagreus myths. But it is possible that the myth deals with the son born to Baal in KTU 1.10 iii 34-35, where he is called 'bull' (*ibr*: cf. l. 11 below). Note also the reference to the bow in l. 13, and cf. KTU 1.10 ii 6. These allusions suggest a thematic link with KTU 1.10. Parts of the translation are entirely conjectural.

upper edge [Belonging to? Ab]dil[1].

1.9 R 1 (seven surviving lines, but only a few signs in each)

1.9 V 8 ...[ ]
he raised him up [ ]
1.9 V 10 the king of? his hill which [ ]
the bull of all of them who had no [ ]
Let him indeed[2] be given to them instead of Baal,
[ ]
or a bow before Hadd in [his] ha[nd?]
...[3] on the day[4] (when) Baal puts (him) to the test[5],

1. This is a PN (cf. Heb. Abdiel). It presumably identifies the student scribe who wrote the tablet.
2. Ug. *l*. Or: 'not'.
3. Text '*m*. It is hard to construe this as 'to', with the following *b*. Is it the end of a word, such as [*šb*]'*m*, 'seventy'?
4. Ug. *bym*. Or: 'against Yam'. Astour (1967: 201): 'in the sea...'.
5. Ug. *ysy*. Cf. Heb. *nāsâ*.

		he[6] [	]
1.9	V	15	The wicked ones arose,
			the worthless[7] [ones	]
			Nahar king[8]...[9] [	]
			Prince Baal [ ] an heir[10] [	]
			a youngster[11] of Hadd and [	]
			and to Nahar[12] he went [	]

6. Ug. *ym*[ ]. I have construed as the beginning of a yqtl vb, such as *ym*[*ḥṣ*] or *ym*[*lk*]. Or: 'Yam...'.

7. Ug. *mzl*[ ]. To be distinguished on the basis of context from √*mzl*, 'run' (KTU 1.14 ii 46-47 and n. 72). Astour (1967: 201 and n. 2): 'the evil[doers]', 'or: "the dest[royers]" '. Cf. Heb. *zālal*, hiph. 'despise'.

8. Ug. *mlk nhr*. Or: 'Nahar rules'? In the main body of the Baal-Yam myth (starting at KTU 1.2 iii 16) Yam is called *ṯpṭ nhr*, 'Ruler Nahar'.

9. Three signs survive. *KTU*[2] reads *ibr* (with a fourth sign rendered ×), but the *i* does not resemble the other *i* on the tablet (*ibr* l. 11). It looks more like a *z* (but this is impossible) or conceivably a badly-written *g* (*gbr*: 'warrior').

10. Ug. *ǵlm*. The word is difficult to translate with precision, and needs to be adjusted to the context. See n. 99 at KTU 1.2 i 13. If it be taken as 'divine assistant', it would refer to someone other than Baal. The conventional translation 'lad' could however fit Baal or his son, being perhaps parallel to *ṣǵr* in l. 18.

11. Rather than 'Hadd was young'.

12. Or: 'to the river' (Astour 1967: 201).

KTU 1.10: Baal, the Heifer, and Anat

(KTU 1.10 = CTA 10 = UT 76 = IV AB = RS 3.362 + 5.181)

Select Bibliography

Virolleaud 1936a; Caquot and Sznycer 1974: 273-89; de Moor 1987: 110-16; P.L. Day 1991, 1992a; Walls 1992: 131-34; Lloyd 1994: 259-68; M.S. Smith in Parker 1997: 181-86.

The tablet has three columns of text on one side only. The first column does not yield much information. When the text becomes sufficiently coherent for sense to be made it appears that Baal goes hunting in the Shamak Marsh (Lake Hule?), and Anat follows him there. On seeing a cow (impregnated by Baal?) giving birth, the goddess is evidently filled with passion, and she and Baal make love. He then repairs to his mountain, where Anat later announces to him the birth of his son. (This is the gist of the text as I read it, but it must be admitted that the precise relationship between Anat and the cow is not certain, and P.L. Day and Walls are dubious about Anat's sexual involvement.)

1.10 i (About 20 lines missing)

1.10 i 1 [ ] Virgin Anat
[ ]
[ ] which the sons of El do not know[1]
[ ] the assembly of the stars,
1.10 i 5 [ ] the generation(s) of heaven...
[V]aliant Baal
[ ] the Charioteer of the Clouds
[ ] peoples
[ ] would dwell in[2] the earth
1.10 i 10 [ ] the dead[3]
[ ]
[ ]

1. Or: 'do indeed know'.
2. The alternative proposed by de Moor (1987: 111) 'would return to the earth' is also possible. (Ug. *ytb* corresponds to both Heb. *šwb* and *yšb*.)
3. Or: 'men'.

[ ]
[Virgin] Anat
1.10 i 15 [Beloved of] the Powerful One
[ ] peoples,
[would dwel]l in the earth...

(10 further lines with a decreasing number of characters, followed by gap of about 13 lines)

1.10 ii (gap of some 20 lines)

'...
1.10 ii 1 [Is Baal in his house,]
[Divine Hadd with]in his palace?'

And the divine messengers of Baal replied:
'Baal is not in his house,
1.10 ii 5 (nor) Divine Hadd within his palace.

His bow he took in his (left) hand,
and his arrows in his right hand,

Then indeed he set his face
towards the shores of Shamak[4], filled with wild oxen.'
1.10 ii 10 Virgin Anat spread her wings,
she spread her wings
and winged her way[5]
towards the shores of Shamak, filled with wild oxen.

And Valiant Baal lifted up his eyes,
he lifted up his eyes and saw,
1.10 ii 15 yes, he saw Virgin Anat,
the loveliest among the sisters of Baal.

4. Perhaps Lake Hule, according to Lipiński (1971a: 16-17), followed by de Moor (1987: 112 n. 18). Margalit (1989b: 75, 77) identifies it with Josephus' Semachonitis (= Hule: *Ant.* v 1 etc.: G.A. Smith 1931: 480) and also locates the marsh of KTU 1.92 here.

5. Lit. 'she turned on the wing', or 'she set out on the wing'. On the problem of how *tr* is to be construed see Walls (1992: 133) and Lloyd (1994: 260 n. 2). I follow the latter, who takes it as inf. of *tr*, Heb. *tûr*, Akk. *târu* (Virolleaud 1936a: 162; Caquot and Sznycer 1974: 283 n. m.).

To her he hurried and stood.
at her feet he bowed and fell down.

He lifted up his voice and cried,
1.10 ii 20 'Life, sister, and longevity[6] be yours!

The horns of your power[7], Virgin Anat,
the horns of your power let Baal anoint,
let Baal anoint them against weariness[8].

Let us plant in the earth my foes,
1.10 ii 25 and in the earth those who arise against your brother!'

And Virgin Anat lifted up her eyes,
and lifted up her eyes and saw,
and saw a cow.

And it was turning round as it went,
it was turning round as it went,
and was turning round in its pangs[9].

1.10 ii 30 [In] the grace, the beauty[10] of the band of the Kotharat[?][11]

6. Ug. *wnark*. N form of *ark* 'to be long': Caquot and Sznycer (1974: 284 n. n) and Gordon (*UT*, 366 [§19.354]; 1977: 120). De Moor (1987: 113): 'let us shine upon you' (*ar*: 'shine', 1st pl. with f. sg. suff.)

7. Virolleaud (1936a: 160) and del Olmo (1981a: 470, 535): *dbat* 'power' (Heb. *dōbe*ʾ). 'Headdress' de Moor (1987: 113). 'Horns with which you strike': Caquot and Sznycer (1974: 284 n. o: Ar. *daba'a*, 'strike with a stick', Akk. *da'āp/bu* 'crush an enemy').

8. Thus Watson (1977a: 277), followed by Lloyd (1994: 261). (Ug. *'p*; cf. Heb. *'w/yp*, 'be weary'.) Del Olmo (1981: 470): 'Baal will anoint them with (the power of) flight'; de Moor (1987: 113): 'Ba'lu will anoint them while flying'.

9. I interpret *tr* as narrative inf. as in l. 11 above ('she winged...'). The cow is the subject. It is evidently in the throes of labour-pains, turning this way and that. Cf. Caquot and Sznycer (1974: 285, where it is not clear if the cow or Anat is in labour) and Lloyd (1994: 262 and n. 8). For Gordon (1977: 120) it is apparently Anat, who is dancing, while de Moor (1987: 13) has 'Anat saw a cow and started to flow... to convulse', understanding Anat to be overcome with passion. The use of the same vb in three successive cola reads awkwardly at first glance. Perhaps the second colon should be excised as a dittograph. But a better explanation may be that it is rhetorical, a form of frequentative, in which the restlessness and anguish of the animal in labour is expressed. The same formula *tlk wtr* occurs in col. iii 17 below.

10. Cf. the same epithets used of the end of the world in KTU 1.5 vi 6-7, translated as 'Paradise', 'Delight'.

11. *KTU*^{2}, 32 ends the line ḫbl.k*tr* (with only the final *r* in italics as certain!).

[(Her) voice[12]] Anat addressed to Baal:

'[ ] O Baal of the mist[13],
[Divine] Hadd of the clouds...
[ ] Valiant Baa[l]
[Virgi]n Anat...

(fragmentary 5 lines)

1.10 iii (gap of some 20 lines)

'...

1.10 iii 1 [ ] the cows[14] gave birth [ ]
a bull for Virgin Anat
and a heifer for the Beloved of the Powerful One!'

And Valiant [Baal] said:

1.10 iii 5 'Indeed, like our progenitor [I shall] mount [you,[15]]
as the Ageless One[16] who begot [us!']

Baal advanced, [his penis] tumescent;
Divine Hadd, [his] pha[llus] erect[17].

Del Olmo (1981a: 470) and Lloyd (1994: 262) both read and interpret as above, but with each sign heavily qualified as tentative. Walls (1992: 131) reads *ḫ*[ ]kǵrt, but does not translate. Virolleaud (1936a: 153): [ ]*k*(?) *ǵ* (?)*r*; *CTA*: *ḫ*[—]kǵrt: 'very uncertain reading'. Any reading is conjectural, but may be tentatively restored by comparison with KTU 1.11.6.

12. Restored from formulaic use in col. iii 33.

13. Following Gibson's suggestion (1978: 142) taken up by Walls (1992: 131) and Lloyd (1994: 262), that *iph* is related to Akk. *upû*, 'mist, cloud'. Perhaps read **ipi* (gen.)? Similarly de Moor (1987: 113) 'drizzle'. Del Olmo (1981: 470) 'whom I have seen' (√*ph*).

14. Text *arḫt* (apparently pl.). We would expect one cow, or possibly two, one giving birth to each of the offspring of the next two cola. (In this case we would have a variation on the widespread gemination motif: see Wyatt 1996b: 219-59.)

15. Following Lloyd (1994: 263). Cf. Virolleaud (1936a: 167): imperative: 'mount'. Caquot (1974: 286): 'like our eternal (*'lm*) creator', followed by Gordon (1977: 120), de Moor (1987: 114) and Walls (1992: 132). The context speaks in favour of the first alternative.

16. Correct *drd* to *dr* or *drdr*. See M.S. Smith (2001: 136).

17. Text [ ]...*uṣ*[ ]. 'Penis' || 'phallus': *yd* || *uṣb't* (lit. 'hand || finger' [or plural]: restored after Ginsberg [1969: 142], though he interprets differently). For Heb. usage cf. Delcor (1967) and Wyatt (1994: 416). 'Tumescent...erect' (*mli*,

Moist[18] was the nethermouth[19] of Virgin Anat,
1.10 iii 10 and the nethermouth of the most gracious of Ba[al's]
sisters.

Baal went up onto the moun[tain ,]
and the son of Dagan into the he[avens[?20]]

Baal sat on the thro[ne of his kingship,]
the son of Dagan on the sie[ge of his dominion.]

1.10 iii 15 To the bull...called [ ]
to the bu<ll>...cried out[21] [ ]

She went and turned[22] [ ]
[in] the grace, the bea[uty[23] of the band of the Kotharat].

A cow, a cow[24]...[ ]

1.10 iii 20 a bull she bore [to Baal]
and a wild ox [to the Charioteer of the Clouds.]

The c[ow] embraced[25] [ ]
The [cow] embraced [ ]
and covered him with...[ ]

1.10 iii 25 [ ] his navel[26] and his first milk
[ ] his infant milk.[27]

By the slope she went up onto the mountain,

mla), lit. 'full', but different vocalizations inviting different nuances. Ug. also uses √*ark* (KTU 1.23.33 and parallels).

18. 'Moist', interpreting *blt* of text in the light as √*bll*, cf. Akk. *balâlu*, Ar. *ball*. Cf. Heb. *bll*. Text has *t* overwritten on *l*, so many read as *btlt*.

19. Text *p*: 'mouth'. Interpreted as 'vagina' by de Moor (1987: 114: 'orifice') and Lloyd (1994: 264 n. 21, *contra* Walls).

20. Text *bš* [ ]. Ginsberg (1969: 142) *bš* [*mm*].

21. Text *ql.nd*...Caquot and Sznycer (1974: 287 n. z) compare Akk. *nadû rigma*, 'utter a word'.

22. The birth is again imminent. See at ll. ii 28-29 above.

23. Cf. the same epithets used of the end of the world in KTU 1.5 vi 6-7, translated as 'Paradise', 'Delight'.

24. Dittography?

25. Or: 'she embraced the cow'.

26. Perhaps this represents the cow severing the calf's umbilical cord? Or: 'her navel' (metonymy for 'udder'?); or: 'her vulva'? Cf. *šōr* = 'vulva' in Song 7:3 (Pope 1977a: 617).

27. Lit. 'the first milk of his infancy'.

by the pathway[28] onto the mountain[29] of victory,

and she went up thence[30] onto Arur,

1.10 iii 30 and[31] from Arur up to Saphon,
into Paradise[32] on the mountain of victory.

Her voice to Baal she addressed:

'Hear the greatest[33] good ne[ws, B]aal,
hear the news, Scion of Dagan[34],

1.10 iii 35 for a bull is born to Baal,
and a wild ox to the Charioteer of the Clouds!'

Valiant Baal rejoiced.

28. 'Slope...pathway', lit. 'flank...stairway' (*yrk...mslmt*). Cf. Heb. *yarkᵉtê ṣāpôn* in Isa. 14.14 (corresponding to Ug. *bṣrrt ṣpn*); Heb. *sullām*, 'stairway' (Gen. 28.12). Cf. del Olmo (1981a: 473): 'slope...hill'; de Moor (1987: 115): 'spur... stairs'.

29. Ug. *ǵr tliyt*. This form is used here and at KTU 1.101.3. At KTU 1.3 iii 31 the expression *gb' tliyt* is used. Cf. the similar variation between *mrym ṣpn* and *ṣrrt ṣpn*.

30. Text reads *bkm* after *t'l* ('she went'). Aartun (1967: 288-89): *b* + *km* (cf. Ar. *kīm*, 'hill', followed by Caquot and Sznycer (1974: 288 n. f) and Renfroe (1992: 57-59). Del Olmo (1981: 526) reads it as a conj. (= Heb. *bᵉkēn*), also discussed by Aartun. Thus de Moor (1987: 115). Gordon (1977: 120): 'weeping' (√*bky*).

31. The 'and' follows 'Arur' in the text.

32. Ug. *n'm*. Lit. 'beautiful place'. Cf. the location of Eden on a sacred mountain in Ezek. 28.13-14. Cf. also at KTU 1.5 vi 6, 28.

33. The *il* is superlative.

34. I am here giving the sense usually understood. Contrast Wyatt (1992a: 415-16 §14).

KTU 1.11: A Fragment concerning Baal and Anat

(KTU 1.11 = CTA 11 = UT 132 = RS 3.319)

Select Bibliography

Virolleaud 1944–45b; Caquot and Sznycer 1974: 289; de Moor 1987: 116; Walls 1992: 134-39; Lloyd 1994: 268-73; M.S. Smith in Parker 1997: 186-87.

Various scholars think that this text is the top of KTU 1. 10 iii above.

1.11 1 [Baa]l was aroused[1] and grasped her by the belly[2];
[Anat][3] was aroused and grasped him by the penis[4].

[Baa]l...to[5] the bull
[Vir]gin Anat...

'[Embra]ce, conceive and give birth,
[in the grace, the beaut]y of the band of the Kotharat[6].'

[Vir]gin Anat
[Val]iant Baal...

1. For discussion of the obscure verb *yṯkḥ* see Caquot and Sznycer (1974: 239-40 n. f). Cf. Rin (1968: 23-24) on Isa. 23.16. See n. 7 at KTU 1.5 i 4.

2. 'Abdomen', as euphemism for 'vagina': de Moor (1987: 116 n. 1). 'Womb': cf. Gen. 25.22 (Lloyd 1994: 269 n. 39): Akk. *qerbītu*, 'womb'.

3. The restoration of Anat here is based on the context: only she and Baal appear in this fragment.

4. Read *ušr* for *ušk*: edge of tablet friable. Cf. Caquot and Sznycer (1974: 289 n. l) and Watson (1977a: 277).

5. Ug. *l*. Or 'for', or 'from'.

6. Formula conjecturally restored by comparison with KTU 1.10 ii 30.

KTU 1.12: The Devourers

(KTU 1.12 = CTA 12 = UT 75 = BH = RS 2.[012])

Select Bibliography
Virolleaud 1935b; Dussaud 1936; Ginsberg 1936a; Gaster 1937, 1950: 217-22, 450-51; Gray 1951; Kapelrud 1969; Gray 1971; Caquot 1974: 333-51; Wyatt 1976, 1996b: 220-31; Gordon 1977: 121-25; de Moor 1987: 128-34; Parker 1997: 188-91.

The first part of this text is a theogony, evidently from a common source as KTU 1.23, though now sharply divergent. On the common ground see Wyatt (1996b: 220-31 and refs). The second, fragmentary part describes Baal's death and the 'cosmic mourning'[1] which follows. An atonement element appears to be present (see especially l. 46 of col. ii), and the text ends with a ritual instruction.

1.12 i (about 6 lines missing)

'[you make] us pregnant with Shahar,
[you make] us pregnant with Qadmu[2]!
Our entrails[3], El our father,
1.12 i 10 our entrails like fire they are eating,
our vitals[4] like worms[5] they are devouring!'

1. This is not to be treated simply as a doublet of KTU 1.5, where the death is not actually described (perhaps part of the missing text), but is alluded to in a number of ways, as with its announcement and El's response at KTU 1.5 vi 8-25. Nor is the drying up of the world in mourning (ii 42-43) to be interpreted in a 'seasonal' fashion, any more than such descriptions elsewhere.

2. 'Shahar... Qadmu' (divine names) tentatively, following de Moor (1987: 129). 'Dawn... east', Ginsberg (1936a: 140), Caquot and Sznycer (1974: 334) and Gordon (1977: 122). '—... east wind', Gaster (1950: 219). *k*...*k*..., taken as *kaph veritatis*.

3. Lit. 'liver'.

4. Lit. 'breasts', but this is an internal devouring by ravenous foetuses.

5. 'Fire... worms': Ug. *iš*, Heb. *'ēš*, Ug. *mrm*, cf. Heb. *rimmâ*. 'Fire... corruption': Gray (1951: 148; but 'worms', 1971: 62); 'fire...—': Caquot and Sznycer (1974: 334). Other suggestions: 'mole... ferret(?)': Ginsberg (1936a: 140); 'mole... worm': Gaster (1950: 219); 'fire... fatted calves'(!): Kapelrud, (1969: 320); 'a (liver-) fluke... worms': Wyatt (1976: 416); 'curs... puppies': del Olmo

El laughed in his heart
and convulsed with laughter in his liver.

'Go out, you, O Talish handmaid of Yarih!
O Dimgay handmaid of Athirat!

Take your birthing stool,
your litter, your swaddling-clothes,

and go out from the tree in the centre[6]
towards the vast and awful desert.[7]

Dig with your elbows in the dust,
your nails[8] in the soil!

Go into labour
and bring forth the eaters;
let them bring you to your knees,
and give birth to the devourers.'

El pronounced their names.

'May they have horns like bulls,
and humps like steers!'[9]

(1981a: 481).

6. 'Tree': Ug. *aln* (Heb. *'allôn, 'ēlôn, 'ēlâ*); Driver (1956: 71): 'oak'; del Olmo (1981a: 482): 'holm-oak'. I take *tk*, 'towards', or 'within' (cf. Hebrew *tôk*) with adverbial ending *m*, relating to the cultic tree at the centre of the world, contrasting the centre with the limen of the desert.

7. I have taken *šiy* to be an adjectival form from √*š 'y* (Hebrew *š 'h*) 'fall into ruins'. If the words *il* (here taken as superlative) and *šiy* were to be joined (word-dividers are used sporadically in this text), *ilšiy* could be Alashia (Cyprus), 'Cypriot' being the equivalent of 'maritime'. In KTU 1.23 the events take place at the edge of the cosmic ocean, the *t^{e}hôm* of the biblical tradition. Many scholars leave *tkm* and *ilšiy* untranslated. See discussion in Caquot and Sznycer (1974: 338-39, nn. z-c). 'Desert', *mlbr* for *mdbr*.

8. Lit. 'the bones of the hand'. Cf. the Akk. term *šinqatu*, 'finger nail' (lit. tooth of the hand'): *CAD*, XVII [Š/3], 54a.

9. A blessing pronounced by El. The bull-like devourers—this is a simile—are perhaps goats (Wyatt 1996b: 239). Kapelrud (1969) identifies them as locusts. De Moor (1981–82: 113-14) seems to think that they are flies. A bovine simile for insects appears implausible. Besides, they are not to be regarded as demons (such as the *dbbm* of KTU 1.169.1, whom de Moor also takes to be flies) because their birth from Athirat and their analogy with the twin deities of KTU 1.23 are too powerful a motif to relegate to the sidelines of theology.

And Baal's face was on them[10].
Baal went out hunting
1.12 i 35 and came to the edge of the desert.
And now[11] he found the eaters,
and he came upon the devourers.
Baal greatly desired to have them,
the Son of Dagan was eager for them[12].
1.12 i 40 Baal approached them on foot,
and divine Hadd on tip-toe[13].

1.12 ii (first 3 lines only odd letters)

...face...[ ]
1.12 ii 5 Baal [ ]
divine Hadd [ ][14]

(ll. 7-20 only odd letters)

Baal [ ]
divine Hadd [ ]

10. That is, Baal shows an interest in them. Similarly Gaster (1950: 219). Caquot and Sznycer (1974: 341 n. o), takes the preposition *b* to mean 'against', in a hostile sense. Others postulate that the Devourers look like Baal: thus Ginsberg (1936a: 144 n. 15a), apparently Gray (1951: 149—unclear), del Olmo (1981a: 482) and de Moor (1987: 131).

11. Ug. *wn*. On the problems of the precise analysis of this term see Watson (1994c).

12. It is unclear what Baal's motivation is. Sex? Hunger? The thrill of the hunt? Physical prowess? Perhaps a number of these is combined. Cf. KTU 1.18 iv 3-4, 1.93.

13. 'On foot...tiptoe' (*p'n...ḫrṣ'*), following de Moor (1987: 131), acknowledging that the second term is explained contextually. Similarly Ginsberg (1936a: 145) and Del Olmo (1981a: 483). Gray (1951: 149 n. 139) corrects second term to *ḫrṣ*, which he translates as 'haste'. Caquot and Sznycer (1974: 343 n. w) take this up, explain it by reference to Ar. *ḫarîḍ*, 'serrated tooth of lion', and translate 'club...pike'(!). Dussaud (1936: 12-13): 'foot...axe', which ignores the parallelism.

14. De Moor (1987: 131) restores this bicolon and that in ii 21-22 on basis of i 40-41 above.

(ll. 23-24 only initial letters)

1.12 ii 25 ...the Son of Dagan [ ]

(ll. 26-28 give no sense)

...[15] noble...[ ]
1.12 ii 30 ...terrible[16]...[ ]
Baal's eyes[17] the [ ] seized [ ]
his back they seized,
[his] bo[w they seized]
Baal's feet the [ ] seized.
and the...s[18] destroyed [Baal[?],]
1.12 ii 35 the eaters seized [ ][19].
[Baal][20] fell into a swamp[21] [ ]
His nostrils[22] grew feverish [ ]
in his loins he became hot [ ]

15. Ll. 29-30 both begin *idm*...This probably means 'red' (cf. de Moor 1987: 132, 'red drink'). The colour red is associated with vitality and power. Cf. KTU 1.14 ii 9 and n. 44.

16. Ug. *'rẓ*: Del Olmo (1981: 605), cites this instance as of unknown meaning; the epithet *'rẓ* used of Athtar in KTU 1.6 i 55 etc. is commonly interpreted as 'terrible', a suitable parallel for 'noble'. De Moor (1987: 132 and n. 29) interprets as 'rich' here and of Athtar. Cf. n. 72 at KTU 1.6 i 48.

17. Ug. *'n.b'l*: Ginsberg (1936a: 147): 'Baal's eyes' (also Gaster 1950: 221; del Olmo 1981a: 484); Gray (1951: 149): 'Ba'al declared'; Caquot (1974: 346): 'Baal saw'; de Moor (1987: 132): 'Look! Ba'lu...'.

18. Ug. *ǵllm* usually explained by reference to Ar. *ǵalīl*, Virolleaud (1935b: 261); thus Caquot (1974: 346); de Moor (1987: 132): 'thirsters' (Ar. *ǵal'il*). But see Renfroe (1992: 107). Driver (1956: 73, 142 n. 33): 'fetters' (Heb. *'ōl*, Ar. *ǵullu*, 'manacles').

19. I have taken all the verbs here as 3 pl. qatal form, with Baal's adversaries as the subject. This is in view of the sequel. Alternatively, Baal is the subject. Del Olmo (1981: 484) has various emotions seize Baal.

20. Baal's adversaries may alternatively be the subject of this series of verbs.

21. Ug. *mšmš*. Gaster (1950: 450) cites 'Ar. *mšš*, "ooze" and derived nouns meaning "swampy ground"'. Thus Gray (1951: 65: 'swamp'; 1971: 65: 'mire'); del Olmo (1981a: 484, 584). Virolleaud (1935b: 261-62), without translating, cites the analogy of Ar. *masnās*, 'confused matter'; Ginsberg (1936a: 147): 'groping darkness' (Heb., Aram. *mšmš*, 'feel, grope'). Cf. Renfroe (1992: 132-33).

22. Thus Caquot and Sznycer (1974: 347), del Olmo (1981a: 484): Ug. *anpnm*, (probably dual? cf. Ar. *anfu*) and de Moor (1987: 133). Ginsberg (1936a: 147): 'countenance'; similarly Gray (1951: 149), but this is rather *ap*.

his temples[23] [burned?] as though with malaria[24];

1.12 ii 40 he was as one in a fever [ ]
...[25] [ ]

The ea[rth] dried up entirely[26] [?]
The watercourses of the steppe[27] became parch[ed]

Seven years El filled[28] [the fields?]
1.12 ii 45 and eight anniversaries[29] [ ]

for he was clothed[30] as in a garment in the blood of his br[others,]
as with a robe in the blood[31] of his kinsmen,

23. Or: 'his horns' (*qrnh*: cf. Exod. 34.29-35!).

24. Text *ǵb*[ ]. Following Driver's suggestion (1956: 143 n. 11): Ar. *ǵibbu*, 'tertiary fever'. Thus del Olmo (1981a: 484).

25. None of the proposals for this line is convincing. Cf. Caquot and Sznycer (1974: 348 n. m).

26. Following Driver (1956: 73, 153 n. 11) and del Olmo (1981a: 484, 639): Aram. *tera'*, Ar. *tari'a*); cf. Gray (1971: 65).

27. Ug. *bnt šdm*: lit. 'daughters of the steppe', accepting Virolleaud's proposal (1935b: 262 and n. 1, cf. Ar. *banâtu larḍi*, 'daughters of the land', 'wadis'). Thus also Driver (1956: 73 n. 4), Caquot and Sznycer (1974: 348) and del Olmo (1981a: 484). Kapelrud (1969: 327): 'I must restore' (√*bny*). Gaster (1950: 221): '...daughters; fields...'. Ginsberg (1936a: 147): 'there mourned(?) the earth...', adding *a*, ending previous line to produce *abnt*, ignoring missing signs, and insisting (n. 38) that *šdm* stands for *šdmt* (on which see Wyatt 1992c). De Moor (1987: 133): 'the growth on the fields...'.

28. Ug. *mla*. Or: 'was full'; or: 'made fruitful [the fields]' (Wyatt [1976: 418]: referring to seven years of plenty?). Cf. Gordon (1977: 124): 'is abundant'. 'El': de Moor (1987: 133): 'the god' (n. 37: 'probably Ba'lu...').

29. Ug. *ṯmn.nqpnt*. Lit. 'eight cycles of time' (*WUS*, 213 §1847; del Olmo 1981a: 593; *UT*, 447 §19.1700). Cf. Heb. *nāqap*. Or: 'but the eighth was dried up until [ ]' (Wyatt 1976: 418), reading **nqpat* for *nqpnt*. Cf. √*qāpâ* in Exod. 15.8. See also formula at KTU 1.23.66-67 (...*nqpt*...). De Moor (1971: 57 n. 26) interprets *nqpt* as 'equinox'. But this does not seem appropriate here.

30. Narrative inf. (*UT*, 80 §9.29), taken as 3 m. sg. pass. or intrans. in force by Gray (1951: 150; 1971: 66), Caquot and Sznycer (1974: 348), Gordon (1977: 124) and del Olmo (1981a: 485); as 3 m. pl. by Gaster (1950: 221), Driver (1956: 73) and de Moor (1987: 133); as 3 m. sg. active by Ginsberg (1936a: 148).

31. 'Garment...blood', 'robe...blood': Ug. *dm* (Heb. *dām*), 'blood'. De Moor (1987: 133), 'mourning dress...mourning coat': Ug. *dm* (Heb. *dāmam*), 'weep'.

As seven were f[illed[32]] for his seventy brothers,
and eight for the eighty[33],
1.12 ii 50 the chief of his brothers found him,
and find him did the chief of his companions.
At the most dangerous moment,
at the most crucial time[34],
thus Baal had fallen like a bull,
1.12 ii 55 and Hadd had been prostrated[35] like a steer
in the midst of the swamp of [ ].
...[36]
...
Let the king pour out a jug[37]
let him pour water drawn from the well,

32. Restoring *ym*[*lu*]: cf. l. 44, *mla*. The subject is presumably the years of l. 44. Or, if a ritual context is presupposed, perhaps *ym*[*m*]: 'days'. *KTU*[2]: ym[ġyh].

33. 'Seven...seventy...eight...eighty': thus Ginsberg (1936a: 148), Gray (1951: 150; 1971: 66) and Kapelrud (1969: 327). 'Seventy-seven...eighty-eight'—so Gaster (1950: 221), Driver (1956: 73), Caquot and Sznycer (1974: 349), Gordon (1977: 124), del Olmo (1981a: 485) and de Moor (1987: 134)—is impossible, because of the *l* before *šb'm* and *ṯmnym*.

34. Lit. 'danger of dangers...crisis of crises' (Ug. *skn*, Heb. *skn* II, Ug. *'dn*, Akk. *edinnu*), 'crisis in illness': Landsberger (1949: 257) and Gray (1951: 150 n. 57; 1971: 66 n. 48). Similarly Gaster (1950: 222), Kapelrud (1969: 328) and de Moor (1987: 134: cf. Akk. *šikin adanni*). Other views: Driver (1956: 73): 'utmost care...utmost delight' (Ug. √*skn* I, *'dn*, Heb. *'ēden*, 'delight'); Caquot and Sznycer (1974: 349 and nn. t, u): 'with the best offerings, with the most delicious things' (√*skn*, 'to place', Ug. *'dn*, Heb. *'ēden*); del Olmo (1981a: 485, 595): 'before the most distinguished leaders...before the elite troop' (Ug. *skn* III, Heb. *sōkēn*, Akk. *saknu*, 'leader').

35. Ug. *tkms*: cf. Akk. *kamāsu*, 'kneel, prostrate oneself'.

36. The verb beginning this line was first read as *ittpq*; now read as *i*<*š*>*ttk* as in following line: *KTU*[1 and 2], del Olmo (1981a: 485). The same root appears to be used in the following lines. The two main lines of interpretation are to see √*ntk*, 'to pour': Gray (1951: 150), Kapelrud (1969: 328) and de Moor (1987: 134), which I think is contextually more probable; or √*štk* (cf. Heb. *štq*, Ar. *škt*), 'to cease': Ginsberg (1936a: 148), Gaster (1950: 222), Driver (1956: 73), Gray (1971: 67) and del Olmo (1981a: 485-86). Gaster (1937: 48 n. 61) had explained the verb by reference to Syr. *šky* and translated 'pay heed'. Caquot and Sznycer (1974: 350 n. c) understand √*šyt*, 'to place'. Similarly Gordon (1977: 125) and Gray (1951: 150 for l. 57).

37. Ug. *dn* II (cf. Akk. *dannu*), 'jug'. Or: 'justice' (*dn* I, cf. Heb. √*dyn*). Amos 5.24 uses a water metaphor for justice.

1.12 ii 60 let him pour from the well in El's temple[38]
and from the deep in the temple of the Craftsman[39].

38. Or 'the god's temple', the god being Kothar, the 'craftsman' of the following colon. I have translated *hkl* (Sum. E.GAL, Akk. *ekallu*, 'great house') as 'palace' throughout the Baal texts, because the emphasis there is surely on royal ideology and the importance of having a 'house' (an important theme in the Keret story too [see introduction to KTU 1.14-16 and cf. Merrill 1968]). See n. 66 to KTU 1.2 iii 7. With Anat's house at KTU 1.3 ii 18 (see n. 29) I have followed the same convention. The present passage is concerned more directly with cultic matters, so 'temple' is the more appropriate translation.

39. All translations of the last four lines differ greatly. It seems that a water ritual performed by the king is to be understood. To the *mṣlt*, see Caquot and Sznycer (1974: 351 n. g), and de Moor (1987: 134), and cf. the Jerusalem temple 'sea' (sc. reservoir of water for ritual purposes) in 1 Kgs 7.23-26, corresponding to sacred pools in Egyptian temples.

KTU 1.13: A Hymn to Anat

(*KTU* 1.13 = *CTA* 13 = *UT* 6 = RS. 1.006)

Select Bibliography
Cazelles 1956; de Moor 1980a, 1987: 137-41; del Olmo 1981a: 487-94, 1981b; Caquot 1989: 19-27; Walls 1992: 138-44; Lloyd 1994: 273-88; Margalit 1995: 231-38.

This hymnic text shows the complex character of the goddess, destructive from birth, and herself at the end giving birth, without having conceived. A series of horizontal strokes separates most lines of text, only R l. 17 to lower edge l. 21, and V ll. 22-23 being undivided in this way. De Moor considers it to be an incantation against infertility.

1.13 R 1

[from the wo]mb[?][1] you are born[2].
[ext]erminate[3] on the second day,
fe[ll[4] on the third] day,
1.13 R 5 slay on [the fou]rth day.
Sever hands,

1. Most commentators read r]*ḫm.tld*, (thus *CTA*) and consequently restore [*r*]*ḫm* (*KTU*[2] [ ]r*ḫ*m.t*ld*), translated as 'Maid', 'Damsel', etc., a putative epithet of Anat (but rather 'the womb [of Anat?]'). Only *tld* is supported by examination of the tablet. Cf. n. 77 to KTU 1.6 ii 5.

2. Or: 'she is born', or 'she bears'; 'may [she] bear': de Moor (1980a: 305). The passive is preferable. Cazelles (1956: 51), 'you shall bear'.

3. Restoring [*tš*]*ḫrm* (see also next note; cf. Heb. √*ḥrm* hiphil): the construction is a tricolon, with three verbs for killing, Caquot (1989: 21-22), del Olmo (1981a: 492; 1984: 88), de Moor (1980a: 305; 1987: 138) and Lloyd (1994: 274). All translate the following phrase 'for two (three, four) days'. I understand it to mean that Anat is born on day one, and from the second she is fulfilling her role as war-goddess.

4. Tentatively restoring *š* [*ql*...]. The verb *hrg* in l. 5 and *šql* here appear to be either m. sg. imper., (Anat treated as a warrior) or perhaps inf. abs. as imper. (*UT*, 79 §9.28). Perhaps [*tš*]*ḫrm* (previous note) should be read [*š*]*ḫrm*. Similarly with following verbs. They may have inf. force ('born...to slay, sever' etc.).

attach[5] [them] [6] to your girdle,
tie on the heads of[7] your warriors[8].

And fly with[9] your falcons
and settle on your mountain Inbub[10],
1.13 R 10 come[11] to your mountain (which) I know![12]

Lo![13] Come yourself[14] to your dwelling;
to the ro[of][15] of the high[16] [hea]vens go,

5. Cf. Walls (1992: 140), 'hands of your binding' (*šsk* cf. *šns* in KTU 1. 3 ii 12; note that the word-pair '*tk*, **šns* of KTU 1.3 ii 11-13 is used in reverse order on this interpretation). Many take Ug. *šsk* to be Š of √*nsk*. Thus Cazelles (1956: 51), de Moor (1980a: 305; 1987: 138) and Lloyd (1994: 274), 'pour out'. Caquot (1989: 22 n. 10), 'those who despoil you' (cf. Jer. 30.16).

6. If reading 'pour out' (previous note), restoring [*dm*]; cf. de Moor (1980a: 305), del Olmo (1981a: 492) and Lloyd (1994: 274).

7. Ug. *l*: or: 'from'.

8. KTU 1. 3 ii 11-13 would lead us to expect *bmtk* ('[tie heads] to your back'). The text *mhrk* is unexpected. Does it means 'warriors (you have slain)' and so 'enemies' (thus Lloyd 1994: 274)? Or 'those who have died in your service'? Cf. n. 17 to KTU 1.3 ii 7.

9. Ug. *ldr*['*k*] (cf. *dr'*, Heb. *zr'*). Lloyd's view (1994: 275 n. 53) that there is insufficient room for the characters is unwarranted.

10. Levine and de Tarragon (1988: 497) explain by √*nbb*, 'be hollow'. Cf. Wyatt (1996b: 47): 'without gates' or 'gateless' (*in* + *bb*). On *rbṣ* cf. de Moor's restoration at KTU 1.101.1 below. Anat descends a mountain at KTU 1.3 ii 5.

11. Ug. *at*: so Caquot (1989: 23), √*atw*; Gordon (1949: 52) reads as *at*, 'thou'. Others read the initial broken sign as *k* (giving *kt*, 'base'): thus *CTA*, *KTU*[1 and 2], del Olmo (1981a: 492; 1984: 88), de Moor (1987: 138), Walls (1992: 140) and Lloyd (1994: 275).

12. Cf. Cazelles (1956: 52).

13. Ug. *hn*: the tablet reads [ ]*n*. There is no warranty for *KTU*[1]'s k*t, followed by del Olmo (1981a: 492). *KTU*[2] corrects.

14. Ug. *atn at*: understood as G imper. of √*atw* with *n* energic (*UT*, 72 §9.11), followed by 2 p. ind. pron. Cazelles (1956: 52), 'come to us, come...'. Cf. Caquot (1989: 23). Cf. de Moor (1987: 138), 'I should give you' (similarly Walls 1992: 140; Lloyd 1994: 275).

15. The letters *bg* [ ] may tentatively be read. Thus *bg*[*g*]. Cf. del Olmo (1981a: 492) and de Moor (1987: 19).

16. So de Moor (1987: 138), Lloyd (1994: 275). We might expect *rmm*, after KTU 1. 108.7.

and run[17] towards[?18] the stars.
There [(your) warriors[?19]] shall fall[20] like poplars[21],
like the trunks[22] of ash-trees[23]...[24].

1.13 R 15 ...Penetrate[25] the boundary...
...and altar...

...above the stars
the (most?) gracious [ ] image[26].

17. Dividing *p* (copula) and *rṯ* : so Cazelles (1956: 52), del Olmo (1981a: 492; 1981b: 52; 1984: 88), Caquot (1989: 23 n. 19) and Lloyd (1994: 275, 276 n. 61); √*rṯ* (Heb. *rûṣ*, 'run' with Cazelles and del Olmo: *hapax* in Ug.). For other senses: Caquot (1989: 23 n. 19) and Lloyd (1994: 276 n. 61), 'break, crush' (*rṯ* imper. cog. Ar. *raḍḍa*, Heb. *raṣ*[*ṣ*], 'break'); de Moor (1980a: 305; 1987: 138, correcting to *prq*): 'cella'.

18. The end of l. 12 is damaged by the (repaired) break. Either *kt* (del Olmo 1981a: 492 etc.): 'podium'; de Moor (1987: 138): 'throne-base'; Lloyd (1994: 275): 'pedestals'; or *pt* (Caquot 1989: 23: 'smash') usually read. Is a scribal error possible? **tk*, 'towards (the stars)' makes better sense than either of these readings.

19. L. 14 begins [--] *r*×*m*: the × represents an erased sign: read **mhrm*, as in l. 7.

20. Others have *kbkbm* as subject (m. pl. in *t*-: *UT*, 74 §9.14): Cazelles (1956: 52), de Moor (1987: 139). 'She (Anat?) falls': Gordon (1949: 52); del Olmo (1981a: 492; 1981b: 52; 1984: 88): 'they (sc. building materials) fall'; Lloyd (1994: 276-77): 'may they (pedestals) fall'.

21. Ug. *lbnt*: cf. Heb. *libnê*. 'Brick(s)': Gordon (1949: 52), del Olmo (1981a: 492), Caquot (1989: 24) and Lloyd (1994: 276); 'old woman': Cazelles (1956: 52); 'white petals': de Moor (1980a: 306), both √*lbn* 'be white'.

22. Ug. *yrkt*. Cf. Heb. *yarkâ*, lit. 'thigh, flank, extremity' (as in Isa. 14.13). Thus either 'summit' (synecdoche: top for whole tree) or long-bone metaphor for tree-trunk.

23. Ug. *'ṯqbm*: cf. wood used for Aqhat's bow, *KTU* 1.17 vi 20 (*ṯqbm*). Thus de Moor (1971b: 349-50; 1980: 306), del Olmo (1981a: 492) and Lloyd (1994: 277). Cazelles (1956: 52): 'hunchbacks' (Akk. *išqubitu*); Caquot (1989: 24): 'strong ones' (Aram. *taqqîp*). See now Noegel 2000.

24. The lacuna at the beginning of l. 15 may belong to the following colon, or be a final word here parallel to *tpl*: *tmt* (cf. *RSP*: I, 278, §II 387), *tabd* (cf. *RSP*, III, 114, §I 215), *tpl* (cf. *RSP*, III, 115, §I 216) are conjectural restorations.

25. Ug. *ṯṯpn* (= √*ṣpn*?). 'Penetrate' (Ar. *ḍafana*): Rin (1968: 251), del Olmo (1981b: 57) and Caquot (1989: 25). 'Hide' (Heb. *ṣāpan*): Cazelles (1956: 52-53). De Moor (1980: 306; 308): 'drip (of sweat)' (√*nṯp*, *nṭp*).

26. De Moor's version (1980: 306; 1987: 139) is attractive: 'the [silver] of the image is more beautiful than the stars'. But the restoration of [*ksp*] is conjectural.

Let Virgin Anat wash herself;
1.13 20 [let the Beloved of the] Powerful One[27] bathe herself[28],
lower edge and let her go up to El [the Bull[29]] her father,
—the dwelling of your deeds be [ ]![30]

1.13 V May he hear you, O Cow,
and understand (you), [Beloved of ?] the Powerful One.

May (my) voice be in your ear,
and [ ].

Because you have bound up[31] evil[32],
1.13 V 25 since you have been clothed in light,

may the celestial messengers bless the prince;
may the celestial messengers[33] send you strength[34].

I shall bless your son(s) as a first-bo[rn],
(like) a prince I shall bless you.

1.13 V 30 Voracious was A[na]t the cow of Baal,

27. On this epithet see Wyatt (1992a: 417-19). The correction was suggested by Whitaker (1969: 73), discussed by del Olmo (1981b: 57) and adopted by Lloyd (1994: 278 n. 71). Text appears to read *tb* [ ]. There is no warranty for correcting to **td* and understanding 'Breast (or Nursemaid) of the Nations', an epithet dependent entirely on this reconstruction. (Thus Cazelles 1956: 54; del Olmo 1981a: 493; 1981b: 52; de Moor 1980a: 306; 1987: 139; Caquot 1989: 25.)

28. Ug. *tptr*'. Dt of √*pr*': de Moor (1980a: 308), 'beautify oneself'. Gt of *pr*' (cf. Ar. *'iftaraġa*): Caquot (1989: 25 n. 26) and Lloyd (1994: 278 n. 70). Cazelle's reading *tkr*' (1956: 54), is prosodically improbable.

29. There is room for [*tr*] at the end of l. 20.

30. A glossed prayer by the scribe?

31. Ug. *rtqt* (Aram. *r'taq*. 'tie', Ar. *rataqa*. 'close'). De Moor (1980: 309, Ar., Heb. *rātaq*) understands a woman whose vulva is closed against intromission.

32. Taking *mrġt* in the sense proposed by Caquot (1978: 17), followed by del Olmo (1981a: 584), Ug. √*rġġ*, Heb. *ra'*, Akk. *raggu*. De Moor (1980: 309), equates *mrġt* with Akk. *marḫitu*, 'lover'. Cazelles (1956: 54), reads *mrġt*, 'milk'.

33. Reading *ml<a>k.šmm*, as in previous colon: de Moor (1980a: 306) and Lloyd (1994: 280).

34. The initial letter is damaged. Either *ḥl*, 'strength', or *ṭl*, 'dew'.

vo[ra]cious[35] was Anat to bring forth[36],
she whose womb had not known conception,
[ ]...suckling.

(5 unintelligible lines followed by gap of about 5 lines)

35. Reading *a<g>zrt* as *agzrt* in previous colon: thus de Moor (1980a: 306), Caquot (1989: 26), Lloyd (1994: 282 n. 90) and *KTU*^{2}. See *CTA*, 58 n. 4. Cf. the term *agzrym* at KTU 1.23.23, 1.23.61. In that text the term refers to gluttony; here its reference is sexual.

36. Or does the term *wld* have a more specifically erotic nuance here (perhaps 'copulate', even 'rut')? This passage appears to give the lie to P.L. Day's claim (1995: col. 64) that Ugaritic Anat is sexually inactive. Cf. also KTU 1.10 iii 7-10. See also Walls' negative assessment of the present passage (1992: 142-43). But hunting, warfare and sex tend to bring out similar emotions, and similar abandonment. (The English 'venery' covers the lot!) Note however the paradox of l. 31: the goddess bears, without having conceived. In Egyptian tradition she conceives but does not bear (PHarris 3.5-10). See discussion in te Velde (1977: 28-29), Walls (1992: 149-52) and Lloyd (1994: 95-98). It is possible that *wld* should be read instead as *ktld*, as at KTU 1.14 iii 48 and n. 104.

Part III
KTU 1.14–1.16

THE STORY OF KING KERET

(KTU 1.14 = CTA 14 = UT Krt = IK = RS 2.[003] + 3.324 + 3.344 + 3.414)
(KTU 1.15 = CTA 15 = UT 128 = IIIK = RS 3.343 + 3.345)
(KTU 1.16 = CTA 16 = UT 125, 126, 127 = IIK = RS 3.325 + 3.342 + 3.408)

Select Bibliography

Greenstein in Parker 1997: 9-48*. (* indicates comprehensive translation.)

This lengthy narrative poem is variously described as myth (Gray 1964),[1] legend (Ginsberg 1946) and epic (Gaster 1947), or some intermediate stage between them.[2] Whether or not there is any historical basis for the work, Keret, apparently king of Khabur on the River Khabur (though a number of scholars have sought to give the narrative

1. For Engnell (1943, 1944) the Keret story is a thinly disguised fertility myth, and nothing other than a coded variant on the Baal Cycle of myths (also regarded as 'fertility myth'), while Albright (1936: 31-32) and Mowinckel (1941: 142-44) detected elements of the Adonis myth. For critique see Bernhardt (1955–56).

2. The wise words of Gibson (1974: 60-61) repay some attention. Perhaps neutral terminology such as 'narrative', 'story', 'poem' is safest. It is not essential to fit compositions into distinct categories of our own making. These remarks are also appropriate for Aqhat (KTU 1.17–1.19). But Merrill's (1968: 6) distinction, that stories about gods are myths, while those about human subjects are not, is naïve and no longer tenable.

a Palestinian setting: see Bernhardt [1955–56: 101-102 for survey] and most recently Margalit [1995: 217]), has been seen as an ancestor, real or imagined, of the dynasty ruling Ugarit in the LBA, in the period from which the archives date. This would be consonant with the motive suggested above for the present composition of the Baal texts, that is as a legitimization of the possibly rather shaky claims to the throne of Niqmad II, the patron of Ilimilku. What better way to proclaim a new age than to trumpet its illustrious past? History can always be created! Unfortunately we cannot by any means be certain on such issues, and the perceptive analysis of Parker (1977, 1989), recognizing in the story the interweaving of three common folklore motifs (with interesting parallels to Job), calls into question the entire ideological programme, for he sees the poem as essentially subversive of the old values.[3] The text does however reflect royal ideology, even if it offers a critique of it (Wyatt 1997, 1998a). Merrill (1968) is right in maintaining that the 'house' of Keret, sc. the dynasty, is a main theme of the story.

Some scholars have supposed the work to be incomplete (quite apart from gaps within KTU 1.14–1.16). Thus Bernhardt (1955–56: 111) wonders whether a tablet is missing between KTU 1.14 and 15. However, at least so far as any tablets beyond KTU 1.16 are concerned, in dramatic terms there is a powerful resolution of precisely the initial dilemmas with which the narrator has confronted Keret (the loss of wife and children),[4] though hardly in the terms that the king would himself have wished. The entire story hangs on the last five cola! Indeed, in an informal sense we have here the seeds of tragedy as a genre, in which the gods remorselessly visit on the hero the logical implications of a minor character-fault. Lapses of memory in a king lead to unforeseen consequences. The first tablet (KTU 1.14) is interesting in that it shows signs of reworking. Double lines representing column-divisions run down the middle of cols i and ii, showing that the tablet was originally intended to have eight columns of text. It is

3. Cf. Margalit (1999), who asks whether 'the author of Keret, far from preaching the doctrine of divine kingship, might in fact be condemning it by means of a lethal dose of parody'.

4. As will be seen from the notes to KTU 1.14 i, the debate as to whether the crisis involves one wife and her children or a series of wives is not finally resolved. I have adopted the former position because a choice has to be made in translation. There is something to be said for both views.

unlikely that the entire tablet is palimpsest, the present column lines having apparently been marked and used in preference.

Synopsis of the Narrative

1.14	i	The loss of Keret's family is described; the king goes to bed weeping. El appears to him in a vision, offering him wealth...
	ii	Keret protests that it is sons that he wants, not wealth. He is told to offer sacrifice, then muster his army to march against...
	iii	King Pabil of Udum, who will try to buy him off, but whose daughter Hurriy he must demand in marriage. Keret awakes from sleep, offers...
	iv	sacrifices as instructed, musters a vast army, and sets off for Udum. On the way he comes to a sanctuary of Athirat, and vows that if his enterprise is successful, he will offer the goddess twice his bride's weight in silver, and three times in gold. The army travels on and arrives at Udum.
	v	The city is besieged. After a week Pabil sues for peace, offering Keret wealth.
	vi	His embassy arrives. Keret rejects wealth, and demands Hurriy in marriage. The embassy returns...
1.15	i	Pabil reluctantly gives permission for Hurriy to depart.
	ii	Keret holds a banquet for the gods. El blesses him and foretells a fruitful marriage, guaranteeing the succession...
	iii	Daughters will also be born. The gods depart, and El's promises are fulfilled. Athirat remembers the unfulfilled vow...
	iv	Keret orders a feast for his officers...
	v	(It appears that he has become ill—cursed by Athirat—for) Hurriy tells the officers as they arrive to weep for Keret...
	vi	...It sounds as though the feast is degenerating into a wake...

1.16 i Ilhu, a son of Keret, weeps for the king, who tells him to fetch his youngest sister, saying that the king is holding a banquet...

ii Complaining at not being summoned earlier, she enters and weeps for the king.

iii Rites are performed to counter drought and famine.

iv The divine heralds are called upon to summon the gods.

v El asks who among the gods will cure Keret of his disease. When no one replies he creates a healing-goddess (Shataqat) from clay... He tells her to go to Keret...

vi Shataqat arrives and heals Keret. He tells his youngest daughter to prepare a meal. After eating he sits on his throne. Meanwhile his eldest son Yasib thinks that since Keret is dying (he has not heard the news!) it is time for him to go and take over as king. He goes to Keret, tells him he will now reign, and is roundly cursed.

1.14 i 1 [Concerning K]eret[5]

(6 illegible lines)[6]

5. I simply follow convention in transcribing the hero's name thus. On the problem see Watson (1994a). Versions such as Kirtu (de Moor and Spronk 1982a: 153; Spronk 1988: 62), Kirta (Coogan 1978: 53; del Olmo 1981a: 237; Pardee 1997c: 333: why the *a*?) are as conjectural. The retention of the consonantal skeleton (thus Parker 1977; Margalit 1995) is safest, but inelegant in a translation. Pardee (1997c: 333 n. 3) views the conventional 'Keret' as 'the least likely'. He is quite possibly right. On Kirta as a king of Mittanni see Wilhelm 1989, 28. If the name is Mittannian, it may represent Sanskrit *kṛta*.

6. For an attempt at reconstruction of the opening lines see Margalit (1995: 215-17). One result of his attempt is the positioning of Keret's town of Khabur (*ḫbr*) on the coast of Syria, *[*gblt y*]*m*: '[bordering on the se]a'. Attractive though this be, both in terms of the supposed real geography of the story, in relation both to Ugarit and to the cities associated with Athirat (at KTU 1.14 iv 35-36), and of its symbolic geography (kingdoms stretch ideally 'from sea to sea'), it remains entirely unprovable, only the final *m* of the putative phrase surviving. Margalit further locates Keret's kingdom at Byblos, and then (p. 219) links it with pastoralist kin in the steppes of central Syria and Transjordan. If we wanted to continue to speculate, we might consider Keret the eponym of the Cretans, who appear, apparently among the Philistines, as mercenaries of David, the so-called 'Cherethites' (*krētîm* rather than *kᵉrētîm*) of 2 Sam. 15.18 etc. This link was already suggested by Virolleaud (1936c: 9). But the link with Ditan (see n. 156 at KTU 1.15 iii 15), even if it is

1.14 i 7 The family of [Keret] was laid waste[7],
the house of the [k]ing destroyed[8],
which had seven [bro]thers in it,
eight sons of one mother[9].

1.14 i 10 (As for) Keret, his offspring[10] was destroyed,
(as for) Keret, ruined was his posterity[11].
A rightful wife he had indeed obtained,
a lawful spouse (with bride-price paid)[12],
A woman he had married[13],

fictitious, contains an important ideological reference, and offers circumstantial support for the normal location in eastern Syria.

7. Reading [ ]*'rwt* (thus *KTU*[1 and 2], rather than *CTA* [ ]*rpat*: but cf. *CTA*, 61 n. 3). √*'rw*, Heb. *'ārâ*, 'be naked, bare'. Cf. Akk. *uru*, 'bare place'. The nuance of the Ug. is determined by parallelism.

8. Text *itdb*. Read *itbd*, as proposed by Ginsberg (1946: 33). Virolleaud had toyed with a metathesis (1936e: 53) but to no purpose.

9. The reference is to Keret's *one* wife and *seven* sons. Thus already Ginsberg (1946: 14), and followed by, e.g., Gray (1964: 11), Dietrich and Loretz (1980c) and Xella (1982: 158). Rather than seven wives, as supposed by Cassuto (1950), Sauren and Kestemont (1971: 194), Gibson (1974: 63), del Olmo (1981a: 290), de Moor (1979: 643-44; 1987: 192), Margalit (1996: 199 n. 31), Tropper (1996b) and Pardee (1997c: 333). Cf. the motif of seven *husbands* in Tob. 6.14-15. The brothers are Keret's seven sons, not his own brothers (as for Cassuto 1950; Merrill 1968: 7, 12; Sauren and Kestemont 1971: 194; Gordon 1977: 37; Margalit 1995: 219). Parker's comparative treatment (1977) of Keret and Job strongly supports the 'sons' approach in preference to the 'wives' approach. The idea that Keret had gone through an entire gamut of wives before finally solving his problems with an eighth (I am reminded of that coy modern phrase 'serial monogamy'!) is less convincing, by comparison with the hero who has lost an entire family (one wife and seven children), and then starts all over again (and perhaps doubles their number, a sign of divine blessing). *This* is the stuff of all the folk-ethics crammed into such a tale. Given that royal polygamy was probably normative in Ugarit and in other ancient Syrian royal courts, the wives approach seems eminently sensible; but the royal line went through the *rabitu*, not just any wife: so as far as the succession was concerned, only one wife mattered. Having said this, I am happy to concede that the wives option is no more difficult than the sons option in grammatical terms.

10. Ug. *ḥtkn*. Gray (1964: 11): 'our sire', taking suffix as 1 pl. The suffixed *n* as 3 m. sg. is not so common as *h*, but is found (*UT*, 36 [§6.8], 149).

11. Ug. *mknt*. √*kwn*, 'to beget'. Cf. KTU 1.23.54.

12. Ug. *mtrḫt yšrh*: lit. 'a bride-priced one of his righteousness'.

13. The sequence *yšrh aṯt trḫ* is translated by Virolleaud (1936e: 35) as 'expels

but she went away[14].

1.14 i 15 Children their mother had borne him[15],
but a third died at birth[16],
a fourth of disease,
a fifth pestilence gathered to itself[17],
1.14 i 20 a sixth the sea engulfed[18],
a seventh[19] of them fell to a weapon[20].

the wife of Teraḥ', in accordance with his general attempt to locate the narrative in Palestine and establish links with the biblical patriarchal tradition. Some of this early scholarship now looks rather quaint, but we should appreciate the difficulties facing the early interpreters of Ugaritic: we build on the shoulders of giants.

14. Ug. *tb't*. De Moor and Spronk (1982: 155): 'rebelled'.

15. Ug. *ṯar um tkn lh*. De Moor and Spronk (1982: 156), supplying <*l*> before *tkn*, translate 'he procured a mother, but she was <un>faithful to him' (also de Moor 1987: 192). They support the multiple wife approach, and thus run through the gamut of female failures.

16. Ug. *kṯrm*. 'Childbirth': de Moor and Spronk (1982a: 156), Margalit (1996: 199 n. 31), which would fit the notion of seven wives. 'Health': del Olmo (1981a: 290, 569), the *-m* being presumably adverbial. But why would they die 'in health'? Death is usually associated with a lack of health. Every other cause of death listed here is an interruption of normality, though childbirth is admittedly a normal process which can go disastrously wrong. Van Selms discusses the √*kṯr* (1979). His discussion seems to assume that divine functions can be restricted to philological possibilities, an implausible basis for theology.

17. That is, they died of disease, perhaps attributed to Reshef as god of pestilence.

18. That is, they drowned, perhaps attributed to Yam the sea-god. Following the proposal of Ginsberg (1946: 34) to read *ġlm* as vb (cf. Heb. *'ālam*, 'conceal, hide') rather than as n. pl. cs. (thus de Moor 1987: 192, 'the lads of Yam') or sg. (thus del Olmo 1981a: 290, 'mighty Yam'). In both these cola, we should not necessarily read a mythological sense into the phrase, which may be neutral (as a dead metaphor) for dying of disease and drowning. Cf. the phraseology of KTU 2.10.11-13 (Cunchillos 1989: 279).

19. The series of numerical terms contains a number of problems, and remains unsolved, in view of the failure to reconcile different assessments. Ug. *mṯlṯt*, *mrb't*, *mḫmšt*, *mṯdṯt*, *mšb'thn*. Cassuto took these to be denom. forms referring (as f. D pass. pts.) to the mothers. The reason the series starts with the third is that the first two were, on his understanding, already dealt with in ll. 12-15: ('his lawful wife did he send forth, his legitimate bride', ll. 12-13, and 'a[nother] woman did he marry, but she also went back; an occlusion at her womb did she have', ll. 14-15). While this analysis has something to be said for it, explains the f. forms, and solves the problem of the series of numerals beginning at the third, other scholars are agreed

Keret saw his offspring,
he saw his offspring[21] destroyed,
quite ruined his dwelling[22];

that these terms are however fractions. This has given rise to ingenious explorations of the arithmetical games the poet is supposedly playing with his hearers (and readers). See in particular Finkel (1955), Tsumura (1984) and Sasson (1988). Gray (1964: 11, 32) takes the forms to be 'multiplicatives', referring to the ages of the children. For Driver (1965: 95-96) they denote the numbers of sons in groups, so that Keret had 3 + 4 + etc., totalling twenty-five. For my treatment see Wyatt (1987b: 393-94). Loretz (1995: 111-13) supports the fraction interpretation, understanding sons, while Tropper (1996b) has reverted to Cassuto's position.

20. Ug. *bšlḥ*. Most thus (*b* instr.), from √*šlḥ*, 'throw': thus, 'a missile'. Following the suggestion of Tsevat (1954), Coogan (1978: 58): 'in battle'. Dietrich and Loretz (1980c: 204 n. 67), followed by Xella (1982: 158 and n. 2), de Moor and Spronk (1982a: 156) and de Moor (1987: 192 and n. 9) take the term to refer to Shalḫu ('Thrower'), a deified river of the underworld. Cf. also del Olmo (1981a: 290). This proposal is attractive, since a DN would be appropriate here, if we understand the last three forms of death, however prosaic, to be attributed explicitly to malign divine intervention by Reshef, Yam and Shalhu. But a more neutral sense may be appropriate. None of these deities feature as characters in the story, as do El, (Baal, by reference), Athirat and Shataqat, so that the neutral sense of their names is plausible. Margalit (1996: 199 n. 31): 'fell from a parapet'. On any interpretation, Keret is evidently cursed. Such a catalogue of disasters is too much of a coincidence. The story raises precisely the moral theology problem explored in Job. But the author of Job, for all his high-flown poetry and mythological *richesses*, is nevertheless locked into the logic of (an incipient) monotheism. Where do you turn when the only way out is to blame God? One of the intuitive strengths of polytheism was that it contained moral issues strictly within a theological context, since all problems were dealt with 'intra-pantheonically'. Perhaps one of the reasons Job *is* so rich mythologically is that the author is trying so hard to get off the hook!

21. Ug. *ḥtkh*. It is the term *ḥtk*, 'progeny', already occurring in l. 10, which requires that the preceding sequence to this bicolon refers to Keret's children, and not his wives, an argument that I concede is otherwise finely balanced, with arguments in favour of both sides. Cassuto (1950: 19) avoids the problem by translating 'portion', referring to his wealth, an unconvincing analysis. The term can also mean 'sire' (cf. KTU 1.1 ii 18, ‖ [*ab*]), and is read as such in l. 10 by Gray (above). For recent discussion of the term see Loretz (1995: 114-16).

22. Ug. *ṯbth*. To be taken in the metonymic sense of the family dwelling there (√*yṯb*). Cf. the pun on *bayit*, ('house, dynasty') in 2 Sam. 7.1-17. Alternatively, the emphasis is on Keret's throne: cf. Gibson (1978: 82): '(kingly) power'; Coogan (1978: 59): 'royal house'.

and in its entirety[23] was the family destroyed,
1.14 i 25 and in its totality his succession[24].

He went into his chamber (and[25]) wept;
redoubling his lamentations, he sobbed[26].

His tears poured out,
like shekels to the ground,
1.14 i 30 like five-shekel[27] weights onto his[28] bed.

As he wept he fell asleep;
as he cried slumber (came).

Sleep overpowered him and he lay down;
1.14 i 35 slumber, and he curled up.

And in his dream El came down,
in his vision[29] the Father of Man[30],

23. The sense fits either reading offered here, *whtmhn* (*CTA*) or *wbklhn* (*KTU*[1 and 2]).

24. Ug. *yṛṯ* (Heb. *yrš*). The term covers inheritance and heirs. It comes right at the end of the long sequence narrating Keret's woes, and provides its logical as well as dramatic climax. It favours the 'sons' approach over against the 'wives' approach. This is no private disaster, for the succession to the throne and the future of his entire kingdom are at stake.

25. The copula is found with the following verb *wydm'*, perhaps an erroneous transposition.

26. Cf. remarks of Watson (1989: 131) and references.

27. Ug. *kmḫmšt*. I have divided *km ḫmšt*: with ballast form of *k*. Cf. del Olmo (1981a: 291) and Xella (1982: 159). De Moor (1987: 193), dividing *k mḫmšt*: 'like pieces of one-fifth' (sc. of a mina? the form being strictly fractional, as at l. 18)—notwithstanding de Moor and Spronk (1982a: 157). In any event, it is a larger weight than that of the preceding colon. The former reading *km* is almost certainly right. What is strange, and perhaps an error, is the ballast form *km* in the previous colon. Usual sequence is *k*...*km*... The progression here (one to five) is comparable to the formula 'thousand... ten thousand' (KTU 1.2 iii [10-11] and parallels). Reading *tmḫmšt*, Ginsberg (1946: 14) took this as a vb with following n.: 'his bed was *soaked* [his italic, as doubtful]'; but this misses the parallelism. Cf. KTU 1.19 ii 34, *rb't ṯqlm* ('quarter-shekel [weights]'), where however there is no comparison. Keret's royal tears carry greater weight than Danel's servants'! This is in keeping with the epic treatment of all royal emotions.

28. The *h* on *mṯth* may be directional (Heb. *he locale*), possessive, or both.

29. Ug. *ḏhrt(h)*. See Tropper (1996a), which provides the answer to Greenfield (1994). Cf. KTU 1.14 iii 51 (*hdrt*).

30. Ug. *ab adm*. The term is ideological, used of the deity as father of the king

and he drew near, asking Keret:
'What ails Keret[31] that he weeps,
1.14 i 40 the gracious one, heir[32] of El, that he groans?
Does he desire the kingship of Bull, his father,
or domin[ion] like the Father of Man?[33]

(8 lines missing, containing:)

[Take silver]
[and yellow gold,]
[a share in its production]
[and perpetual slaves]
[or charioteers with chariot-horses,]
[from the stable of a handmaid's son.]'[34]
[But Keret replied:]
1.14 ii '[Why should I want silver]
1.14 ii 1 [or yellow gold[35]],

as 'Primal Man', and in effect a god, since he is also *bn il* (KTU 1.16 i 20), and El is his father (*ṯr abh il*: KTU 1.14 ii 6), rather than having the more general sense of 'father of mankind' (thus, e.g., Gibson 1978: 83, but see n. 3). Cf. Gray (1964: 11), Xella (1982: 159): 'Father of men'. The same royal title is used in connection with Pabil in KTU 1.14 iii 32 (in a message containing the response he will give!) and vi 13.

31. Ug. *mat krt*: lit. 'What ails you, Keret' (continuing in 3rd p.): see de Moor and Spronk (1982a: 158). Keret as subj. requires a 3 p. vb.

32. The Ug. term *ǵlm* is notoriously difficult to pin down, but generally has a theological or ideological nuance. See n. 99 at KTU 1.2 i 13.

33. The question appears to be whether Keret hankers after a divine kingship, which is not appropriate to his station. However, it is the kingship of El which is at issue (cf. Isa. 14; Ezek. 28); a divine kingship of a kind already lies behind the traditions of Ugaritic royal ideology, with Athtar as the paradigm. See Wyatt (1986a, 1986b).

34. El is not prepared for Keret to have his (El's) kingship. He offers him a bribe to dissuade him from his imagined desire, a common folklore motif. But Keret is after the survival of his dynasty, more durable wealth than mere riches. For notes on the text see immediate sequel. On restitution of this text here see comments in de Moor and Spronk (1982a: 158-59).

35. The restored expression is *yrq ḫrṣ* (KTU 1.14 iii 22 and parallels). Ginsberg (1946: 36) draws attention to the Akk. form from Qatna: *ḫurāṣu arqu*, 'yellow gold'. The term is perhaps a hendiadys: cf. de Moor and Spronk (1982a: 159 and refs.), who offer a slightly different stichometry.

a share in its production[36]
or perpetual [slav]es[37],
or charioteers with chariot-[horse]s[38],
from the stable of a handmaid's son[39]?[40]
[It is s]ons I would beget,
1.14 ii 5 descendants[41] I would multiply!'

36. Ug. *yd mqmh*. Alternatively, 'a share in its (the gold's) mining' (lit. 'raising up'). Cf. Herdner (1974: 511): 'with the mine from which it is extracted'; Gibson (1978: 83): 'fresh from the mine'; de Moor (1987: 193): 'with its finding place'. Gray (1964: 12): 'in portion of its value'. This is preferable to 'a portion of his territory', since in parallel passages the 3 p. suff. remains constant. Xella (1982: 159): 'gold (items) with their pedestals'.

37. Perhaps slaves who will not claim redemption after seven years? Cf. Exod. 21.2; Lev. 25.45-46; Deut. 15.12; with Lev. 25.40. These biblical passages may reflect not distinctive Judahite, but broader levantine social practice of the first millennium. Cf. Hammurabi's code §§117-18 (*ANET*, 370-71) and Epzstein (1986: 119-24). The Babylonian code, with redemption after three years, is more humane than the Bible.

38. Ug. *ṯlṯ* [*ssw*]*m mrkbt*: 'charioteers, [hor]ses-of-chariots', rather than 'chariots with three horses', for which there is no evidence (*contra* de Moor and Spronk [1982a: 160] and de Moor [1987: 194]: 'teams of three horses'; cf. Ginsberg [1946: 36]). See discussion in Dietrich and Loretz (1979: 197), Vervenne (1987) and Vita (1995: 92-93). See also *ṯlṯ* in KTU 1.14 ii 36 (and n. 58) and parallels, and del Olmo (1984: 177-85). Xella (1982: 159): 'bronzes, horses, chariots', taking *ṯlṯ* in sense of √ III, *UT*, 503 §2691, perhaps 'third metal', after gold and silver? On this line of enquiry, cf. *alaš* as loanword for 'copper' (Reiter and Plöchl 1993), thus explaining Alašia as Cyprus, 'Copper-Land'. See also n. 62 to KTU 1.14 ii 36.

39. The expression *bn amt* is probably not as neutral as most scholars suppose. In Pss. 86.16 and 116.16 it refers specifically to the king. The language is ideological. On the colon cf. Wyatt (1990c: 21-22). Xella (1982: 159) reads the colon as 'stables, servants'. Cf. de Moor and Spronk (1982a: 160), who take it as 'bondmen'. In view of the ideological nature of the expression *bn amt* it is possible that it is in the mouth of a king a self-designation (with perhaps a hint of self-deprecation before a god?). If so, the colon means by way of circumlocution simply 'my stable'. When Pabil says this (KTU 1.14 v 38, vi 8) he is offering to trade economic benefits for peace.

40. The prosody and hence the syntax of this section is understood very differently by different translators and commentators. Other versions should be compared.

41. It seems that a parallel for *bnm* (*KTU* [2]: [ ]×*nm*) is required. The text reads [ ]*šrm* (thus *KTU* [1 and 2]): the right stroke of a *š* may be tentatively read. Is this an

And Bull, his father, El re[plied][42]:

'[Desist] from weeping, Keret,
from crying, gracious one, heir of El.[43]

Wash yourself and rouge yourself[44];
1.14 ii 10 wash your [han]ds to the elbow,
[your] finge[rs] up to the shoulder.

Enter into [the darkness of the tent shrine].

Take a lam[b in] your [hand],
a sacri[ficial] lamb [in] your right hand,
1.14 ii 15 a suckling lamb in [them] both.[45]

error for **šršm* ('roots'), or to be restored as **bšrm* (*m* encl., 'flesh'). Or is **šrm* to be taken as a complete word? In this case perhaps it extends the sense of sons to royal sons, thus 'princes', as for Xella (1982: 159). Ginsberg (1946: 15) reads [*ṯa*]*rm*, (cf. *CTA* [ ]*rm*): 'kinsmen'. Cf. Driver (1956: 28-29): 'kin' and Herdner (1974: 511 and n. h): '[chil]dren'.

42. Reading *w*[*yṯ*]*b*, with *KTU*[1 and 2], rather than *w*[*yqr*]*b* offered on grounds of space by de Moor and Spronk (1982a: 160). Too *much* space is not a logical problem in restoring a text, though the overall context is an important consideration. With *w*[*yqr*]*b* there is no introduction to the direct speech. *CTA* [*wy'n*].

43. Note different syntax for these three cola offered by de Moor and Spronk (1982a: 160). For the present bicolon see discussion by van der Westhuizen (1985).

44. De Moor and Spronk (1982a: 160) rationalize this as scrubbing till the skin is red! A more satisfactory explanation seems to me to be the ritual application of red ochre, widely attested in the ancient world. Cf. Whittle (1996: 98, 100 [Varna], 130 [Hungary], 132 [Sredny Stog culture], etc.), Gimbutas (1991: 174, 286-87 [Malta], 370 [Crimea], 386 [Rumania]), Mellaart (1973: 256 [Shanidar], 272 [Tell es Sawwān], 274 [Hassūnah], 290 [Ḥajji Fīrūz], 312, 319 [Çatal Hüyük]), Mallowan (1970: 389 [Sialk]), Anati (1963: 174 [Einan], 256 [Jericho]). Many of the incidences noted here, dating from the Mesolithic, but attested both earlier and later over a vast area, concern burials, though the use of red ochre was not exclusively mortuary, being evidently used in general ritual contexts. But such an association may well explain the term 'rouging oneself' used of Keret in the Ugaritic texts (KTU 1.14 ii 9, iii 52), where he seeks to prepare himself for a procedure which will save him from extinction, since his children are all dead. The only other person to whom this action is attributed is Pughat, who performs it precisely because it is a masculine one. See n. 266 at KTU 1.19 iv 42.

45. One lamb is probably intended. Xella (1982: 160) translates the last term (*lla*) as 'kid', which would distinguish between them. Technically he is probably right (cf. KTU 1.4 vi 43), prosodically less convincing.

Take the appointed portion of [your] offering[46]-b[read],
dreg-[free] wine as a (drink-)offering[47];

pour out wine from[48] a silver[49] [rhyt]on,
honey(ed wine)[50] from a rhyton of [g]old;

46. Ug. *dnzl*. For discussion see de Moor and Spronk (1982a: 161) and Aartun (1985: 1-2), based on Ar. *nzl*, 'food offered to guests'. Renfroe (1992: 136-37, not noting Aartun) is sceptical. See also discussion in Watson (1992b). The sense offered is at best provisional.

47. Ug. *msrr 'ṣr dbḥ*. Two entirely different approaches are possible here. I have followed Aartun (1984: 49; 1985: 11), construing the words as follows: *msrr*, from √*srr*, 'remove', signifying the removal from wine of solid materials; *'ṣr*, cognate with Ar. *'aṣīr*, 'sap, juice, wine must', JAram. and Syr. *'eṣārā'*, 'sap, extract'. As for *dbḥ*, while its basic meaning is 'slaughter' (e.g. for sacrifice), it may have the extended sense of 'offering' or 'feast' as below, KTU 1.16 i 40, and in KTU 1.114. Here I take it to be a fluid offering, accompanying the lamb. The alternative is to see in *msrr* √*srr* (Ar. *sarra*, 'secret'), denoting the inwards (sc. internal organs) or choicest part of the victim (*UT*, 452 §19.1798). The following *'ṣr* is then readily explained as 'bird', Akk. *iṣṣuru*, Ar. *'uṣūr* (*WUS*, 239 §2080; *UT*, 460 §19.1905; *DLU*, 91), *'ṣr dbḥ* being 'sacrificial bird' (thus most). On the approach taken above, we have three cola (a tricolon) describing the animal victim, one the cereal offering(?) (note Renfroe's conjecture), and finally three cola (a tricolon or monocolon followed by bicolon as above) dealing with libations. A symmetrical sevenfold pattern then emerges, representing the comprehensive nature of the preparations for the cult. This will be performed on the tower in the following cola. On *msrr* cf. Gray (1964: 37). De Moor and Spronk (1982: 161) take it to mean 'fly' (Eth. *srr*, D form); cf. de Moor (1987: 194): 'fowl, a sacrificial bird'. This seems tautologous.

48. Here and in the following colon I have rendered *b* as 'from' rather than 'into': it is a question of libations. And perhaps also of where they are poured out. I have them poured out on the ground before Keret ascends the tower. Alternatively, he climbs up, and thus pours the wine into the ritual vessels before carrying it up. Cf. n. 53.

49. The usual word for 'silver' is *ksp*; here the more recherché term *ḫtt* is used. This may have lent an air of sophistication to the scene. Gordon (*UT*, 400 §19.916) relates it to Eg. *ḥḍ*, 'white' (with *nbw* det. means 'silver'); Gray (1964: 37) calls it 'Anatolian'; *DLU*, 184 relates it more specifically to Hitt. **ḫat*. Both may be right: a precious substance might well have had an international vocabulary (cf. *šmrḫ/k/gt*, 'emerald', at KTU 1.4 i 32 and n. 90), as did other important commodities.

50. Ug. *nbt*. Being parallel to *yn*, 'wine', this may mean rather 'honeyed wine' than simply 'honey'. But it still evidently involves the ritual use of honey. See McKenna (1992: 138-41) on its importance . Cf. *arbdd* at KTU 1.1 ii [21]—and n. 15—parallels and n. 33 to KTU 1.41.21.

1.14 ii 20 go up to the top of the tower[51],
mount up to the summit of the wall.

Lift up your hands to heaven,
sacrifice to Bull your father, El.

1.14 ii 25 Serve[52] Baal with your sacrifice,
the Son of Dagan with your food.[53]

Then come down, Keret, from the roof,

prepare[54] food for the city[55],
wheat for the house of Khabur[56];

51. The line appears to be dittographic, *pace* de Moor and Spronk (1982a: 161).

52. 'Serve'. Ug. *šrd*. This may alternatively be construed as Š imper. of *yrd*, ('cause to come down'): thus, e.g., Driver (1956: 31), Xella (1982: 160) and de Moor (1987: 195). Virolleaud (1936e: 39), followed by Gray (1964: 38) and del Olmo (1981a: 297: 'honour') looks instead to √*šrd* (Heb. *śʿrād*), occurring in Exod. 31.10 (cf. BDB, 975). Cf. also Heb. *šērēt*, Pi., 'serve', proposed by Held (1954). The theology of the Keret story favours the latter, for it is El, patron of kings, who is most directly concerned with Keret's interests.

53. The whole sequence here raises interesting problems on precise cultic procedure. Are the libations poured out down below or up on the roof? Is it El's temple or Baal's temple in Ugarit that provides the model? (The only candidate for an El-temple so far is the 'temple aux rhytons', but this looks increasingly like a *marzihu*-construction: see de Tarragon [1995: 204-206]. Perhaps it is yet to be discovered.) How does the 'sanctuary' (tent-shrine? *ḫmt*) relate to the place of sacrifice? Is this the Ugaritic sacred precinct in any case, since Keret is king of Khabur? All these questions remain open. Cf. Schaeffer (1939b: 126 n. 2) and further discussion and references in Ginsberg (1946: 37).

54. 'Come down... prepare'. Ug. *yrd*...*'db*. I have taken as imper. forms. They could also be jussives: 'let Keret come down...let him prepare'. Thus, e.g., del Olmo (1981a: p. 293, second form inf.), de Moor (1987: 195). For *'db* I have here adopted the neutral sense. But given that Keret is told to perform this task immediately on coming down from the (temple-) tower, *'db* may carry the cultic sense of 'offering' found elsewhere, as at KTU 1.6 ii 22. Similarly at KTU 1.14 iv 9.

55. Ug. *qryt*. In view of the anomalous spelling (we should expect *qrt* in the sg.; note the du. *qrytm*) Herdner (1974: 515 and n. x) proposes seeing it as a cognate of Akk. *qaritu*, translating '(coming) from the granaries [*sic* pl.]'. Cf. next note.

56. Albright (1943a) suggested that this means 'the granary' rather than a TN. This, Driver's similar proposal (1956: 31)—cf. also Herdner in previous note—and other early suggestions are rejected by Badre *et al.* (1976: 107), del Olmo (1981a: 550) and de Moor and Spronk (1982a: 163) in favour of a TN. The form *bt ḫbr* here is probably to be identified with *ḫbr* by itself (KTU 1.15 iv 8-90), the *bt* being part

1.14 ii 30 let bread of the fifth month('s harvest) be cooked,
food of the sixth[57] month's.

Let a force[58] be victualled[59]
and let it set out.
Let a mighty host[60] be victualled,
and let a force go forth[61].

of the TN (cf. Bet Shemesh, Bet Shean etc.). Astour (1975: 284-85 §40) locates it tentatively on the River Khabur (modern Nahr al Khabour), a tributary joining the Euphrates just below Deir ez Zor. Margalit, as we noted above (n. 6 to KTU 1.14 i 1), locates it on the coast at Byblos.

57. 'Fifth...sixth': Ug. *ḫmš...ṯdṯ*. While the first form can be cardinal or ordinal, the second is only ordinal (the cardinal 'six' is *ṯ ṯ*). This clinches the argument over translation. The reference is to the fifth and sixth months; that is, if the first month fell in September–October, in February–March. But since that is early for cereal harvests in Syria it may be rather periods of five and six months from sowing to harvesting. Unfortunately we cannot confirm an eastern location, for even if Khabur be in the east, the fact remains that the poem in its present form was composed or at least redacted in Ugarit, and therefore no doubt reflected the local climate. However the dating problem be solved, we should follow Gray (1964: 38), followed by Gibson (1978: 84) and de Moor (1987: 195) in understanding different cereal crops (barley and wheat respectively) harvested in successive months, rather than those who think in terms of a campaign lasting five or six months (e.g. Driver 1956, 31; del Olmo 1981a: 293; Xella 1981: 293, 1982: 160). Herdner (1974: 516 and n. y) tries to have her bread and eat it. In the Gezer calendar (Albright 1943b; Cassuto 1936; *ANET*, 320) barley-harvest and (wheat-?) harvest are in the eighth and ninth months respectively. See Pardee (1997c: 334 n. 20) for the view that it is hyperbole for a long campaign. While he is writing of Emar, Fleming's (1997b: 431) remarks on spring and autumn new years may reflect Ugaritic usage too (just as there are probably residual new year elements in both Pesah and Sukkot in Israel).

58. Ug. *'dn*. See Renfroe (1987).

59. 'Let...be cooked [l. 30]...be victualled'. Ug. *yip...ngb*. I take as internal pass. forms. Alternatively jussives: 'let him cook...victual'. Dietrich and Loretz (1980d: 193): 'equipped'.

60. Ug. *ṣbu ṣbi*. Perhaps read second word *ṣbi<nt>*? Lit. 'a host of hosts', with superlative force. Cf. Gibson (1978: 84 n. 9).

61. This colon ends with the particle *m'*. Gray (1964: 39) and Gibson (1978: 151): '(all) together' (Ar. *ma'ân*). Gordon (*UT*, 435 §19.1511): enclitic after imperative (citing Eg. *m'*). Cf. *WUS*, 189 §1616, del Olmo (1981a: 581). I have omitted it from the translation. Ginsberg (1946: 37) links it tentatively with Heb. *mā'â*, perhaps 'grain of sand', and an allusion to the army's size? For the simile in military context cf. 1 Sam. 13.5 (the Philistine army) and 2 Sam. 17.11 (David's force) (Heb. *ḥôl*).

1.14 ii 35 Let your host be a mighty army:
a million charioteers[62],
mercenaries[63] without number,
archers[64] beyond reckoning.

Let them march in their thousands like the downpour[65],
1.14 ii 40 and in their ten thousands like the early rains[66]

62. Ug. *tlṯ mat rbt*: the first term could be construed as 'three', in which case the line means three million: 3 times 100 times 10,000 (thus, e.g., Watson 1979a: 114; Dietrich and Loretz 1980d: 193; Xella 1982: 161; de Moor and Spronk 1982a: 164). But it seems that three military categories are listed in the tetracolon (monocolon and tricolon?): the army and then its constituent parts. So *tlṯ* is better construed as 'charioteer' (cf. Heb. *šālîš*), sc. the 'third man' in the chariot, of the team of three. Cf. KTU 1.14 ii 2-3 and n. 38 above and parallels. See also Ginsberg (1946: 36), del Olmo (1984: 177-85) and Vita (1995: 92). Note that the three successive cola list the military personnel without any particle, followed by a numerical qualification. (Thus the lack of any antecedent to *tlṯ* does not invalidate this interpretation.)

63. Ug. *ḫpṯ*. The sg. form counts as coll. Vita (1995: 136 n. 7) lists the authorities for this view, without comment.

64. Ug. *ṯnn*. 'Archers': thus Dietrich and Loretz (1980d: 193), del Olmo (1981a: 294) etc. For discussion see Vita (1995: 125-28). Etymologically, probably the 'second man' in the chariot. Perhaps cognate with Eg. *snn*, *UT*, 504 §19.2708; the Eg. term has an arrow det. (Faulkner 1972: 232, cf. Eg. *snw*, 'two' and *sn*, 'brother').

65. Ug. *ḫḏḏ*. A rain term rather than 'lightning', as proposed by Watson (1976a: 441: cf. Heb. *ḥāzīz*, 'lightning', Akk. *ḫadādu*, 'roar')? The Akk. in any case suggests rather 'thunder'. Cf. usage of *ḥāzīz* at Job 28.26, 38.25 and Zech. 10.1. The allusion may well be to the *roar* of a heavy downpour. This is to attempt to preserve a greater tightness for the bicolon. If the 'lightning (thunder)' option be preferred, it surely reverses the climactic order. And lightning is an inept figure for an army's passage. The approach of Xella (1982: 161: 'seasonal thunder || drops of autumn rain') seems to me to mix similes in an unconvincing manner, again with anti-climactic effect. The same argument applies to de Moor and Spronk (1982a: 164): 'thunderstorm'. It is the relentless, unceasing downpour as much as its noise that is the point of the simile. Dietrich and Loretz (1980d: 193): 'downpour'. The translation 'storm-clouds' (Pardee 1997c: 334) rather misses the point.

66. Text *kmyr*. The word-divider of *KTU*^{2} (*km.yr*) is not visible to me (close-up slide). But Gaster proposed dividing the signs thus, identifying *yr* (Heb. *yôrê*) as 'early [sc. autumnal] rain'. See discussion in Herdner (1974: 517 n. c). The main argument against it could be the lack of a *k* in the preceding colon to match the ballast *km* here, but Herdner cites instances of words in the *second* colon of a bicolon doing double duty. For *ḫḏḏ . . . km*<.>*yr* Ginsberg (1946: 16, 37) understood 'serried . . . massed', cf. Akk. *kamru*, 'heap'.

let them advance[67].

Two by two let them proceed;
let all of them advance in threes[68].

Let the single man[69] lock up his house;
1.14 ii 45 let (even) the widow be enlisted[70].

let the the sick man take up his bed[71];
let the blind man outrun the runner[72].

67. Ug. *aṯr*. Herdner (1974: 518 and n. d) takes this as a prep. See discussion in Dietrich and Loretz (1984: 57-62) and Husser (1995: 125 and n. 29). They also take it prepositionally, thus taking *hlk* in previous colon as performing double duty. But I think my approach is preferable: here is a classic verbal form (qatal || qatal) to balance it chiastically. See entries at *DLU*, 61-62.

68. While the literary force of this is the climactic process of the n., n. + 1 formula, are we perhaps to see here the infantry marching in twos and the chariotry riding in threes?

69. Text *yḥd*. (Cf. Heb. *yāḥîd*.) At KTU 1.14 iv 21 the text reads *aḥd*. There is no need to correct either, except on grounds of fixity of formulaic expression. The sense in both cases is the unmarried individual.

70. Or: 'hire herself out', sc. as a mercenary. Thus, e.g., Bernhardt (1955–56: 107 and n. 88: as a camp-follower!) and Xella (1982: 161). Inf. abs. followed by 3 f. sg. N. (Cf. Heb. usage with *śākar* N.) This is a complete mobilization, total war! This leaves unresolved the form of the inf., which looks like G, whereas we should expect N, **<n>škr*. Alternatively (Gray 1964: 13, 42) 'hire a substitute' (*škr* as n.), but this weakens the image, as does 'give a generous contribution' (de Moor and Spronk 1982a: 164).

71. Ug. *zbl 'ršm yšu*. As, e.g., Driver (1956: 31); Gibson (1978: 84), Watson (1979a: 116) and Xella (1982: 161). Or 'Let them carry the sick man on his bed': Herdner (1974: 518). Gray (1964: 13): 'the sick man be carried ... '. *zbl* can be subj. or obj. of the vb. (cf. Heb. *nāśā'*). The translation offered is to be preferred in terms of the hyperbolic style. See next note.

72. We have a series of increasingly ludicrous occurrences, so desperate is the demand of King Keret for manpower (person-power! see ll. 44-45 on the widow's contribution). All the conventions of military liability and exemption (cf. Deut. 20.5-9) are here ignored. Ginsberg (1946: 38) notes, 'there are no exemptions from this draft!'. The invalid will rise from his sickbed, and the blind man, who is no use to anyone, will rush headlong, and blindly, into the fray. This developing sense of the improbable supports Watson's proposal (1979a), followed by Fales (1984) and adopted here, that *mẓl ymẓl* is to be explained according to an Akk. usage *ḫašḫašu pētân birki ibi'a*: 'the cripple overtakes the swift-footed'. He accordingly takes *mẓl* as not an inf. abs. but as a pt. = n., and the vb *ymẓl* as compar. D, cognate with Ar. *mazana*, 'go away, flee', *maza'a*, 'run, gallop ... '. Del Olmo (1981a: 576) also cites

And let the newly-wed go out[73]:
let him abandon his wife because of[74] another,
1.14 ii 50 on account of a foreigner his beloved[75].[76]
Like locusts let them settle on the steppe,

1.14 iii 1 like grasshoppers on the edge of the desert.[77]

Ar. *mazala*, 'run'. Usually taken in quite the opposite sense, e.g. Herdner (1974: 518 and n. f): 'the blind will find his way haltingly'. Similarly del Olmo (1981a: 294). Cf. Emerton (1969: 22-23) and Xella (1982: 161). De Moor and Spronk's (1982: 164) translation, 'let the blind man donate generously', takes up their sense of the previous colon but one. They understand those who cannot help physically to assist financially (cf. de Moor 1987: 196 n. 24).

73. Cf. Deut. 20.7.

74. The *l* here is probably not to be construed as 'to' in view of the overall sense. The sense adopted here is also supported by the following ballast form *lm*. But see my remark at the end of the following note.

75. We may take the 'another... foreigner' to refer, with Bernhardt (1955–56: 107), Watson (1979a: 113) and del Olmo (1981a: 294), to the enemy, sc. Pabil. The sense of *nkr* II supports this. Cf. Heb. *nokrî*, Akk. *nakaru*. This bicolon could alternatively be translated as follows:

> let him abandon his wife to another,
> to an acquaintance his beloved.

This is to identify *nkr* I ('recognize') in the second colon. The approach of others, e.g., Dietrich and Loretz (1980d: 196), Herdner (1974: 519) and de Moor (1987: 196) seeks to combine the second overall sense with *nkr* II, which is implausible; it would mean that another is left behind to take advantage of the newly-wed's absence. Similarly Margalit (1995: 220), who is undoubtedly correct on the sociological data, but takes no account of the hyperbolic dimension. With *this* mobilization, there will be no one left, except the poor bride. Unless indeed she too is to go, to be abandoned to the enemy (sc. Pabil)! This would be to take the groom and the bride as conscripts together. Cf. previous note. This is *not* a passage to be used to illustrate the moral poverty of Ugaritic society. It is pure hyperbole. The whole description of the mobilization progresses from the normal (the single man) to the impossible. For comments on the sociological background see J. Finkel (1954).

76. The entire tricolon recurs with slightly different wording at KTU 1.14 iv 26-28.

77. It is difficult to see what function the double line performed here, since it bisects the bicolon. Did it perhaps mark a breaking-off point, the copying or dictation resuming afterwards? For the image of an army as numerous as a plague of locusts cf. KTU 1.3 ii 10-11, and note also the reverse image (of locusts behaving like a rampaging army) in Joel 2.3-9.

Go for a day and a second,
a third, a fourth day,
a fifth, a sixth day.

Lo,
at sunrise[78] on the seventh
1.14 iii 5 you will come to Udum abounding in rain[79],
and to well-watered Udum[80].

Then attack its cities,
invest[81] its towns[82],

78. Ug. *špšm*. 'Sunrise': e.g. Ginsberg (1946: 38), Bernhardt (1955–56: 110), Herdner (1974: 519) and del Olmo (1981a: 295). Or 'sunset': e.g. de Moor (1987: 196) and Pardee (1997c: 335). Gray (1964: 13, 44): 'with the sun', which he explains in the former sense. Cf. Gibson (1978: 85 and n. 2). 'Sunrise' would imply a forced march through the night—perhaps for six nights!—which fits in with the hyperbole of the passage. Cf. Richardson's comments (1973: 7 n. 5), and note discussion (with opposite conclusion) in de Moor and Spronk (1982a: 165). KTU 1.14 iv 46 reads *aḫr špšm*, 'after sunrise'.

79. Text *rbm*. Usually corrected to *rbt*. In view of the interpretation adopted here, the text may stand: lit. 'Udum of the rains'. However, parallels at KTU 1.14 iii 30, iv 47, vi 11 support the correction. The error is best explained as dittography of the word-divider.

80. There are various approaches to the expression TN *rbt*, TN *ṯrrt*: (1) 'rain-abounding TN, well-watered TN' (cf. Eissfeldt 1940: 72-73; Herdner 1974: 519; Caquot 1989: 91 n. 281); (2) Great TN, little TN (thus de Moor 1987: 196); (3) main city TN, citadel of TN; (4) 'Great TN, well-fortified TN', or some combination of or variation on these. Cf. also KTU 1.100.63-64, and *ṯr* in KTU 1.101.8. I have taken the first option as the most convincing. It is thus a question not of two parts of a city, but of two epithets in parallel, pertaining to the same city, and indeed, in view of the following bicolon, a state capital, followed with a reference to its satellites. Udum thus forms, perhaps, a classic 'city state', like Ugarit. The identity of Udum remains uncertain. Hardly Edom (thus Virolleaud 1936e: 41). Cf. discussion and references in Astour (1975: 267-69, §VIII 16) and in Margalit (1989a: 258 n. 21). Eissfeldt (1940) noted its possible identification with TN *udumu* in EA 256.24, which he located in the Beqaa, while Margalit took it to be in Bashan, as also de Moor and Spronk (1982a: 165).

81. 'Attack ... invest'. Ug. (*w*)*gr ... šrn*. The first term is not √*gwr*, 'dwell' (cf. Gibson 1978: 85, 'tarry'), but rather √*gry*, Akk. *gerû*, Heb. *gārâ*, 'attack' (*DLU*, 152). Cf. Herdner (1974: 520 and n. k), de Moor and Spronk (1982a: 166). *šr* is cognate with Heb. √*śwr* II.

82. 'Cities ... towns'. Ug. *'rm ... pdrm*. Pl. as generally understood. De Moor (1987: 196) takes both forms to be du.: 'twin-city ... twin-town'.

drive from the fields the woodcutters,
from the threshing-floors the straw-gatherers,

drive from the well the water-drawers,
1.14 iii 10 from the spring the bottle-fillers.[83]

Rest a day and a second,
a third, a fourth day,
a fifth,[84] a sixth day.

Do not fire your arrows towards the city,
your sling-stones[85] at the citadel[86].

1.14 iii 15 And lo,
at sunrise on the seventh,
Pabil the king will not sleep[87]

for the noise of the bellowing of his bulls,
for the sound of the braying of his asses,
for the lowing of his plough-oxen,
the howling of his hunting-dogs.

1.14 iii 20 And he will send messengers[88] to you,

83. That is, bring the economic life of the community to an abrupt halt. Note that the social classes mentioned are those who would bear the first brunt of an attacking army. They are the first to suffer in any war.

84. Text *ymš*: *y* dittography of *ḫ*. Read *ḫmš*.

85. Ug. *abn ydk*. Lit. 'the stone(s) of your hand'.

86. Ug. *mšpdt*. I take it that a parallel to *qrth* is required. Following Gray (1964: 48, 'lofty burg'), who adduces Ar. *šadafa*, 'be tall', and Gibson (1978: 85, 152, 'citadel') who cites Ar. *sadafu*, 'object seen from afar'. Herdner (1974: 522 and n. p): 'propelled by your hand' following Rosenthal (1939: 222), √*ndp*, and also Bernhardt (1955–56: 108). Similarly del Olmo (1981a: 295). Cf. de Moor and Spronk (1982a: 167) and de Moor (1987: 197): 'throwing'. See also discussion in Watson (1994d: 270 n. 46), who favours de Moor's and Spronk's view. My interpretation provides a parallel to *qrt*.

87. If my six nights of forced march (n. 78) is correct, then Keret's discomfort will perhaps be mirrored by that of Pabil, who will spend the *next* six nights awake. Note that the same time-reference, *špšm*, is used. I take it that his animals will be making noises of protest over the whole week at lack of food, rather than that they will merely wake up early on the seventh. (Cf. Herdner 1974: 522 n. q.) They would wake up early every morning even in peaceful times. Ginsberg (1946: 16): '... will sleep until...'. But this is to suppose that all is normal.

88. Ug. *mlakm*, du.

to Keret at his encampment[89],

"Message of King Pabil:

'Take silver
and yellow gold,

a share in its production
and perpetual slaves,

charioteers with chariot-horses
1.14 iii 25 from the stable of a handmaid's son.

Take, Keret, peace-offerings aplenty[90],
and begone, king, from my house,
depart, Keret, from my dwelling[91].

1.14 iii 30 Do not besiege[92] Udum abounding in rain,
or well-watered Udum.

Udum is a gift[93] of El,
and a present from the Father of Man.' "

Then send back messengers[94] to him:

"What would I want with silver
or yellow gold,

89. Ug. *mswnh*. 'To the camp' (Ginsberg 1946: 17, 39; Driver 1956: 31; Gray 1964: 14, 50; cf. Ar. *sawana*, 'wall around'). De Moor and Spronk (1982: 168): 'night-quarters'. Margalit (1995: 239) gives the most compelling argument in favour of the 'camp' interpretation, imagining that Hurriy, after a tearful farewell to her people, is delivered thither in KTU 1.15 i 1-8. I take the *-h* to be a 3 m. suff., relating to Keret, though it can also be directional (Heb. *he locale*). It could be taken as parallel to *mlakm*. See del Olmo (1975: 93-94): 'delegate, plenipotentiary', citing EA and Alalakh Akk. *massu*, 'committed, in charge', or OB Akk. *massû(m)*, 'chief, leader, expert'.

90. The text reads *šlmm šlmm*. It may of course be simply a case of dittography.

91. 'House... dwelling', Ug. *bty, ḫzry*. On the translation of *ḫzr* see KTU 1.2 iii 19 (n. 77). I have understood both terms to refer to Pabil's palace. If however *bt* refers to the entire kingdom (as 'House of Khabur' may denote the kingdom, or 'House of Omri' may have the same sense), then *ḫzry* should be interpreted in the broader sense of 'my settlements', 'my towns'. Cf. the Galilean TN Ḥazor.

92. Ug. *tṣr*, √*ṣwr*. De Moor and Spronk (1982: 168) prefer √*ṣrr*, 'harass, harry, vex'.

93. Text *ytna*. Usually corrected to *ytnt*.

94. Du.

1.14 iii 35 a share in its production
or perpetual slaves,
or charioteers with chariot-horses
from the stable of a handmaid's son?
But what is not in my house you shall give:
give to me the maiden[95] Hurriy,
1.14 iii 40 the most gracious one of your family,
your first-born[96],
whose beauty[97] is as the beauty of Anat,
whose loveliness is as the loveliness of Athtart[98];
whose pupils[99] are lapis lazuli,

95. Ug. *mṯt*. This becomes a routine designation of Hurriy. Cf. the m. form *mṯ* occurring at KTU 1.5 v 22 and n. 49 *ad loc.*, and below at KTU 1.15 iv 3 and n. 167.

96. Ug. *bkrk*. 'Your first-born'. The Heb. *bᵉkôr* is m. only in sg., though a f. pl. is found (Gen. 4.4). The only Ug. instances (all in the present text) are m., unless the form be taken as c. I am supposing it to be the station of Hurriy herself, which would explain her special standing in the eyes of the people of Udum (KTU 1.15 i 5-8). Cf. Herdner (1974: 524): 'the flower of your posterity, your eldest [f.!]'; similarly Gray (1964: 14) and Gibson (1978: 86). Alternatively, 'the most gracious of the family of your firstborn' (thus, e.g., Driver 1956: 33; del Olmo 1981a: 296; Xella 1982: 162; de Moor 1987: 197), though this would make Hurriy Pabil's grand-daughter. Any information which would clarify the situation is now missing.

97. Ug. *n'm*. Lit. 'graciousness'. But perhaps the precise nuance is 'beauty'.

98. De Moor's view (1987: 198 n. 32) that Anat and Athtart 'were the goddesses of love' is unsupported by any evidence, Anat's sexual activity with Baal notwithstanding. Anat appears to be a war-goddess at Ugarit; Athtart's role is unclear.

99. 'Pupils': Ug. *'q(h)*: cf. Albright (1936: 31), Ginsberg (1969: 144) and Gray (1964: 14, 54). Alternatively 'eyebrows' on the ground that the inlaid eyebrows of statues were of lapis lazuli or some other precious substance. Cf. the eyebrow inlays on the funeral masks of Tutankhamun. Levantine and Mesopotamian statuary frequently has recesses for such inlays. Gordon (*UT*, 460 §19.1906) makes the same point. 'Eyebrows' might be argued to give a more convincing parallel to *'p'p* in the following colon on the etymology of the latter. It is however the monocolon of l. 45b that clinches the issue. It could of course be objected that Hurriy's eyes would almost certainly be brown(!), but the description is probably based on statuary and its conventions. Note the wordplay between *'q* and *iqni*. De Moor and Spronk (1982: 168): 'eye-paint', de Moor (1987: 198): 'eye-shadow', on basis of Akk. *eqû*, 'to paint the eyes', *mēqītu*, 'eye-paint', etc. But this again loses the parallel with *'p'p*.

(the whites of) whose ey[es][100] are bowls of alabaster[101];
they[102] are surrounded by [eye-sha]dow.[103]

100. Ug. *'p['p](h)*. 'Eyes', sc. the whites of the eyes. Probably derived as redupl. pilpel from *'ûp*, 'to fly', the fluttering of eyelids resembling the flapping of wings (cf. Heb. *'ap'ap*, usually rendered 'eyelid', but note Ginsberg's sharp comment [1946: 39], citing Ps. 11.4). It is preferable in any case to 'eyelids' (Herdner 1974: 525 n. e) on contextual grounds, even if it is eyelids—or eyelashes (de Moor 1987: 198)—rather than eyes which flutter. Besides, how does the bowl metaphor fit the eyelids or lashes? It surely evokes a rounded (white) bowl, which matches perfectly the curvature of the eyes themselves. The effect of fluttering the lids (lashes) can be to make the eyes *flash*. Besides, the eyelids would scarcely be white (cf. *trml*), and my interpretation of l. 45b, the following colon, supplies the requisite colour around the eyes. Hardly 'corneas' (Xella 1982: 162), as this would suggest that Hurriy suffered from cataracts!

101. Ug. *trml*. Herdner (1974: 525 and n. g) and del Olmo tentatively link with Amor. Akk. *šarmu*, translating 'alabaster'. Driver (1956: 33, 151 [misprint *trmn*]) 'onyx(?)...unknown precious stone'. Cf. Gibson (1978: 160). Gray (1964: 14): 'carnelian'. Note the different colours required by these translations: white, black and red respectively. De Moor (1987: 198 and n. 33): 'frothing milk'.

102. 'They': the eyes, rather than 'she', Hurriy. I take this to form the closing part of a tricolon.

103. I read [*s*]*dm*. The basis is Eg. *sdm*, 'to paint' (Faulkner 1972: 257). This was suggested to me by Wilfred Watson, who has drawn my attention to Troy (1994), who notes the elaborate symbolism of the ritual treatments of the Eye of Horus, and discusses √*sdm*. Watson translates as 'They (her eyes) are ringed by eyepaint'. Margalit's discussion (1995: 221-24) is also of interest with regard to this problematic line, though difficulties remain. As he notes, the colon surely deals with Hurriy's face, since the preceding two cola and the following monocolon all deal with her eyes (framed in a beautiful face, already introduced in the preceding bicolonic comparison with the goddesses). Most follow Pedersen's proposal ['*]dm* (1941: 102, cf. Heb. *'ōdem*), and understand something like 'she is girded with [ru]bies'. Note de Moor's (1987: 198) interesting half-way house between the two approaches (writing eight years before Margalit). Nevertheless, it is always men who rouge themselves (e.g. Keret at KTU 1.14 ii 9—see n. 44—and iii 52 immediately below), and rouge would hardly go well with Hurriy's sophisticated make-up. Pughat's make-up, by rouging, at KTU 1.19 iv 42, is a special case, for she is actually putting on her war-paint! A better guide to Hurriy's procedures is surely the description of Anat making herself up in KTU 1.3 iii 1, where the goddess uses murex, presumably for the delicate purple shade about the eyes, or even mascara on the lashes. The entire description in the present passage is surely the hypnotic presentation of Hurriy's eyes, set about with women's crafts for maximal effect. (On the psychological basis for eye-make-up, cf. Jaynes 1982: 169-72.) I have translated 'eye-shadow' after de Moor, but with a different reference. (Cf. de Moor and

1.14 iii 45 I shall take my rest in the gaze of her eyes!
For in my dream El has granted,
in my vision the Father of Man,
that she will surely bear[104] progeny to Keret,
and an heir to the servant of El."'
1.14 iii 50 Keret awoke, and (it was) a dream,
the servant of El and (it was) a vision[105].
He washed himself and rouged himself[106],
he washed his hands to the elbow,
his fingers to the shoulder.
1.14 iii 55 He entered into the darkness of the tent shrine[107]:
lower edge he took a sacrificial lamb in his hand,
a suckling lamb in them both[108].
He took the appointed portion of his offering-bread,
dreg-free wine as a (drink-)offer[ing];
1.14 iv 1 he poured out wine from a silver rhyton,
honey(ed wine) from a rhyton of gold;
and he went up to the top of the tower,
he mounted up to the summit of the wall.
1.14 iv 5 He lifted up his hands to heaven;
he sacrificed to Bull his father, El.
He served Baal with his sacrifice,
the Son of Dagan with his food.

Spronk 1982a: 168, KTU[2]: *[t]dm* on '*q*—explained above as 'pupils'—as 'eye-paint'.)

104. Text apparently *wld*. To be read *ktld*. Cf. S.D. McBride cited in Hendel (1987: 51 n. 48), endorsed by Watson (1989: 50, 52 n. 33).

105. Ug. *hdrt*. See KTU 1.14 i 36 (*ḏhrt*[*h*]) and n. 29.

106. Ug. *yadm*. Xella (1982: 163): 'put on ritual attire'.

107. Ug. *ḫmt*. Or: 'tent'. In which case it is a tent-sanctuary. Cf. the **ḥēmātô* of Ps. 19.7 as cultic tent (Wyatt 1995b: 571-72). Also restored at KTU 1.14 ii 12.

108. Note the apparent variation on KTU 1.14 ii 13-14: in view of the precise word order here (*imr dbḥ bydh*) the present reading can be justified. If a (rather complicated) haplography be argued, perhaps it is to be read:

lqḥ imr <bydh	he took a lamb in his <hand,>
imr> dbḥ <bm ymnh>	a sacrificial <lamb in his right> hand,
lla klatnm	a suckling lamb in them both.

Keret came down [from the r]oof,

he prepared food for the city,
1.14 iv 10 wheat for the house of Khabur.

He had bread of the fifth month('s harvest) cooked,
[food] of the sixth mon[th's].

He victualled a force
and [it set out].
A [mighty] host he victualled,
1.14 iv 15 and a force [went forth].

His host was a [mighty] army:
a million charioteers,

<mercenaries without number,
archers beyond reckoning.>[109]

they marched in their thousands like the downpour,
and in their ten thousands like the early rains they
advanced.

Two by two they proceeded;
1.14 iv 20 all of them advanced in threes.

The single man locked up his house;
(even) the widow was enlisted.

The sick man took up his bed;
1.14 iv 25 the blind man outran the runner.

And the newly-wed groom was led off[110];
he abandoned his wife because of another
and on account of a foreigner his beloved.

Like locusts they settled on the steppe,
1.14 iv 30 like grasshoppers on the edge of the desert.

They went for a day and a second.

109. The additional bicolon—cf. KTU 1.14 ii 37-38—is omitted, I suspect unintentionally. I hesitate to restore putative text unless there is compelling reason (as with examples in KTU 1.17 i 34, 1.23.51, 1.100.34-35 [edge note], 60). But if it is omitted here, we have an unbalanced army, represented only by its charioteers. Cf. previous note.

110. Text *ybl*, which I have read as internal pass.: he hardly went willingly! Cf. *yṣi* at KTU 1.14 ii 47.

After sunrise on the third[111]

1.14 iv 35 they[112] ca[me] to the sanctuary of Athirat of Tyre
and to the goddess[113] of Sidon[114].

There Keret the votary[115] vowed[116] a gift:[117]

111. As Cartledge (1992: 108) notes, Keret has studiously, even slavishly, followed El's instructions to the letter thus far. The sudden irruption of the following episode into the narrative at this point, interrupting his journey to Udum, lends a considerable emphasis to the episode. Since it is in many respects the most important single scene in the story (see further discussion below), this accentuation is appropriate. We should perhaps compare Keret's disobedience in not following El's instructions to the letter with the narrative of the anonymous prophet in 1 Kgs 13.11-26. His fate will be as disastrous, if not quite so bloody. See also n. 120.

112. Or, 'he'. Text *ym*[*ġy*].

113. In the Iron Age Ashtart appears to have been the chief goddess of Sidon (Jezebel's father, 1 Kgs 1.31; cf. 2 Kgs 23.13; Tabnit's sarcophagus: *ANET*, 662). Here *ilt* denotes Athirat, also goddess of Tyre, who may have been her predecessor in Sidon. Attempts to identify the two goddesses (e.g. Cartledge [1992: 108 n. 3]) are misdirected. On the Tyrian pantheon, and evidence of an older Asherah, with Ashtart and Anat an independent generation, see Du Mesnil du Buisson (1963).

114. 'Tyre ... Sidon'. Ug. *ṣrm ... ṣdynm*. The text is problematic. The TNs would be *ṣr* (KTU 2.38.3 etc.) and *ṣdn* (not found). We would not expect two enclitic *m*s, and they look like gentilics, though we would expect **ṣrym*, **ṣdnym* (read at UT 328.13 = CTA 93.13 = KTU 4.50.13 by Astour [1975: 317 §VIII 87]; now read as *lbnym*). There is a problem with the position of the *y* in the second. As to the location, see Astour (1973). The pairing of the two supports the identification with Tyre and Sidon, where most scholars locate the scene. See, e.g., de Moor and Spronk (1982a: 170).

115. Ug. *ṯr*. This title is applied intermittently to Keret in narrative references from this point on, (its occurrence in the lacuna at the end of KTU 1.14 i, as in Xella [1982: 159] being entirely hypothetical) culminating in its final occurrence at KTU 1.16 vi 54. Is its initial use perhaps a hint at the solemnity of his vow, which would have been accompanied by sacrifice (cf. *ṯ'y* at KTU 1.6 vi 57)? Albright (1936: 31) links it with ESA *ṯ'y*, 'to sacrifice'. On this basis, and supposing it to have some semantic link with *ṯ'y*, I propose the translation 'votary', which periodically reminds the reader of the seriousness of Keret's position once the time for fulfilment of the vow is past. The usual translation is 'noble' (e.g. Xella 1982: 159) or something similar (e.g. Herdner 1974: 529 and n. u: 'generous', thus Xella 1982: 164), following Virolleaud's suggestion (1936e: 8) that it is to be related to Heb. *šôa'*, 'noble, magnanimous'. Gordon (*UT*, 505 §19.2713, cf. §§19.2715-16) takes *ṯ'* to be the name of Keret's clan, with *ṯ'y* as gentilic. For further discussion of the term *ṯ'y*, see refs. at KTU 1.6 vi 57 n. 131, and at KTU 1.40.24 n. 14, 1.119.8 (*ṯ'y*) and 11 (*ṯ'*) (nn. 11, 17) and 1.169.2 n. 10.

116. Ug. *ydr*, √*ndr*, on which see Boyd (1985).

'O Athirat of Tyre,
and goddess of Sidon,
1.14 iv 40 if I take Hurriy to my house,
and bring the sacred bride[118] into my dwelling,
twice her weight in silver shall I give,
and three times her weight in gold![119,120]
They went on a day and a second,
1.14 iv 45 a third, a fourth day[121].
After sunrise[122] on the fourth
they came to Udum abounding in rain,
and (to) [well-]watered Udum.
They attacked its cities,

117. Ug. *iiṯt*. The double *ii* is dittographic. Read *iṯt*, 'gift': Parker (1979–80: 27) and Cartledge (1992: 109-10 n. 3). The former attempt to divide it, linking the second part, *iṯ*, to Heb. *'îš, yēš*, as in Driver (1956: 33: 'As surely as ... exist'), Xella (1982: 164), cf. Gibson (1978: 87 and n. 4—inflected!), is superseded, as are the explanations offered by de Moor and Spronk (1982a: 170).

118. Ug. *ǵlmt*. See n. 99 at KTU 1.2 i 13.

119. We almost hope for Keret's sake that Hurriy is anorexic! This kind of formula is widely paralleled in both historical vows and folklore. Parker cites the vows of the Hittite Queen Puduḫepa, who is more realistic: she offers statues with only the hands, feet or head in gold! (Parker 1989: 72-75.) Keret's language is the hyperbole of the epic style of the narrative. See Cartledge (1992: 110 n. 3) for discussion of other approaches. There is no need to rationalize the present passage, or make it conform to common sense. The hyperbole is surely deliberate, even humorous. A votive offering on this scale would bankrupt a small kingdom. On the precise sense of the figures cited, see also Herdner (1974: 530 n. x). Cf. also the figures appearing in a broken context at KTU 1.16 v 8-9.

120. On the vow sequence see Parker (1979; 1989: 70-87) and Cartledge (1992: 108-15). Quite apart from Keret's stupidity in not taking care to fulfil so important a vow, there is the question of the implicit impiety of its making in the first place. See n. 111.

121. Cartledge (1992: 109) cites the new counting from one, rather than a resumption of the previous one ('five, six, seven') as telling against Parker's view of the passage as secondary to an older core. The new departure in the numbering further accentuates the literary significance of the vow episode, by having it deliberately break not only the flow, but the wholeness of a seven-day sequence. This temporal rupture is ominous. Cf. KTU 1.16 v 21 n. 270.

122. Ug. *aḫr špšm*. Note the simpler expression *špšm* at KTU 1.14 iii 3 and below at l. 7.

1.14 iv 50 they invested its towns.

They drove from the field the woodcutters,
and from the threshing-floor the straw-gatherers.

1.14 v 1 They drove from the well the water-drawers,
and from the spring the bottle-fillers.

They rested a day and a second,
a third, a fourth day,
1.14 v 5 a fifth, a sixth day.

<They did not fire their arrows towards the city,
their sling-stones at the citadel.>[123]

Lo,
at sunrise on the seventh,
King Pabil could not sleep

for [the noise of] the bellowing of his bulls,
1.14 v 10 for the sound of the braying of [his] asses,
[for the lowing] of his plough-oxen,
[the howl]ing of his [hunti]ng-dogs.

Then [King Pa]bil [alo]ud to [his] wife did cr[y out]:

'Listen, I pray...'

(15 illegible lines)[124]

1.14 v 30 '[Set your] faces[125], then, towards Ke[ret in his
encamp]ment,
and sa[y to Keret] the votary—

"Message of [King Pabil]:

1.14 v 35 'Take [silver]
[and yell]ow gold,

[a share in] its [production]
and [perpetual] slaves,

123. See Pardee (1997c: 336 n. 36) on the inadvertent nature of the omission of this bicolon.

124. Margalit rather optimistically reconstructs these lines (1995: 224-31, §VI).

125. Du. Messengers are usually sent in pairs. Cf. KTU 1.14 vi 35-39. See also n. 10 at KTU 1.1 ii 16 and nn. 88 and 94 above.

[charioteers] with [chariot]-horses
from the st[able of a handmaid's son].

1.14 v 40 [Take, Keret, peace-offerings] a[plenty[126]],

[do not besiege Udum abounding in rain,]
[or well-watered Udum.]

[Udum is a gift of El]
[and a present of the Father of Man.]

[Begone, king, from my house,]
1.14 v 45 [depart, Kere]t, from my dwelling!'"'

1.14 vi (about 4 lines missing)

[He sent messengers to him,]
1.14 vi 1 to [Keret at his encampment.]

They lifted [up their voices and cried]:
'Message of [King Pabil]:

1.14 vi 5 "Take s[ilver]
[and yellow] gold,

[a share in its production]
and [perpetual] slaves,

[charioteers] with [chariot]-horses
from the stable of [a handmaid's son].

1.14 vi 10 Take, Keret, pea[ce-offerings aplenty]!

Do not be[siege] Udum abounding in rain,
or well-watered U[dum]:

Udum is a gift of El,
a present from the Father of [Ma]n.

Begone, king, from my house,
1.14 vi 15 depart, Keret, from [my] dwelling!"'

126. See n. 90 to KTU 1.14 iii 26-27, where I suggested that *šlmm* might be repeated through dittography. If so, only one should be restored here. If it be argued that the available space requires the additional signs, it should be regarded as authentic. With entire lines missing at this juncture no certainty is possible. However, at KTU 1.14 vi 9-10 both *š*s are present, apparently confirming the deliberate usage.

But Keret the votary replied:

'What would I want with silver
or yellow gold,

1.14 vi 20 a share in its production
and perpetual slaves,

charioteers with chariot-horses
from the stable of a handmaid's son?

But what is not in my house you shall give:

give to me the maiden Hurriy,
1.14 vi 25 the most gracious of your family, your firstborn,

whose beauty is as the beauty of Anat,
whose loveliness is as the loveliness of Athtart;

whose pupils are lapis lazuli,
1.14 vi 30 (the whites of) whose eyes are bowls of alabaster.[127]

For in my dream El has granted,
in my vision the Father of Man,

that she will surely bear[128] progeny to Keret,
1.14 vi 35 and an heir to the servant of El.'

The messengers[129] departed without delay;
thereupon they set their faces towards King Pabil.

They lifted up their voices and cried:

1.14 vi 40 'Message of Keret the votary,
the word of the gracious one, [heir of El]:
...

(for continuation see restored
text at beginning of KTU 1.15 i)

1.15 i (at least 40 lines missing, containing):

["What would I want with silver]
[or yellow gold,]

127. Note that the two cola following this formula at KTU 1.14 iii 44-45 are omitted. Perhaps they should be read <...>.

128. Read *ktld*, as at KTU 1.14 iii 48. *CTA*, *KTU*[1 and 2] *wld*.

129. Ug. *mlakm* is du. On the following vbs as du. see Ginsberg (1946: 40).

[a share in its production]
[or perpetual slaves,]
[charioteers with chariot-horses]
[from the stable of a handmaid's son?]
[But what is not in my house you shall give:]
[give to me the maiden Hurriy,]
[the most gracious one of your family,]
[your first-born,]
[whose beauty is as the beauty of Anat,]
[whose loveliness is as the loveliness of Athtart;]
[whose pupils are lapis lazuli,]
[(the whites of) whose eyes are bowls of alabaster;]
[they are surrounded by eye-shadow.]
[I shall take my rest in the gaze of her eyes!]
[For in my dream El has granted,]
[and in my vision the Father of Man,]
[that she will surely bear progeny to Keret,]
[and an heir to the servant of El.]
...'"[130]

1.15 i 1 The hungry she took by the hand;
the thirsty she took by the hand.[131]
She set out on (her) donkey[132]

130. The missing narrative probably told how peace was made, and the marriage agreed, and appears to resume in the middle of an account of how dear Hurriy was to the Udumites.

131. Whether or not these are farewell handshakes and embraces, as supposed by Margalit (1995: 238), the image is one of a royal figure who moves at ease among the poor. Is a similar royal *Sitz im Leben* the basis for Isa. 55.1-3?

132. Ug. *ttṯkrn*. Most commentators have left the line untranslated. The vb (which has the appearance of 3 f. sg. Št of √*ṯkr*, but this is misleading) is *hapax*, and would appear, as Margalit (1995: 240) notes, to denote some action of Hurriy, between her tearful farewell and arrival at Keret's encampment. He proposes linking it to Heb. *yiśśākār* (K. *yiśśāśkār*), the Heb. tribal name, itself of obscure etymology. He draws attention to the expression *ḥʿmōr gārem* 'strong-boned ass' in the blessing of Jacob (Gen. 49.14), cf. Ar. *ḥimār ǧirmin*. He might have gone further, to say that it looks as though the form **śś kr(m)* may lie behind this, as a specific term for a wild ass (as though '*equus robustus*'!). The vb would then be denom. on this √. As to *śś*, it appears to be a by-form of *śśw*, 'horse', and may be

and they brought it[133] to Keret at his encampment.
1.15 i 5 (As) the cow lows for her calf,
young lambs (bleat) for their mothers,
so the Udumites lamented her.
Then Keret the votary said[134]:

1.15 ii (some 20 lines missing)

'...
1.15 ii 1 [ ]
[ ] Bull,
[Valian]t Baal,
[ ] Prince Moon,
1.15 ii 5 [Ko]thar-and-Hasis,
[ ] son(s) of Rahmay[135], Prince Reshef,
[and] the assembly of the gods in threes.[136]'

related with other near eastern horse terms to Skt *aśva*. (That is another problem, however.) Another line of interpretation on the same √ might be 'she put a brave face on it': that is, she showed the defiance of the wild ass. This seems preferable to the interesting proposal of de Moor and Spronk (1982b: 173): 'should our slaves bring her [to you] as a tribute?'.

133. The tablet surface is very poor here. Virolleaud (1942–43b: 138) read [-] *bdn*, *CTA* .[--(?)]*dn*, *KTU*[1] .xxxb*u/d*n*, *KTU*[2] .x 'bdn (all Rom). A slide does not assist the decision-making process! My translation is conjectural, taking a putative [--]**bun* to refer to a Š form of √*bu* with 3 m. suff. *n* referring to the animal. 'They': her servants; or 'she'.

134. Ug. *y'ny*. If this means 'replied', then the previous tricolon may be the content of a message, (by Hurriy herself?) relaying the people's distress to the king. The whole passage is obscure. Cf. Ginsberg's restoration (1946: 21-22).

135. An appropriate guest-deity, since as queen, Hurriy becomes her earthly counterpart. Cf. her role in KTU 1.23, where she and Athirat appear to be hypostases of Shapsh. I believe that she may be present in Ps. 110.3 (Wyatt 1996b: 271-72, 284).

136. Gray (1964: 18) translates 'The Assembly of the gods, the three categories thereof'. Cf. Gibson (1978: 91 n. 2) and de Moor (1981: 205 n. 47). Handy (1994) groups the deities in four classes, 'authoritative deities', 'active deities', 'artisan deities' and 'messenger deities'. This is a modern perception for purposes of recognising their interrelationships in the texts. Presumably at the mythic level the gods participate in the marriage festivities. In real terms their images are brought to the ceremony. De Moor and Spronk (1982b: 174), de Moor (1987: 204-205) and Margalit (1995: 241-42) offer a more or less complete reconstruction of ll. 2-7. I

[T]hen Keret the votary served a feast[137] in his house,
1.15 ii 10 a party in his [ho]use he gave,[138]
and excuses he would not accept[139].
[After]wards there came the gods to the assembly,
[and] Vali[ant Baal] spoke:
'Come[140], O Wise One, perceptive [god],

accept Margalit's interpretation of the final colon (*-h* on *tlt* adverbial: Ginsberg [1946: 40]; cf. Herdner [1974: 537 n. f]). Their identification of Rahmay with Anat (e.g. Gray 1964: 58) is however unwarranted. Cf. KTU 1.6 ii 5 and 1.23.13. The assembly (*'dt*) of the gods, that is the council of the gods, is present, because since this is a royal wedding the destiny of the kingdom must now be determined in the light of Keret's new good fortune. Interestingly this indicates that the gods have little foresight, unless we are to suppose that they foresee what is to transpire (including Athirat, who is surely present, and whose presence cannot at any rate be precluded, though Margalit thinks she had rejected her wedding invitation), but simply agree that this is to be the course of future events. Cf. Jaynes (1982: 72-73) on the containment of the ancient gods within the constraints of human psychological perceptions. Del Olmo (1981: 303) interprets the passage as a list of divine recipients of Keret's sacrifices.

137. Text: Virolleaud (1942–43b: 142): ' [.]*r*, followed by Ginsberg (1946: 22) and *CTA*. *KTU*[1] š*r, *KTU*[2] *'šr*. 'Make a feast', Gray (1964: 18), followed by Gibson (1978: 91), del Olmo (1981a: 303) and de Moor (1987: 205).

138. I have construed *'rb* as parallel to *'šr*, and propose the following stichometry:

krt ṯ 'šrt bbth yšt
'rb bbth ytn

The form *'rb* as a n. would be construed as an 'entering' (cf. of sun, *DLU*, 88), here used as a social term for an assembly, its precise sense determined by the parallel 'feast'. Admittedly this leaves the following terms difficult to interpret, but nothing published so far makes that an easy task!

139. Ug. *w.yṣu.lytn*. See de Moor and Spronk (1982b: 174-75), de Moor (1987: 205), taking this as the second part of a bicolon (*'rb* antithetic parallelism with *yṣu*). Lit. 'But that one should go out he did not allow'. Cf. the compulsion in Lk. 14.23.

140. Ug. *tb'*. Lit. 'go, depart' (*UT*, 496 §19.2517). But it can hardly have a spatial sense here. El is the one god who does *not* move from the centre, a sign of his ontological and rank supremacy. Cf. nn. 63, 64 at KTU 1.2 iii 4. This tells against del Olmo's (1981a: 304) and de Moor's sense (1987: 205). I have understood it in a temporal sense, as initiating a new action. El properly inaugurates the ritual of blessing, which will confer on Keret the fruition of all the divine promises. Thus Ginsberg (1946: 22): 'come'; similarly Gray (1964: 18). Cf. Gibson (1978: 91): 'arise'.

1.15 ii 15 bless indeed [Keret] the votary,
give a blessing[141] indeed to the gracious one, [heir of] El'.

[El] took a cup [in] (his) hand,
a goblet in (his) [right] hand:

He did indeed bless[142] [his servant],
1.15 ii 20 he blessed Keret [the votary],
[he gave a bless]ing to the gracious [one], heir of El:[143]

141. See Pardee (1978b: 250). His article shows the difficulty for the usual interpretation 'strengthen', though he concedes that his 'bless' is a response to the demands of parallelism. See also Gray (1964: 18): 'grant thy benison'. Cf. however del Olmo (1981a: 304): 'will you not comfort?' and de Moor (1987: 205): 'fortify'.

142. Ug. *brkm ybrk*. I take this to be inf. abs. with encl. and finite vb (D stem 3 m. sg.), as do most commentators. Gray (1964: 19) takes *brkm* to be the du. n.: 'a double blessing he gave'. This would be in agreement with the fact that Keret's children appear to double in number, as the blessing delivered immediately below forecasts. It would also supply evidence in favour of the 'sons' view of the opening scene against the 'wives' view. The first word might alternatively be understood as the n.: 'with blessings' (as pl.) or 'with a blessing' (sg. with 'adverbial *-m*', pl. with pl. ending and adv. *-m* combined?—*UT*, 103-104 §11.5; this amounts almost to an instrumental usage). But we would not expect a pl. ending together *with* enclitic *m*, and Heb. n. *b'rākâ* is f., while *UT*, 376 §19.517, *WUS*, 582-83 §582, *DLU*, 116 do not list a n.

143. These five lines (one bicolon and one tricolon), expressed in formulaic language, allow the restoration of the defective formula at KTU 1.17 i 34-36. The formal use of the libation by El is significant, for this is a royal context, which applies also in the context of the blessing of Danel. See Jackson and Dressler (1975) who draw attention to the confirmation of the ritual tradition from the iconographic data. See in particular the stela RS 8.295, the decoration of vase RS 24.440 (probably a different god: Reshef?), the gilded bronze statuette of El (RS 23.394), and the recently discovered stone statuette of El associated with the *temple aux rhytons* (RS 88.70): Yon 1991: 336 (§§16a, 16b), 337 (§§17a, 17b). With reference to the bronze statuette they cite the interpretation offered by Schaeffer (1966: 8). This material may in turn be compared with the various forms of the so-called 'dynastic seal', which was copied to preserve the same ideological basis for successive kings. See Nougayrol (1955: xlii and pll. XVI, XVII, §§22-25). The last of these illustrates the anepigraphic tablet RS 16.393A, which has the impressions of both the 'original' seal and of a copy. For further refs. see also Dijkstra and de Moor (1975: 178 n. 66). The tricolonic form of the formula used here suggests three stages of blessing, rather than merely a poetic redundancy. Margalit (1989a: 281-82) offers some useful comments on this mythic counterpart of a ritual performed on earth.

'[Take] a wife, O Keret,
take a wife to your house,
bring a [sac]red bride into your dwelling:
she will bear[144] you seven sons[145],
1.15 ii 25 and multiply them eightfold[146] for you.
She will bear Yasib[147] the heir:
he will drink the milk of A[thi]rat;
he will drain[148] the breast of Virgin [Rahmay[149]];
the suckling of [goddesses[150]].

144. Or: 'let her bear', and similarly, with jussives, in following cola. But the indicative is more convincing, since El does not express a wish, but a (divine) promise.

145. Ug. *bnm*. De Moor and Spronk (1982b: 175) translate as 'children', on the ground that there are eight (cf. discussion below on the youngest daughter at KTU 1.15 iii 12). I believe, on the basis of KTU 1.15 iii 24-25, that there are seven sons and seven daughters.

146. This expression suggests that a colon or even two is or are missing from the sequence at KTU 1.15 iii 7-12, which number only six. However, in this n, n +1 example, the seven is the dominant number. Besides, I shall suggest an entirely different explanation of the number of children below, n. 155.

147. On the PN Yasib see Watson (1979b). He explains it on the basis of Akk. *naṣābu*, 'to suck', so that it conforms to the oracle of his birth, 'Suckling', as often with heroes (thus various biblical characters, such as Adam, Abel, Cain, Abraham, Isaac, Jacob, his sons, Moses, Samuel [who has stolen Saul's oracle!] etc.). Such literary games are merely the logical extension of all name-giving in ancient societies.

148. Ug. *mṣṣ*. 'He will suckle': del Olmo (1981a: 304). 'Squeezing': Watson (1979b: 807).

149. Most scholars fill the lacuna with *'nt*. Thus Virolleaud (1942–43b: 142, 147), Ginsberg (1946: 23), Bernhardt (1955–56: 111), Gray (1964: 19), del Olmo (1981a: 304), de Moor (1987: 206), Pardee (1997c: 337) etc. There is no warrant for this, in view of the royal ideological myth of the generation of kings: see Wyatt (1996b: 297). The pair to Athirat in KTU 1.23 is Rahmay. The virginal quality (and in my view the term *btlt* in these ideological contexts must mean *virgo intacta*) in the mythic context is part of the fiction that royal goddesses conceive and bear kings as analogues of their earthly analogue, the *rabitu*, who remains ritually pure. It is in effect a transferred epithet. We must not underestimate the pollution which would be associated with sexual activity: Lev. 15 probably merely epitomizes widespread sanctions and taboos throughout the ancient Near East, and in WS societies in particular.

150. Text *mšnq* [ ]. Cf. Virolleaud (1942–43b: 142): *mšnq*[*t*(?)], *CTA*

. . .'

1.15 iii (about 15 lines missing)[151]

1.15 iii 1 [ ]
'[Be greatly exalted,] Keret,
[among the Saviours of] the underworld[152],
[in the convocation of] the assembly of Ditan[153].

mšnq[ ]. *KTU*[1] m*šnq* [ ], *KTU*[2] mšnqt [ ]. Ginsberg (1946: 23) restored *mšnq*[*t* ilm]. Most have understood something such as 'the (two) wetnurses [of the gods]': thus, e.g., Ginsberg (1946: 23), Gibson (1978: 91), de Moor and Spronk (1982b: 175) and de Moor (1987: 206). For del Olmo (1981a: 304) the wetnurse is sg. My objection to this sense is threefold. First, it supposes that goddesses (exalted beings) act as wetnurses (lowly beings), which is improbable. This is not delegation to a servant, but suckling by the *mother(s)* of her (their) infant. Yasib's mother is geminated on ideological grounds because of the dual nature of kings (Wyatt 1996b: 219-68). Secondly, it places the emphasis on the goddesses, and their connection with Yasib, whereas the passage is about Yasib, and his connection with them. Thirdly, from a prosodic point of view, it requires a reversal of relationships within the tricolon. My translation, following that of Herdner (1974: 539), gives a colon that summarizes the previous two cola. It presupposes a restoration *mšnq*[*ilht*]. Yasib is the heir (*ǵlm*) to the throne. Thus is the succession assured, and expressed most powerfully in mythic terms. On the ideological point, that kings are suckled by goddesses, see Watson (1979b: 808 and n. 8), citing Gadd (1948: 45). To this add Frankfort (1948: 44 [Egypt], 300-301 [Mesopotamia]).

151. The missing text probably listed the following six sons of Keret.

152. The status of the *rpum* is much debated. See also KTU 1.20–1.22 and 1.161. For a summary of current views, including the nuances of this passage, see Schmidt (1994: 74-93 [80-81]) and Wyatt (1996b: 352-56). It no doubt anticipates Keret's later (*post mortem*) inclusion among their number, but perhaps also, by way of extreme hyperbole, identifies him even now as one of their number. There may even be a heavy irony, since as the story turns out Keret may just as well be dead! One important feature of the present passage and its ideological meaning, to which Schmidt (1994: 92-130) draws attention is that the first-born son for whom Keret yearns is essential for the due performance of his, Keret's, funeral rites. The description of the ideal son in KTU 1.17 i 25-33 (and parallels) specifies the duties the son will perform on his father's death. It is this son, Yasib, whom Keret subsequently curses, thus frustrating even this basic social obligation.

153. This apparent PN, which recurs in KTU 1.124 and is no doubt to be identified with the *ddn* of KTU 1.161.4, 10, is generally regarded as the eponymous ancestor of the Ugaritic royal line (though this quite probably constituted a fiction). See Schmidt (1994: 72-82, 89-91). See n. 156 below and n. 12 at KTU 1.161.3.

1.15	iii	5	[And she will] come to term and bear you [dau]ghters:
			she will give birth to the girl[154] [ ]
			she will give birth to the girl [ ]
			she will give birth to the gir[l]
1.15	iii	10	she will give birth to the gi[rl]
			she will give birth to the gi[rl]
			she will give birth to the gi[rl][155].

154. Ug. *pġt*. (*UT*, 496 §19.2081). In the Aqhat story this is the name of Aqhat's sister and at Exod. 1.15 that of one of the Hebrew midwives (Puah). The latter context suggests a link with Heb. √*pā'â*, 'groan', as in childbirth in Isa. 42.14.

155. Either each daughter was named in the missing text, or they were numbered off. In KTU 1.16 i 29, 39 the youngest daughter appears to bear the name *ṯtmnt*, which if a name might be rendered 'Octavia', or if a number, 'Eighth'. This at least is the usual view, though the infixed *t* ought to counsel some hesitation. Cf. the Roman practice of naming sons by order (Tertius, Quintus, Sextus, etc.). See Vattioni (1996: 75-77). In KTU 1.15 iii 6 the text reads bn[.]*t* according to *KTU*^{2}. The resultant n. is *bnt* the pl. of *bt*, 'daughter', whose radical *n* is visible in the Ar. form *bint*. The question the interpreter must first answer is whether we have the pl. followed by six daughters, or an anomalous sg., 'daughter' followed by six further ones. For this pattern cf. KTU 1.47.5-11 and parallels (*b'l ṣpn* and six further Baals, totalling seven). In any event this appears to be a heptacolon. Do we therefore have six (named or numbered) daughters, or seven? In either case, there is no explanation for one called 'Eighth'. This should, on this approach, be sought perhaps in the logical demand of the formula n, n + 1 as applied at KTU 1.15 ii 23-24 above (where *bnm* is perhaps to be understood as generic, 'children'). An alternative approach might be to apply the arithmetical pattern of KTU 1.14 i 15-20, so that the first two are implied in the first term (perhaps du. **bnt<m>*?), with the third to the eighth then listed. Note de Moor's (1987: 207) insertion of Thatmanatu in the final lacuna. 'Eighth' or 'Octavia' would in my view—to follow for a moment the logic of the argument—be the last child (of fifteen? fourteen? Cf. KTU 1.15 iii 24-25—see n. 160), rather than the first, in view of the merismic implications of the blessing pronounced upon her at KTU 1.15 iii 16 (*ṣġrthn*, 'the youngest of them [f.]'). Alternatively, the scribe has simply omitted the birth formula twice. In this case two cola are to be restored. Attempts to reconcile modern and ancient arithmetical procedures are frequently futile. Cf. the forty-two(!) generations from Abraham to Jesus in Matt. 1.17, though only forty are given in vv. 2-16, as we would count them.

However, here is a new suggestion for *ṯtmnt*, which solves all the problems outlined above. Apollo has the epithet Σμινθευς, which LS explains as either from TN Σμινθη or from σμινθος, 'mouse'. While the second of these is plausible, on account of his associations with plague, caused by rats, it may already be a secondary interpretation of a Semitic epithet, related to Heb. *ʿmînît*, which has caused

Be greatly exalted, [Keret],
among the Saviours of the underwo[rld],
1.15 iii 15 in the convocation of the assembly of Dita[n][156].
Their last one I shall treat as the firstborn[157].'
The gods blessed him and went away,
the gods went away to their tents,
the family of El to their dwellings.[158]

Bible translators much grief, but probably means 'lyre' (cf. JB 'octachord' at Pss. 6, 12 superscription). Thus Apollo is 'the Lyre-Player', a suitable Semitic epithet for him, especially given his ancient links with Reshef. (His name Apollo is also explicable as a hellenized form of the Semitic aphel form, 'the Feller' sc. the one who fells, √*ypl*, *npl*, as a god of destruction.) Keret's daughter would no doubt, as a princess, be accomplished in social skills. I propose 'lyre-player' as the poet's way of singling her out. The form would be Gt f. sg. pt. The infixed *t* now has an explanation. The girl whiles away her time with her instrument at her hobby (which the French would charmingly call her 'violon d'Ingres'!). She could then be, on a normal arithmetic, the fourteenth child of Keret. It is an epithet rather than a name, but might serve as sobriquet. On its possible social context see n. 209 at KTU 1.16 i 29. The Akk. *sammû*, 'lyre', of Sum. origin (*CAD*, XIV (S), 118-20), which appears at Ugarit would support this approach. See also n. 25 to KTU 1.47.32.

156. See n. 153, and cf. de Moor (1976: 324) and Levine and de Tarragon (1984: 655-56). To de Moor's query, why should a funerary dimension enter the Keret story at this stage, they answer that it is precisely because his present fecundity will make him a blessing to come and a future *Rapiu*. If so, then the irony should not be lost, since Keret is to lose it all at the end. See next note. I think it unlikely in view of the outcome of the Keret story that the king is held up as a paradigm or eponymous ancestor. Quite the contrary! On the other hand, the reference to Ditan here is no doubt the application to Keret, simply as a forceful literary figure, of a name pregnant with ideological power and prestige for the dynasty of Ugarit. Perhaps the irony is the greater because of his prestigious pedigree. On Ditan and Didan see also nn. 12, 21 and 46 at KTU 1.161.

157. In El's mouth this is a blessing indeed, indicating such wealth (= blessing) that there will be no need to divide it proportionally among Keret's offspring. It is however a blessing that will come back to haunt Keret, for it will be transformed by Athirat's malevolence and Keret's stupidity into the curse (KTU 1.16 vi 54-58) with which he disinherits not only his heir Yasib, but by unspoken reference back to this blessing all his other children too. Gray (1964: 19) has 'to the youngest of them I shall give the birth-right', which almost implies the disinheritance of the older children, perhaps anticipating the curse. But such a verbalized contingency plan would be quite implausible, and as I see it the curse will effect them all.

158. An example of staircase parallelism, a:b:c::a1:c1:d1::a2:d2. Though the gods of Ugarit dwelt in temples, the ancient tradition of their tent-dwelling is preserved.

1.15 iii 20 And she came to term[159] and bore him a son,
and she came to term and bore him sons.

Lo, within seven years

the sons of Keret were as (many as) had been promised,
1.15 iii 25 and the daughters of Hurriy as many as they.[160]

And Athirat recalled his vow,
and the goddess [his promise[161]].

And she lifted up her voice and [cried]:

'Look, I pray: has Ke[ret broken],
or [the king] altered his vow?[162]
1.15 iii 30 [So] shall I break [my promise][163]!
...'

(about 7 lines missing)

Cf. the tent-shrine of KTU 1.14 ii [12], iii 55, El's tent-dwelling (KTU 1.4 iv 23-24), the Israelite 'tabernacle' (*miškān*, the term used here in the third colon), the tradition of 2 Sam. 7.6 and Midianite and Egyptian evidence (Wyatt [1996b: 46 n. 57]). The *Chaoskampf* tradition also involves tent-imagery, since the cosmic tent is the stretched out skin of the vanquished Yam. On this see Habel (1972) and Wyatt (1996b: 213-18).

159. Ug. *tqrb*. Similarly Gibson (1978: 92). Driver (1956: 37): 'soon'; cf. de Moor (1987: 207): 'and soon afterwards'. 'She conceives', Ginsberg (1946: 23), followed by del Olmo (1981a: 305) and Herdner (1974: 541). 'She approaches' (Virolleaud 1942–43b: 154) is uninformative.

160. Sc. seven of each, notwithstanding the wording of KTU 1.15 ii 24-25. We should not attempt a realistic approach to the problem of bearing fourteen children in seven years. This is hyperbole, to match the power of El's blessing. Keret outdoes Jacob! Cf. Job's children, Job 1.2 and 42.13 (seven sons, MT [*šib'ānâ* is odd—see Sarna (1957: 18)], LXX; fourteen, T).

161. Ginsberg (1946: 23, 41) suggested the reading *p[lih]*, a conjecture based on Lev. 22.21 and parallels.

162. Thus, e.g., Ginsberg (1946: 23-24), restoring *ypr* in l. 28, Driver (1956: 39), restoring *pr*, Gray (1964: 20) and del Olmo (1981a: 304). De Moor and Spronk (1982b: 177), cf. de Moor (1987: 208): '(Look here, alas, Kirtu, nobleman ([*ṯr*])!)| Woe! two (*tn*) vow[s you have broken...]'. Why two? Cf. Margalit (1995: 242-45). His objection to restoration of *ypr* on grounds of space in the lacuna (cf. Driver) still allows him to propose *ṯr*.

163. Margalit (1995: 243): 'S[o] shall [I] annul [his happiness]', which lacks the reciprocity of expression we would expect.

1.15 iv (about 5 lines missing)

1.15 iv 1 ...[164]
[Then Keret the votary[165] lifted up his voice;]
aloud [to his wife he cried][166]:
'[Hea]rken, [O maiden[167] Hurriy],
slaughter [the sleekest of] your fatlings;
1.15 iv 5 open [ampho]ras of wine.
Call my seventy commanders,
my eighty leaders[168],

164. The line begins *p'*, the rest being broken (cf. Virolleaud 1942–43b: 157, *p* [ ]; followed by *CTA*; *KTU*[1 and 2] ×). A colour slide shows that nothing can now be made of the vague markings surviving. Ginsberg's cautious reconstruction *p'*[nh lhdm ytpd], '[His] fe[et upon the footstool he sets]' (1946: 24, 42), on the basis of KTU 1.4 iv 29, is accepted by Driver (1956: 38-39), Gray (1964: 20, 61) and Gibson (1981: 92). Gray notes that this is a royal motif. Cf. KTU 1.17 ii 10-11, where Danel also does it.

165. If Ginsberg's reconstruction of l. 1 (previous note) be adopted, this would read merely 'he...', assuming that the king had been named in the preceding lines now entirely missing.

166. De Moor and Spronk (1982b: 177) followed by de Moor (1987: 208), take this to be addressed to Keret (by Athirat?), on the ground that he is instructed to command the preparation of his funeral feast (the royal equivalent of digging one's own grave!). This is not implausible, since it appears to be at this same feast that his courtiers begin to lament his imminent death at the beginning of KTU 1.16 i. But in view of the number of missing lines between the tail-off of KTU 1.15 iii and that later point (a rough estimate of ninety-four lines) certainty about the juncture at which Keret's fate is announced and made clear to all is impossible to determine.

167. The fact that Keret continues to call his wife *mṯt* after her marriage and child-bearing illustrates the translational problem. We need a term covering both her premarital state and the present situation, which is also in keeping with *mṯ* at KTU 1.5 v 22. I would defend 'maiden' here on the ground that it reflects what might be regarded as Hurriy's 'honorific virginity' as a queen: her children have a divine father (Keret son of El). She therefore remains ideologically 'virginal', having 'not known a man'. This is in keeping with the famous LXX translation of *'almâ* in Isa. 7.14 by παρθενος. This is not simply an interpretation of the text, but a faithful reflection of its ideological content. Cf. n. 75 at KTU 1.17 v 16. Dantiy is a wife throughout the narrative, so far as we know, but I have used the same translation. It is more a matter of atmosphere than of philological exactitude which determines the issue. Cf. Maid Marion in the Robin Hood traditions.

168. 'Commanders...leaders': the Ug. terms *ṯr(m)*, *ṣbym* (here *ẓby*) mean

the commanders of Khabur abounding in rain,
of well-watered Khabur.

1.15 iv 10 [ ]
[ ]
[ ]
[ ][169]
Let the maiden [H]urriy obey[170].

1.15 iv 15 Let her slaughter the sleekest of his[171] [fat]lings;
let her open amphoras of wine.

To him his commanders let her bring,
to him let her bring his leaders,
the commanders of Khabur abounding in rain,
1.15 iv 20 of well-watered Khabur.

To the house of Keret let them come,
to the dwelling [let them walk],
and to the winevat[172] let them draw near.

'bulls...gazelles', animal terms used for military ranks. We might say 'generals and colonels'. See Miller (1970). Cf. also the use of *ḫnzrm*: n. 37 at KTU 1.5 iv 9.

169. De Moor and Spronk (1982b: 178), de Moor (1987: 208) and Margalit (1995: 245-48) attempt reconstructions of these lines, in which a few sporadic letters survive. For de Moor they concern instructions for the preparation of a meal, For Margalit, instructions to Hurriy to make herself up for the feast, including the donning of her corset! I do not read of any remains of female underwear in the excavation reports.

170. For de Moor (1987: 208) this is future: 'The Lady Hariya will obey', being part of Keret's instructions. Others treat it as narrative (e.g. Gray [1964: 20]: 'Mistress *Ḫry* hearkened'). If taken thus it implies a substantial repetition of the narrative at the beginning of col. v. On this basis I concur with de Moor, that this is part of Keret's instructions. The 3 f. jussive and 3 f. indic. forms of the vbs cannot be distinguished, and the latter may have future or past reference. This is also true of the 3 m. pl. vbs.

171. Or, 'her'.

172. Reading *wlḫmr*. Virolleaud (1942–43b: 157), *wl ḫmt g*(?)*r*. *CTA wlḫm* m*r*. *KTU*[1] w lḫm m*(?)r*. *KTU*[2] *w l ḫm mr*. On Virolleaud's reading and sense: Ginsberg (1946: 24, 42): '*pavilion*'; so also Gray (1964: 20); del Olmo (1981a: 306, 552): 'guest-pavilion'; Xella (1982: 170): 'rooms'. On *CTA-KTU* reading: Gordon (1949: 76): 'tents *of myrrh*', (1977: 48, untranslated, as Herdner [1974: 544]); Driver (1956: 39): 'audience-chamber(?)'; Gibson (1978: 93): 'audience chamber' (reading *ḫmmr*, based on parallelism); de Moor (1987: 206): 'tent of bitterness'. Margalit (1995: 249) interprets the passage as an allusion to a *marziḥu* feast, for which there is no evidence here. I have taken the *m* as dittograph: read **wlḫm{m}r*.

Their hand to the drinking-bowl let them stretch out;
1.15 iv 25 the knife into the meat let them put.[173]
[And] let the maiden Hurriy speak[174]:
"[To ea]t and drink I have called you,
[to banquet[175] with] Keret your lord.
..."'

(about 15 lines missing)

1.15 v (2 lines missing)

1.15 v 1 [She slaughtered the sleek]est of [his fatlings],
she ope[ned ampho]ras of [wine],
to him [his] commanders [she brou]ght[176]
to [him] she [brou]ght [his] lea[ders].

I take *ḫmr* to mean not 'new wine', as de Moor (1971a: 75, cf. Grabbe 1976: 61), but the container in which it is stored. See n. 9 at KTU 1.3 i 16 and Dahood (1964: 408-409; 1972: 186 §II 199).

173. The verbal sequence here is *tbun*, (form of *aṯr*? or *atw*? [cf. *CTA*, 70 n. 7]), *tqdm*, *tšlḥ*, *tštn*. (Cf. at KTU 1.15 v 5-8 below: [*tbun*], [cf. as before], [*tqdm*], *t*[*šl*]*ḥ*, *tštn*.) Taking them to be 3 m. pl. forms, the final *-n* on the first and last instances points to indicatives, suitable for the text below, but less so here, if we expect a jussive force. The central vbs (we can speak only of the latter two) look like jussives, suitable here, but not below. Taken alternatively as 2 m. pl. forms yields the same results. Taken as 3 f. sg., (cf. Gray 1964: 20) the *-n* forms would be energic, the others indicative or jussive.

174. Gray (1964: 20) takes as narrative.

175. The term *dbḥ* usually restored here. But it has the sense 'feast' rather than 'sacrifice', as at KTU 1.16 i 39-40 (see n. 222).

176. Reading [tš']rb (Rom.) with *KTU*^{2}. This section appears broadly to reiterate the reading of iv 15-25, with the omission of the three cola of ll.19-21. This might be restored as an unintentional omission (read '<...>'), but hardly read among the surviving characters of v 6-7. Thus del Olmo (1981a: 307) takes ll. 3-4 to contain the Khabur bicolon. Ginsberg reads the [ ]*r*b which *KTU*^{2} reads at the end of l. 3 ([*tš'*]*r*b, 'she brought') to be [*k*]*rpn* (*sic*), as parallel to *rḥbt* in previous colon (thus also Gibson 1978: 93). But this word-pair does not appear in Ug., the standard one being *ks* || *krpn*, as in KTU 1.15 ii 16-17. The same problem undermines Margalit's (1995: 250) reconstruction. It must be admitted that any reconstruction is hypothetical.

1.15 v 5 So[177] [to the house of Keret they came,]
to the dwelling [they walked]
[and to the winevat they drew near].

Their hand to the drinking-bowl they [stretched] out,
[the knife into the] mea[t] they[178] put.

And the maiden Hurriy [spoke]:

1.15 v 10 '[To eat], to drink I have called y[ou],
[ ] bless...

[Over] Keret you must weep[179],
[like] the bellowing of bulls[180]
[as they bewail] the dead you must weep.

1.15 v 15 [ ] and in its midst[181] you will bury [him][182],
[for] he is only a finger's (breadth) from death[183]:
[Ke]ret is joining[184] El.

177. Ug. *aḫr*: lit. 'afterwards', presumably following the sacrifices.

178. Margalit (1995: 251) makes Hurriy the subject of the vbs in these five cola (on which cf. however KTU 1.15 iv 21-25). They can be read either way, as 3 m. pl. or 3 f. sg.: context determines sense. Understanding the precise nuances of mood is difficult. The formal description suggests a ritual context, with due attention paid to orders of precedence. On this basis Hurriy may be considered to outrank the officials, but it is they who respond to a command (l. 10), and approach.

179. Ug. *tbkn*. 2 m. pl. indic. Cf. Herdner (1974: 545 n. g) on the difficulty of the reading. It reads oddly that Hurriy should *instruct* the nobility to weep. But Keret is not yet dead. Perhaps by ordering the royal mourning to begin she hopes to avert the disaster. Gray (1964: 20): 'For *Krt* they wept'.

180. Ug. [ ]*rgm.ỉrm*. In the context, with the reference above (l. 3) to 'commanders' (*ỉrm*), this might be construed as 'the voice of the commanders', or some such form. Cf. Ginsberg's translation (1946: 25) and the inverted commas in Herdner's (1974: 546). The present translation is supported by what seems to be required at KTU 1.15 vi 7 below. Cf. Herdner (1974: 546 and n. h, 548 and n. q).

181. Ug. *blb*. Lit. 'in the heart'. Sc. the palace? The royal burials at Ugarit are under the palace floors. De Moor and Spronk (1982b: 179): 'in your heart' (sc. in emotional anticipation).

182. Margalit (1995: 252-53), reads *wblb.tqb*[*n*], 'but within they cursed him'.

183. Cf. de Moor and Spronk (1982b: 179), for an Akk. equivalent. Cf. Spronk (1986: 153) and de Moor (1987: 210). Lit. 'his fingers grasp death'?

184. Ug. *šrk*. Cf. de Moor and Spronk (1982b: 179), who note that this is an allusion to the apotheosis of a king, rather than a euphemism for death. Cf. n. 216 at KTU 1.16 i 36.

To the going in of the sun Keret will indeed come,
1.15 v 20 to the setting of the sun our master.

And [Ya]sib will reign over us,
and will [succeed[185] Ker]et the votary over us.'
...[186]

(25 lines illegible or missing)

'...
1.15 vi 1 Listen to[ ]
while[187] you eat and drink.[188]'

And the maiden Hurriy spoke[189]:

'To eat, to dri[nk] I have called you,
1.15 vi 5 to sacri[fice] on behalf of Keret your lord'.

185. Conjectural. Cf. Gibson (1978: 94, reading *wy[l]y*): 'he will [replace]'. Del Olmo (1981: 308): 'Then Keret the Magnificent will depart...'. Ginsberg leaves untranslated. De Moor (1987: 210): 'But Kirtu, the nobleman, answered'. Margalit (1995: 257): 'Thereupon de[cla]red [K-r-]t-the-Noble'. Text *y['n]y*: Virolleaud (1942-43b: 169); *CTA* y[-]y; *KTU*[1] y*['']n*y; *KTU*[2] y['']ny. De Moor's and Margalit's sense is perfectly reasonable; I have taken the colon with the preceding to be part of a bicolon, *ymlk* therefore providing the semantic field in which to set y['']ny. The vb can also mean 'be humiliated' (√'*nw*: *DLU*, 84; not recognized by *UT*, *WUS*; cf. BDB, 776 √'*nh* III), which would give a satisfactory antithetical parallelism: 'Yasib will rule | Keret will be laid low (or humbled)'.

186. No coherent sense can be made in the immediate sequel. *KTU*[2]'s reconstruction of the text (cf. de Moor and Spronk 1982b: 180), and de Moor's and Margalit's attempts at translation, clutch at straws.

187. Ug. *'dm*. The *m* is enclitic. *'d* can have the sense of 'while' rather than 'until'. Cf. KTU 1.4 vi 55. This sense is unrecognized by *UT*, 453 §19.1813, *WUS*, 226 §1997. Cf. *DLU*, 71.

188. The vbs may be 2 m. pl. or 3 m. pl., as for Ginsberg (1936a: 25) and de Moor (1987: 210). Gordon's paradigms (*UT*, 154) would require them to be subj. or juss. De Moor and de Olmo (1981: 308) indic.; Ginsberg and Gibson (1978: 94) juss. To first vb, Virolleaud (1942–43: 170): [*tlḫ*(?)]*m*; cf. Ginsberg; *CTA* <*t*>[*lḫ*]*m*; *KTU*[1] l*ḫ*m (tl*h*m); *KTU*[2] <t>lḫ*m*. Margalit (1995: 261-62) reconstructs [dm]*m*, translating 'How long will you drink (my) [bloo]d?' This is certainly inventive.

189. Ug. *t'n*. If the preceding words are also spoken by Hurriy, perhaps 'continued'. But they may be spoken by a messenger on her behalf. Margalit consequently takes the sequel also to be part of the speech.

They came in[190] to Keret;
like the bellowing of b[ulls] were their words[191].
in [their] view Keret [was already dead][192]
[ ][193]

(about 40 missing lines)

1.16 i 1 (Concerning Keret)
'Like dogs shall we howl[194] at your tomb[195],
like whelps at the entrance to your burial chamber?[196]

190. Virolleaud (1942–43b: 170): *i?d?un*, *CTA* tb'u*n*, *KTU*[1] t*b*un, *KTU*[2] tb*un*. Margalit (1995: 261-62) proposes *tbk*[!]*n*: '(That) you might (also) weep for K-r-t', continuing Hurriy's speech.

191. Similarly Gibson (1978: 94), del Olmo (1981a: 308) and de Moor (1987: 211). Taking *trm* in its secondary sense as Keret's military leaders, Ginsberg (1946: 25) has 'Like the speech of the peer[s] *is their speech*'. Similarly Gray (1964: 20).

192. Following de Moor and Spronk (1982b: 180).

193. On the deteriorating state of the text see *CTA*, 71 n. 15 and Margalit's observation (1995: 260). His reconstruction (pp. 262-63) is intriguing.

194. Ug. *'tq*. This term is usually explained as having the senses 'pass' (thus, e.g., Gibson 1978: 94; cf. de Moor 1987: 211: 'prowl') or 'grow old' (thus, e.g., del Olmo 1981a: 309). Ginsberg (1946: 26), Gray (1964: 22): 'change(d)'. See Pardee (1973) for discussion. I have tentatively followed the suggestion of Margalit (1976: 148), Dietrich and Loretz (1980e: 189-90) and Xella (1982: 172) that it has the sense 'we shall howl' ('howl' because the simile compares the mourners to dogs). The form *lntn* in l. 5 (in the expression *lntn 'tq*) is generally supposed to have the sense of 'mourn' on the basis of the alternative form *lbky 'tq* in KTU 1.16 ii 41. See Gray (1964: 64), following Ginsberg (1946: 26), Gibson (1978: 94 and n. 7), del Olmo (1981a: 309) and de Moor (1987: 211). This approach can only be a guess for √*ntn* in this sense. See discussion in Herdner (1974: 549-50 n. e,). Perhaps *bky* below should be corrected to *lntn*, but this too remains problematic. Herdner notes that the Ug. vb is *ytn*, not *ntn*.

195. Ug. *btk*. Gray (1964: 64) notes that dogs would not normally be allowed within houses in the ancient world. More to the point, they are frequently associated with death (see illustrations and discussion in Pope 1972), suggesting this secondary sense for *bt*. Heb. *bêtî* means 'my tomb' in Gen. 15.2. Cf. also references at Wyatt (1996b: 108). Ginsberg's (1946: 26, 43) proposal, 'aspect', THeb. *bābū'â*, referring to Keret's face, has not found favour.

196. The parallel *bt* requires a similar nuance for the obscure *ḫšt(k)*. See del Olmo (1981a: 554) and references, Xella (1982: 172). Ginsberg (1946: 26, 44): 'joyous countenance' *(ap ḫštk)*, but no etymology offered. See discussion of the bicolon in Herdner (1974: 548 n. c).

Yet father,
how can you possibly die,
1.16 i 5 or will your burial chamber be given over[197] to howling
on the part of[198] women, O my wretched father?[199]

They weep for you, father,
the mountain of Baal, Saphon,
the holy stronghold of Nan[200],
the mighty stronghold,
the citadel of vast expanse.[201]

1.16 i 10 Is Keret then the son of El[202],

197. Text *lntn*. Clearly written, but perhaps error for *ltn*?

198. Ug. *bd* (construed as *b* + *yd*). Ginsberg (1946: 26, 44): 'dirge'; cf. *ybd* at KTU 1.3 i 18; 1.17 vi 31. Cf. Herdner (1974: 550 and n. f), vb: 'will women sing...?'; de Moor (1987: 211), n.: 'dirges of father's wife'. The poem appears to allude to professional mourning women, such as are illustrated in Egyptian BD papyri and on tomb reliefs and paintings. But this still leaves open my translation and those cited here as alternatives.

199. The prosody of this tricolon (?) is obscure. It has the style of a recitative.

200. Text *nny*, and not as previously supposed, *any*. Reading established by Bordreuil (1989). Nan(u) is Anti-Casius, Gk Mt Thronos, the lower southwestern peak of the Jebel el Aqra massif.

201. The pentacolon has the appearance of a set piece, probably liturgical, cited here. Four parts of the mountain appear to be referred to, though only two are named. The sacred mountain itself bewails the death of kings, and its fourfold allusion probably indicates the cardinal points, thus representing a universal mourning. Why is the mountain thus apostrophized at the impending death of a king? Because the cosmic mountain is a symbol not just of divine victory and the divine throne, but of royal victory and the royal throne too, for the king's legitimate power presupposes the divine victory, and the handing to the king of the divine weapons (as attested in Mari text A 1968, for the text of which see Durand 1993) is a ritual whereby he vicariously shares in the divine victory. See Wyatt (1998a) for numerous examples of the language of the *Chaoskampf* as appropriated by kings. This ideological basis is at least one prominent element in the composition of the Baal Cycle of myths in KTU 1.1–1.6. Wherever Keret may have ruled, fictionally or legendarily, the Ugaritic poet applies Ugaritic royal ideology to the narrative.

202. Ug. *bnm il*. The term may be interpreted on two levels. Prosaically, the expression merely means 'a god', the generic use of *bn*. On a mythological level, which applies here, as supported by the poetic parallel *šph ltpn wqdš*, it means 'son of El', a term replete with ideological nuances, and the exact counterpoint of the other expression *ab adm*, 'Father of Man', used of El in KTU 1.14 i 3 and parallels. The two formulae complement each other as defining the king's position mid-way between the divine and human realms. This is an inchoate doctrine of incarnation.

the offspring of the Wise and Holy One[203]?'[204]
He entered[205] into (the presence of) his father:

which persists through the ideology of the IA monarchy in Jerusalem. Readers should divest themselves of an assumption of the absolute gulf between divine and human beings, the product of a long Judaeo-Christian and Islamic tradition. Cult personnel, and particularly kings and queens, occupied intermediate positions.

203. Ug. *qdš*: an epithet of El himself. See n. 78 at KTU 1.2 iii 20.

204. The passage in ll. 9-23 is the key to the ideological significance discerned in Keret by Parker (1977). He sees in these rhetorical questions a serious critique of an old royal ideology of divine kingship, which the premature death of a king would raise as a serious dilemma. In Wyatt (1983a) I suggested that it was the death of Arhalbu which might have raised such issues quite starkly, he being evidently childless (see RS 16.144 and Tsevat 1958). But if this composition owes something to the editorial (as distinct from merely the scribal) hand of Ilimilku (see colophon at KTU 1.16 vi 59), it is possible to see in the narrative an attempt at ideological support for the monarchy as a means of supporting the claims of Niqmad II. On the circumstances of his accession and the ideological thrust of the Baal myths see Wyatt (1998a). If this seems rather contradictory in view of the unavoidably negative aspect of Keret (as argued by Parker), perhaps we should see the story as addressing the circumstances of Niqmad's predecessor, however elliptically, thus falsifying his claims in favour of Niqmad's. It would however be going too far to see directly biographical information here. It is a traditional tale. We simply have insufficient information to test these theories. See further discussion in Wyatt (1997).

205. Correcting text to *y'rb* (adding the two horizontal strokes of the *b*), 'he entered'. Thus Virolleaud (1941b: 113, translating 'he throws himself on his father'), Ginsberg (1946: 26), Herdner (1974: 551), Gibson (1978: 95), del Olmo (1981a: 310), de Moor (1987: 212), *CTA* and *KTU*[1 and 2]. Cf. also KTU 1.16 ii 50-51. Alternatively, reading *y'rṣ*, as tablet: 'was distraught over'. The correction is to be justified on the ground that ll. 1-11 are repeated *verbatim* in ll. 16-22, and the best construction to put on this is an inner deliberation on the part of the speaker in the latter section, or perhaps an instruction by a god. The former of these alternatives makes sense if we suppose that the anonymous son of Keret is Yasib, who thus deliberates in KTU 1.16 vi 25-38. Given that in the latter passage Yasib is promptly cursed by his father for treason as soon as he gives expression to his inner thoughts, we may wonder whether the thoughts here expressed, so detrimental to a royal ideology in Parker's estimation, are not similar inner plottings which invite the condemnation of the reader. Of course, even daring to think such things on the part of the poet allows the rot to set in! However, the narrative sequence suggests that the son in question here is the Ilhu (*ilḥu*, 'Iluha'u'?) who appears for the first time in l. 46. We must assume that he is another brother. He would have already appeared in the missing section at the end of KTU 1.15 vi. Why is he singled out? Is he perhaps the seventh son, who might have had a special significance? It would be plausible to suppose that he was the youngest son, to whom the blessing of KTU

he wept and gnashed his teeth.
He gave forth his voice in weeping:

'In your life, our father, we! rejoiced;
1.16 i 15 in your immortality we took delight.

Like dogs shall we howl at your tomb,
like curs at the entrance of your burial chamber?

Yet, father,
how can you possibly die?

Or will your burial chamber (be given over to) weeping,
to howling on the part of women,
O my wretched father?

1.16 i 20 How can it be said
that Keret is the son of El,
the offspring of the Wise and Holy One?

Or do the gods die,
the offspring of the Wise One not live?'[206]

And Keret the votary replied:

1.16 i 25 'My son, do not weep for me,
do not lament concerning me;

do not exhaust, my son, the wells of your eyes,
the waters[207] of your head with tears[208].

1.15 iii is applied. However, the text there appears to be quite clear that it is a daughter who is the recipient of the blessing.

206. Note how the previous tricolon (ll. 20-22) repeats the thought of the bicolon at ll. 9-11. The format is changed, from direct question to philosophical musing ('how can it be said...?'), and now leads on to the present bicolon in a strikingly climactic manner; this is the serious theological question of the whole sequence, as indicated by Parker. He argues that since the implicit response is that the gods do *not* die, the conclusion the reader is expected to draw is that the king is not therefore a god. My suggestion (Wyatt 1985c) that it is a kind of '*Realtheologie*', acknowledging the negative side of the human condition, regards it as equally revolutionary thought in the LBA. It may be however that we should regard this as rhetorical hyperbole on Ilimilku's part rather than serious questioning of the present theological consensus. See further Wyatt (1997).

207. Text *mḫ*. Gevirtz (1961: 42) proposed reading *my*, 'waters', a suggestion taken up in *KTU*[1 and 2] and followed here, on the basis of the parallel in Jer. 8.23. The Ug. text is haplographic. The prosody of the bicolon supports the amendment, the head being regarded as a reservoir from which tears flow. If the reading of the

Call your sister the lyre-player[209],
1.16 i 30 the daughter of vigorous[210] conception[211].
Let her weep and lament[212] for me without restraint.

tablet be preferred, 'brain' (Akk. *muḫḫu*, Heb. *mōaḥ*). Thus, e.g., Virolleaud (1941b: 116-17), Ginsberg (1946: 26), Herdner (1974: 552) and del Olmo (1981a: 310). Was the brain regarded as this reservoir? The ancients certainly did not appreciate its real function, to judge from its unceremonious disposal in Eg. embalming procedures (Herodotus ii 86). Note also discussion in Xella (1983a).

208. In Jer. 8.23, the parallel adduced by Gevirtz, the tear-reference is perfectly reversed:

Ug. *qr 'nk my*$^{!}$ *riṯk* (a:b:c:d): Heb. *rō'šî mayim w*^{e}*'ênāy m*^{e}*qôr* (d:c:b:a).

209. See n. 155 at KTU 1.15 iii 12. Margalit (1976: 154-56; 1989: 69; 1995: 264-65) argues that this youngest daughter (whom he takes to be an eighth, 'Octavia') is a *nadītu*-priestess, or 'a nun residing in a cloister away from home'. Were this conjecture to be taken seriously, we should perhaps envisage the unnamed daughter playing her lyre in a temple choir, as Eg. royal women plied their sistra in the temples of Thebes. There is no need to suppose her to be at any distance from her home, however. Being called upon to play a ritual part here, perhaps involving the use of her instrument, would be entirely consistent with this situation. But Margalit (1989a: 154) also wants to treat *nadītu* as parallel to a restored 'bride' at KTU 1.18 i 26-27, which seems dubious. Cf. also n. 36 at KTU 1.3 iii 4.

210. Virolleaud (1941b: 106, 117): *dnn. CTA d(a/n)n*; *KTU*^{1} da*(?)n; *KTU*^{2} *dnn.*

211. Text *ḥmḥh*, to be corrected to *ḥmḥ<mt>h*. I take this to refer back to Hurriy, who was by no means exhausted by carrying fourteen children: her final pregnancy was as healthy and auspicious as the first. A queen, like a king, was the epitome of ideal (and fecund) motherhood. Xella (1982: 173) translates the phrase 'the daughter whose passion is burning', referring to her character rather than her conception. Similarly De Moor (1987: 213). Whether or not they intend a sexual nuance, this is explicitly denied by Margalit (1995: 265-66), with regard to either alternative; he interprets *bt ḥmḥ<mt>h dnn* as 'her house of sanctuary/shelter/circumvallation' + 'strong, mighty' (epithet of the wall). This would however require the reading *bt ḥ<mt>h dnnt*, whichever n. the epithet qualified.

212. That is, Ilhu's sister's mourning will be more effective than his, or perhaps more specifically his will bring misfortune to a father who is still alive. Here the youngest daughter's skill would come into its own, for she could sing elegies to Keret to the accompaniment of her lyre. The psychological power of music was well-known in the ancient world (e.g. 1 Sam. 16.14-23), and it was an important adjunct of the cult. Weeping was also regarded as releasing power, through the passage of a body fluid. This first mention of weeping may signify a release of power to heal Keret (hence the point about the daughter's greater power). The next mention, in ll. 34-35, appears to presuppose his death. In this case it may imply the greater benefit for the welfare of the deceased.

Afterwards you shall speak to your sister[213],
[ ]
Since I know how compassionate your sister is,
let her weep her tears upon the steppe[214],
1.16 i 35 in the heights[215] the issue of her throat.
[ ][216] at the setting[217] of the Great Lady[218] Sun,

213. Ug. *aḫr.al.trgm.laḫtk*. For this approach, the *al* taken as asseverative, cf. del Olmo (1981a: 311). The first word *aḫr* is uncertain (*KTU*[1] a*ḫr*r*, *KTU*[2] aḫr [Rom.]), and could alternatively be read *ġzr* (thus Ginsberg 1946: 26; Gibson 1978: 95). See Virolleaud's transcription (1941b: 106) and *CTA*, 72 and n. 4. De Moor (1987: 213), reading *aḫr* (thus de Moor and Spronk 1987: 94), takes it to mean 'Come back! Do not (yet) talk to your sister!'. Margalit (1995: 266): 'thereafter do not speak to your sister'.

214. Ug. *ṣdm*. This may conceivably be an echo of the original location of the story in north-central Syria, or a conventional usage, going to a barren place to mourn, possibly to avoid cursing productive land, as *is* done by the distraught Danel. Cf. Jephthah's daughter (Judg 11.37-40). The translation of de Moor and Spronk (1982b: 182) and de Moor (1987: 213), 'let her not (yet) turn on her waterworks in the fields' is not only delightfully ambiguous (one thinks of the leaks of a privatized utility!) but turns the image on its head, by anticipating the opposite of what the text says.

215. Ug. *bsmkt*. See Watson (1996a: 77-78) for range of views. He suggests Akk. *sumuktu*, 'loose earth (?), dirt (?)' as a possible cognate.

216. Text [-]*mt*[-]. Ginsberg (1946: 45) relates it to THeb. √*mtn* Hiph., 'wait', followed by Herdner (1974: 553), Gibson (1978: 95) and de Moor (1987: 213). Perhaps less convincingly in the context of the following lines, 'I shall die (sc. **amt*) at the setting of Great Lady Shapsh' (del Olmo 1981a: 311). So also Xella (1982: 173). This approach, if tenable, would imply a correspondence to the formula of a king's death from Egypt: 'King Tuthmosis III went up to heaven; he was united with the sun disk; the body of the god joined him who had made him' (Frankfort 1948: 102). The Ugaritic king was mythologically son of the sun-goddess.

217. Ug. *ṣba*. The precise nuance, of setting rather than rising, appears to be established by KTU 1.15 v 18-19: *'rb* || *ṣbia*, and 1.19 iv 47-48: *ṣbi* || *m'rb*. But it may be neutral, referring to rising or setting, the context supplying the precise nuance. The presence of this root in WS invites a reappraisal of the Heb. DN *yhwh ṣebā'ôt*, perhaps of the deity (an ancient moon-god?) as controlling all *movements* of celestial bodies, rather than simply the bodies themselves seen as an army. Thus perhaps, with the etymological sense of *yhwh* (see n. 51 to KTU 1.1 iv 14) 'the lord of (celestial) movements'.

218. Ug. *rbt*, an ideological title used of Shapsh. Cf. KTU 1.23.54 and n. 49 *ad*

and at the shining[219] of the great luminary[220].
Then[221] say to your sister the lyre-player:
1.16 i 40 "Keret is giving a banquet; [222]
the king is holding a feast".[223]

loc. Its use here indicates that we should translate the expression mythologically, rather than as simply a neutral reference to sunset. It amounts almost to an invocation of the goddess.

219. Ug. *tgh*. √Ug., Heb. *ngh* (the final *h* is consonantal as Heb. dagesh indicates, though a final *h* remains problematic in Ug. [= suffix?]), Akk. *nâgu*, 'shine'. Either a verbal or substantival sense is plausible, the *h* favouring the latter. Del Olmo (1981a: 311): 'absents itself'; cf. de Moor (1987: 213): 'turning in' (sc. setting). For another interpretation see Margalit's comments (1995: 267-68) and his rendering:

> '[Thou shalt] ar[rive] at the cloister of the Great-Šapš,
> Yea, to the retreat of the Great Luminary'.

He understands this to be the convent where the girl dwells.

220. Ug. *nyr rbt*. Since this is distinct from the usual appellative of Shapsh, *nrt ilm špš* (e.g. at KTU 1.4 viii 21), it is perhaps to be construed as the moon. Thus del Olmo (1981a: 311). In the prehistory of the WS cult, the moon-god would have been El himself. Ginsberg (1946: 27), followed by Gray (1964: 23) and Herdner (1974: 553) thinks rather of the stars: 'the light of the myriads'. Gibson (1978: 95) offers a hybrid: 'the illuminator of myriads (of stars)'. Bernhardt (1955–56: 113) and de Moor (1987: 213), seeing synonymous parallelism, translate as 'the great Lamp' (sc. the sun).

221. Lit. 'and'.

222. The colon reads *krtn dbḥ dbḥ*. Originally understood by Virolleaud (1941b: 121) as an instruction to the youngest daughter to sacrifice. Ginsberg's (1946: 27) understanding, '(Our) Keret is making a sacrifice', has been followed by subsequent scholars (e.g. Jirku 1962: 105; Gray 1964: 23; Herdner 1974: 553; Gibson 1978: 95; del Olmo 1981a: 311; Xella 1982: 173; de Moor 1987: 213). We are to understand Keret as being very sick. Does he have a sacrifice performed on his behalf, or does he come from his sickbed to perform it? The latter would raise serious issues of his fitness for ritual activity. Cf. Yasib's objections to his general incapacity in KTU 1.16 vi 31-38. However, the translation surely errs in translating *dbḥ* as 'sacrifice', firstly in view of this cultic problem, and secondly because the parallel term *'šr(t)* denotes a feast. That *dbḥ* can have the same more neutral sense followed here is clear from KTU 1.114.1. Cf. the secular use of *mgt* at KTU 1.16 vi 18, 21. The ending of *krtn* is probably an *-n* formation, or hypocoristic, rather than a suffix (de Moor and Spronk 1982b: 183).

223. I take it that this bicolon is the whole of the message which Ilhu is to deliver. The following ritual instruction is addressed by Keret to Ilhu, not by Ilhu to his sister.

Take your nose[224] in your (left) hand,
your g[or]ge[225] in your right hand,[226]
go,
stand by the door-lintel[227],
bring silver to your lord[228],
1.16 i 45 and gold in plenty as your gift.'[229]

224. The word should be read *apk*, 'nose': thus Virolleaud (1941b: 122). To be preferred to *tpk*, Ginsberg (1946: 27): 'drum', or Herdner (1974: 554): 'tambourine'.

225. Restoring *[b]rltk*. For refs. on discussion see *DLU*, 116. Like *npš*, this term often has an abstract sense, such as 'vitality' or 'appetite'. Here scholars understand it in the context of parallel *ap*, indicating the part of the body associated with breathing. Perhaps alternatively 'windpipe' (thus de Moor 1987: 213). I have understood this to be a two-handed gesture. If the formula *yd* || *ymn* is merely rhetorical, *brlt* may mean 'nostrils' (sg. for du.). Watson (1976b: 107, 109) proposes restoring *grgrk* here, 'your branch', though he concedes the reading *-r-tk*.

226. This seems to be a specifically ritual gesture. It is to be distinguished from the gesture of ll. 47-48, which uses a different vocabulary, though this too has been interpreted in accordance with the present passage. Watson (1976b: 109) followed by Gibson (1978: 96 n. 2) links the second passage with Ezek. 8.16-17, though the *zᵉmôrâ* mentioned there seems to me more likely to be an instrument played through the nostril, such as a nose-flute (√*zmr* I) than a mere 'branch' (√*zmr* II), and in any event the second passage is independent. See below.

227. Thus Gibson (1978: 95, 157): Akk. *ṣerru*, Heb. *ṣîr*, Aram. *ṣîrtâ*. Watson (1976b: 107 and n. 7): 'jamb'. This is contextually more likely than 'go and sing a song on the heights' (thus del Olmo 1981a: 311, 616; Xella 1982: 173; de Moor 1987: 213: Akk. *ṣerretu*), unless a part of the temple or palace were to be understood, though cf. n. 214. Ginsberg (1946: 27): '*go, take thy stand by the songstresses*' (italicized as conjectural: the songstresses being mourning women?). Driver (1956: 41): 'go, take thy place (at the head of) the concubines'; similarly Gray (1964: 23): '... among his harem' (Akk. *ṣirritu*, Heb. *ṣârâ*, Ar. *ḍarratu*).

228. Construed by de Moor (1987: 213 n. 83) as the daughter's personal god. The use of the technical term *šqrb* (as at KTU 1.40.[9], 26) could be taken as support for this approach, already proposed by Virolleaud (1941b: 123). Ginsberg (1946: 27), construing the syntax differently, takes it to be Keret. Watson (1976b: 107): 'cause your lord to approach with your plea(?)'.

229. Ug. *bmgnk*. for the translation above cf. the sense 'as a gift' (sc. to the deity) as supposed by Herdner (1974: 554 n. u) and de Moor and Spronk (1982b: 183). There are a number of other possibilities here: *mgn* here may be a title; cf. its use as a divine epithet in Gen. 15.1; Deut. 33.29; Pss. 3.4; 7.11 etc.; and as an epithet of rulers in Ps. 47.10; Hos. 4.18 (if MT retained). On the other hand, the *b* is awkward for the translation adopted, and suggests the alternative 'in your shield',

Thereupon
the hero Ilhu took his spear in his hand,
his lance in his right hand[230]
[and] he came thither in haste.

1.16 i 50 He arrived [lat]er, and it was dark.

His sister had gone out to draw water.

He set his spear at the door-jamb,
he looked out[231] at the gate.

Lo,
she saw her brother[232]:

with the instrumental use of the shield to hold the precious metal. Perhaps a votive offering is to be understood? Cf. Queen Puduhepa's offerings of gold on behalf of her husband Hattusilis (Parker 1989: 72-75). The sense of *mgn* as 'gift' may also refer to votive shields, such as were kept in the sacred precinct at Jerusalem in the 'House of the Forest of Lebanon', on which see discussion in Wyatt (1998a). Cf. Watson (1976b: 107): 'at your entreaty'.

230. 'Spear... lance': Ug. [*m*]*rḫh*... [*g*]*rgrh*. The second term is hardly 'gorge' here (thus Gibson 1978: 96) notwithstanding Heb. *garg*^{e}*rôt*. It must be a term parallel to *mrḥ*. For *grgr* as 'lance' cf. Akk. *gurgurru* (Ginsberg 1946: 45). De Moor (1987: 213) translates both terms ('nostrils... throat', the former presumably √*rḥ*) in accordance with the ritual in ll. 41-42, but Ilhu will be intending to perform this on arrival at the door, though he is overtaken by events. The employment of a complete change in vocabulary, as required in de Moor's translation, is unprecedented. Ug. poetry usually follows earlier formulaic usage slavishly. Cf. discussion in Gray (1964: 69), and see also below, ll. 51-52. Watson (1976b) takes this to be a plant (*eruca sativa*, Akk. *girgirû*, var. *egingīru*), held to the nose in the ritual he discerns here.

231. Lit. 'he put his face out'. His sister, startled at the sudden appearance of his face out of the gloom, drops her jar in surprise. Cf. at KTU 1.17 vi 15, where Anat drops her cup. Bad luck evidently dogs the family here, since the shattering of the water-jar would undoubtedly be understood by Ilhu and his sister as a bad omen. The text remains obscure. De Moor (1987: 214) appears to understand Ilhu hitting his nose on the door (as his sister opened it?—'when her face came out of the gate'). This has also been understood as a third allusion to the ritual of ll. 41-42: e.g. del Olmo (1981a: 312).

232. On Watson's (1976b) understanding, Ilhu is performing his ritual when his sister sees him on her return from water-fetching. He quickly tries to disguise his action as something neutral, but she has already seen what he is up to, and draws the worst conclusion. Watson's reconstruction of the event is persuasive: I differ from him only in seeing not a plant held in the hand, but the ritualist's throat held in the hand, as the pattern of behaviour. Cf. discussion in de Moor (1979: 644-45).

her jar shattered on the ground.

1.16 i 55 [On seeing] her brother she wept:

'[Is] the king [really] sick?
[Is] Keret your lord [in truth ill]?'

[And] the hero Ilhu [replied:]

'The king is [not really] sick;
1.16 i 60 [K]eret your lord is [not in truth ill][233]:

[Keret] is giving a banquet;
[the king] is holding a feast'.

1.16 ii 1 (16 lines illegible)[234]

She approached her brother [Ilhu]

'Why have you lied to me[235] [ ]?
For how many months has he been s[ick],
1.16 ii 20 for how many has Kere[t] been ill?'

And the hero [Ilhu] answered:

'For three months has he been s[ick],
for four has K[eret] been ill.

1.16 ii 25 Certainly Keret is approaching [his setting][236] and the grave[237].'

233. Cf. Ginsberg 1946: 27; Driver 1956: 41; Herdner 1974: 556; del Olmo 1981a: 312.

234. For an attempted reconstruction of this section see Margalit (1995: 272-78).

235. Ug. *lm tb'rn*. Or: 'misled me?'. Variously interpreted: 'why dost thou deceive me': Ginsberg (1946: 28); 'why dost thou keep me in suspense?': Gray (1964: 24); 'why do you lead me?': Herdner (1974: 557); 'why do you put me off?': Gibson (1978: 97); 'why have you abandoned me?': del Olmo (1981a: 313); 'why have you kept me away?': Xella (1982: 174); 'why did you bring me [to our father]?': de Moor (1987: 215); 'why do you fool with me?': Margalit (1995: 278). √*b'r*, 'turn down, disappoint' and other meanings: *UT*, 375 §19.495; 'get rid of': *WUS*, 56 §459; √II, 'abandon': *DLU*, 103 and refs. It can hardly be a question of √*b'r* I, 'burn', undifferentiated in *UT* and *WUS*.

236. Ug. *mġy* [*'rb*]: used of the setting sun, and of going into the grave. Cf. n. 217 above.

237. The entire phrase is *mġy* [*'rb*] *wqbr*. Lit. 'coming to the entrance and the grave'. Perhaps a hendiadys.

She shrieked,
a c[ry she raised][238];
she shrieked,
she raised a screa[m].

Like women beating the gate she wailed[239],
like women in childbirth [she moaned][240].

1.16 ii 30 Altogether naked,[241] without [even her] shift[242] [she went],
mournfully, with no garment.

And [until with her wailing] her brother had had enough
she wept in front of Ilhu.

A [c]ry she raised;
she shrieked,
she raised a [scr]eam.[243]

238. Reading *q*[*l.trm*] with *t*, as at ll. 33-34 rather than *q*[*l.rm*] of de Moor and Spronk (1982b: 185), followed by *KTU*^{2}. The tetracolon of ll. 25-26 is partially repeated as the tricolon of ll. 33-34.

239. De Moor and Spronk (1982b: 186) conjure up a delightful picture of girls meeting their boyfriends at the well, but it is difficult to see how this fits the present image. More likely perhaps is mourning women in a frenzy of grief at the entrance to a tomb.

240. Note the merismus: all life from death to birth (in that order, a reversal of the natural process) is summed up in this woman's cry. The world is turned awry by the death of Keret.

241. Ug. *'rym*, adv., lit. 'nakedly'.

242. De Moor and Spronk (1982b: 185) read *lbl* [*.lbšt*] *bṣ*; lit. 'without [(her) garment] of linen (byssos)', which I take to be an undergarment.

243. I have broadly followed the proposal of de Moor and Spronk (1982b: 185-86) for ll. 25-34, though with some modifications. For an entirely different approach see, e.g., Herdner (1974: 557-58), Gibson (1978: 97) and del Olmo (1981a: 313-14). According to these scholars it is a set of instructions given by Ilhu to his sister for the preparation of the grave. This seems inherently improbable on two grounds. Firstly that the daughter should prepare the tomb for her father, the main ritual duties being performed by the eldest son, as shown in KTU 1.17 i 25-28 and parallels, and thus not even Ilhu's responsibility; and secondly that such a concern should intrude at this juncture, where a description of the daughter's distraught state is much more apposite, following directly on her hearing the bleak news. The words to which she gives expression are the same as her brother's in KTU 1.16 i 14-23 (which fulfil the instructions of ll. 2-11). No stiff upper lips in Ugaritic society: like Racinian heroes and heroines, they give full vent to every feeling.

1.16 ii 35 She wept and gnashed her teeth,
she gave forth her voice in weeping:

'In your life, father, we rejoiced;
in your immortality we took delight.

Like dogs shall we howl at you tomb,
like curs at the entrance to your burial chamber?

1.16 ii 40 Yet father,
how can you possibly die?

Or will your burial chamber (be given over) to weeping,
to howling on the part of women,
O my wretched father?

Or do the gods die,
the offspring of the Wise One not live?

1.16 ii 45 They weep for you, father,
the mountain of Baal, Saphon,
the holy stronghold of Nan,
the mighty stro[ng]hold,
the citadel of vast expanse.

Is Keret then the son of [El],
the offspring of the Wise [and Holy One]?'[244]

1.16 ii 50 Weeping she entered[245] in [to her father],
she entered the ro[om of Keret]

(about 7 lines illegible or missing)

1.16 iii (about 30 lines missing)

1.16 iii 1 Oil [of peace]was poured[246] [into[247] a bowl].

244. Ll. 35-49 are identical with elements from KTU 1.16 i 6-23, adapted to Ilhu's sister as subject, and with the units in different order. This is evidence of the practice in oral poetry of treating the sub-units almost as musical phrases, to be recombined in different order in the overall symphony.

245. Ug. *t'rb*. This supports the correction of the text reading *y'rṣ* to *y'rb* at KTU 1.16 i 12 above. See n. 205 *ad loc*.

246. Subject? 'He': most interpreters. Virolleaud (1941b: 198) and Ginsberg (1946: 29): 'they'. It is the same formula as in KTU 1.3 ii 31 and 1.101.14, according to Gibson (1978: 98) and *KTU*^{2}, and I have translated it in the passive in accor-

And he[248] said:
'Explore[249] earth[250] and heaven;
travel to the ends of the earth,
to the edge of the abyss[251].

1.16 iii 5 To the earth let the rain of Baal speak[252],
and to the steppe the rain of the Most High[253]!

Pleasant to the earth (would be) the rain of Baal,
and to the steppe the rain of the Most High!

Pleasant to the wheat in the furrow,
1.16 iii 10 in the ploughed field to the spelt,
like a diadem about the city-mound[254]!'

The ploughmen lifted up their heads,
those preparing the wheat (looked) up.

Exhausted was the bread in their granaries;
1.16 iii 15 exhausted was the wine from their wineskins;

dance with the requirements of the former passage. The restoration of the line is conjectural.

247. Or 'from'.

248. In view of the large number of lines missing before and after the text in col. iii, we can only conjecture the identity of the subject. It may be a god, a priest acting on Keret's behalf, Ilhu, or, following Gibson (1978: 98 n. 1), Gupan and Ugar, the messengers of the similar passage KTU 1.5 vi 3-9. There is certainly a thematic link with the Baal text, since Ilimilku appears to wish to evoke the death of Baal as comparable to that of Keret. It seems likely that the speaker is instructing Gupan and Ugar to make a search. This is at least unconsciously an ideological feature.

249. Ug. *tr*. Cf. Heb. *tûr* and del Olmo (1981a: 638, √I rather than II, 'tremble', as supposed by Gibson 1978: 98).

250. In the formula *arṣ wšmm*, *arṣ* probably has overtones of the underworld. This is a comprehensive search!

251. Cf. Herdner 1974: 560 and n. j; Gibson 1978: 98.

252. 'Let speak': Ug. '*n*. I take this to be a prayer for rain, along the lines of the formula in KTU 1.1 iii 12-16 and parallels. Gibson (1978: 98): 'a source (of blessing)...'. Del Olmo (1981a: 315) takes it with previous words: '...look!'.

253. A title of Baal. See Wyatt (1992a: 419).

254. I understand this to be an image of a city crowned by its surrounding fertile fields. Thus also Herdner (1974: 561 and n. n), del Olmo (1981a: 315). To *'ṭṛṭṛt* (to be explained either as dittog. or redupl.) cf. Heb. *'aṭārâ*. Other views: Gray (1964: 25): 'over the furrow-ridges as incense'; de Moor (1987: 217): 'like fragrant herbs on the ridge'.

exhausted was the oil from [their] v[ats].[255]
The house of Keret [ ]

(about 18 lines missing)

1.16 iv (about 16 lines missing)

'...

1.16 iv 1 [[256]] El, listen!
Like El your speech [is wise],
like Bull the Wis[e One] you are wise:[257]
Summon the herald[258] of the god(s)[259], Ilsh,

255. Since Athirat's curse lies heavy on the king, it affects every aspect of life in his kingdom. Famine threatens all his subjects when the king is punished for his sins. His impending death presages universal death. The thought here is closely parallel to the very practical conception of divine blessing and curse in Deut. 28.1-6 || 15-19. The Ugaritic and biblical sources point to the moral rationalization of natural disasters: someone has to be blamed!

256. Margalit (1995: 290-91) plausibly conjectures the reading *lmlak* here, 'O messenger of (El)', denoting Kothar.

257. De Moor and Spronk (1982b: 187) have these lines addressed to someone else who is compared to El. They suppose Baal. Merrill (1968: 16) thinks it is Keret. I think it is more probably Kothar, in conformity with Margalit's suggestion. While Baal appears to intercede before El on Danel's behalf in KTU 1.17 i 16-33, he is not a god who acts merely as intermediary for others. There appears to be a hierarchical relationship, El addressing lower orders of deity through intermediaries. It may also be that Ilsh is an artificer-god (see next note) which would strengthen the likelihood that Kothar, chief of craftsmen, should be instructed to deal directly with him.

258. Ug. *ngr* (Akk. *nāgiru*). Thus Driver (1956: 43 n. 8), Herdner (1974: 562; see n. t), del Olmo (1981a: 316, 587) and Margalit (1995: 291). Alternatively we should follow Virolleaud (1941c: 207), Ginsberg (1946: 29) and Driver (1956: 43): 'carpenter-god' (Akk. *naggâru*, Ar. *najjar*). Cf. Gibson (1978: 99): 'steward' (n. 2: 'or "carpenter"'). Gray (1964: 26, 73): 'water-pourer' (Heb. *nāgar*, Punic *ngr*). The broken state of the text prevents us from making any certain choice between these options, but l. 16 below (*gm ṣḥ*) may be regarded as circumstantial evidence in support of the line taken here. Since Ilsh (and his wife) appear nowhere else, it is impossible to be sure what their function is in the narrative. De Moor (1987: 218 n. 96) and Korpel (1990: 292), followed by Becking (1995a), argue that the primary meaning of *ngr* (f. *ngrt*) is 'raven', and secondarily 'messenger'.

259. Ug. *ngr il*. This may mean simply 'divine herald (or carpenter, or raven)', but I take its f. form following, *ngrt ilht*, to be cs. with gen. pl., which must there-

Ilsh <the herald of the house of Baal,>[260]
and his wife, the herald of the [go]ddesses.'

1.16 iv 5 Like a wild ass[261] off sped[262] [Kothar.]

He summoned the herald of the god(s), Ilsh,
Ilsh the herald of the house of Baal,
and his wife the herald of the goddesses,

(saying:)

1.16 iv 10 'Thus says[263] the Wise One, the perceptive god:

"Listen[264], O herald of the god(s), Il[sh],
Ilsh the herald of the house of Baal,
and your wife the herald of the goddesses,

go up to the parapet of the building,
to the top of the tower[265],

fore influence the sense here. Since *il* is parallel to *ilht*, it ought to be given a pl. sense, though the pl. *m* ending is obstinately absent.

260. Restored on basis of ll. 7 and 11, as suggested to me by Wilfred Watson: a haplography has been caused by the double reference to Ilsh.

261. Text *km'r*. The word *m'r* is unknown. Aistleitner (1964: 102), followed by Margalit (1995: 291-92) and myself, divides *km 'r*, which in Herdner's view (1974: 563 n. w) 'ill fitted the context'. But the wild ass was a figure of unrestrained vigour, to say nothing of lechery, to the ancients. Cf. Ishmael's epithet 'Onager-Man'. Margalit has in mind Hephaistos' crippled state, so that 'when he (Kothar) runs, he resembles a galloping donkey rather than a horse'. I think this misses the point, which is speed, not clumsiness.

262. Ug. *khṣ*. Most leave untranslated. Aistleitner (1964: 102; *WUS*, 147 §1300): 'rush off (like a wild ass)' (comparing, tentatively, Ar. *kaḥaṣa*); followed by Margalit (1995: 291-92).

263. Ug. *ky'n*. Cf. Heb. *kōh 'āmar*.

264. The term *šm'* also carries the nuance 'obey'.

265. Ug. *ln.ḫnpt.mšpy*. *KTU*^{2} brackets the first word-divider: '[.]'. The preceding colon suggests the sense required, on the basis of parallelism. For *ln.ḫnpt* cf. Ginsberg (1946: 29): 'platform...' Driver (1956: 45): 'parapet(?)' (followed by Gibson 1978: 99; Xella 1982: 176). Gray (1964: 26, 73): 'to the summit of the bare roof' (Ar. *ḫanā*, 'to swell' and *nafata* 'to be tall', cf. Heb. *nôp*). Herdner (1974: 563 n. y): 'summit' (Ar. *ḫanif*: 'proud'). Del Olmo (1981: 317, 589, citing Ar. *ḫanafa*, *aḫnafu*) translates 'back, spine'. For *mšpy*, Gray cites Heb. *šᵉpî*, 'bare height' (√*šāpâ*, also cited by Herdner and del Olmo). An entirely different approach is taken by de Moor and Spronk (1982b: 188): 'croak, announcer (three times) to the defiled earth', addressed to the putative raven-messenger. The form *nḫnpt* is explained as N f. pt. of *ḫnp*, 'defile' and *mšpy* by ref. to Akk. *mušāpû*, 'announcer'.

1.16 iv 15 the three (of you) like the waters of a fall,[266]
to the mountain[267] call aloud
[ ]
...'''

(about 27 lines missing)

1.16 v (ll. 1-9 illegible)[268]

1.16 v 10 And the Wise One, [the perceptive god, asked]:
'[Who] among the gods [will remove the sickness],
will expel the di[sease]?'
[But none from among the gods] answered him.
He asked the question a se[cond, a third time]:
1.16 v 15 'Who among [the gods will remove] the sickness,
will expel [the disease]?'
But none from among the gods ans[wered him].
He asked the question [a fourth,] a fifth time:
'Wh[o among the gods] will remove[269] the sickness,
will ex[pel the disease?'
But none from among the gods answered [him].
1.16 v 20 He asked the question a sixth, a seventh time:

This seems strained in comparison to the alternative, though it does of course relate to the following text.

266. Tentative translation partly based on the suggestion of Margalit (1995: 292-93). I take the *tlt* to be part of El's instruction, here relayed by Kothar to Ilsh and his wife, to all three of them, Kothar included, to proclaim his message. The instruction it is intended that Kothar should pass on (to two heralds) has come to include himself (a third). *kmm* I construe as *k* + *m m* (or the second *m* may be enclitic), while *trry* is to be related to the epithetal *trrt* in KTU 1.14 iii 5 n. 80).

267. The mountain (sc. Saphon) is the dwelling-place of the gods. The message is to be shouted out so that all may hear.

268. Ll. 8-9, beginning respectively *tnnth*[...], *tltth*[...], may allude back to Keret's vow to Athirat (cf. KTU 1.14 iv 42-43, where however the first term is *tnh*). De Moor and Spronk (1982: 189), taking this line, are of the view that Baal probably offers to pay Keret's debt. But contrast Ginsberg (1946: 30): 'a second time... a third time...'.

269. Ug. *ydy*. The nuance is that of exorcism. See n. 1 to KTU 1.169.1.

'[Who] among the gods will remove the sickness,
will expel the disease?'[270]

But none from among the gods answered him.

And the Wise One, the perceptive god, said:

'Sit, my sons, on your seats[271],
1.16 v 25 on the thrones of your princeships.

I myself shall act the craftsman,
and I shall create,
I shall create[272] a remover of sickness,
an expeller of disease!'

With m[ud his hand] he filled,
with suitable mud [his right hand].[273]

270. This is the classic motif of the chief god seeking a volunteer to perform a task, which finds an expression in Isa. 6 and 40. The sevenfold request to the gods gives them the fullest opportunity to answer El's invitation. Seven represents totality (seven children, a seven-day journey, seven days of siege, the twice sevenfold blessing of El, leading to seven sons and seven daughters, and perhaps further sets of seven in missing passages). The breaking of the seven days of the journey into sets of three and four, breaking the flow of Keret's obedience to El's instruction, further symbolizes the breaking of the vow itself which has now culminated in the need for El to act unilaterally. See n. 121 to KTU 1.14 iv 45. The completion of the journey at that juncture on the fourth day is itself a satisfying conclusion, but ironical in view of its disruption of the more important seven-day pattern. The purpose here is to highlight El's rejoinder to the silent gods; for he alone is able to act effectively to help Keret. This is a function of El's special relationship with a king. See Parker (1977; cf. 1989: 190-91, where he cites the parallel of the myth of Zu). Whether or not the missing text spoke of El's awareness that it is Athirat's curse that is at work, we cannot say. On the 'sevenfold' motif cf. KTU 1.4 vi 22-35 (Baal's temple built in seven days: cf. 1 Kgs 6.38; 8.65), 1.6 ii 31-35, v 12-19 (Anat's treatment of Mot), 1.12 ii 42-45 (seven-year drought), 1.17 i 5-16 (Danel's ritual activity), 1.19 i 42-43 (a seven-year curse), iv 13-18 (seven years of mourning for Aqhat), 1.23.66-68 (seven years of wandering for the gracious gods) and 1.41.53 (seventh day marks end of ritual sequence).

271. Or: 'return to your dwellings' (thus de Moor 1987: 219). Herdner (1974: 565) hedges: 'go and sit down' (cf. n. d).

272. The form *ašḫn* occurs twice. Possibly dittographic, or one should be corrected to {*a*}*šḫn*, to read as inf. abs. 'I shall indeed create...'. The vb is presumably Š of √*kwn*. The G stem would suffice were the sexual sense intended.

273. Reading from a colour slide, the text of this putative bicolon in ll. 28-29 may be read very tentatively as follows:

1.16 v 30 He fashioned [ ] out of moistened clay[?][274].
[ ] dragon[275],

(some 7 illegible lines)

‘...
a cup [ ]
1.16 v 40 a gob[let]

(ll. 41-48 consist only of odd letters)

[remove] the sickness,
1.16 v 50 [expel] the disease!’

(10 further illegible lines)

‘...
1.16 vi 1 Mot it is who will be destroyed,

rṯ/ht[?] |---| *ymlu*
n'm.rṯ [----]

This may be compared with the readings of *CTA* (*r*[----].*ymlu* | n'*m* (k/r)*ṯ* [---?]), which differs from Virolleaud's (1941c: 210) transcription only in allowing the possible k in l. 29 and increasing the estimated gap in the first colon; and *KTU*[1] r×[ ].ymlu | n'm.r*ṯ [ ], *KTU*[2] *r*ḫt[h].*ymlu* | *n'm.rṯ.t*[iṯ]. All references to hands (**yd* parallel **ymn*) are reconstructive, though entirely reasonable. I construe the material used (*rṯ* || *n'm rṯ*) to mean 'mud... the best of mud' or the like. On *rṯ* see *WUS*, 297-98 §2556. 'Clay': Ginsberg (1946: 48) and Herdner (1974: 566). Del Olmo (1981: 626) cites Ar. *rawṯu*, *raṯṯa* and Akk. *rušu*.

274. Text *yqrṣ dt.bpḫ*[----] *mḫt*. The first term, as Ginsberg (1946: 48) pointed out, is used of the making of Enkidu by Aruru (*Gilgamesh* 1.2.34); Gray (1964: 74) and Gibson (1978: 100 n. 5) noted the same usage in Job 33.6. The form *pḫ*[*r*] is understood by de Moor (1979: 647-48) to mean 'potter' (Akk. *paḫāru*): *idem*, (1987: 220, for *dt.pḫ*[*r*]): 'such as is used by the potter'. Margalit (1979: 553 n. 51) cites Akk. *paḫaru*, Aram. *paḫra*, Ar. *faḫḫar*, 'clay': 'a being (he creates) from clay'. The final *mḫt* remains obscure. Perhaps, by haplography, corrupted from **mṯṯ*, 'watered, moistened'?

275. The reading *tnn* is tentative. Perhaps Shatiqat is serpentine, a suitable symbolic form for a healing goddess, the dangerous quality of snakes (see KTU 1.100, 1.107) having homeopathic significance. On snake-goddesses see West (1995: 132-38). Cf. also the royal formula u š u m . g a l, 'Great Snake', used by Shalmaneser III (*ANET*, 276 and n. 2: Oppenheim compares this with the Eg. uraeus, who as the goddess Wadjet on the king's brow symbolizes his effective power in the world).

Shatiqat[276] it is who will prevail!'[277]

And Shatiqat departed;
she came indeed[278] to the house of Keret.

Weeping, she entered[279],
1.16 vi 5 sobbing[280], she came within[281].

From the city she cast out Mot,
from the town she cast out the Enemy[282];
with a staff she struck him:

<the sickness> came out of his temple[283],

276. The name is the 3 f. sg. form of the Š stem of √*'tq*, 'she causes to be distant', or 'she removes'. As with the names of Baal's maces, *ygrš* and *aymr*, the finite form of the name conveys greater immediacy than a pt. form.

277. This presumably ends El's instructions to Shatiqat. This final bicolon may be read as jussive: 'Let Mot ... Let Shatiqat ...!'. On the scene cf. Saliba(1972).

278. Inf. abs.

279. Ug. *tgly wtbu*. I am inclined to treat the *tbu* as dittographic (from l. 3; cf. l. 5), or the whole expression as hendiadys.

280. 'Weeping ... sobbing': Ug. *bkt ... nṣrt*. Ginsberg (1946: 31) appears to treat these as TNs, perhaps denoting Keret's palace. The second term is explained by Driver (1956: 157 n. 9) with ref. to Ar. *ṣarra, ṣarṣara*, 'cried out, yelled', and by del Olmo (1981a: 592) with ref. to Common Semitic *nṣr*. See rather Heb. *ṣrr*, hiph. denom., 'suffer distress', though no niph. is found. Cf. Gray (1964: 74-75); Herdner (1974: 568 n. m); Healey (1976: 432); Sanmartín (1978: 451).

281. Construing *pnm* as equivalent to Heb. *p'nîmâ* (Herdner 1974: 569 [end of n. m]).

282. Cf. the approach of del Olmo (1981a: 320) and Xella (1982: 177). That of Ginsberg (1946: 31), 'towns she flies *over a hundred* | villages she flies *over a multitude*' (his italics, as conjectural), followed with variations in detail by Driver (1956: 45), Jirku (1962: 113), Herdner (1974: 569) and Aistleitner (1964: 103), makes no sense immediately after we have heard that she has entered Keret's palace. On a different approach again de Moor (1979: 646; cf. 1987: 221): 'in the town she made her incantation/charm fly | in/through the city she made her flower-stalk fly'. 'Mot ... the Enemy': reading **mt* in l. 6. Cf. Virolleaud (1942–43a: 1-2). A colour slide makes it quite clear that this is the reading, despite the efforts of *CTA* (*m*h), de Moor (1979: 646: *m*<*nt*>*h*) and *KTU*[1 and 2] (mh* [erasure] ××; *m*h [××]). There is certainly evidence of an erasure and rewriting, but we should read what the scribe ended with, rather than what he began with! On my approach, *tdu* is construed as √*nda* (del Olmo 1981a: 588), cf. Heb. *nādā'*, rather than as √*day*, while to *šrr* || *mt* cf. Heb. *šōrēr*, Ar. *šarra* (del Olmo 1981a: 633).

283. 'Temple' or 'temples' (du.). The term is *ptm* (not to be corrected to *km* as in *KTU*[2]; cf. *CTA*'s trouble with the text), since *pt* is || *riš*. It is to be linked to Akk.

the illness[284] from the top of his head.

1.16 vi 10 And she sat down and washed him free of sweat.

His appetite for food she opened,
his desire for dining.

It was Mot who was destroyed;
Shatiqat it was who prevailed over him.

1.16 vi 15 So Keret the votary gave an order;
he lifted up his voice and cried:

'Listen, O maiden Hurriy—

Slaughter a lamb that I may eat,
a young animal[285] that I may feed!'

The maiden Hurriy obeyed.

1.16 vi 20 She slaughtered a lamb and <he> ate,
a young animal and he fed.

Lo,
a day and a second,
Keret sat upon his throne-dais,
the king sat upon his throne,
against his back-rest,
on the siege of his dominion.

1.16 vi 25 Now Yasib was sitting in the palace,
and his inward parts[286] instructed him:

putu, Heb. **pōt* appearing in Ps. 19.8. For discussion see Wyatt (1995b: 572, 589-90), following a suggestion of Dahood (1965: 123). To be distinguished from *pit* = Heb. *pĕʾâ* (KTU 1.17 ii 9).

284. 'Sickness...illness': the former term (*mrṣ*) is restored following the suggestion of Gibson (1978: 101). The word-pair *mrṣ* || *zbln* already appears six times above in KTU 1.16 v 10-50.

285. The term is *mgt*. Cf. perhaps Heb. *muggaš* (Mal. 1.11), which means 'offering' (*nāgaš*, hoph. pt.). However, this sense would be inappropriate here. Cf. the non-cultic nuance of *dbḥ* in such passages as KTU 1.16 i 39-40. See discussion in Virolleaud (1942–43a: 9) and del Olmo (1981a: 574). Bernhardt (1955–56: 115): 'kid'.

286. Is this expression perhaps intended to indicate that these are bad thoughts, perhaps even thoughts in bad faith? Jaynes (1976) represents the thought of what he calls 'Iliadic man' as internal dialogue experienced as the voices of gods. If Yasib listens to his own 'inward parts' instead of to divine voices, he is ill-counselled. I

'Go to your father, Yasib,
go [to] your [fa]ther and say,
repeat [to Keret your lord]:

1.16 vi 30 "Listen,
and let your ear be alert:

[Like a warrior] can you command [warriors],
and [give orders to those under (your) command]?[287]

you have lowered your hand in weakness[288].

You have not tried the case of the widow;
you have not judged the cause of the powerless.[289]

1.16 vi 35 Like a bedfellow is illness,
(your) concubine is disease!

Step down from your kingship:
I shall be king;
from your dominion:
I shall be enthroned!"'[290]

Yasib the heir went away.
1.16 vi 40 He came in to his father.

He lifted up his voice and cried:

thank Richard Clark for this suggestion. (Alternatively, this internal self-conscious dialogue is evidence against a Jaynesian psychology.)

287. Bicolon restored on basis of ll. 43-44. See other comments below.

288. The raised right hand (the weapon-hand) of a king is a symbol of his power, here compromised by the lowering of the hand. Some biblical examples of the motif of the 'hand of power' are Exod. 14.16, 26; 17.8-16 (Moses) and Exod. 15.6, 32.11; Deut. 4.34 (Yahweh). On this motif see L'Orange (1953) and recent discussion in Wyatt (1998a). See also at KTU 1.3 v 23 and n. 70, and 1.18 i 10 and n. 124.

289. The classic social duties of the king, still maintained in the rhetoric of modern governments. Isa. 1.17, one of many biblical allusions to the theme, appeals for the implementing of the basic ethos, sadly neglected (1.23). Widows and orphans are those in society who have no champion to protect their interests. The king is their last court of appeal for justice.

290. On the presumption of Keret's continuing sickness, Yasib's motive is beyond reproach. A sick king cannot rule effectively: he should give way to someone who can. However, we know what he does not, that Keret has now been healed. So Keret's incapacity for wise judgment exhibited in his neglected vow is now visited upon his son, who, failing to check his facts before blurting out his challenge, calls forth the curse which will undo all El's patient work.

'Listen, I pray, O Keret the votary[291],
listen, and let your ear be alert!
Like a warrior can you command warriors[292],
and give orders to those under your command[293]?[294]

291. Are we perhaps to discern in Yasib's form of address a distancing of himself from his father, whom he now seeks to depose and supplant? The reference to his epithetal *ṯr* (see n. 115 at KTU 1.14 iv 37) can only rub salt into the wound. And while this direct form of address is typical of discourse between the gods, it smacks of impudence when a king is thus addressed by a subordinate, even though he be his own son.

292. Ug. *kġz.ġzm*. While leaving untranslated, Virolleaud (1942–43a: 13) explains as parallel to *ġrm*, 'mountains', and thus misconstrues. Ginsberg (1946: 32) leaves the entire bicolon untranslated. Bernhardt (1955–56: 115): 'as someone whom anger excites (you speak ...)'; Driver (1956: 47): 'as when raiders(?) make a raid(?)', Gibson (1978: 101): 'while bandits raid you turn your back' (Ar. *ġazâ*, 'raid' [vb], *ġazwu*, 'raid' [n.]); cf. Aistleitner (1964: 104): 'while you give in to the most wicked men of violence' (*WUS*, 246-47 §2137: 'extortioner' [Ar. *ġazâ*]); del Olmo (1981a: 322, broadly followed above, and also by Xella [1982: 179]), gives the more neutral sense 'warrior' for *ġz*, and sees here a martial role for the king. Herdner (1974: 571-72 and n. y) entirely reverses the sense: 'in case of invasion, you flee'. Gray (1964: 29, 77): 'by slow degrees thou art growing old' (Ar. *ġadġada*, 'diminish', *dabara*, 'recede [or possibly "grow old"]': Ug. lit. 'thou art receding by slow degrees'). De Moor (1987: 222): 'the most munificent you drive away'. In view of such diversity, it is as well to recognize the provisional nature of the translation. On *tdbr* see *UT*, 384 §19.641 ('manage'). *DLU*, 128 distinguishes two forms, √ I, 'guide, cause to march', and √ II, 'to say, declare'. Either makes sense here. See also discussion in Watson (1996a).

293. Ug. *w ġrm.ṯtwy*. Bernhardt (1955–56: 115): 'and you are like a slanderer' (Ar. *sawiya*, 'to be like'); Driver (1956: 47, 152 n. 15): 'and shalt dwell in the pit' (Ar. *ṯawâ*, inhabit', Heb. *šiwwâ*, 'quieted'); Herdner (1974: 572 and n. *z*): 'and you take refuge in the mountains' (Ar. *ṯawaya*, 'sojourn, stop'); Aistleitner (1964: 104): 'you entertain swindlers'; Gibson (1978: 102, 155, 160): 'and you entertain feuding rivals' (Ar. *'atwâ*[*y*], 'entertained'; *ġr* [√*ġyr*], 'rival'). De Moor (1987: 222): 'but the usurer you allow to stay'. Del Olmo (1981: 322), broadly followed by Xella (1982: 179) has 'and to troops (can you) give orders?'. To the difficult *ġr*(*m*) cf. Heb. *ṣar*, 'foe' and *ṣîr*, 'envoy', each of which might also fit the present context. To *ṯtwy* (*UT*, 501 §19.2662: 'rule, govern') cf. Heb. √*šāwâ* II. Cf. also Gen. 14.17 which glosses *šāwê* as *melek*.

294. I have taken the bicolon to refer to Keret's failure to fulfil his military duties. This approach is supported by the following monocolon of ll. 44-45, which also has a military reference. Those other translations noted above which preserve this sense are inherently more plausible than entirely different approaches.

1.16 vi 45 You have lowered your hand in weakness!

You have not tried the case of the widow,
you have not judged the cause of the powerless!
You have not banished those who plunder the child of
the poor:

you do not feed the orphan in your presence,
1.16 vi 50 while the widow is behind your back![295]

Like a bedfellow is illness,
(your) concubine is disease!

Step down from your kingship:
I shall be king;
From your dominion:
I shall be enthroned!'
But Keret the votary[296] replied:

1.16 vi 55 'May Horon smash, O my son,
may Horon smash your head,
Athtart-the-name-of-Baal your skull!
May you fall down in the prime of life,
empty-handed, and humiliated!'[297]

The scribe is Ilumilku the sacrificer.[298]

295. Out of sight, out of mind! The expression points to a more powerful ideological presumption, that to catch the king's eye is to have legitimate expectation of satisfaction from him. The orphan's lot here is worse, however, for even *within* the king's presence (*lpnk*, l. 48) he is neglected.

296. As the dénouement unfolds, we are reminded again, with a final irony, that Keret is under the obligation of a vow.

297. The curse is that uttered against Yam by Baal in KTU 1.2 i 7-9. It is evidently a routine curse of destruction. Perhaps its *Sitz im Leben* was executions? This could provide a neat exculpation for the executioner: he merely fulfilled a god's command. Keret's unthinking outburst against his son, heir to his throne, at once unravels all the repair work laboriously achieved by El to undo the outworking of Athirat's curse, which had brought Keret to the point of death. Now her vengeance is complete, as Keret himself obligingly voices the very curse the goddess must have had in mind. Now, at a stroke, he is back to square one, with no heir to his throne. In view of the blessing on his youngest daughter in KTU 1.15 iii 16, that she would have the blessing of the first-born, we must suppose the colon to have been pregnant with future omen, for now it transpires that logic demands that she also share in the curse now pronounced. Implicitly, *all* the children are cursed.

Even had Athirat's wrath been deflected by appropriate ritual means, El would presumably have caught up eventually with Keret for his initial disobedience (at KTU 1.14 iv 36-43). The last word of the text is *wt'n*, 'and be humbled' (√*'ny* II). Virolleaud (1942–43a: 19) took this to mean 'and she replied' (√*'ny* I), thus introducing a speech by Keret's wife or daughter. This is perhaps the origin of the theory of another tablet (next note). The conclusion of Keret is not to be construed as evidence of the theological bankruptcy of Ugaritic religion, as has been supposed by some commentators (e.g. Oldenburg 1969; de Moor 1990). Rather is this evidence of the vitality of LBA society. For my more extended views on this see Wyatt (1996b: 323-30; 1999b). The pluralistic symbolism should not be understood as detracting from this, for it is precisely the idiom in which the diversity and conflict of experience are explored. Lévi-Strauss' famous conclusion (1977: 216) on the nature of myth is worth reiterating here, even if Keret be regarded as not belonging to this genre, and if we do not wish to press the entire structuralist agenda:

> although the problem obviously cannot be solved ... myth provides a kind of logical tool which relates the original problem ... to the derivative problem ... Although experience contradicts theory, social life validates cosmology by its similarity of structure. Hence cosmology is true.

This is no less valid than the hermeneutical circle of theology, for all theology is an attempt to treat the most fundamental human problems through a metaphysical game of suspended disbelief. It is perhaps worth noting too that a work of literature may be exploring the unknown, thinking the unthinkable, and intuiting extensions of experience (which is what theology is all about). It is wise not to take it too literally as supporting a prejudice, as is sometimes done to its disadvantage in modern studies of Ugaritic religion. Margalit's (1989a: 46) characterization of the end of Keret as almost light-hearted ('[it] ends on a note of levity') and as lacking any tragic dimension in my view misreads the text. It is tragic precisely in that it studies the consequences of a flaw in human character—Keret's levity in matters of religion—which is not dissimilar to Aqhat's lack of propriety before a goddess.

298. The colophon is an abbreviated version of the fuller one found at KTU 1.6 vi 54-58. I understand this to be the end of the Keret story. See also del Olmo (1981a: 243, 273, with references: 243 n. 14 to dissent from this view), and Margalit (1995: 314-15). Cf. Parker (1989: 145) for a recent reiteration of the 'incomplete' theory, and also de Moor (1990: 93 n. 275), who argues that the final tablet would have had the fuller list of Ilimilku's titles we see in KTU 1.6 vi. This argument is spurious in my view, since we have only one such example, which is scarcely enough to warrant stating it as a principle. If the story really ends with the effective reimposition of the accursed position in which he first found himself, there also seems little justification for maintaining the view that Keret is to be seen as the eponymous ancestor of the Ugaritic royal dynastic line. It may be an unwritten supposition that the story must somehow have borne a positive message for the Ugaritic dynasty which leads to the expectation of a fourth tablet. But apart from Parker's intriguing view of the text as a serious critique of traditional royal ideol-

ogy, it is possible to see the story as deliberately discrediting one king in order to legitimize his successor, who bears no blood relationship to him. We know insufficient about the succession of the kings of Ugarit to be certain about matters of this sort, but it is a reasonable estimate that the sequences found in such texts as KTU 1.113 and 1.161 do not necessarily vouch for a line of direct descent between successive kings, particularly over the many centuries required for the former text, but do attest a line of 'ideological descent'. To be 'N son of N' is to be in a legal, and not necessarily a filial relationship with one's 'father'. Even the apparent continuity of the Judahite monarchy may include some fictitious relationships, for genealogies were essentially manipulative constructions, designed to accord legitimacy. Every king is 'son' to his predecessor unless he repudiates the link. The supposition of a dynastic shift, in which Niqmad II (now revised to Niqmad III-IV: see 146 n. 132) required to be legitimized by appeals to the old ideology which showed him as the natural choice of the gods can also steer us away from the ultra-satirical position adopted by Margalit (1999). In favour of such an approach is its presence in the Baal Cycle of myths (Wyatt 1998a), where the element of continuity throughout the cycle is the one throne which persists in spite of the multiple changes in occupancy (Wyatt 1996c). In the Keret story what is at issue is the tension between the perfectly serious presentation of all the old ideological forms and the obtuseness of Keret's own behaviour. Central to the narrative, the pivot about which all revolves, is the vow to Athirat, the goddess who is primarily concerned as *rabitu* with matters of royal procreation and succession. It is not the institution which fails here, but the incumbent. Perhaps here too is a subtle message concerning the assumption of office by Niqmad II. He will succeed where his predecessor failed because he will fulfil all vows, obligations and righteousness. But see now 146 n. 132

Part IV
KTU 1.17–1.19

THE STORY OF AQHAT*

(KTU 1.17 = CTA 17 = II D = 2 Aqht = RS 2.[004])
(KTU 1.18 = CTA 18 = III D = 3 Aqht = RS 3.340)
(KTU 1.19 = CTA 19 = 1 D = 1 Aqht = RS 3.322 + 3.349 + 3.366)

Wright 2001 (* indicates comprehensive translation.)

This traditional tale is in some respects analogous to the Keret story, in that it treats the same theme of childlessness (in this case, perhaps specifically of sonlessness, since it is concerned with the role of the [eldest] son with regard to ritual and social duties towards his father), and like Keret, faces the dilemma of the loss of so important an asset.

* 'Aqhat' has become the conventional designation of this narrative poem. Virolleaud (1936d) named it after Danel, Aqhat's father. This original view has something to be said for it, though Ilimilku also identified it as 'Aqhat' (KTU 1.19 i 1). In terms of the tragic dimension, Aqhat is the appropriate counterpart to Yasib, but the story as a whole appears to be concerned with broader issues than Aqhat's death: Danel too is also the counter to Keret, though an innocent one. The lost ending precludes a final estimation.

In both cases the importance of the theme is emphasized by its reference to a king, for such a problem is then of importance to the whole society. I do not think the matter of Danel's royal status is in dispute, despite claims to the contrary, and have drawn attention to the (admittedly circumstantial) evidence in the notes.

The same debate has taken place on the strict literary category into which the text falls as with the Keret story. Astour (1967) has seen broad mythic elements in the narrative, taking Aqhat to be the prototype of the Gk hero Actaeon, while de Moor (1988b) has discerned seasonal elements analogous to those he believes to be present in the Baal myths and the Keret story. For a useful study of the genres, antecedents and congeners of the story see Parker (1987). Both the Keret and Aqhat stories are primitive forms of the later tragic genre: Keret's weakness lies in carelessness and a short memory. Whether Danel has a flaw in his character we cannot now say, since any description of it is now missing. But the sons of both heroes are also at fault. As Yasib sins by insulting his father, and bringing his wrath down on him, so Aqhat sins by insulting a goddess, whose vengeance is sure and terrible. These are in short typical human situations, in which reality and ideal are all too often at some remove.

Contrary to Margalit (1989a: 253) who sees the Aqhat story as 'a powerful critique of this same society and its cultural values', and de Moor (1990: 69-100 [93-97]), who writes of 'the pantheon of disillusion', so that both commentators see Ugaritic culture under judgment,[1] it seems to me that it simply presupposes the ethos of such a society and its normal preoccupations with fertile families and land. This is by and large the ethos of Genesis. The confrontation between Aqhat and Anat is the inevitable consequence of the character of the two. They merely play out the logical implications of their personalities, and neither is under any implicit judgment, any more than is the world in which they live. Indeed Aqhat gives a superficial impression of a very modern young man, standing up for his autonomy and integrity. He is

1. It seems that Ugarit and its culture is extraordinarily and irrationally prone to judgmental posturing of this sort by modern scholars. The only clear reason I can discern for this is the preconceptions of certain kinds of modern theology, which perhaps, sensing a threat when comparisons are made with ancient Israelite-Judahite religion, feel obliged to defend the latter *à la Deutéronome* by a sustained offensive against the former. At the end of the twentieth century it would be nice to think that we had outgrown such a prejudicial approach. It is quite inappropriate to an academic discipline.

just rather too blunt in making his point. Anat's particular form of flesh-devouring savagery is a graphic image of war personified. Her character as a huntress here, especially in KTU 1.18 iv 3 and 1.19 i 1-19, is to be compared with the imagery of her as a war-goddess in KTU 1.3 ii 3-30, for the two activities are closely related, especially in royal ideology. But there is nothing inherently ideological in the poem, even in the light of the hunting dimension, for the themes are universal, though the probability of its redaction by Ilimilku, who seems to have had his own motivation in transmitting the Baal Cycle and Keret, suggests the application of a similar concern with the royal legitimacy of Niqmad II (cf. Xella 1976). This is nevertheless essentially a folk-tale which takes for granted the prevailing world-view of its time of transmission. Some scholars suppose that a tablet preceding KTU 1.17 may be missing, while a fourth missing tablet, or possibly one or all of KTU 1.20–1.22, are sometimes regarded as the continuation of the narrative at the end.

Synopsis of the Narrative

1.17 i Danel (is without a son and therefore performs a ritual to obtain divine assistance; he) sacrifices to the gods for six days, perhaps spending every night in the temple. Baal intercedes for him on the seventh, asking El to provide a son who will perform all the filial duties. El blesses Danel and promises...

ii a son. [The son is born and news is brought to Danel,] who rejoices and holds a feast in his palace for the goddesses of childbirth.

iii ————

iv ————

v Kothar arrives with a composite bow as a gift. He is fêted, and the bow is given to Aqhat...

vi A feast is taking place. Anat asks Aqhat for the bow. He tells her to take the raw materials to Kothar, who will make her one. She persists, offering him immortality. He tells her to stop lying, and says that, in any case, a bow is a man's weapon. She goes off to El in a rage, accusing Aqhat of impiety.

1.18[2] i Anat threatens El if she does not get her way; he gives her a free hand. She comes to Aqhat, inviting him to go hunting with her.

ii ———————

iii ———————

iv Following a successful hunt, Anat summons Yatipan, and tells him to assume the form of a falcon, and pounce on Aqhat, killing him. He does so...

1.19 i The bow falls into the river and is smashed. Anat immediately laments what she has done. Danel sits to dispense justice; Pughat sees the withering of the plants and tears Danel's cloak. He utters a curse.

ii Danel, apparently not taking in the whole story, which of course the reader knows, wishes that his son would harvest the now shrivelling grain. Two messengers arrive and tell of Anat's complicity. Danel...

iii curses the falcons. As each falls from the sky he examines its stomach (or crop). Empty falcons are healed. Finally he finds his son in Sumul's stomach, and buries him. He then goes round the country,

iv cursing all villages in the neighbourhood of the murder. Aqhat is mourned for seven years. Pughat puts on armour, with a woman's gown over it, and sets off to find Yatipan. He thinks she is Anat, demands wine, and boasts of his exploit while she plies him with it...

2. Virolleaud (1936d: 217-27) estimated KTU 1.18 as having had six columns. He took cols. i and iv to be vi and i respectively. See also discussion at n. 136 to KTU 1.18 ii on Margalit's view.

1.17 i (about 10 lines missing)[3]

'...

1.17 i 1 [Then[4] let Danel, the man of heal]ing,
at once let the hero, [the devotee of *Hrnm*][5],

3. A previous tablet may also be missing, according to Margalit (1989a: 250-51). There is some circumstantial support for this, for ten lines is scarcely enough space for an Ugaritic poet to reach the stage in the narrative as it begins in l. 1. There are just too many presuppositions which the reader requires, such as, did Danel have previous children who died? Had his wife died, like Keret's, with perhaps a second marriage already consummated, but proving barren? If the opening lines are instructions (see n. 9) who issued them and against what background?

4. The presence of the formulaic introduction *[apnk]...aph<n>* leads Husser (1996: 85) to suppose that a self-contained unit (cols. i and ii down to l. 27) begins at this point.

5. Danel carries the double epithet *mt rpi...mt hrnmy*. What do they mean? The term *mt*, ('man') is usually construed in the sense of owing allegiance to, or in a religious sense, being a devotee of a deity, on the supposition that *rpi* (nom. *rpu*) and *hrnm* are DNs. The latter is also construed as a TN, so that *mt* TN means 'citizen of TN'. The most obvious candidate for the former is Rapiu, the god hymned in KTU 1.108, who appears to be the eponym of the *rpum* (cf. Heb. *r^{e}pā'îm*) who feature in KTU 1.20–1.22 and KTU 1.161. See Parker (1972), de Moor (1976) and Rouillard (1995). Typical of other translations: Driver (1956: 49): 'Rephaite... *hrnmy*-man'; Caquot and Sznycer (1974: 419): 'man of healing... man of Harnam' (with explanation: 402, that the latter 'probably reveals the name of his capital'); cf. Jirku (1962: 116); Gibson (1978: 103): 'man of Rapiu...man of He-of-Harnam'; de Moor (1987: 225 and nn. 5, 6): 'the Saviour's man...the Harnamite man' (explained n. 5, as Danel being a special protégé of Baal, and n. 6, Harnam being perhaps Hermil on the Orontes, with other views and refs. given). The treatment of *hrnmy* as gentilic goes back to Albright (1953). Virolleaud and del Olmo leave untranslated. Margalit (1989a: 143, 251-60): 'the Rapian... devotee of the "Rainmaker"', (with survey of opinions, and rejection of the theological sense of *rpi* and the gentilic sense of *hrnmy*). Margalit takes *rpi* to be a TN—with *mt rpi* as gentilic—ident. with modern er-Rafeh in the Hauran (Raphon of 1 Macc. 5.37, Eg. TN *nw.rpi*; cf. G.A. Smith 1931: 629 n. 1). Thus the term has for him the sense of 'man of Rapiu (TN)', a position forced on him by his refusal (1989: 253 etc.) to accept that Danel is a king. As for *hrnmy*, he construes this as a DN, made up from √*hr(r)*, 'be full, pour out, dispense' and *my*, 'water', thus 'dispenser of waters', 'Rainmaker'. I find Margalit's broad arguments more compelling than previous ones, especially in view of the cultic associations of *hrnmy* in KTU 1.19 iv 24, 31. The whole issue is now to be revised in the light of Annus 1999, who convincingly relates *mt rpi* with Greek *meropes anthrôpoi*. I am not convinced by the etymology offered for *hrnmy* (it takes no account of the *-n-*) in the second, so that I take it to

enrobed[6], feed the gods,
[enrobed], give[7] the holy ones[8] [to drink].

be an unexplained theological term, perhaps an epithet or a DN **hrnm*. Might such a (minor) god be associated above all with incense? See below at KTU 1.19 iv 24-25. Note that I adapt the nuance of *mt* to each context: 'ruler ... devotee ...'. I have written the TN 'Rapha' instead of 'Rapiu' (DN) for clarity. Dressler (1979: 211) also rejects a royal dimension for Danel. It must be conceded that certainty eludes us on the term *mt rpi*. I have fulfilled the translator's duty of choosing an option here. Given that I accept Danel's royal status, the possible anticipation of his future status as one of the *rpum* cannot be ruled out. Cf. n. 152 to KTU 1.15 iii 4.

6. Ug. *uzr*. Taken as G pass. pt. The garments Danel wears (*ṣt*, *mizrt*), presumably a ritual one appropriate to the occasion and an undergarment, are mentioned in ll. [4-5,] 13-15. For this approach see Aistleitner (1964: 67: 'in mourning-clothes'), del Olmo (1981a: 367: 'girt'), Xella (1982: 193: 'ritually clothed'). Hardly 'in loincloth' with Margalit (1989a: 143), 'clothed in a loincloth' (Husser 1996: 88), as this would be quite inappropriate for a ritual occasion. (Wilfred Watson points out to me that Sum. priests were portrayed as 'ritually naked' during the cult, but we may not assume that this was the case in Ugarit.) Dijkstra and de Moor (1975: 172-73), followed by de Moor (1987: 225 n. 7), reject this sense in favour of some cultic term appropriate to solid and liquid offerings ('consecrated oblations'), comparing it with Ph. *'zr* = *'zr*. Cf. Gibson (1978: 102 n. 1). See already Driver (1956: 49 and n. 2): 'nectar(?)', Jirku (1962: 115-16): '*uzr*-offering', Caquot and Sznycer (1974: 419 and n. c): 'stimulant'. *UT*, 354 §19.125 (√*'zr* II): 'food or drink offerings'; *WUS*, 10-11 §130a as above; *DLU* (p. 67) lists various options. A case can be made for either approach. On the garment approach cf. the following (all refs. Yon 1991): the long ceremonial robe with thick hem worn by the king, and illustrated several times, e.g., on the Baal au Foudre stela (p. 331, RS 4.427) and on the terracotta stands (e.g. p. 332 §e, RS 78.41 + 81.3659). This probably represents a specific type of garment worn in cultic contexts. Cf. also the robe of the enthroned El statue found in 1989 (pp. 117 §2, 337 §17b: RS 88.70) as well as the gilded bronze statuette (p. 337 §17a, RS 23.394) and perhaps on the stela (p. 336 §16a, RS 8.295).

7. See Dijkstra and de Moor (1975: 173) on √*šqy* as causative in the G-stem. The parallel term *lḥm* has the same causative sense. Cf. Pardee (1997c: 343 n. 2). The view of Caquot and Sznycer (1974: 419) that Danel eats and drinks 'divine stimulants' is untenable with regard to the form of the vbs. Cf. also Aistleitner (1964: 67) who has 'the god ate ... the son of *Qdš* drank', identifying these terms with Danel. The only obvious use of 'stimulants' is wine and various incenses. On the other hand an enquiry into the religious use of plant substances and other narcotics in ancient Ugarit could prove very interesting. Cf. n. 50 to KTU 1.14 ii 19.

8. Ug. *bn qdš*. Lit. 'sons of the Holy One' (sc. El): cf. *bn ilm*, 'gods'; alterna-

Let him take off [his robe, go up] and lie down.
1.17 i 5 take off [his clothes] and go to bed.'[9]

Lo,
a day [and a second],
[enrobed, the gods] Danel,
[enrobed, the gods] he fed,
enrobed, [he gave] the holy one[s to drink].

A third, a fourth day,
[enrobed, the go]ds Danel,
1.17 i 10 enrobed, [the gods he] fed,
enrobed, he gave the [holy] ones to drink.

[A fi]fth, a sixth day,
enrobed, [the go]ds Danel,
enrobed, the gods he fed,
[enrobed] he gave the holy ones to drink.

[Dan]el took off his robe[10];
he took off his robe, went up and lay down,
1.17 i 15 he took off his clothes[11] and went to bed.[12]

tively, 'sons of holiness (abstract)'. But not 'sons of Qudshu (goddess)'. See n. 78 at KTU 1.2 iii 20.

9. I am inclined to endorse the approach of Jirku (1962: 115), followed by Caquot and Sznycer (1974: 419-20) who have this passage read as a set of instructions, which Danel then obeys in ll. 5-15. The only problem is stylistic: do the forms *apnk* || *aphn* belong within direct speech? Others treat the vbs as indicatives, and the passage as narrative. The latter approach raises the problem of this initial account being followed by the seven-day account that follows, an unlikely repetition, even by the standards of Ugaritic prolixity. In that there is an imbalance between the apparent simplicity of the instruction (to be performed once?—or is it possible that reference to a six-day sequence was contained in the original text?) and the complexity of its fulfilment (performed over six days), the whole point is probably that Danel's desperation for a son leads him to an obsessive performance of the rites. This lends verisimilitude, in that it highlights the anguish of a childless king. Cf. Keret's emotional state in KTU 1.14 i 26-30.

10. Ug. *ṣth*. Cf. Dijkstra and de Moor (1975: 174): Akk. (*ā*)*ṣītu*, Ar. *ṣuttiyah*. They also compare Heb. *sût*, 'vesture' (with samekh).

11. Ug. *mizrt*. Or: 'loincloth'. Cf. Pardee (1997c: 343 n. 3).

12. The entire ritual episode has been widely interpreted as an incubation procedure (see especially Obermann 1946). Margalit (1989a: 77, 250, 260-66) and Husser (1994: 29-62; 1996: 93-95) offer systematic critiques of the theory, concluding that there is no instance of it in Ugaritic literature. Note the difference in

Behold[13],
on the seventh day[14],
Baal drew near[15] in intercession[16] for him,
at the misery[17] of [Da]nel, the man of healing,

the character of Keret and Danel as described by Ilimilku. Keret sobs himself to sleep at his unhappy lot. Danel is more pragmatic, and performs a ritual to achieve his end. There may of course be a description of Danel's state of mind in earlier missing text. Keret has also lost his wife; Danel has a wife, who appears later (l. 39) and is subsequently (KTU 1.17 v 16) identified as 'Maiden Dantiy', so that the rituals performed may be construed as traditional medicine, intended to effect a conception.

13. Ug. *mk*. Introduces the seventh day, a new departure from the preceding six-day sequence. Similarly at KTU 1.17 ii 39.

14. The repetitious use of seven-day periods and other examples of the use of sevenfold structures were noted at KTU 1.16 v 20-21 n. 270. The narrative appears to indicate that Danel offered sacrifices and libations for six days (not seven, as proposed by Margalit 1989a: 266) before going to bed. If so, this probably corresponds to no normal ritual (there is no intrinsic reason, for instance, to link it with the seven days of KTU 1.41.47), but is a literary hyperbole, as the formal use of the n, n + 1 enumeration indicates (the seven is the climax, the favourable time when so much piety can *only* be efficacious), to express the degree of his dedication and self-sacrifice in pursuit of the most noble of ends, obtaining posterity. There was no question of free choice about having children: it was a solemn duty. The literary form also serves to show his importunity, which finally achieves its result when Baal intercedes for him.

15. Baal draws near not to Danel, but to El, before whom he intercedes for Danel. This is not a theophany. Thus we are to understand the events of this scene to take place in El's home. I have taken this to be located on Mt Saphon ('Mount Throne', KTU 1.1 iii 12, is apparently to be located on Saphon l. [16]), though in an earlier recension some sacred locality of the Hauran may have been intended, such as Mt Hermon or Jebel Druze. I suppose that Ilimilku has at any rate made the transfer in his own mind, even if there is nothing specific in the text. This supports the interpretation of the opening lines as instructions (now that he has obeyed them it is time for Baal to act, perhaps reminding El of a promise?), and lends some circumstantial support to the view that there was an earlier tablet, now missing, which narrated events preceding Danel's present childless condition. Certainly the estimated ten lines missing at the beginning of this tablet could hardly have given much in the way of introduction to the present complex state of affairs.

16. On the precise nuance of *ḥnt* see Watts (1989).

17. Text *abynt* (Virolleaud 1936d: 186 and pl. V). *CTA* reads final 'nt' in Rom. *KTU*[1 and 2] read '*abyn* at'. For this reading see Dietrich and Loretz (1978b: 67). The signs following the clear *aby* are entirely unclear. There may even be three signs, a third being perhaps discernible on the double vertical line separating the columns.

the groaning of the hero, the devotee of *Hrnm*,

who had no son like his brothers,
nor scion like his kinsmen[18]![19]

1.17 i 20 'Because[20] having no son like[21] his brothers,
nor scion like his kinsmen,

enrobed, the gods he feeds,
enrobed, he gives the holy ones to drink,

you must surely bless him, Bull El my father,

There are vertical elements as clear as the horizontal ones, yet none are as deeply impressed as other letters in the vicinity. Most take a practical line, recognizing in the uncertain writing either *abyn* or *abynt*; thus Virolleaud (1936d: 191): 'abstract from *'ebyôn* [*sic*]'; Gibson (1978: 103 and n. 5, 141): 'the misery' (MHeb. *'ebyônût*, 'poverty'). Caquot and Sznycer (1974: 420 and n. i): 'my father...' (reading only *aby* with certainty); Del Olmo (1981a: 368): 'How wretched you are', cf. also Xella (1982: 194), Aitken (1990: 29 and n. 4) presupposing *abyn at*. Margalit (1989a: 144, 267) takes *abyn* as an epithet applying to El: 'a deliberately rhymed and ironic imitation of El's stereotyped epithet *ltpn*'. This seems rather speculative. His translation: 'art thou indifferent...', construes this as the beginning of Baal's speech.

18. There appears to be a macho dimension here. Danel presumably is to be imagined as comparing himself unfavourably to other men, even if we concede Margalit's (1989: 254-55) view that it was generally women who were blamed for failure to conceive. The very matter of blame says it all! If Danel is in addition a king, the matter is even more serious, since his virility (or lack of it) would be full of portent for the nation. And the nation goes on results. This theme is comparable to that of the Keret story.

19. There is no certainty as to the whereabouts of the beginning of Baal's speech. Some scholars incorporate these two bicola as the beginning, addressed either to El or Danel (cf. n. 15). I take Baal's words to begin in l. 20 (with *bl*), following Driver (1956: 49) and Jirku (1962: 116). (Their line-numbering follows Virolleaud and *CTA*, mine that of *KTU*.) The latter position is more convincing, since otherwise Baal indulges in a gratuitous repetition.

20. Ug. *bl*. Normally taken as a negative or positive particle (see, e.g., del Olmo 1981a: 527, with refs.). It must here be construed with the following *it*. Gibson (1978: 104 n. 1) cites Heb. *'ên yēš* in 1 Sam. 21.9 and Ps. 135.17. Virolleaud (1936d: 188) appears to think that Danel already has a son! No sooner prayed for than granted?

21. Text *wm*. usually corrected to *km*, but better *k*[*m*] (*k*...*km*... being a standard word-pair).

you must surely give a blessing to him[22], O Creator-
of-creatures,

1.17 i 25 so that he may beget[23] a son in his house,
a scion in the midst of his palace.
He shall set up[24] the stela[25] of his ancestral god[26], [I]

22. Ug. *tbrknn...tmrnn*. For the same vbs (*tbrk* || *tmr*) see KTU 1.15 ii 14-15 and n. 141.

23. Ug. *ykn*. √*kwn* in its sexual sense: 'beget' rather than 'establish', though the latter sense is possible. Cf. KTU 1.23.54, Ps. 8.4 and Wyatt (1996b: 227 n. 29, 242). Margalit (1989a: 144) takes the latter sense in the pass.: 'that a son may be established'. There follows the list of the classic six duties of filial piety (enumerated as [I-VI] for ease of reference in discussion). It is striking that only six are listed. We would not be surprised to encounter seven, and I suggest that the present bicolon, introducing the six, constitutes the seventh element of our implicit expectation, so that the result is the sevenfold perfection of the production ([I]) of a son who will fulfil all righteousness ([II-VII]).

24. Ug. *nṣb*. These and the other verbal forms (apart from *mšṣu*, l. 27 and *m'msh*, l. 30) may be construed as pt., finite or inf. abs. forms, the son || scion being the subject. The two clear pts. in the series suggest that this is how the others can be read, and this is how I have construed the other vbs in the same bicola. Caquot and Sznycer (1974: 423) treat the units as relative clauses: 'who will...' (thus also del Olmo 1981a: 369); Gibson (1978: 105) takes them all as (pt.) nouns: 'one to...' I have used 'shall' to indicate the modal sense: these are duties to be performed. Since there is no specifically royal element in the list of duties, we should think of a traditional form here taken up by the poet. 'One who stations himself': Boda (1993: 12-13), taking *nṣb* as relating to Heb. niph. form.

25. Ug. *skn*. 'Stela': del Olmo (1981a: 368, 595), citing √*skk*, Heb. *nesek* (by metath.)—sc. '(place of) libation', Akk. *šiknu*. So also Jirku (1962: 116), Caquot and Sznycer (1974: 421), Xella (1982: 194) and van der Toorn (1996: 154). Dijkstra and de Moor (1975: 175): 'stelae'. Aistleitner (1964: 68): 'statue'. Gibson (1978: 104): 'steward'. *UT*, 449 §19.1754, 'stela', 'steward' (Heb. *sōkēn*); *WUS*, 220 §1909 ('administrator', Akk. *šaknu*, Heb. *sāgān*, *segen*). Margalit (1989a: 144, 268): 'tomb', 'literally "storage-place"'. He considers the term to represent a dolmen, and refers to the numerous dolmens of the Golan (sc. in the western Hauran, original setting of the story). The use of a raised stone monument ('stela'), surviving down to the present in the form of modern gravestones, is well established in antiquity as a memorial and votive offering on behalf of the dead, often inscribed with pious biographies or statements of cultic intent. A local (Ugaritic) example of the former is, e.g., the Mami stela, RS 1.[089] + 2.[033] + 5.183, found in the 'Baal temple' (Yon 1991: 322, 328 §8a and b). Examples of the latter are, e.g., KTU 6.13, 6.14 = RS 6.021, 028, (Yon 1991: 322, 334 §14a and b), the 'Dagan' stelae found on the south side of the south-easterly of the two acropolis temples, on the basis of which rests its identification as the Dagan-temple. Many of the other illus-

in the sanctuary[27] the cippus[28] of his kinsman[29];
into[30] the earth sending forth his dying breath[31], [II]

trated but uninscribed stelae from Ugarit may also have had funerary connections. 'To care for': Healey (1979: 355), followed by Boda (1993: 12-13).

26. Sc. 'the god of the ancestor' of KTU 1.47.2 = KTU 1.118.1 = RS 20.24.1. See n. 2 *ad loc.* This deity was presumably pluralized (*ilibh* implies a specific ancestral god) to account for all family needs. Margalit (1989a: 144): 'his (father's) ghost'. But there is no intrinsic reason to identify *ilib* || *'m* with the 'soul' of the father dying in the following bicolon. This bicolon deals with a cultic tradition of ancestor-invocation, the following one with a funeral. Whether *ilib* represents a deified ancestor, or perhaps rather a clan deity whose worship dates back to one's ancestors, remains uncertain. For the latter view see Pardee (1997c: 344, n. 6). See also at n. 29.

27. Ug. *bqdš*. That is, as a symbol of his presence before the resident deity? Margalit (1989a: 271) suggests that here and at KTU 1.169.8 it denotes the cemetery. The case for the latter is stronger than for here, where we should take into account the fact that stelae were found specifically in association with the temples at Ugarit. Tombs were beneath the floors of individual houses at Ugarit, though the dolmen-groups of the Golan may have constituted collective burial-grounds.

28. Ug. *ẓtr*. Caquot and Del Olmo (1981: 368): 'votive cippus'. Tsevat (1971: 352): 'sun-emblem' (Hitt. *šittari*), followed by Dijkstra and de Moor (1975: 175), Xella (1982: 194) and Pardee (1997c: 344 and n. 7). Sznycer (1974: 421): 'monument'; van der Toorn (1996: 154): 'symbol'; Jirku (1962: 116): 'protecting'; Aistleitner (1964: 68): 'streaming out' (cf. *WUS*, 98 §890); Pope (1981: 160 n. 4) and Boda (1993: 14): 'thyme'. De Moor (1985b: 408; 1987: 228 and n. 26): 'marjoram'. The two terms *skn* and *ẓtr* being best construed as in parallel, a sense is required which is plausible for both.

29. Ug. *'mh*. The term *'m*, like *ilib*, is a recognized DN. It does not specifically mean the father. Rather 'maternal uncle'. Caquot and Sznycer (1974: 421), with the alternative sense, 'clan', are thinking in terms of family solidarity. Cf. Margalit (1989a: 271). The presence of the possessive *-h* on both *ilib* and *'m* suggest that we do not have the formal use of DNs here, but rather the generic forms that in each case lie behind the DNs, denoting a type of spiritual entity, individualized in such and such a DN of the same name.

30. Ug. *l*. This is usually understood as 'from'. For the sense 'into', thus reversing the point of the son's ritual duties towards his father, making them part of the funeral service rather than a subsequent cult, see Xella (1982: 194) and Husser (1995: 118-26 [124]). Cf. KTU 1.6 ii 37, where it is perhaps the implicit failure to bury the fragments of Mot *and to keep them underground* which leads to his subsequent revival. Thus it is in no sense a reference to a cult of the dead, but rather to effective funeral rites, which are designed to deal with the dead by sealing them firmly in the underworld, thus freeing the world above from their continued (and now baneful and unwelcome) presence. Cf. also the passive vbs in KTU 1.161.2-

into the dust protecting[32] his progress[33];
he shall shut[34] the mouths[35] of his slanderers, [III]

12, which I suggest below (n. 8 *ad loc.*) are an indication of the fear in which the dead are held.

31. Ug. *qṭrh*. Lit. 'his smoke' (Heb. *qîṭôr*, Akk. *qutru*). A metaphor for a man's last breath. Cf. KTU 1.18 iv (24-)26 and 1.169.2-3 for its similar occurrence with √*yṣa* (discussion in Husser 1995: 121-23). Note that this goes *into* the underworld. Interestingly this indicates on the surface a different anthropology from the familiar biblical one. There a divine breath is mixed with soil to make a human being (Gen. 2.7). At his death, Yahweh withdraws the divine breath (Job 34.14) and the body rejoins the soil from which it came (Gen. 3.19; Job 1.21; 10.9; 34.15; Ben Sira 40.1). But there remains something of a person's consciousness in Sheol (e.g. Pss. 6.6; 139.8), suggesting that more than mere flesh descends. Cf. also Samuel's *''ʿlōhîm'* (1 Sam. 28.13). The Ug. text confirms an archaic belief in a 'soul' of sorts which will now dwell in the tomb. The relation of this to the *rpum* (presumably the 'souls' of dead kings) remains unclear. A further passage to be considered with this one is KTU 1.18 iv 23-26. See n. 156 *ad loc.*

32. Ug. *ḏmr*. For the argument for taking this as a vb rather than as a n. (*mšsu* || *ḏmr* rather than *qṭrh* || *ḏmr aṯrh*) see Husser (1995: 118). It is vital that the rituals of burial be performed correctly, so that the deceased really enters the underworld. Hence the protective, apotropaic element. Perhaps something akin to the ancient Near Eastern and Gk fear of the dead lying unburied lies behind the allusion. Though Xella (1982: 194) takes the same broad line on this bicolon as Husser, he translates the present colon as 'and to the dust intones the song (*ḏmr*), over his tomb (*aṯrh*)'.

33. Ug. *aṯrh*. Husser (1995: 126) envisages the souls of the clan-ancestors coming together at the funeral to escort the newly-dead into the underworld. This is what appears to be happening in KTU 1.161, where the dead kings named are summoned not out of the underworld, but into the tomb which constitutes its threshold, where they will gather to welcome Niqmad into their company. At the funeral they await his descent among them, commanded by the officiant in ll. 20-26. A similar conception appears to lie behind the wording of Isa.14.9-20. But the dead kings there come not to welcome, but to taunt. Husser's approach supersedes the analysis of this colon by Caquot (1987: 8-10). Pardee (1997c: 344 and n. 8), translating 'his place', identifies this as the burial chamber under the floor of the house. Most houses at Ugarit, together with some at Mahadu (Minet el Beida), as well as a number of rooms in the palaces both at Ugarit and at Ras Ibn Hani, have complex corbelled burial chambers, evidently dating from the time of the construction of each building. Similar tombs have been found in the Peloponnese (hence the common designation 'Mycenaean'), but they have also been found at Mari and elsewhere.

34. Ug. *ṭbq*. *Hapax* in Ug. Ar. *aṭbaqa* used (intrans.) of 'closing' of mouth: Dijkstra and de Moor (1975: 176). Cf. Heb. *dābaq*? *WUS*, 120 §1113.

he shall drive away those who are ill-disposed[36]
towards him.

1.17 i 30 Taking his hand when he is drunk, [IV]
supporting him [when] sated with wine[37];

35. Ug. *lḫt*. Either 'jaws' or 'mouth' (Heb. *lᵉḥî*, cf. Akk. *laḫû*?); thus Caquot and Sznycer (1974: 422), Gibson (1978: 104), del Olmo (1981a: 369), Xella (1982: 194) and van der Toorn (1996: 154); cf. *WUS*, 168-69 §1451, *DLU* √ I. Or on another approach 'accusations' (lit. 'tablets', presumably outlining a legal charge against someone, like a modern writ: cf. Heb. *luḥôt*). Cf. *WUS*, 168 §1449, *DLU* √ II. The latter term appears at KTU 1.2 i 26. Virolleaud (1936d: 189): 'tablets'. Dijkstra and de Moor (1975: 176): 'abuse', Margalit (1989a: 144): 'calumnies', based on Ar. *laḥā*, 'to insult', Aram. *lḥy(t)*, 'evil'. On this approach the sense may be 'he will rebut the calumnies of those who malign him'.

36. Ug. *'šy*. Or 'those who attack'. *WUS*, 243 §2109, 'disturb, bother'; *DLU*, 93, 'do ill to someone, molest'. See useful discussion of the options in Caquot (1987: 10-11) and Margalit (1989a: 274-76). The latter's suggestion of Ar. *'s(s)*, 'grumble...' is suggestive, following his proposal to interpret *'šy* in KTU 1.17 vi 8 as 'spleen' (dismissed by Boda 1993: 19, who proposes 'attack', cf. Heb. √*'āsâ* pi.). Margalit further suggests a class distinction between his peers in the first colon, who give him verbal abuse (or threaten him with a lawsuit?), and his inferiors in the second, who threaten physical violence. But this may be reading too much into the text. His further remark (p. 276 n. 38), part of his general rejection of a kingly Danel, to the effect that were he really a king he would have paid retainers to perform these jobs, is not convincing in the face of the circumstantial evidence for his kingship. First, the list appears to be drawn from popular wisdom on filial duties, only secondarily applied here to a king; and secondly, there is a simplified presentation of Danel's kingdom, in which only immediate issues are mentioned, and only the actors appear, to work through one particular theme of family tragedy. It is the demands of folktale construction (Olrik 1909, discussed in relation to the Abraham narratives by van Seters 1975) rather than political reality which determine the format. (For a critique of Olrik see Whybray 1987: 142-52.)

37. As Husser notes, this is at first glance anomalous in a catalogue so far of primarily religious duties. It quite possibly refers to the father's participation in the rites of the Marziḥu, as proposed by Eissfeldt (1966). See also Margalit (1989a: 276-77), who notes the verbal similarities with KTU 1.114.16-19. Cf. the assistance given to El when he is inebriated in KTU 1.114.18-19 (noted also by de Moor 1987: 228 n. 31). There are six bicola here listing the son's duties. They are listed thus, as demonstrated by Husser (1995: 117), enumerating them from I to VI: duties III, IV and VI are to be performed during the father's old age; duties I, II and V after his death. This gives an a:a:b::b:a:b arrangement of the duties. We must remember that life expectancy was probably below forty in LB Ugarit, so that a father of that age was 'old'. Duties III and VI are domestic, duties I-II and IV-V are cultic. The pt. verbal forms (see n. 24 above) are used with duties II and IV, verbal

he shall serve up his share[38] in the house of Baal, [V]
and his portion in the house of El;

he shall plaster his roof on a [mu]ddy day, [VI]
he shall wash his clothes[39] on a filthy day[40].'[41]

ellipsis with duties I and V, so that in syntactic terms the final arrangement is a (ellipsis):a (2 pts):b (2 vbs)::b (2 pts):a (ellipsis):b (2 vbs).

38. Ug. *ksmh*. There are two options for the sense. Firstly, cf. Heb. *kusemet*, 'spelt' or 'emmer' (an early wheat); thus, e.g., *WUS*, 154 §1359 and Dijkstra and de Moor (1975: 177), who note the term as a cereal offering in KTU 1.39.9 and 1.41.19. See also Pardee (1997c: 344): 'grain-offering'. Cf. however discussion at latter text (n. 30), where I have translated 'cups'. Secondly, 'share, portion' (thus, e.g., Dietrich and Loretz 1978b: 70; del Olmo 1981a: 369, 567; Margalit 1989a: 144). Cf. Heb. *kāsam*, Akk. *kasāmu*, 'cut in pieces', *kismu*. This affords a better parallel to *mnth*, 'his portion', in the following colon. De Moor (1987: 228 and n. 32) allows either sense. Caquot and Sznycer (1974: 422 n. v) compare Num. 9.13, which refers to obligatory participation in sacrifices, envisaging the son standing in for his father on such an occasion.

39. Ug. *npṣh*. There is no need to see this as a military garment, as is implied in Margalit's (1989a: 279) discussion (cf. *npṣ ġzr* at KTU 1.19 iv 44), but quite likely that it refers to 'official' garments of some kind. *WUS*, 211 §1824, 'outer garment'. Gibson (1978: 153) cites Ar. *nifâḍu*, 'smock'. De Moor (1987: 229): 'his equipment'; Pardee (1997c: 344 and n. 11): 'his outfit'.

40. The apparently menial nature of these duties is evidence for Margalit (1989a: 279) against Danel's kingly status. But again, the list is traditional, and even though a prince would never soil his hands with such duties, he might like to be presented as so doing for piety's sake. The final expression *bym rṯ* may refer to 'the day of (its) filthiness', the epithet referring back to the clothing. Cf. Watson (1976c: 376).

41. This passage, ll. 26-33, occurring four times in quick succession in cols. i and ii, is a classic locus for analysis of the moral life of Ugarit. See Eissfeldt (1966), Koch (1967) and Healey (1979). All the values of family solidarity are enshrined here, and the essential role of the (eldest) son who performs all the key rituals which in effecting the present and future welfare of his father symbolizes that of the whole clan. Thus the folk-tale remains the vehicle for important social messages. The repetition, like a musical refrain (and we should be open to the possibility that this poetic material was declaimed to the accompaniment of musical instruments), reinforces the point. The high moral tone of such passages, to say nothing of the overall plots of the stories, belies the occasional theologically motivated presentation of Canaanite values as deficient or depraved. See Wyatt (1996b: 326-30, 393) and above at introduction to Aqhat, n. 1. Healey (1979: 356), whose analysis differs from the line taken above, describes this as 'a rare sample of Ugaritic wisdom literature'.

El took [a cup] <in (his) hand[42]:
a goblet in (his) right hand;
he did indeed bless[43]> his servant[44],

42. The text reads [--]*yiḫd.il.'bdh*, which would mean '[ ] El grasped his servant'! Cf. Caquot and Sznycer (1974: 422), 'El took his servant [by the hand]', restoring [*byd*] in the lacuna. Scholars have subsequently tended to accept the proposal of Jackson and Dressler (1975), and independently Dijkstra and de Moor (1975: 177-78) and Loewenstamm (1975a: 109). See also Pardee (1977, 1997c: 344), Parker (1979: 19-22) and Margalit (1989a: 144-45). Jackson and Dressler draw on the form of the blessing narrative in KTU 1.15 ii 16-20 to restore a better reading here. They explain it on the basis of a misreading of a word-divider as an 'ayin (so that for "*bdh*' we should read '*.bdh*', the the final *-h* would not have been present if *verbatim* as in the Keret version). We have a haplography on the part of Ilimilku or his scribe, involving a slip on a master document from '*.bd*' (or '*byd*') on one line to "*bdh*' on the next. Thus the whole of the second colon and parts of the first and the third of the Aqhat passage have been lost. This is confirmed by the suffix *h*, which belongs to *'bd*, 'servant', but perhaps not to *b(y)d*. Here are the two texts for comparison, with the proposed restoration in the Aqhat passage:

KTU 1.15 ii 16-20	KTU 1.17 i 34-<->-36
ks.yiḫd [il.b]yd	*[ks] yiḫd.il< byd(h)*
krpn.bnt [ym]n	*krpn.bnt ynm(h)*
brkm.ybrk ['bdh].	*brkm.ybrk > 'bdh*
ybrk.il.krt [r]	*ybrk [il.dnil].mt.rpi*
[ym]rm.nʿm[n.]ǵlm.il	*ymr.ǵzr [mt h]rnmy*

Note that *[ym]rm* in the Keret version carries enclitic *m*. The reading now established also draws attention to the term *'bd* in the tradition, which is important in determining Danel's royal nature (*pace* the declarations of Jackson and Dressler and Parker that it does not occur of Danel). Margalit does not appear to have noticed this point, though accepting the restoration. The same ritual procedure now occurs in both texts (in the same context, of El blessing a king who desires a son): El takes the cup of blessing; the bicolon, and the stereotyped formula of blessing which follows as a tricolon probably represents in the narrative an allusion to a fixed liturgical form. Only then do we have a form of words specific to the context, so that the one applied to Keret is different from that employed here. To El's ritual gesture cf. also KTU 1.1 iv 9-10, where he takes the cup during the rites of Yam's enthronement.

43. Cf. discussion of the usage at KTU 1.15 ii 18 above (n. 142 *ad loc.*).

44. See n. 42. 'His servant' prefaces the usual stereotyped formula of the poem, extending the bicolon into a tricolon. I cannot accept the force of Parker's (1979: 21-22) argument, which appears to want to deny the presence of *'bdh* in the text against all the evidence. The fact that it is used *hapax* of Danel is no proof that it cannot be so used! The Heb. term *'bd* has the specific overtone of 'gardener' (cf.

1.17 i 35 [El] blessed [Dane]l, the man of healing,
he gave a blessing to the hero, [the devotee of *H*]*rnm*:

'By my life! Danel, [the man of heal]ing, shall live!
by my vitality[45] the hero, the devotee of *Hrnm*!
[May] it [go] well with him![46]

Let him go up to his bed [and lie dow]n[47]:

1.17 i 40 from kissing his wife [let there come conception],
from his embracing her, pregnancy[48]!

[ ] let her give birth

Wyatt 1988b and 1990c), and alludes to cultic duties of the king. I think it highly likely that such nuances were also present in the Ug. term.

45. Ug. *npš.yḥ...brlt*. For this interpretation see also Dijkstra and de Moor (1975: 178), followed by de Moor (1987: 229) and Margalit (1989a: 145), taking the *npš...brlt* to be oaths: 'By my life!... by my vitality!', with *ḥy* construed as a dd jussive. Cf. RS 8.333.20-22 [Nougayrol 1955: 8). Alternatively, cf. Caquot and Sznycer (1974: 422), Gibson (1978: 104) and del Olmo (1981a: 370), etc. Their analysis would yield '(His) appetite let Danel [the ruler of Raph]a regain...'. See also Pardee (1997c: 344 and n. 13).

46. Text in Virolleaud (1936d: 187): *.hw.mḫ*, with a final angle-wedge of a preceding letter; cf. *CTA* (p. 80 n. 6); *KTU*[1 and 2]: [----]ḫ/ṭ.*hw.mḫ*. Dijkstra and de Moor (1975: 178) compare KTU 1.19 iv 39, reading it *a*[-]*ḫ.ḥy.mḫ*, after *CTA*. There Virolleaud (1936d: 176) reads *a*[ ] *y* [.]*mḫ*, with the remains of a *ḫ* visible at the end of the first lacuna in pl. IV l. 201. According to *KTU*[1 and 2] the reading is *n*pš.*ḥy.mḫ*. The condition of the tablet precludes a certain decision either way, and the original reading is the safer of the two, providing (tentatively) a f. parallel to the m. formula used here. On the interpretation cf. de Moor (1987: 229 and n. 39): inf. abs. of *arḥ*, 'travel', with pron. and *mḫ*, 'marrow', lit. 'may (s)he travel marrow-like'. Perhaps the English expression 'more strength to his elbow!' captures the right nuance. Margalit (1989a: 119, 170) restores the text as [*wyrš*]*ḫ.hw.mḫ* (and [p. 140] at KTU 1.19 iv 39: n̊p̊š̊.*ḥy.mḫ*), and translates 'He, no other, [will lea]p from his (own) bed'.

47. Reading *l'ršḥ.y'l* $_{39}$ [*wyškb*]; cf. *KTU* [2], which reads [wyš]k]b. Dijkstra and de Moor (1975: 178) draw attention to ll. 4 and 14 above ([*y'l*]*w yškb*). Margalit (1989a: 119, 145) construes quite differently, reading *y'l* $_{39}$ [l'rš.d]*d*. He translates (following his preceding colon [previous n.]): 'He'll mount the [bed of lov]e'. This is ingenious, but overbold.

48. On the formula cf. KTU 1.23.51, 56: [*hr*] || *ḥmḫmt*. De Moor (1987: 229 n. 41) understands *ḥmḫmt* to denote 'orgasm'. Margalit (1989a: 145, 172): '[(his) breath] will become heated... passionately'. He reconstructs the link between the cola as [whr hwt(h)] on grounds of space.

(from) the impregnation of <Danel[?]>, the man of healing.[49]

So that he may beget a son [in his house],
[a scion] in the midst of his palace.
[He shall set up the stela of his anc]estral god,
1.17 i 45 in the sanctuary [the cippus of his kinsman],
[into the ea]rth sending forth [his dying breath],
[into the dust pro]tecting his progress;

(about 10 lines missing, containing the following)

[He shall shut the mouth of his slanderers,]
[he shall drive away those who are ill-disposed towards him].
[Taking his hand when he is drunk,]
[supporting him when sated with wine,]
[He shall serve up his share in the house of Baal,]
[and his portion in the house of El;]
[he shall plaster his roof on a muddy day,]
[he shall wash his clothes on a filthy day.]
...'

1.17 ii (about 10 lines missing, probably narrating the conception and birth of Aqhat, and containing the following)

'...
[you have begotten[50] a son in your house,]
[a scion in the midst of your palace.]
[He shall set up the stela of your ancestral god,]

49. The interpretation of the last colon is conjectural, since there is no parallel to draw on.

50. In view of the discussion at KTU 1.17 ii 14, n. 57, concerning the birth of Aqhat, we should suppose, on the argument of Caquot and Sznycer (1974: 405, 425 n. f) and Husser (1996) that at some point in the lacuna between the two columns there would have been a brief narrative of Danel's love-making with his wife Dantiy, and (more or less immediately) the announcement of Aqhat's birth. (This argument is rejected by Parker 1989: 103.) Since I find Husser's analysis cogent, I have modified the form of the introduction to the third and fourth lists of filial duties in order to reflect the fact that Aqhat is now born.

1.17 ii 1 [in the sanctuary] the ci[ppus of your kinsman];
[into the earth sending forth your dying breath],
into the dust the prot[ecting your progress].
[He shall shut] the mouths of your slanderers,
he shall driv[e away those who are ill-disposed towards you].
He shall serve up your share in the house of [Baal],
1.17 ii 5 [and your portion] in the house of El,
taking your hand [when you are drunk],
supporting you when sated with wine,[51]
he shall plaster your roof on a muddy day,
he shall wash your clothes on a filthy day.'
Danel's[52] face showed his joy,
and above, his brow shone[53].[54]
1.17 ii 10 He unfurrowed his brow and laughed;
his feet on the footstool he placed[55].
He lifted up his voice and cried:
'(At last) I may sit down and rest,
and (my) soul[56] can rest in my breast!

51. Two bicola have changed places, to be seen as a scribal error rather than poetic variant.

52. Text *unil*. Read *d'nil*.

53. Cf. the appearance of Moses in Exod. 34.29-30.

54. Margalit (1989a: 120, 174) proposes an extensive reconstruction of this bicolon.

55. The gesture is the same as that of El (KTU 1.4 iv 28-29). As Gray notes (1964: 60) this is a kingly gesture, used of Keret in Ginsberg's reconstruction (1946: 24) of KTU 1.15 iv 3. See n. 164 *ad loc*. If it is generally restricted to royalty (and gods, and even portraying kings as gods), as footstools in iconography and texts suggest, it tells against Margalit's objections (1989a: 6, 20, 40, 42, 253 etc.) to understanding Danel to be a king. We have the exception of the stools set out for heroes (warriors) by Anat in KTU 1.3 ii 22, 37; but these may represent enemy kings, or heroes dying in battle and becoming divinized. In KTU 1.4 i 34 a footstool is made by Kothar for Athirat; in KTU 1.4 iv 29 El uses one, while in 1.5 vi 13 he comes down to it from his throne and thence down to the ground, as a gesture of mourning. In KTU 1.6 i 60 Athtar's feet do not reach Baal's footstool.

56. Ug. *npš*, covering a range of meanings from 'thorax', through 'chest', 'lung', to 'appetite'. See *WUS*, 211-12 §1826, Heb. *nepeš*, Akk. *napāšu*, *napištu*.

For a son has been born to me[57] like my brothers,
and a scion like my kinsmen.

He shall raise up the stela of my ancestral god,
in the sanctuary the cippus of my kinsman,

<into the earth sending forth my dying breath,>
into the dust protecting [my] progress.[58]

He shall shut the mouths of my slanderers,
he shall drive away those who are ill-disposed towards me;

taking my hand when I am drunk,
supporting me when sated with wine.

He shall serve up my share in the house of Baal,
and my port[io]n in the house of El,

he shall plaster my roof on a muddy day,
he shall wash my clothes on a filthy day.'

Danel came <to>[59] his house;
Danel arrived at his palace.

The skilful goddesses[60] had entered[61] his house,
the daughters of Ellil, the Bright Ones[62].

57. Ug. *kyld.bn.ly*. This can be translated in one of two ways. 'For a son will be born to me', as future (thus, e.g., Gaster 1961: 338; Jirku 1962: 118; Aistleitner 1964: 69; Gibson 1978: 105; del Olmo 1981a: 372; de Moor 1987: 231; Margalit 1989a: 146; Aitken 1990: 35; Pardee 1997c: 345); or 'for a son is (or has been) born to me' as past (thus, e.g., Virolleaud 1936d: 198; Driver 1956: 51; Ginsberg 1969: 150; Caquot and Sznycer 1974: 425; Husser 1996: 90). As Husser points out, this is a well-known birth formula. He cites KTU 1.10 iii 36-37, Jer. 20.15, Isa. 9.5, and similar wording in KTU 1.23.52-53; Job 3.3; Lk. 2.10-11. Cf. Parker (1988). Husser notes (p. 91) that the 'love-scene' narrative would have occurred in the lacuna between cols. i and ii, and so would the event of the birth.

58. Margalit (1989a: 120, 146, 174-75) proposes a different reconstruction of the text at this point.

59. Margalit (1989a: 175) notes that a *l* is missing, perhaps through haplography.

60. Ug. *ktrt*, the f. pl. form of *ktr*, which as a DN is 'Kothar', the artificer god. There is no evidence of a link between the god and the goddesses. See Pardee (1995: col. 917). Further discussion in Margalit (1989a: 285-86).

61. Ug. *'rb*. On the pluperfect force of the qatala form see Husser (1996: 91-92).

62. These DNs are discussed at KTU 1.24.5-6 nn. 6-8.

Then Danel the man of healing,
at once[63] the hero, the devotee of *Hrnm*
1.17 ii 30 slaughtered[64] an ox for the skilful goddesses:
he fed the skilful goddesses
and gave the daughters of Ellil, the Bright Ones, to drink[65].

Lo,
a day and a second
he fed the skilful goddesses
and gave the daughters of Ellil, the Bright Ones, to drink.

A third, a fourth day
1.17 ii 35 he fed the skilful goddesses
and gave the daughters of Ellil, the Bright Ones, to drink.

A fifth, a sixth day
he fed the skilful goddesses
and gave the daughters of Ellil, the Bright Ones, to drink.

Behold,
1.17 ii 40 on the seventh day[66] the skilful goddesses departed from his house,
the daughters of Ellil, the Bright Ones,

those who apportion the delights of the bed of conception,
the joys of the bed[67] of childbirth.

63. Ug. *apnk*...*ap*[.]*hn*. The same formula as at KTU 1.17 i 1, beginning a new sequence of activities.

64. Ug. *ṯbḫ*, though we might have expected *dbḥ*, 'sacrificed... to'.

65. The vbs √*lḥm*, √*šqy*, used in this bicolon are already trans. in the D and G stem respectively ('feed... give to drink') in KTU 1.17 i 7-8 and repetitions of the formula. Here the Š stem is used for both vbs, perhaps with intended climactic effect, to suit the fulfilment of Danel's wishes.

66. The seven-day pattern is probably as much a literary construction as a ritual one. Cf. n. 270 at KTU 1.16 v 20-21 and n. 14 at 1.17 i 15. The present instance is strictly antiphonal to the latter. Husser's (1996: 86) analysis shows convincingly that the two cultic scenes frame the first act in the drama, resolving the problem of Danel's childlessness. He sees the goddesses (p. 92) as presiding over the critical first six days of the new-born child's life. Cf. their functions as outlined in KTU 1.24.48-50, covering everything from the nuptials to the birth of a child. Not just mid-wives but health-visitors!

67. 'Delights... joys of the bed...'. For an alternative sense as a superlative

Danel sat down [and coun]ted his[68] months.
A month, a second month passed,
1.17 ii 45 a third, a fourth [month passed][69].
The months came to [years?]

(about 10 lines missing)

1.17 iii (entire column missing, about 50-60 lines)

1.17 iv (entire column missing, about 50-60 lines)

1.17 v (gap)

'...
1.17 v 1 [ ]
[ ] I shall bring a bow, "Precious"[70];

construction see Caquot and Sznycer (1974: 426): 'the most delightful...most beautiful of beds...'. So also Caquot (1987: 11-12). Cf. n. 51 at KTU 1.5 vi 6-7.

68. Sc. Aqhat's.

69. In view of the fact that Aqhat has already been born, these months must be those of his infancy. Caquot and Sznycer (1974: 426 n. m) compare the 'months to years' formula of KTU 1.6 v 7-8. The restoration ['š]*r*, to give 'ten months' (sc. of pregnancy, as at KTU 1.23.<51>, 57) is conjectural. Note that the formula of the present narrative does not conform to the pattern of KTU 1.23. This view is rejected by Pardee (1997c: 345 n. 23).

70. Text *ṯmn*(?): Virolleaud (1936d: 201); ṯmn[?]: *CTA*; ṯ*m*n*: *KTU*[1]; ×mn[-]: *KTU*[2]. I interpret this not simply as an epithet of the bow, but its name. Cf. ll. 35-36 below. The name appears at KTU 1.19 i 5 as *ṯmn*, subj. of *yṯbr*. It is m. in form, though *qšt* is f. Perhaps a manly name for a manly weapon. See Margalit's (1989a: 75) assessment: 'its symbolism... denoting maturity and manhood'. Note his translation 'of great value' (1989: 148, 290). (See also Margalit 1979: 556, for the link with Ar. *ṯamīn*, 'precious', endorsed by Cooper 1988: 20.) Cf. the names of Baal's maces in KTU 1.2 iv 11-12, 19. Caquot and Sznycer (1974: 427 and n. o) understand as adv. 'there'. So also Parker (1979–80: 30; 1989: 108), del Olmo (1981a: 374) and Pardee (1997c: 345). Dijkstra and de Moor (1975: 180) and de Moor and Spronk (1987: 105) read a doubtful md[rkt], with de Moor (1987: 233 and n. 60) translating hesitantly as 'bent, loaded'; cf. Isa. 5.28, 21.15, the n. suggesting, on reading *ṯmn*, 'as a present'. Virolleaud (1936d: 203): 'eight'; Gibson (1978: 107 and n. 1): 'eight (parts)', referring to its constituent parts, being a composite bow. Even on taking it as a name as above, this is the etymological basis, 'eight' being a superlative beyond the perfect number seven. Or perhaps this bow will sing like

I shall produce many arrows'.

And lo, on the seventh day,

1.17 v 5 then[71] Danel the man of healing,
at once the hero, the devotee of *Hrnm*,
arose and sat by the entrance to the gate,
beneath the trees which were by the threshing-floor.[72]

He tried the case of the widow,
he judged the cause of the orphan[73].

In lifting up his eyes he looked

a lyre (*ṯmnt*)? The name may have been chosen to echo these various nuances.

The weapon is a composite bow, as is clear later from the description of its parts at KTU 1.17 vi 20-24. For discussion of this breakthrough in military technology see Margalit (1989a: 290-91), and also Albright and Mendenhall (1942), Yadin (1947; 1963: 6-8, 47-48). For surviving examples from Egypt see McLeod (1970, 1982).

71. Ug. *apnk*. This term (with parallel *a<p>hn*) normally introduces a new narrative section, but reads awkwardly after the previous colon. Has something been omitted?

72. The city-gate and the threshing floor were important for the legal and ritual procedures respectively of a community. 'Beneath the trees' (*ṯḥt adrm*). Margalit (1989a: 148): 'alongside the notables'. Similarly del Olmo (1992a: 133 and n. 88) in discussing *ṯḥt* in KTU 1.161.22-26, and Pardee (1997c: 346). If the 'trees' option be accepted, it is worth asking (though we have insufficient evidence to answer) the question as to whether we have an element of royal arboreal symbolism here. The Israel-Judahite goddess Asherah, the mythological mother of the king, was evidently worshipped in the form of a tree-trunk, whether living or dead, while the Assyrian tree-of-life motif appearing widely on seals and reliefs was closely bound up not only with the rituals, but also the ideology of the king. What is so striking about the latter material is its close resemblance to late Heb. kabbalistic systems. See in particular Parpola (1993). It is tempting to think that there may be an ancient WS tradition, of which only hints now remain, but may yet be rediscovered. But perhaps this is reading too much into the present text.

73. Typical royal duties, as at KTU 1.16 vi 33-34, 45-48. Margalit (1989a: 253) argues that this is no real kingship, but appears to be clutching at straws. He is quite right on insisting that this folktale probably has nothing intrinsically to do with Ugaritic royal ideology (though Ilimilku's role should not be underestimated). But this does not alter the fact that Danel is portrayed as a king as already noted above. We have drawn attention to the use of '*bdh*, 'his servant', at 17 i 34 (n. 44) indicates Danel's royal status; and his use of a footstool (*hdm*) at 17 ii 11 (n. 55) is further evidence. See also at KTU 1.19 iii 46 (n. 250) and Wyatt 1999a, 249-51.

1.17 v 10 over a thousand miles,
ten thousand leagues,

the coming of Kothar he did espy
and saw the approach of Hasis.

Look!
He was bringing a bow[74]!
Look!
he had produced many arrows!

Then Danel, the man of healing,
1.17 v 15 at once the hero, the devotee of *Hrnm*,
aloud to his wife did cry:

'Listen, maiden[75] Dantiy!

Prepare[76] a lamb in flour[77]
to the taste of Kothar-and-Hasis,
according to the liking of Hayin,
who is the ambidextrous craftsman![78]

74. For Gaster (1961: 342) it is a matter of a number of weapons: 'carrying bows, | bearing arcs by the dozen'. This would seem to detract from the special nature of his gift, if he is going to pass them round like mere trinkets.

75. Ug. *mṯt*. At KTU 1.14 iii 39 and at other instances in the Keret story I have translated this as 'maiden', because of the bridal quality of Hurriy, and continued with the same translation after her children are born. See n. 167 at KTU 1.15 iv 3. Here Dantiy is also now a mother, but I have offered the same translation. If purism were to prevail, we should perhaps translate as 'maiden' before and 'mistress' or even 'matron' after the consummation of the marriage. The precise nuance of the term *mṯt* remains elusive.

76. Ug. *'db*. Or 'offer up', in the cultic sense. I have used the 'neutral' translation since the narrative probably hovers on the dividing line between cultic act and culinary preparation. So also at l. 22. Cf. also the use of the word at KTU 1.114.4, 10. The gods appear in this narrative in more or less human form, acting as characters on the same level as Danel, his wife, and Aqhat. In l. 27 *y'db*, || *ytnn* of l. 26, has the sense 'placed'.

77. Ug. *pḫd*. Cf. Akk. *paḫīdu*, a kind of flour (thus Caquot and Sznycer 1974: 428 and n. y; Parker 1979–80: 22-23), rather than *puḫādu*, 'lamb' (thus *WUS*, 255 §2212). For the latter sense see Gibson (1978: 107): 'youngling(s)'; Dijkstra and de Moor (1975: 181 and n. 104: note Parker's response: 1979–80: 22-23); de Moor (1987: 234): 'stock'; Margalit (1989a: 148): 'flock'. Note also Xella's important study (1978) on the symbolism in operation here, and also Xella (1983b).

78. This domestic presentation of events should not be seen as incompatible with the royal aspect of the narrative. The scene may be compared with that of Gen.

Feed the god, give him to drink,
wait on (him) and honour him,
the Lord of Egypt, of all of which he is god[79].'

Maiden Dantiy obeyed.

She prepared a lamb in flour
to the taste of Kothar-and-Hasis,
according to the liking of Hayin,
who is the ambidextrous[80] craftsman.

Then Kothar-and-Hasis arrived.

Into Danel's hands he put the bow;
onto his lap he placed the arrows.

Then
maiden Dantiy fed the god[81] and gave him to drink,
she waited on (him) and honoured him,
the Lord[82] of Egypt, of all of which he is god.

Kothar departed to his tent;
Hayin departed to his dwelling[83].

Then Danel the ma[n] of healing,
at once the hero, the devotee of *Hrnm*,
the bow he bent[? 84] [and b]lessed[85],

18.1-15 (Xella 1978). Abraham too is a royal ancestor.

79. Ug. *il klh*. See n. 21 at KTU 1.1 iii [0]. Pardee (1997c: 346) translates this tricolon in the pl., as the form *hmt* in l. 20 requires, and the form *ilm* in the same line could be construed. This would require Kothar to be accompanied by an entourage of other Memphite gods, which seems unlikely in so far as they are nowhere else mentioned.

80. Cf. KTU 1.1 iii 5 n. 23.

81. Text *ilm*, to be read as sg. with enclitic. Cf. also at l. 20, and n. 79: the reading *hmt* at l.20 requires correction to **hwt*. The confusion may result from the binomial DN.

82. A rare instance of the generic use of *b'l* in Ug.

83. Cf. KTU 1.15 iii 18-9 n. 158.

84. Text *yqb*. See Virolleaud (1936d: 202 and pl. VII), *CTA*, *KTU*^{2}. Margalit (1989a: 177) defends this reading, noting a word-divider in Virolleaud's transcription, against *KTU*^{1}. He takes this to be √*qbb*, 'bend a bow', as does Gaster (1961: 344). I have provisionally followed this interpretation. De Moor (1987: 235): 'named'. Gibson (1978: 108) and Pardee (1997c: 346 n. 31) leave untranslated. Driver (1956: 52), reading *yqbl*, 'presented'. Caquot and Sznycer (1974: 429 and n. c), reading *yqbṣ*, 'grasps'.

on behalf of Aqhat indeed he ben[t it].

'The first-fruits of your hunting, O my son,
[ ] the first-fruits of your hunting,
lo, the f[irst-fruits of] the hunt
in his[86] temple [you should place]'.[87]

(gap of about 11 lines)

1.17 vi (gap of about 9 lines)

'...

1.17 vi 1 [ ]
[Eat from any of the f]ood,
[and drink from the vat] any [wine] un[til satiety[88]]!'[89]

W[hile they ate the gods drank],[90]

<then they were served suckling animals,>[91]
1.17 vi 5 with jaw-shaped knife a fillet of fatling.

[From goblets they drank] wine,
from cups of gold [the juice of grapes].[92]

[ ] goblet after goblet.

The new wine [ ],
the wine [ ] the spleen in her girdle.[93]

85. Tentatively restoring [*yb*]*rk*. Cf. *KTU*^{2}.

86. Sc. Kothar's, as a thank-offering for the gift. This cannot, so far as I know, be identified with any historical temple of Ptah-Kothar in Syria-Palestine. It is hardly likely to be an allusion to Memphis.

87. Cf. the ritual laws for domestic animals in Exod. 13.12-14, 22.28-30, and Abel's conformity to it in Gen. 4.4. The present allusion presupposes a similar convention in a hunting context. Cf. KTU 1.114.1 and n. 6.

88. Accepting the suggestion of *KTU*^{2} to read '[*d*], and restoring '[*d šb'*]; cf. KTU 1.114.3, 16.

89. Cf. KTU 1.23.6.

90. The language is formulaic. Cf. KTU 1.4 vi 55. Evidently Aqhat makes his offering to the gods, who come down to participate in the sacrifice, which from their perspective is a feast. Among their number is Anat, who sees the bow...

91. Cf. KTU 1.4 vi 56.

92. Cf. KTU 1.4 iv 36-38, vi 58-59, and accepting their wording rather than that of Driver (1956: 53) or *KTU*^{2}. So also Margalit (1989a: 149) and others.

93. Most commentators leave ll. 7-8 untranslated. Margalit (1989a: 150, 179, 275) makes a reasonable case for understanding it to narrate Anat's progressive

[ ]
1.17 vi 10 [ ][94]

In lifting up her eyes she[95] saw [the bow].
[beautiful was the for]m of its string,
like lightning [its arrows].[96]
[ ] deeps,
lightning[97] [ ].
She coveted[98] the bow, the work of [Kothar-and-Hasis]

intoxication, as she swallows cup after cup of wine. The term *ʿšy* he interprets as 'spleen'. This would explain the goddess's later splenetic behaviour! It remains provisional. Cf. the approach of Caquot and Sznycer (1974: 430 and nn. i, j), though they take *ʿšy lḥbš* to mean 'wine pressed from the wine-press'. An entirely different line is taken by de Moor (1987: 236), following Dijkstra and de Moor (1975: 184), who restore text and sense on the basis of KTU 1.5 iv 19-22 (omitted above as unintelligible). I am reluctant to explain *obscurum per obscurius*.

94. Fragmentary. Margalit (1989a: 150) reconstructs to give an account of Aqhat stringing the bow. Cf. de Moor (1987: 236).

95. Sc. Anat. The text initially naming her is lost.

96. Text [ ]×*l.kslh* | *kbrq* [ ] (*KTU*^{2}). Construed on the basis of Dijkstra and de Moor (1975: 185). The surviving words are hardly to be construed together, as by del Olmo (1981a: 376): 'its string [shone(!)] like a ray...'. The simile of lightning (*brq*) suits rather the arrows which fly from the string (*ksl*). Cf. de Moor (1987: 237), who takes *kslh* to mean 'its stave'. Margalit's (1989a: 150) interpretation as a description of Anat's reaction is improbable in my view.

97. The surviving signs in l. 12 read: [ ]*mḫ*(?)*ǵ*ʿ*p*(?).*thmt.brq* (Virolleaud 1936d: 206); [ ]m(h/y)ǵ(d/ʿt).*thmt.brq* (CTA); [ ]*k.yǵḏ.thmt.brq* (Dijkstra and de Moor 1975: 185; *KTU*^{2}); [ky]m̊(.)yǧ̊ʿ(p̊/ṯ̊).*thmt brq* [m kyprq.yʿrm] (Margalit 1989a: 124). *KTU*^{1} was closer to Virolleaud. It is evident that the initial signs are intractable, and that any attempt at translation beyond individual words is hazardous, not to say suspect. Even their syntactical relationship is imponderable, though I agree provisionally with Margalit that they probably belong to different cola. His (1989a: 150, 181-82) attempt at a resolution is bold, but too bold for this commentator: '[like a se]a which roils the deeps, | (Like) lightning-bolts [which sunder a forest]'. It is a conjecture that builds on a hypothesis. It would constitute the continuation of the account of Anat's emotional reaction. Cf. also Driver (1956: 53) and de Moor (1987: 237 and n. 88). Caquot and Sznycer (1974: 430 and n. l) take the terms *thmt brq* together: 'the din of the thunder', explaining *thmt* by ref. to Heb. *hāmâ*, 'make a noise'.

98. Ug. *tṣb*. Caquot and Sznycer (1974: 430 n. m) cite Akk. *ṣabû*, Aram. *ṣebâ*, 'desire', Ar. *ṣabā*, 'aspire to'; *WUS*, 263 §2298 also cites Akk. *ṣibū*. Cf. del Olmo (1981a: 613), but see the remarks of Dijkstra and de Moor (1975: 185 n. 123). They

[of which the hor]ns were like a coiled serpent[99].

1.17 vi 15 [Her goblet she dropped] to the ground,
her cup she spilled [in the dust].[100]

[She lifted up her voice] and cried:
'Listen, pray, [O hero Aqhat]!

Ask for silver and I shall give (it) you,
[for gold and I shall be]stow (it) on you.

Just[101] give your bow to [Virgin] Ana[t],
your arrows to the Beloved of the Powerful One!'

1.17 vi 20 But[102] Aqhat the hero replied:

'The mightiest ash-trees from Lebanon,
the strongest sinews from wild bulls,
the hardest horns from mountain goats,
<the toughest> tendons from the hocks of a bull,[103]
the sharpest[104] reeds[105] from the great marsh[106],

prefer '(Anat) would aim the bow'. I fail to see the force of their argument, however, since good cognates exist. Cf. also perhaps Heb. √*ṣbh* II (BDB, 839).

99. Unstrung, the ends ('horns' because they probably consisted of a horn laminate) bend backwards, to form an almost complete ellipse whose curvature is the reverse of the bow's strung profile. On the final *yqr* cf. Caquot (1987: 13-14). The simile, like the bow itself, is full of pent-up energy.

100. Cf. Keret's daughter dropping her vase in her confusion at KTU 1.16 i 53-54. See also Qoh. 12.6.

101. Text *w*. The sense is adversative. Or: 'But ...'.

102. See previous note.

103. A composite bow's power was determined by the skilful harnessing of the different tensility and elasticity of its component materials. See discussion at n. 70 above. See also Watson (1976c: 372-73), who draws attention to Anat's possession of a bow in KTU 1.3 ii 16.

104. 'Mightiest ... sharpest'. The same Ug. term *adr* is used in each case (restored as penultimate word in l. 22). Cf. the various translations offered for *il* in KTU 1.4 i 30-41 (and n. 95 *ad loc.*). In each case there seems to be a deliberate evocation of all the possible contextual nuances of the same word, rather than a fall-back on a paucity of vocabulary. Pardee (1997c: 346 and n. 37) takes *adr* to be a vb (√*ndr*): 'I'll vow'. But this would mean Aqhat himself supplying the components, which seems unlikely to be what he intends. Watson (1995a: 220) notes Garbini's (1990) appeal to the vb *adr*, Phoen. *azr*, 'cut', and Renfroe's (1992: 35 and n. 21) appeal to *dry*, 'carry, fetch', as in Aram. Here again Aqhat is supposed to do the work.

105. For making the arrows.

give to Kothar-and-Hasis:

let *him* construct a bow for Anat,
1.17 vi 25 arrows for the Beloved of the Powerful One!'

And Virgin Anat replied:
'Ask for life, O hero Aqhat:
ask for life and I shall give (it) you,
immortality and I shall bestow (it) on you[107]:

I shall make you number (your) years with Baal:[108]
With the son of El you shall number months.

1.17 vi 30 "Like Baal he shall live indeed[109]!

Alive, he shall be feasted,
he shall be feasted and given to drink[110].

The minstrel shall intone and sing concerning him".[111]'

[And she[112]] said to him:

106. Perhaps the Hule marsh is to be understood, or the undrained Orontes valley. Cf. the setting of KTU 1.92 and n. 3 *ad loc.*

107. Ug. *aštḫk*. Construed as √*štḥ*, 'send, grant'. Cf. Albright's (1944: 32) suggestion, 'I will give thee life-force', construing the vb as √*lḥḥ*, 'be moist, fresh, vigorous', with the nuance of sexual vigour. The stichometry is against this interesting proposal.

108. 'Years... months': it looks suspiciously as though the terms have been inadvertently reversed, since the movement is towards an anti-climax.

109. The first *k* is comparative, the second emphatic. Alternatively, if my construction be rejected, this might be translated 'For Baal lives indeed!'. Pardee (1997c: 347): 'like Ba'lu (who), when he comes (back) to life'.

110. Ug. *wšqynh*. Lit. 'and one gives him to drink'. The suff. proves that it is the immortal hero who is the beneficiary of the feasting and drinking. Note how paradise is expressed in gastronomical terms. On the translation cf. Margalit (1989a: 151). Contrast Gibson (1978: 109) whose translation is ambiguous, since it is unclear whether it is Baal or the hero who is the guest of honour. Caquot and Sznycer (1974: 432), followed by Cazelles (1979–80: 181-82), have Baal waiting at the hero's table. Gaster (1961: 348) has Baal the one who is feted. So also Pardee (1997c: 347).

111. Cf. KTU 1.3 i 18-22, iii 4-6. Here it is the immortal hero who is the subject of song. The hero's name will live on in the lays of the poets. But of course Anat is conjuring up a picture of him being alive to hear them. I have put the four cola in inverted commas, as part of a putative hymn which Anat is citing. This would explain the abrupt change of person.

112. Virolleaud (1936d: 207, though notice his hesitation: [*wy*(?)]'*nn*) took this to be m. Herdner (*CTA*, 83): [*wt*]'*nn*; so also *KTU*[1]. *KTU*[2] reverts to Virolleaud's

'Thus shall I make Aqhat the hero live!'
But Aqhat the hero replied:
'Do not deceive me, O Virgin,
1.17 vi 35 for to a hero your deceit is rubbish![113]
Man, (at his) end[114], what will he receive?
What will he receive, a man (as his destiny)?
A precious substance[?] will be poured [on] his head,
gold[?][115] on top of his skull,

reading. But this makes nonsense of the context. It requires the gratuitous introduction of a third party. See the attempts of Driver (1956: 55), Jirku (1962: 123), Aistleitner (1964: 72), del Olmo (1981a: 378), Xella (1982: 201) and de Moor (1987: 239). Margalit (1989a: 125, 150) hedges his bets. Gibson (1978: 109) has in my view the correct interpretation.

113. This is not the most tactful response to a goddess. But Aqhat has all the directness and impetuosity of youth. It would be wrong to suppose that Anat foresaw this response. The tragedy plays out as goddess and hero talk past each other. They are similar in character in this respect. On *ḫḫ* see del Olmo (1981a: 551), de Moor (1987: 67 n. 309). Perhaps '*Fæx tauri*!'?

114. Ug. *uḫryt*. Margalit (1989a: 151), on a different syntax: 'a spiked-shaft (in) the posterior'! See his subsequent discussion of the expression *mm uḫryt* (1989: 313-15).

115. 'Precious substance...gold'. Ug. *spsg*...*ḥrṣ*. The precise sense here is uncertain. See Albright (1944: 33 n. 19) for the suggestion that it is an allusion to the smearing of hot asphalt on the heads of criminals in Mesopotamian legal tradition ('tarring and feathering'!) translated into a metallurgical idiom. He translates *spsg* as 'a bowl of dross'. He also (1945) notes Virolleaud's comparison between the term here and Prov. 26.23, on which see further below. We have no evidence of such a practice, and its transformation in substance and context begs the question. Nor (*pace* Caquot and Sznycer 1974: 432-33 and nn. b, c, E.M. Good 1977 and Margalit 1984a; 1989a: 307-10, 316-19: he criticises Caquot and Sznycer unfairly), is it, as has often been subsequently thought, an allusion to the ancient practice of making clay-modelled features on ancestral skulls as practised in aceramic Neolithic Jericho, notwithstanding Margalit's elegant attempt to show that KTU 1.19 i 8-9 is actually based on the Neolithic practice. Is it a description of old age, with silvered hair? Thus Driver 1956: 55 n. 8; Gibson 1978: 109 n. 10; Spronk 1986: 152 n. 3; de Moor 1987: 239 nn. 105, 106. See also Rainey 1965–66: 254; 1971: 154; Pardee 1997c: 347 and n. 46. Renfroe's cautions (1992: 118-21 [118-19]) are worth citing: '(Aqhat) says, arguably, that something called *spsg* will be poured on his head and *ḥrṣ* will be poured on his pate. We do not know what *spsg* is... the claim that it must refer to glaze in some general sense renders *ḥrṣ* in the sense 'potash' a questionable parallel'. Cf. Dijkstra and de Moor 1975: 190 and *DLU* 181.

[and] the death of all I shall die,
and I shall surely die.[116]

See now Neu (1995), who concludes that it is a precious mineral. It is this which has led me to propose the translation above. I suggest that *ḫrṣ* is perhaps a simple mistake for *ḫrṣ*, 'gold', so that two terms for a precious substance are in parallel: I propose that the text refers to the practice attested in Mycenaean culture of placing gold death-masks in the tomb. These may in turn be compared with Philistine anthropoid sarcophagi and Egyptian sarcophagi. In each case, a memorial of the deceased is preserved in a likeness. (Cf. Schliemann's famous remark: 'I have gazed on the face of Agamemnon!'.) The suggestion remains hypothetical, since no such death-mask has yet been found at Ugarit. But there is no reason why Ugaritic tradition should not have been familiar with the practice of neighbouring cultures, and since tomb-robbery had been developed to a fine art in antiquity it would be the presence of gold in excavations rather than its absence which was cause for remark. This proposal is at least no more improbable than that they should be familiar with mortuary practices of four thousand years previously.

The word *spsg* being *hapax*, there is nothing we can say about its unparalleled relation with *ḫ'rṣ*, except that its first letters invite the restoration *<k>sp(sg)*, since *ksp* is the usual pair-word accompanying *ḫrṣ*. This then brings us back to the Prov. 26.23 expression *kesep siggîm*, which Ginsberg (1945b: 21 n. 55) proposed reading as *k-spsg*[*ym*], 'like glaze' on the strength of the Ug. Perhaps the original *kesep* is to be retained here, and restored to the Ug. text as *<k>spsg* || **ḫ'rṣ*. The *-sg(ym)* remains unexplained in both cases, but that is another problem. This is a conjecture, however, and for the present I am following Neu's suggestion. (The term *ḫrṣ* as it appears here means 'chisel' at KTU 1.19 i 8, which could suggest trepanning, but would lose the parallel.) While on my approach the vb *ysk* (√*nsk*) requires explanation, it may be compared with *yšlḥ* parallel *yṣq* at KTU 1.4 i 25-28 (nn. 88-89 *ad loc.*). In support of my reinterpretation of *ḫrṣ* as *ḫ'rṣ*, cf. the different spellings of the name of Yasib's brother:

KTU Ref.	Virolleaud	*KTU*[2]	*CPU*, II.1: 220	My Reading
1.16 i 46	*ilḥu*	*ilḥu*	*ilḫu*	*ilḫu*
1.16 i 58	*ilḥu*	*ilḥu*	*ilḫu*	*ilḫu*
1.16 ii 21	[ ]	*ilḥu*	*ilḫu*	⌊ ⌋
1.16 ii 33	*ilḥu*	*ilḥu*	*ilḫu*	*ilḫu*?

It has to be admitted that the tablet surface is in a very poor shape. Cf. also *phr* for *pḫr* in KTU 1.2 i 20. Evidently the aural niceties of the philologists were not always maintained!

116. This interchange between Anat and Aqhat is a *locus classicus* for understanding Ug. beliefs concerning human destiny. Yet it is hazardous to attempt the construction of a systematic theology out of this material, if only on the ground that Aqhat abruptly rejects what is offered as a false hope. He is no soft touch for promises of jam tomorrow! However, it is an interesting, and very early, example of the pushing forward of the boundaries of human thought, which give verbal form

[And anoth]er thing let me say:
1.17 vi 40 bows (are for) warriors!
Will women hunt now?'[117]

[Outward]ly Anat laughed;
but in (her) heart she devised [a plot][118].

to an idea, and thus in effect create a concept, which can later be reified as 'fact' within a believing community. For a discussion of the topic see Spronk (1986: 142-206). If there was a general belief in some kind of survival, to which Aqhat might be expected to subscribe, then what Anat offers is something of a different order of magnitude, a species of divine life, since she uses Baal and his revival from death as her example. The same contrast between human realism and theological aspiration (treated in both cases as wishful thinking) is seen in Gilgamesh, with the contrast between what the hero wants and what Siduri advises. See van der Toorn (1996: 65). There it is Gilgamesh who is unrealistic. Within the Aqhat story the contrast is to be drawn between Anat's offer and the broad expectation presupposed by the list of the duties of the pious son (KTU 1.17 i 26-33 etc.), which we may take as normative. As we have seen (n. 30 above), the usual explanation of duty [III] as bringing the father's ghost *out of* the grave is precisely the opposite of what the text actually says, so that Spronk's estimate (1986: 149) is flawed. To build any theory of *post-mortem* felicity on the basis of this is a lost cause. The safest position to adopt is that Anat is using a flowery promise merely to get her way. Gods are not above lying, as the serpent and Micaiah both observed (Gen. 3.3-5; 1 Kgs 22.20-25).

117. Aqhat adds insult to injury, by talking down to Anat on the ground that she is female. She does not perceive herself in this way! But, though he betrays his ignorance of mythology, which abounds in toxological goddesses, of course he states a truism, for roles would have been divided broadly on gender lines in Ugaritic society. Anat's transcendence of this fundamental boundary is part of the complexity of her character and theology. Handy's somewhat condescending estimate of the goddess (1994: 123) as 'violent, vindictive, vengeful, self-absorbed, and insolent' is entirely true, and yet wholly fails to account for the subtlety of her nature. See my remarks (1996b: 329).

118. Margalit (1989a: 8) criticizes Virolleaud for his 'inability to conceive of the goddess Anat as a "Devil-figure" who commits murder for material gain'. I am unhappy with a polarization (into demon and deity) which is the product of later modes of thinking. All supernatural powers (sc. projections of the Ugaritic psyche) are divine (*il* or *ilt*) whether they work for good or ill. They represent the outworkings of the human mind, and show the 'logical' outcome of human decisions (indeed, the gods are in a sense tools of the mind in the working out of problems, 'decision-making' facilities). Cf. my remarks on Anat as war-goddess at KTU 1.3 ii 37 n. 34. And while demons are routinely distinguished from deities in ancient tradition, as in KTU 1.169 for instance (see n. 5 to l. 2), the fact remains that Anat is consistently represented as a goddess, even if not a very nice one to know. On

'Leave me, O hero Aqhat,
leave me and go away [ ][119].

If I ever meet you on the path of transgression,
[if I encounter you] on the path of pride,

1.17 vi 45 I myself shall throw you down beneath [my feet],
O gracious one, strongest of men!'[120]

[She stamped her f]eet and the earth shook[121].

Then [indeed]
[she set her f]ace towards El at the source[122] of the rivers,
[amidst the spri]ngs of the two deeps.

She rolled back the tent of El
[and came to the pa]vilion of the king, the Father of the Bright One.

1.17 vi 50 [At the feet of El she] bowed and fell down.
She paid him hom[age and honoured] him.[123]

She vilified Aqhat the hero,
[the child of Dan]el the man of healing.

And [Virgin Anat] spoke;
[she lifted up] her voice and cried:

'Words [of insolence?] did Aqhat [speak?]!
1.17 vi 55 [ ]

problems of terminology see Riley (1995).

119. Pardee (1997c: 347): 'Reconsider...reconsider for your own sake': this is a good alternative approach, though the translation above fits the sequel better.

120. As she hovers between threats and flattery, we can almost hear the internal debate in Anat's mind, for she appears to be motivated by lust and rage in equal proportion. I say 'lust' rather than desire, for while there may be a conscious sexual dimension in her later dialogue with the hero—though not at KTU 1.18 i 24 and n. 132, *qv.*—it is here at an inchoate stage, felt more in her loins than in her head. For an exquisite account of Anat's warring emotions see KTU 1.19 i 1-17. Pardee (1997c: 348) translates: '(however) good and strong (you may be) among men'. This draws attention to the tension in general gender terms.

121. Ug. *tr.* 'Took off', with Anat as subj.: Pardee (1997c: 348).

122. Text *mbr.* Correct to *mbk.*

123. Ll. 46-51 are formulaic, occurring several times in the Baal cycle (KTU 1.3 v 4-8 and parallels)

[Ilimilku the Shubanite wrote (it), the student of Attanu] the diviner.

1.18 i (first 5 lines fragmentary)

1.18 i 6 And [Virgin Anat] replied:

'[Let not the sons of] your [house], O El,
[let not the daughters of your house rejoice,]
Let not [the children of your palace] rej[oice]!

I shall [surely] seize them in [my right hand]:
1.18 i 10 [I shall smite them by] the strength of [my] lon[g arm][124]!

I shall smite you [on] your [sku]ll:
I shall make [your gray hair] run with [blood],

the gr[ay hair of] your [be]ard with gore![125]

Then [let] Aqhat [come to you]
and let the son of [Danel] deliver you,
and let him save you from the hand of Virgin Anat!'[126]

1.18 i 15 But the Wise One, the p[erceptive] god, replied:

'I know you, daughter, that you are pitiless,
and that[127] [among goddesses there is no] contempt like yours![128]

Depart, daughter!

Ruthless (is) [your] heart:

[Sei]ze what is in your mind,
take what [is in] your heart[129]!

124. On the concept of the 'long arm' see Wyatt (1998a) and refs. See also KTU 1.3 v 23 and n. 70, KTU 1.16 vi 32 and n. 288. 'My broad grasp': Pardee (1997c: 348).

125. The opening lines are tentatively restored on the basis of KTU 1.3 v 20-25.

126. The suggestion that Aqhat could somehow rush to El's assistance is of course preposterous. Anat speaks to El with the insolence she will not tolerate from Aqhat.

127. Ug. *w*. At KTU 1.3 v 28 the text reads *k*.

128. El gives the same response as at KTU 1.3 v 27-28.

129. 'Mind... heart': Ug. *kbd*... *irt*, lit. 'liver... breast'. I have altered the organs

Let him be trampled who hinders you!'[130]

1.18 i 20 [Vir]gin Anat [departed].

Then indeed she set [her face]
[towards A]qhat the hero,

over a thousand mil[es],
[ten thousand] leagues,

and Virgin [Anat] laughed.

[She lifted up] her voice and cried:

'Listen, pr[ay, O he]ro [A]qhat!

Come[131], brother, and I shall [ ]![132]

to suit the necessary translation in psychology. But Anat does not *think* before she acts. She *feels* before she acts, for she is the very personification of human rage. Hers sounds a very modern personality. She is determined to do what is in her interests, regardless of the consequences (not unlike Aqhat). El merely concedes her autonomy. This is not to admit that the theology is morally bankrupt. It is simply a realistic theology, constructed on human experience. Cf. n. 30 to KTU 1.114.14.

130. Ultimate divine autonomy! We should remember that theology is a human construction: Anat, like any other deity, is the product of a human rationalizing of experience. Here she personifies the implacable nature of events, which pursue their own causality regardless of human desires. Aqhat has sown the wind. Now he will reap the whirlwind. El grants her complete freedom of action.

131. Ug. *at*. Dressler (1979: 216) suggests √*atw*, 'come', rather than the 2 m. sg. pron. usually understood. Cf. KTU 1.1 iii 16; 1.6 ii 12.

132. The colon is frequently restored to read *a*[*ḫtk*], to yield 'you are (my) brother, and I am [your sister]' or the like. Thus still Pardee (1997c: 348). This is then commonly explained as a formal proposal of marriage, an opening gambit in a seduction scene, or a statement of an agreement between two persons. Gaster (1961: 351 n. b) remarks of the (restored) text that '"brother" and "sister" were common expressions for lovers in the ancient Near East', while de Moor (1965: 361), followed by Dijkstra and de Moor (1975: 194) also takes it in the first sense. My reading of a colour slide of the text shows one thing for certain, that the proposed *a* some read at the end (thus *a*[*ḫtk*] in *KTU*^{2})—that is, an over-written horizontal wedge—is impossible, for what *can* be seen on the edge of the break is a *vertical* wedge. See in particular the argument of Dressler (1979), partially endorsed by Xella (1984), showing that there is no warrant in the first place for the restoration, let alone for the hypotheses built upon it. I have accepted Dressler's solution, though with Xella, I think he overstates the force of the argument from available space. Xella himself however wishes to retain the sister. Cf. Xella (1982: 203). This is not to say that there are not sexual overtones in the story. Is l. 29, for

1.18 i 25 [I] shall satisfy your desire[133]!
[from the house of ?] my father have I fled[134],
[ ]
You should come to the hunt,
[ ]
[O] happy man,
[ ]
I shall teach you how to h[unt]!
1.18 i 30 [ ] the town of Abilim,
A[bilim the town of Prince] Yarih,

instance, perhaps to be given an erotic innuendo: '[ ] I shall teach you the art of ve[nery]!'? We should remember that sexual feelings and activity and physical violence have a long joint history. The address 'brother', following Dressler's interpretation, in any event now becomes conspiratorial: Anat disarms Aqhat by pretending that all is well between them, as though they are jolly hunters together.

133. Text *šb' ṯirk*. The variety of translations shows the difficulty these words have caused: Virolleaud (1936d: 227): 'your seven meats'. Driver (1956: 57): 'with the abundance of thy meat'. Gaster (1961: 351): 'the fulness of thy flesh will I enjoy'. Jirku (1962: 125): 'full of your new wine'. Aistleitner (1964: 74): 'fill your body (?)'. Caquot and Sznycer (1974: 436): 'assuage your passion' (citing Ar. *ṯawrat*, 'ardour', *ṯā'ir*, 'anger'). Similarly Gordon (1977: 18). Gibson (1978: 111): 'your seven kinsfolk', and similarly Pardee (1997c: 349 and n. 60). Del Olmo (1981a: 382): '[better for you] than seven of your relations'. De Moor (1987: 242): '[you, brin]g your seven groomsmen'. Margalit (1989a: 153): '[I know] the fulness of your "passion"'. Xella (1982: 203) leaves untranslated. It is clear that the 'brother... sister' problem of the preceding colon has guided some approaches. The question is whether such a nuance can stand when that hypothesis is discarded. I offer my translation with some diffidence. Whether the 'desire' to which Anat alludes is that of the hunt or of sexual attraction remains imponderable, and it may be justified on Ar. or Heb. cognates. The Ug. *šir* at KTU 1.6 ii 35-37 is taken to be 'flesh' by some (e.g. del Olmo 1981a: 228, 626) though I translated it as 'remains'. The present term *ṯir* is probably 'flesh' (Heb. *śᵉ'ēr*), while *šir* is equivalent to Heb. *śᵉ'ār*, 'residue'. See n. 84 *ad loc*. 'Flesh' may be taken as metaphorical for what is done with it (the fulfilment of passion or desire). Margalit (1989a: 324, 328) explains 'the fullness of (his) passion' as an erection. Cf. n. 11 at KTU 1.24.9.

134. The phrase perhaps hints at an intended elopement with Aqhat (cf. previous note), or may have the more neutral sense that she has gone out hunting. Caquot and Sznycer (1974: 436) have 'my father, I have repelled' (Heb. *nādâ*, Akk. *nadû*). Margalit (1989a: 154): 'I am a *nadītu* [unto you]' with following '[I am truly a bri]de unto you'. But in KTU 1.16 i 29, n. 209, he regards Yasib's youngest sister as a *nadītu*-priestess, qualifying this as 'a nun...'. Or is this a nun with a problem?

whose tower [ ].[135]
[ ] their city...

(2 further illegible lines, followed by about 20 missing lines)

1.18 ii (entire column missing, about 50-60[136] lines)

1.18 iii (entire column missing, about 50-60 lines)

1.18 iv 1 [ ]
[ ] it was shattered[137] [ ]

135. The town of Abilim is proposed by Anat as the *rendez-vous* where Aqhat will await her. She is setting him up, for she will shortly (KTU 1.18 iv 7-8) instruct Yatpan to murder him there. Danel will later (at KTU 1.19 iv 1-7) curse the town for its unwitting complicity in his son's death. Text *dmgdl š*[ ]. May the broken word conjecturally be restored as *š* [*mm*], yielding 'whose tower (reaches to) he[aven]'? Only the first stroke of the putative *š* (tentatively read by *CTA*, *KTU*[1 and 2]) is present, however, and might alternatively be read as ', as for instance by Margalit (1989a: 128, 154), who on the basis of principles of alliteration restores the sequence as *dmgdl* ' [md(.) wnhrm ly]*mm*, translating 'where a tower s[tands and a river is to the ri]ght'. This seems bold to me. Cf. de Moor (1987: 243): 'the tower of which is [a thousand acres on hig]h | [ten thousand square m]iles their town', reading (de Moor and Spronk 1987: 108): *mgdl* ' [*ly.alp šd.rbt.k*]*mn.*'*rhm*, which at least has the merit of being standard formulaic language. It is however the height rather the surface area of the tower which would surely be of significance, a landmark which Aqhat would easily find. The tower might belong to a citadel, though if it does 'reach to heaven' we may detect a theological nuance and suppose it to be a temple (of the '*migdal*' or 'fortress' type of construction, associated above all with the WS world—Mari, Ebla, Ugarit, Hazor, Megiddo, Shechem, Tell Haror) whose tower serves as a landmark.

136. The figure is uncertain, being estimated on the basis of other surviving tablets associated with Ilimilku, and taking into account the size of the script and the shape of the tablet. Margalit (1989a: 154) is apparently alone in estimating KTU 1.18 i, iv to have been two sequential passages, one column on each side of the tablet. This is easily disproved by reference to the double vertical-line column-divider on the right-hand side of col. iv. Column iii would have been to its right. Note too that the edge of the tablet is on the left-hand side of both columns, which confirms the recognized numbering of the columns. For convenience see *CTA*, II pl. XXVIII, rev. (Were the lines on the left, and the column-edge on the right, we would have cols. iii and ii respectively.)

137. This is the end of a quarry in the hunt. In KTU 1.19 i 3 it will be Aqhat's bow which falls shattered (√*ṯbr*) to the ground (along with Aqhat, another quarry!).

[She devoured (it),] elbows, blo[od and forearms,][138]
[Vir]gin Anat surely finish[ed it off?.][139]

1.18 iv 5 Virgin Anat [depar]ted.

[Then indeed she set her face]
towards Yatipan[140], the merce[nary] warrior[141].

[She lifted up her voice] and cried:

'Let Yatipa[n[142], the mercenary warrior] remain,
[let him remain[143]] at the town of Abilim,
Abilim [the town of Prince Yarih].

Until the moon is new

The present episode anticipates the fate of both the bow and Aqhat. Matériel and people are equally vulnerable at the hands of the savage war-goddess. See also next note.

138. The text looks as though it repeats the expression found at KTU 1.5 i 5-6 and nn. 9, 10, where it is discussed. I interpret the present passage as describing Anat's treatment of a deer or other victim—see previous note. Her treatment of victims of the hunt and war was no doubt similar.

139. There is no reason to take it to be a 'human or mythical monster' with Margalit (1989a: 206) which she has presumably brought down in the hunt. Its literary significance here is that it shows the bloodthirsty and savage nature of the goddess, and is surely the type of her later treatment of Aqhat in KTU 1.19 col. i.

140. On the PN see Watson (1976c: 373). He proposes Akk. *naṭāpu*, 'to tear out', as the etymological basis, which would fit Yatipan's raptorial activity. The name might therefore, he suggests, be rendered 'Render, Ripper'.

141. Ug. *mhr št*. 'Soldier of the lady' (Watson 1976c: 373). 'Drinking soldier' (or even 'boozy soldier': soldat buveur!): Caquot and Sznycer (1974: 437). Cf. KTU 1.19 iv 53-54. I have tentatively followed the suggestion of Margalit (1989a: 337-40) who sees in *št* the sociological term 'Sutean'. However, since this text is literary, not sociological, the translation 'mercenary' is preferable, especially since it has satisfyingly pejorative tones. This soldier is a mere hireling, a brigand, like Shakespearian paid assassins. Note de Moor (1987: 244 n. 136).

142. There is no need to see an apocopated (thus *CTA*, I 85 n. 12) form of the name here, thus *yṯp*.×[ ], *KTU*^{2}. The word-divider is much smaller than others, and is probably no more than a flaw on the surface. The first stroke of the *n* is apparent. Cf. n. 150 below.

143. There is room for about 8-10 signs at the end of l. 7: Margalit's (1989a: 129) reading [.mhr.št | yṯb] (10 including word-dividers) is reasonable. 'Remain' (*yṯb*), or 'return' (Caquot and Sznycer 1974: 437 n. r). De Moor (1987: 244) construed this as referring to Aqhat: 'the hero Aqhat is staying in the city of Abiluma...' (no brackets!), restoring (de Moor and Spronk 1987: 109): *yṯb.yṯp*.a[*qht.ġzr.b*]*qrt.ablm*. This is also reasonable, but both are uncertain.

with on [his left] ho[rn]
1.18 iv 10 and on his right horn[144]
his weakened head[145]!'

And Yatipan the mercenary] war[rior] replied:
'Listen, O Virgin Anat:

(it is) you, on [account of his bow], (who) must[146] smite him,
(who on account of) his arrows should not let him live.

The gracious one, the hero, is serving a meal[147],

144. Text *b* ×[-------] | *bqrn ymnh*. Thus *KTU* [1]. *CTA* reads the *b* immediately before the break. *KTU*[2] reads the × as q: *b* q[rn šmalh] | *b qrn ymnh*. This is to understand a reference to both horns of the new (crescent) moon. See also de Moor and Spronk (1987: 109), who restore q[*rn.ẏdh*] ('the h[orn of his (left) hand]'), and de Moor (1987: 244, 'left side...right side'). I see no reason for the restoration. Margalit (1989a: 129, 154) restores *bn*[yr.qṣh]...: 'when [its tip glo]ws | when its right-corner shines'. This all seems rather subjective.

145. Tentative. Or: 'manlike head'? Cf. discussion in Dietrich and Loretz (1985) and Caquot (1990: 75-76). While the lacuna remains a problem, *banšt* [ ] *qdqdh* may refer to a 'weakness of...his head', referring to the darkened disc of the moon. See also Pardee (1997c: 349 and nn. 66-68). The passage undoubtedly refers to some celestial or meteorological condition at the new moon, when the crescent is smaller, the horns being sharper, and the night darker. A dark night for a dark deed! Dietrich and Loretz draw attention to *Enuma Elish* 5.14-18, which describes the phases of the waxing moon, and refers to its two horns during the first six days of the lunation. The 'head' undoubtedly refers to the darkened sphere of the moon which can be seen as a ghostly presence against the crescent. The final colon might alternatively be taken as an instruction as to what to do during the moon's darker period: 'without pity [smash] his skull!'. The term *anšt* can have the sense of being 'human' (Caquot 1990: 77), 'weak', or of 'enraged, pitiless' (*anš* of Baal: KTU 1.2 i 38 and n. 114; *anšt* of Anat, KTU 1.3 v 27 and n. 71, 1.18 i 16).

146. The precise nuance of the vb is variously understood: e.g. Caquot and Sznycer (1974: 439): 'it is you who will...'; Gibson (1978: 112): 'you yourself should...'; del Olmo (1981a: 384): 'are you going to...?'; de Moor (1987: 245): '(now) you can...'; Margalit (1989a: 155): 'you would...'. At this stage it appears that Yatipan is acting as the goddess's *agent provocateur*; only later will he become her assassin.

147. Caquot and Sznycer (1974: 438) understand Yatipan to instruct Anat to prepare a meal; Margalit (1989a: 155) has Yatipan prepare a meal, taking the reference to the hero (sc. Aqhat) with the preceding words. Others understand it to be Aqhat, who is perhaps feasting after a successful hunt. 'Meal': Ug. *ṯrm*. See *UT*, 506 §19.2745 and note *lḥm* || *ṯrm* at ll. 19, 29-30 below. 'Bulls': del Olmo (1981a: 384).

1.18 iv 15 and [ ] I shall remain[148] among (his) tents
and we shall celebrate [ ].[149]'

And Virgin Anat replied:

'Pay attention, Yatip<an>[150], and [I shall instruct?] you.

I shall place you as a falcon on [my] gaunt[let],
as a hawk[151] on my glove[152].[153]

148. The term *ištir* appears as a n. representing a commodity, *kd ištir* in KTU 4.290.3 being perhaps 'a jar of honey' (see de Moor 1965: 361; Caquot and Sznycer 1974: 438 with n. v): 'some honey in the tents'. But for the present context Dijkstra and de Moor (1975: 195) have adopted the view of Hoftijzer (1971), translating the present passage as 'have stayed behind (*bḏdm*: 'in the encampment)' (so also de Moor 1987: 245), also citing KTU 2.32.10, where they read [*diš*]*tir* and translate 'what is owed'. (Cf. *PRU*, II: 43 §22 [RS 16.401] with fig., and Bordreuil and Pardee [1989: 122 fig. 28b, photograph].) The uncertain nature of this scant material should be noted. The present form may perhaps be related to √*šir*, 'to remain', in the Gt form, but the initial *i* can only be a 1 p. prefix. Thus also del Olmo (1981a: 384). Cf. Gibson (1978: 112): 3 p. sg. Margalit (1989a: 155,), has '*IŠTIR* in a teat', taking this to be an 'unidentified foodstuff'. 'He has stayed on': Pardee (1997c: 349).

149. Ug. *wn'rs* [ ]. The range of suggestions indicates the difficulty. Driver (1956: 57, 141): '[they shall] indeed [be tilled]' (*'rs* 'tilth', Akk. *erēšu*). Hoftijzer (1971: 363): 'We shall make a short pause' (Ar. *'rs*). Caquot and Sznycer (1974: 438 and n. x): 'we shall make some cakes [ ]'; (MHeb. √*'rs*, 'knead'). Gibson (1978: 112, 155): 'and he did grow tired' (N stem, Ar. *'arisa*). Dijkstra and de Moor (1975: 195): 'let us celebrate the wedding' (Ar. *'a'rasa*), and similarly del Olmo (1981a: 384, 605), *DLU*, 90: 'we shall celebrate' (Ar. *'arasa*). I take it that the plan is to join Aqhat's hunting feast (*not* a wedding-feast!), thus putting him at ease. It seems that Yatipan is hoping for a free meal as well as a killing. Anat's counter-proposal is to take him entirely unawares from above, from where he would least expect danger.

150. Scribal error rather than hypocoristic form, with Margalit (1989a: 210). Cf. n. 142 above.

151. 'Falcon ... hawk': Ug. *nšr ... diy* (cf. Heb. *nešer, dā'â*, NHeb. *dayyâ*, Akk. *našru*, Ar. *nasr, nisr*). The terms represent 'raptor' and 'bird of prey' rather than eagles or vultures. See n. 140 at KTU 1.2 iv 15. The lexica indicate the notorious uncertainty of interpreting Semitic bird-names. The Heb. *nešer* is also undoubtedly a falcon, so that with the bull, the lion and the man of Ezekiel's chariot (all composite in form: cf. Ezek. 1.4-25 and 10.8-17; later they are differentiated as the bearers of Christ on the clipeus and still later the evangelical symbols surrounding the mandorla) they constitute four emblems of the king, all derived from Eg. iconographic tradition. In Ezek. 17.7 Pharaoh is *nešer gādôl*: 'great falcon' (sc. Horus),

[As] Aqhat [sits down] to eat,
and the son of Danel to feed,

1.18 iv 20 [above him] (some) falcons will hover,
[a flock of haw]ks will be watching.

Among the falcons I shall hover:
above Aqhat I shall place you.

Hit him twice on the skull,
three times above the ear.

Pour out (his) blood like a murderer[154],
like a slaughterer (you must bring him) to his knees.

1.18 iv 25 Let his life-breath go out like the wind,
like spittle[155] his vitality,
as (his) dying breath[156] from his nostrils,

while in v. 3 a similar bird appears to be Nebuchadnezzar. See also n. 236 to KTU 1.19 iii 2.

152. 'Gauntlet... glove': Ug. *ḥbš...t'rt*. See Watson (1977b: 72), followed by del Olmo (1981a: 545) who cites EA Akk. *ḫa-ab-ši*, 'arm'. See also Dietrich and Loretz (1972: 30). 'Wristlet... glove': Gibson (1978: 112, 146, 159), based on contextual grounds. Driver (1956: 57, 139 and n. 9): 'sash... scabbard', citing Eg. *ḥbš*, 'wrapper, garment', Akk. *abšu*, 'thong', and Heb. *ta'ar*, 'sheath'. Margalit (1989a: 155, 335-36, 340-41): 'girdle... pouch'. He acknowledges that there is an allusion to falconry here, but appears to envisage Anat dropping Yatipan rather as a bomber sheds its load! How one is supposed to put an eagle in one's girdle it is hard to imagine. Pardee similarly with 'belt... bag' (1997c: 349).

153. *Pace* Reiter (1990), this is *prima facie* evidence for falconry in the second millennium BCE.

154. 'Like a (certain) bird', with the following colon reading 'like a falcon(?) [lit. attacker or leaper] over his knees': Watson (1991: 360); 'like one emptying a bucket': Pardee (1997c: 350 and n. 74). While philologically possible, these seem to me to fall down on prosodic grounds.

155. Ug. *iṯl*. 'Spittle' (cf. Hitt. *išalli*): de Moor (1965: 363-64), Dijkstra and de Moor (1975: 196) and Watson (1987), *DLU*, 60-61. As a body fluid this will, like blood, mucus, milk and semen, contain elements of the vitality of the individual. For it to be merely wasted is a loss to Aqhat. See Margalit (1989a: 156, 342-43) for the view that *iṯl* is a plant (Ar. *'aṯl*, Akk. *išlu*): 'his vitality, like the *IṮL*-flower'. *WUS*, 41 §473 tentatively suggests 'swarm of bees' (Ar. *ṯawl*)!

156. Ug. *qṭr*. Lit. 'smoke' (*WUS*, 275 §2404). See n. 31 at KTU 1.17 i 27 on its metaphorical usage. The present instance is undoubtedly intended to echo the usage in the list of filial duties. The son's task is to ease the passage of his father's *qṭr* into the ground at the due end of his life. Here his own *qṭr* is being hastened thither

and also[157] his pulse[158]:[159]
I shall not let him live!'

She took Yatipan the mercenary warrior;
she placed him as a falcon on her gauntlet,
as a hawk on her glove.

As Aqhat sat down to ea[t],
1.18 iv 30 the son of Danel to feed,

above him (some) falcon[s] hovered,
a flock of hawks[s] was watching.

[Among] the falcons Anat hovered[160];
above [Aqhat] she placed him.

He hit him twice on [the skull],
three times above the ear.

1.18 iv 35 He po[ured out] his blood [like] a murderer,
like a slaughter[er (he brought him) to his knees].

[His] life-breath went out like the wind,
[like spittle] his vitality,
as (his) dying breath from [his nostrils].

prematurely by Anat. Aqhat will be mourned not by a son, but by his own father. The irony is inescapable.

157. Ug. *u ap*. The *u* I take to be the initial copula, as in Heb. *û*, rather than 'or'. If this is so, its use before a glottal is noteworthy.

158. Ug. *mprh*. See Margalit (1989a: 156, 212 and n. 54) and now Wright (1994). Margalit proposes √*prr*, and compares Heb. √*pr(p)r*, Ar. *farfara*. He translates 'his convulsions'. Following Wright's discussion of the Eg. cognate *npȝpȝ* (Eg. *ȝ* often has the value of *r*) as used in the Smith medical papyrus, I have opted for 'pulse', which indicates the presence of life, like the spittle (wet), the vitality and the (dying) breath, rather than the act of dying. This seems preferable to Pardee's suggestion (1997c: 350 and n. 75): 'Thus I'll not let the soldier live on!'. He appears to accept the reading *mhrh* here and at l. 38.

159. The whole passage ll. 23-26 (‖ 34-37) is an important one for understanding Ugaritic anthropological thought.

160. Anat appears in the form of a bird (a kite?) in KTU 1.108.8 (*w'nt.di.dit.rḫpt*). See also stela RS 2.[038] (Yon 1991: 329 §9c). On the stela she is clearly anthropomorphic, like winged forms of Isis or Hathor, and there is no reason to insist that she is avian, rather than a winged woman, in the present instance. If this is the way it should be understood, we should perhaps assume that Anat was invisible to Aqhat below as she flew above.

Anat [watched?] as his pulse[161] stopped,
[she looked on? as] Aqhat [died],
and she wept[162] for the ch[ild of Danel]:

1.18 iv 40 'I understand[163]
that it was on account of your b[ow that I smote you],
[and because of] your arrows that I did not let you
l[ive]!'
And the birds[164] disappeared [ ][165].

1.19 i 1 ([Concerning] Aqhat)[166]

161. Text *mhrh*. Correct to *mp*$^{\text{!}}$*rh* according to l. 26. 'His convulsions': Margalit (1989a: 156). See n. 158. Note that Pardee (n. 158 above) appears to read *mhrh* in both instances. This is a reasonable alternative, and one of the lines requires to be harmonized with the other.

162. As soon as the deed is accomplished, remorse sets in! The sequel will show an uncontrolled mixture of savagery, tenderness and grief: the classic components of guilt! Caquot (1985: 94) speaks charmingly of Anat's 'versatility'. This is a sounder assessment than Handy's (1994: 123-25) view of bureaucratic malfunctioning. See Wyatt (1996b: 329).

163. Ug. *abn ank*. Caquot (1985: 94, 110 n. 4) cautions against interpreting this as promise of restitution (√*bny*): thus, e.g., Gordon (1949: 93), Driver (1956: 59), Gaster (1961: 355), Jirku (1962: 128), Caquot and Sznycer (1974: 440 and n. g): '*I* shall recreate', del Olmo (1981a: 386) and Pardee (1997c: 350): 'I would have made'. Gibson (1978: 113): '[(Life for you)] I would have created', followed by Aitken (1990: 56-57): ([*ḥym*] *abn ank*). So also Xella (1982: 205).

164. Text '*pm*m[ ] rather than '*pt*.m[ ] of *KTU*^{2}.

165. Provisional. See Caquot (1985: 94-95) for discussion of the colon. His estimate that this is 'a bundle of uncertainties' is sound. Of his further view that a further tablet may have intervened between this tablet and KTU 1.19 I am not so sure. Aqhat is freshly dead in KTU 1.19 i, and to presume further intervening adventures of Anat within the crisis of the narrative is implausible.

166. The first few lines of KTU 1.19 i are in extremely poor condition, the difficulties this entails being compounded by the number of unparalleled words, making a coherent sense based on known lexemes a hazardous enterprise. Del Olmo (1984: 125) warns against facile reconstruction, while Renfroe (1992: 119-20) writes of 'the questionable usefulness of modern Ugaritic composition' in comparing the translations by de Moor (1987: 247) and Margalit (1989a: 157; cf. 1995: 228). I offer an attempt at the passage with the diffidence such a caution demands. Particularly useful for this difficult section, in addition to del Olmo's, are the studies of Caquot (1985) and Cooper (1988). Note also Pardee's remarks (1997c: 350 n. 81).

[The bow of Aqhat] came down[167] into the midst of the
waters;
[the arrows of the hero] fell into the depths[168].[169]
Shattered was the bow[170] [of Aqhat the hero?],

167. The first seven lines are exceptionally indistinct, with a square area of text missing from the middle. The surrounding signs are generally indistinct. Virolleaud (1936d: 125), reads [ ]*kr*(?)*b*.[ ], while the transcription (pl. I), reads one horizontal stroke (the lower of two?) followed by k, another k or r and perhaps b followed by a word-divider. None of these should be written in italics, since their status is uncertain. *CTA* reads [t]*krb*., and *KTU*[1 and 2] *tkrb*. De Moor and Spronk (1987: 111): tkr*b*., and Margalit (1989a: 131): *tkrb*.. (In each case I indicate the word-divider here.) In view of the uncertainty of the reading and the expectation of a word parallel to *tql* in l. 3, I am inclined to accept tentatively the trd (in Rom.) proposed by Driver (1956: 58) and followed by Gibson (1978: 113). A colour slide does not give a certain reading, but the **b* is written across a superficial crack, which in my view bisects the third (central) vertical stroke of a *d. This means that at least the sequence **rd* is preferable to **rb*. Del Olmo (1984: 130 n. 293) suggests that the √*krb* does not occur in Ug., and is followed by Cooper (1988: 20). Cf. Caquot (1985: 96).

168. Ug. *lb*. Lit. 'heart'. Referring to the parallel 'waters': del Olmo (1981a: 386). Cf. *lēb-yām* in Exod. 15.8. In that context the term may almost have its anatomical force.
